There is probably nobody in any walk of life who could not cite such cases within his own observations. To tell such sufferers that music is non-essential and wasteful, would be to produce a sad but emphatic dissent.

Leaving aside the value of music to the non-combatant sufferer, let us consider another phase of it, where the argument would be as potent if there had never been a war.

We hear much of what the automobile and the telephone have done to mitigate the hardships of rural communities, but does anyone stop to think of what the modern reproducing instruments have done in this same field, to enrich life and make the young folk more contented?

Fifteen years ago, the advent of a new great artist, like Heifetz or Elman would have been a matter in which only certain coteries in the large cities would have been interested. To-day, it assumes importance in the smallest and dullest communities of Canada, as the perusal of the advertising columns of rural newspapers will reveal. In this connection, it must be borne in mind that any measure directed toward placing the music trades in the non essential category would hit the rural community first.

It must be plain from the above, that the consensus of opinion among all who have given serious thought to the matter, is strongly on the side of the utility of music, even in this country, where the art obtains no official recognition.

What can the non-essentialists say when they see our young men whistling, when they see our soldiers marching and whistling or singing frolicking airs that show healthy bodies, strong minds and heartiness of soul—needed, may I not say, more than anything else at the present time? Would those who do not realize what music means in fostering this spirit, stop this whistling or stop this singing? Defeated armies don't sing—the thief and the scoundrel don't whistle. Discouraged men do not win success—discouraged people do not win wars—music dispels discouragement.

This is a very simple illustration, but is it not a fact, and does the point not mean much?

Before the war, the effect of music and the results of music were realized by very few. Very little thought had been given by many to the subject, and especially to its actual position in our everyday affairs, but I am satisfied the war, and the efforts of many to put music in the non-essential class, are going to do more for music and fix its need more firmly in the minds of the people, than anything else could probably have done.

Information from the active war zone shows very clearly, there is hardly a Y.M.C.A. camp, a rest camp, a hospital or convalescent home that has not a phonograph or piano or both, and in many cases a number of them, and that they have proven so great a blessing as to be practically indispensable, as those in charge of such institutions have written many, many times: "You have no idea what joy and pleasure the phonograph gives the men."

Every man (excepting he "with soul so dead") has been comforted or inspired with some form of music, even under normal conditions. We can hardly appreciate the wonder of its effect, when a national air is played by soldiers whose souls are full of the spirit of war and a stage setting, so real that it throbs and breathes and rattles with clouds and shooting flame and clamor and terror. Then, "O Canada," "Rule Britannia," "Star Spangled Banner," "La Marseillaise," have a meaning, of such grandeur and such thrill, that if, for only this, our nation would be well repaid for all we have ever spent on music.

What a permanent and wonderful effect all of this will prove after the war!

In drawing to a close, it may be pointed out that some years ago, Prof. Robertson, the well known economist of Ottawa, was sent to Europe by the Government to report on educational reforms. Before his departure, he was approached on the subject of music, and requested to investigate that phase of European education. He scoffed at the thought, and dismissed music as, to his way of thinking, useless and expensive noise. When he returned to Canada a few months later, however, he frankly admitted that he had been converted, and that he had never before realized what an important part it played in the development of the young, until he visited the great institutions of Europe, where it is scientifically used as an essential part of the educational system.

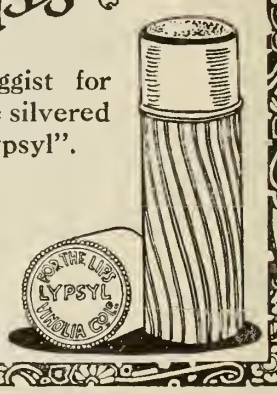
This is the common experience of every man who is at pains to look into the matter, and to estimate how important and beneficent a part music does play in the life of civilized communities.

It is admittedly one of the greatest of all contributories to the congenial life, on which the happiness and prosperity of Canada must be rooted. As has been tersely said: "Music in the family circle builds up the intimate family relations between parents and children, between brothers and sisters, that are the basis of the finest feelings in life." I might quote C. N. Bovee on this subject: "Music is the fourth greatest requirement of the human soul. First, food; second, shelter; third, raiment; fourth, music."

With music in the family, the musical trades are most intimately bound up, because of the partially mechanical nature of all musical production. On ethical and sociological grounds, they have a claim for consideration, greater than anything that could be measured in purely commercial terms. The music trades ask no favors that would interfere with the full employment of man-power for the purposes of war; they ask no favors as an essential industry, so far as the distribution of materials is concerned; they are already heavy contributors to the public revenue without protest; but they do regard the musical art to which they minister, as a necessity of civilization in times of peace, and as an essential factor in the maintenance of public morale in time of war.

With these reasons in mind, I sincerely believe in the great need for more music at this time, that every avenue for its place in the home be made as convenient as possible to the public, and that we are more than justified in the slogan recently adopted:

"SEE IT THROUGH."
MONEY, FOOD, SOLDIERS' NEEDS,
AND IN THE HOME—MUSIC.



Every woman who buys Bonds stands behind a soldier.

From her shapely toes to her finger tips
I love them all; but—Ah—her lips!
Whence have they gained that rosy glow
Which everyone admireth so? From

Sit down in a Gossard and realize its superior comfort and style

Sit down in a GOSSARD CORSET

The Original Front-Lacing Corset

and compare its superior comfort and smooth, graceful lines with any other corset you have ever known.

The soft, pliable materials and light, scientific boning will give delightfully with every movement. The back steels are of sufficient length to curve comfortably under the body.

The front clasp is of just the right length to give perfect support. See the smooth, straight hip lines and that ample fullness at the top of even the lowest corset.

Look at the straight front with its delicate accent at the waist. In this new Gossard front, even in a sitting or bending position, all appearance of fat or thickness is eliminated.

Take your hand mirror and look at the flat, graceful back lines. This perfect Gossard back and the perfect Gossard front are and always will be the despair of imitators.

Ideal proportions can be attained in a Gossard by every type of figure. In these original front-lacing corsets every woman may know a priceless all-day comfort. She is assured a hygienic support that safe-guards her health, and an inimitable style and improved figure that will permit a real clothes economy by enhancing the beauty of the most inexpensive frock or suit.

And more—every Gossard will give a wearing service that alone is worth the price paid, whether it be

$2.00, $2.50, $2.75, $3.00, $3.50, $4.00, $5.50 or more.

Gossards are doing even more for womankind than ever before by conserving the health and increasing the efficiency of the vast army of patriotic women who are so unselfishly giving their services to the Great Cause.

Be sure you buy a genuine Gossard. Look for the name *Gossard* on the inside of the corset—it is your guarantee of the original front-lacing corset.

Gossards are sold by the best stores.

A Wonder Child and Clever Mother

(*Continued from page* 18.)

at once. When awake, baby must have something to do; must be intelligently amused; must have something interesting to observe, and not have to look at a blank wall. The Indian mother hangs her papoose on a tree, gives him outlook, and lets him be put to sleep by nature's lullabyes; we give ours a look into a fluffy carriage-top."

Teaching the Child Colors, Sounds and Motions.

"Instead of giving baby a 'pacifier,' hang different-toned bells at the foot of his crib. Attach to each a different-colored ribbon. Say the word 'bell' each time you ring one; then name the color of the ribbon. Both eye and ear are thus being trained, and baby entertained at the same time. When he is six months old he will pull a ribbon of any color asked for.

"When four or five weeks old, baby should be taugnt definite ideas of form and motion. Get several colored balloons, and tie a different one each day to his wrist. As he floats it contentedly he learns to move it in different directions—up and down and around. This starts co-ordination of mind and muscle. He is getting ideas of smoothness, lightness, color, and is also developing the strength of his baby arms. Then take two chairs; tie a string across their backs and drop a big red ball down to baby, who is on the floor beneath on a stack of pillows. Teach him to kick at the ball, and later, when he can sit up, to roll it to you. A ball is the child's natural heritage; begin to play with it in the cradle.

"The mother should plan to play every day with her child for some definite purpose, just as much as she plans to provide food and clothes. This would take no more time, and much less energy, than mothers now spend in quieting and scolding a worrying child, or later in counteracting his destructive tendencies. A child develops so much nervous energy that if it is not used in some helpful way it will be turned to destructive ends."

"Can you do anything to train a child musically?"

"Decidedly," replied Mrs. Stoner. "Little babies love rhythm. The mother should sing sweet lullabyes, if she can, if she cannot, she should repeat rhythmic verse. As I am not a singer, I put Winifred to sleep by scanning Virgil's Latin poems, with the result that when she was one year old she could scan the first ten lines. Much that was difficult to learn in school-book form was made easy to Winifred in simple jingles, in which children delight; they are fascinated by simple rhymes. Many beautiful songs and poems can be quickly and thoroughly learned in this way.

"Make the child familiar with the things about him in the world by starting in the home. Carry him about the room, point out and name the various objects, tell him simple stories about them; show him the pictures on the wall and tell him their stories. When he ceases to be interested in things, never force them on him; let him rest.

"Above all, tell your readers who are mothers not to let their children just drift along, picking up what crumbs and scraps they may happen upon accidentally. Let the mother have a definite purpose to train her child—to make it bright, sensitive to harmony of sound and color, active, eager to learn, musical, constructive—in short, to develop all its powers for good, so that there will be less difficulty in overcoming its evil tendencies. The mother was intended by the Creator to be the child's first teacher, and all mothers should assume this responsibility for the first few years entirely, and after that should have constant companionship with their children, and guide and help them in their school studies.

"Mothers do not play enough with their children; they do not take as much interest as they should in the child's talk and work and play and studies; are not 'chummy' enough with their children; they do not smile enough; and they are not as anxious as they should he to develop their own intellectual and spiritual powers so that they can teach and lead their children, making them clever, happy, useful boys and girls, men and women.

"I am delighted to hear of what the CANADIAN HOME JOURNAL is doing to help the mothers of Canada. Give them all my love, and tell them that I hope the story of Winifred, and the methods by which I trained her, will help other mothers to bring up children that will give them as much joy as Winifred gives me."

An Afternoon on the Aventine

(*Continued from page* 23.)

tected' the little States, with the exception of very independent Sardinia, as far as the Papal States, with the wretched, misruled kingdom of Naples in the south."

"Yes, Signor, but Austria is of many races; some of these fought hard against German supremacy, but for a long while Austria has thought as Germany said, and her management has been in the hands of that race who despise women's virtue, and who, if it seems 'necessary' to do wrong, are always ready 'to throw one's soul over one's shoulder,' as our peasants say. Our Italy had been a divided land since the end of old Rome, and no one thought that a united Italy was possible or to be wished for. We did not chafe so madly under the Austrian until the Tedeschi spirit began its systematic pressure to crush out all distinctly Italian feeling, putting soldiers in all our cities, with—we thought then—orders to insult and misuse our women, if we showed any nationalism."

The Signora's dark eyes flashed like stilettos, and I reflected that, however low a man's nature might be, commonsense should lead him to practice his brutalities in a land other than Italy. But just then Giacinta brought in our last course, a flat basket daintily trimmed with fig leaves, and filled with ripe, fresh-picked black figs. The Signora took some on her plate and laughed. "An old woman shouldn't talk of the days when she was young and very foolish," she said merrily. "Now we are allied with Austria and Germany, for we are a free and united country, and can afford to let the dead past bury its dead. Why, Signor, I was only thirteen, and Tito eleven, when we called ourselves patriots, and talked—ah, how we did talk!—of what we thought of Austria, and what we meant to do to her when we grew up.

"Our father heard us sometimes. He was a very good and wise man, and he would smile and say: 'You are very young, children, so you think everything is black or white—every Austrian is black as Hell, and every patriot white as God's light. Now I, who am old, see much gray in both sides.' 'But you know that the only white is with us!' we both shouted at him, and he answered, 'Am I not an Italian, foolish little ones? Are we not going to move to Rome because Pio Nono, the new Pope, is giving all the freedom of a constitutional government to his tiny State?'

"It was good to be young and in Rome those days, when everyone saw visions of making the whole world perfect and free, starting, of course, with Italy. And then the Pope—did you know they took me to see him in those wonderful Vatican gardens, where he walked each day? They put my harp among the fragrant lemon trees, but when I saw the old man in his white cassock, his little white cap and white cape, with the long white sash having the golden keys embroidered on its ends, sitting there on the terrace, with his cup-bearer and a Noble Guard on either side of him, and two prelates standing behind, I trembled so that my fingers were stiff. Then a fire took hold of me, and I played Italy and all that she dreamed of being. They made me play again, and then a servant brought my father more gold than I had ever been given at one time before. But I was a bold, mad girl. I knelt right down in the open and cried: 'Give your gold to the poor, Holy Father, but give me something you have touched yourself—you who are saving Italy.' The next minute I was so afraid and ashamed to think of what I had done, but the good Pope only smiled. 'Do not scold the child,' he said to my father, and he gave me this tiny gold cross. I wear it still, yet there was a time, not long after I was given it, that I threw it aside, for Rome was muttering that the Pope was coward or traitor, or both. But my father said, 'Rome is crowded with all sorts of patriots from everywhere. Austria is threatening the Pope (as a temporal prince) because his liberalism is stirring up her Italian subjects. I think he has done wisely to appoint Rossi as his minister, for he is a clever and moderate man.' And then Rossi was assassinated; I believe it was done by an agent of Austria's, hut looking back, I do not now blame Pio Nono for blaming us. He fled to Naples, and left Rome to look after himself.

"All North Italy was now in revolt, helping the invading Sardinians, they having declared war on Austria. We in Rome declared ourselves a republic, having for President our Mazzini—Mazzini, our poet and prophet, who raised Italian nationalism so high that even in our darkest hour we were ashamed to sink into anarchists. But he was not a good business man, that is, he could not do good work in arranging for food and munitions of war for our soldiers.

"For we had an army, and its general was Garibaldi. I saw him enter Rome in April, 1849—a red-haired, bearded

(*Continued on following page.*)

The Trust of Carmen Shelley

(*Continued from page* 8.)

greater inspiration—service to the helpless crippled children. Sonny's little, misshapen foot stabbed my heart and roused the fighting instinct of my manhood. I could not endure the sight of your little lad *crippled*, Carmen." His voice lingered with a peculiar tenderness over her name.

"Nothing in all my life has been so sweet as my friendship with you and Sonny," he resumed, "but—but now it must end. Sonny does not need the surgeon, and we must no longer chum together—"

"Why must we not chum together?" questioned Carmen Shelley, her cheeks suddenly whitened, her breath laboriously short.

"I can no longer chum with you and Sonny and yet have you remain loyal to Hugh Shelley," he broke out passionately, his eyes, dark with pain, searching her colorless face.

The woman, with a little, smothered cry, stumbled forward and bent over the sleeping boy, her fingers stroking the little black head. Then swiftly she turned toward the man, her eyes luminous and misty, a soft crimson glow flooding her cheeks.

"Hugh Shelley could say naught against our friendship," she announced softly. "Sonny's father laid down his life for his country *eighteen months ago*."

Haddon Spurr started forward, a cry of incredulity on his lips. Then, glimpsing the burning light in the eyes of the woman, he reached out hungrily toward her. Stooping, he gathered her in his arms and kissed thrice over the laughing lips.

"Carmen, sweetheart of all the world, I shall never fail your trust."

"We knew that long, long ago, dearest," laughed the woman in response. "Sonny and I trusted you most of all men."

THE END.

An Afternoon on the Aventine

(Continued from preceding page.)

man, who rode as if his horse was a part of him. He wore a red shirt and a broad-brimmed hat with a long black feather. Such was our first sight of the man who more than anyone else was to make our Italy, but then we only knew him as a patriot who had spent years of exile in South America and come back to help us, with his beautiful Brazilian wife, Anita.

"We—and Europe—learned to know him those three months that he defended Rome, proving himself to be a military genius, as well as the truest and gentlest of men. But everywhere the patriots had lost. Sardinia only barely saved herself, and France sent an army against Rome to restore the Pope. I heard the cannon and musketry and the bursting bombs as I played in the Vatican gardens again. This time men with slings and crutches and bandages were all round me, for part of the great buildings had been taken by the Roman Commission for a hospital. They had appointed Margaret Fuller, the American author, who married our Marchese Ossoli, as regolatrice, and she kept me to help cheer her patients, for my father and even Tito were with her husband, fighting under Garibaldi.

"Then it all ended; all our golden dreams became dust. Garibaldi escaped from Rome, with most of his men, before the city surrendered to France, and the Pope came back, but this time he did not trust his people. Anita Garibaldi went with her husband, but in the hardships of that retreat across Italy she died, while he got away to America. We, my father and I, returned to Venice, where we lived almost in hiding for those six dark years. Tito, the Austrians took as he followed Garibaldi in his retreat, and though he was not thirteen, they shot him. But there, I shall tell you no more of our black years under the yoke, only this, no war is so horrible as to be ruled by men whose study is to degrade and humiliate you daily, in order that your spirit and the spirit of your children may be thoroughly broken. We could and did pray then, 'If this is peace, God, give us war,' and so at last the 'good war' came.

"You know how Sardinia waited for her chance, then, allied with France, made war on Austria, until half Italy was free. Then Garibaldi roused the South, and in one wonderful campaign conquered the old kingdom of Naples. so in 1860 Italy was free and united, except Rome, which our ally, France, demanded should be left for the Pope. When she was crushed by Germany in 1870, however, the Italians quietly occupied the city."

As the Signora finished, we sat silent a few minutes, I looking through the big, uncurtained window opposite me, at the red roofs of Rome spreading out in the valleys between the hills, where glorious domed and towered churches rose among thick green trees. I was wondering if it was those drear years under the heel of an iron-souled conqueror that makes Italy so gladsome to-day, in her freedom, though the taxes she thinks necessary to keep her prepared for war pinch the homes of her people in food and warmth. The Signora must have been thinking the same, for she said, with her pleasant laugh: "Is it not good that being sinned against hurts a land so little—it is only the sinner who is wounded to the heart by his deed. Just as out of dead things Nature makes the dear, beautiful flowers grow, so out of our dead wrongs has come, I think, a great content of spirit and gladness of heart."

. . . . . .

1915—the crisis has come, and Italy has listened to the voices of her little children, of her working men and women, rather than to statesmen trained in diplomacy. Against what on the surface seem her political interests, she has refused even to remain neutral in this war against the ravishers of Belgium. To-night she is our ally, and I have here a letter from the Contessa.

"You will sorrow with me," she writes, "at the death of my aunt, but you will be glad that she lived long enough to hear what she was praying for—our declaration of war. Like other idealists, she had suffered much in spirit at the crime in Belgium, for she had been so sure that the world had grown too good for the things that were once done to us to be done again—and done in multiplicate. But she held to her brave faith that the lands which suffered most and gave most now would reap the greatest gladness of spirit and health of soul in the ages after we have crushed forever the Tedeschi spirit."

Amen! And you, brave women—brave women of your land, who send your men to battle, then work and contrive with double energy, and without a word of complaint to anyone—with all my soul I salute you.

Wire Contrivances That Help The Housewife

By ALICE GRANT.

Fashioned into a score of useful articles, heavy wire is an invaluable kitchen asset. One of my favorite forms is that of a lamp-chimney cleaner which consists of four heavy wires with a twisted handle ringed at the end. At the opposite end, the wires are bent at right angles to form a clasp for a rag to be inserted; a ring about the wires tightens the hold. If you have no lamps to be cleaned, this little article still has its uses. In my kitchen we insert a wet rag and wash off the stove top without menace to our hands, while, with a clean, wet cloth, we pry into the depths of bottles and jars, and by prodding and pressing get them thoroughly clean. Another helper that saves many a scorched finger is a griddle and cake-pan greaser which holds among bent wires a wad of greased paper or cloth. A spring holds or releases the cloth as desired. There is no danger of burning and the griddle is evenly greased.

A single piece of heavy wire ingeniously twisted, makes an efficient pot-lid holder. A twist at the top forms a ring which will slide over a nail or hook and two sharp bends below make a substantial support for the lids.

Long forks of wire, heavily tinned and with sharp prongs, are efficient kitchen helpers. Technically these are known as "flesh-forks" and are intended for raw meats, hence the sharp prongs. But although they are good meat-forks, I value mine most for toasting, for as toast-makers I have found them to excel any fork designed for that purpose. Flesh-forks come in varying sizes and with either wire or wooden handles. The long wire handle is looped, and rarely gets too hot.

A vegetable-lifter, which also has a varied field of usefulness, consists of a semicircular scoop of wires with a long, looped handle. It is intended for insertion into hot water to remove small pieces of vegetables and to drain them while so doing.

More complicated wire aids include an egg-basket which comes in different sizes for holding varying numbers of eggs, and which has a handle bent at the top into a loop. In this loop is placed a tiny three-minute glass. The eggs are put into the boiling water, the glass, which is reversible, is turned so that the part holding the sand is on top and, when the top section has emptied, the eggs are soft-boiled. A fish-basket is in quite a different and still more complicated form. This is in two parts, both made of close-running parallel wires held in a framework and the two parts so made as to fit closely together at the bottom. When they are together the basket is just the right size and shape for boiling a fish. The fish, basket and all, is immersed in boiling water, only the basket handle being permitted to remain uncovered. When the fish is done, the basket is lifted, the platter placed underneath it, and the two parts pulled gently apart. The fish drops to the platter whole and in good shape for serving.

A wire potato-masher with a wooden handle is simply a coil of heavy tinned wire in the shape of a funnel. It mashes and flakes potatoes rapidly, and at the same time, can also be used to beat eggs and to crush fruit. It is an excellent egg-beater, quick and thorough. Its makers also announce that it will act as a lemon-squeezer.

Two novelties in wire strainers are worth mention. One is to be used in the kitchen and is an ordinary strainer with a peculiar handle of twisted wire which makes it possible to fasten it to the rim of a pan and to have both hands free for pouring or stirring. This little convenience comes in many sizes and is a most valuable help. There is no danger of the strainer slipping into the pan or of dumping its contents into the strained mixture. If you have to leave in the middle of the operation it is all ready when you wish to begin again, and this without the soiling of an extra dish. The second strainer is fast achieving well-deserved popularity. Everyone who sees mine wants one, and I myself am just purchasing an additional one for special use. It is intended for table use primarily, but may be used in the kitchen as well. It is a tiny silver-plated, good-looking strainer for tea or coffee, with a wire handle which fits into the tea or coffee-pot. This is attached to the strainer proper. At the same point there is attached a tiny pan or basin which swings out under the strainer when it is used and catches the drip.

At the sink, a wire soap-dish which fastens on the faucets and hangs there ready for use keeps the soap within reach and turns the soap-drip to the useful purpose of keeping the sink clean. The soap dishes come in many styles and can be obtained in shapes suitable for hanging on a single faucet or between the two. They are held in place by a wire loop which fits over the body of the faucet and can easily be removed when cleaning makes it necessary. A wire sink-brush should also find many friends; it has bristles of wire which can be scalded clean without injury.

Two of my outside wire-helpers consist of a special carpet-beater and a trash-burner. Yes, I still beat rugs occasionally and other things as well, even in this day of vacuum cleaners, and I suppose that many of us find this still essential, for the hand vacuum will not beat skirts nor small rugs, and electricity does not come to us all. The best thing about my carpet-beater is that it has a handle which is guarded by a twist in the wire so that, beat hard as I may, my knuckles never come into contact with the article beaten, and consequently there is no danger of their being skinned. My trash-burner is a wire basket with a lid which holds paper scraps and permits them to be burned without blowing about and making a litter or menacing anyone's safety.

Incidentally, I hope you are not frying bacon in these days of modern inventions. A little wire broiler is specially made for broiling bacon and it is much more savory when cooked in this way. It is built very much like the ordinary broiler and fits inside of the over oven, under the gas flame.

All of us who keep house know the nuisance it is to clean lettuce properly, and some one has invented for this purpose a round wire basket, that opens and closes with a firm catch. You open the basket, put in the loose leaves, and "souse" it up and down in clear cold water, until every leaf is thoroughly cleansed. It takes half the time generally consumed in washing each and every individual leaf.

Those of you who have many flowers in the house will be glad to hear about the wire flower-holders that will fit inside vases of various sizes. Some of them are round and have a very wide mesh in which to insert the flowers; these are particularly good for short-stemmed flowers, which will not stand up in a bowl without this wire device. Others are made to hold roses and long-stemmed flowers, and with the aid of this wire holder a much more artistic effect is obtained. They cost from twenty-five to fifty cents each.

Perhaps one of the most important wire novelties that have been manufactured is the wire sagless bed-spring. No longer do you roll toward the middle, if you buy the proper kind of a wire spring. It is so built that it will not tear the bedclothes and because of some special construction it can not possibly sag, and is perfectly sanitary and germ-proof. When buying new bed-springs, be sure you get the kind that is guaranteed not to sag.

All of these wire novelties are comparatively inexpensive and within the reach of the modest purse. They save many steps and a great deal of worry for the busy housewife, for it is the little things that count in the sum total of the day's irritations.

The Girls' "Carry-On" Column

(Continued from page 21.)

serving hot chocolate and sandwiches while the train is waiting. This plan has been carried out in some of the towns in the States with tremendous success.

I am thinking of visiting one of our Canadian military hospitals about once a week, just to cheer the soldiers up once in a while. What could I take to them that would be acceptable?

L. W., London

Cigarettes and candy are always acceptable, and above all, if you can possibly take a cake or pie of home-made cooking, you have certainly gone a long way in the cheering up process. You might offer to lend some of the men books which you think they might like; it is often impossible to keep the bed patients supplied with books.

Merry Christmas

And maybe some of "OUR BOYS" will be celebrating by going "Over the Top." We can't help with the fight so we are just going to see that there is not a single lonesome soldier in the whole front line trenches on Christmas Day, aren't we, girls?

So let's do without our Christmas Cake and Plum Pudding and send it to some homesick soldier boy who has no friends. You will be surprised how happy you can be on Christmas Day without it. Just put in a bright, cheery little note with your name and address on it to wish the boy in Flanders all kinds of good luck. The war may be over next year and we may never have the chance again.

For those who wish to send their parcels to the trenches address them

For a Canadian Soldier
in care of the
Canadian War Contingent Association,
123 Victoria Street,
London, Eng.

Those who wish to send their parcels to Canadian soldiers in the hospitals in England

Address—
For a Canadian Soldier,
In care of the Canadian Red Cross,
43 Tooley Street,
London, Eng.

Post Office rates to England—
Twelve cents a lb. Parcel must not be over eleven lbs.

To France—
Thirty-two cents for a seven lb. box.

Buy Victory Bonds

ANOTHER OFFENSIVE IS SUCCESSFULLY TERMINATED.

An army of workmen have been engaged for many months on the construction of Mount Royal Tunnel at Montreal, but the offensive has terminated. The Tunnel, 3.35 miles in length has been completed and was opened on October 21st, on which date the Canadian Northern Railway established through train service between Toronto Union Station, Ottawa Central Station and Montreal Tunnel Terminal, 416 Lagauchetiere street west, two blocks from the Windsor Hotel, Windsor and Bonaventure Stations.

Rail, sleeping and parlor car tickets are obtainable at all Canadian Northern Railway ticket offices.

Every woman who buys Bonds, stands behind a soldier.

Canada's War Effort

Up to the middle of 1918, $501,704,000 had been spent by Canada for pay and allowances, including subsistence, billeting, rations and assigned pay. The maintenance of the troops in France had taken another $114,366,000. Separation allowance has amounted to $71,436,000, and clothing $35,449,000; while the bill for boots and repairs totals $10,600,000. For ocean transport the expenditure to the middle of this year had been $16,000,000; for land transport $17,500,000. Stores, which includes furniture, bedding and utensils, is another big item—$14,000,000; while motor truck, ambulances and other vehicles, have cost $9,600,000; for remounts, etc., the bill has been $8,591,000. Over $4,700,000 has been paid for machine guns and $5.500,000 for kit bags and necessaries of kit. These items alone aggregate $800,000,000.

Turning to the monthly expenditure during 1918 it is found that pay and allowances average $14,000,000; maintenance of troops in France $8,000,000; separation allowance $2,500,000; clothing $325,000; boots and repairs thereto $190,000; accoutrements $110,000; outfit allowances $200,000; motor trucks, ambulances, etc., $270,000; land and ocean transport $260,000

Production of Munitions.

That Canada has done wonderful work in producing war munitions is well known, but only by getting some idea of the magnitude of the operations conducted by the Imperial Munitions Board can one appreciate adequately what has been done in this line of effort. The Board, which had its origin in the Shell Commission, organized principally to supply shrapnel shell to the British Government, has gradually extended its operations until now it acts as the medium through which orders for war materials and supplies from all the Allied countries are placed in this country. It even goes further than that; in reality it has mobilized the manufacturing industries of the Dominion for war work. It awards contracts for shells, steel and wooden ships, buys and manufactures timber, buys also metals and minerals of all kinds that enter into the manufacture of munitions. Outside of the Dominion Government, it is Canada's greatest business concern. To date it has placed over $1,200,000,000 of war orders in Canada, on which well on to 300,000 persons are engaged.

A few details will show what Canada is doing as a maker of munitions. To date over 60,000,000 shells have been produced. There have also been produced 60,000,000 copper bands, over 45,000,000 cartridge cases, 30,000,000 fuses, over 65,000,000 lbs. of powder and about 65,000,000 lbs. of high explosives. Of the 1,800,000 tons of steel used in the production of munitions, fully 1,450,000 tons have been produced in Canada. The Board has built, equipped and operates seven large national plants at a cost of $15,000,000. In these are produced all kinds of war materials, including shells, powder, gun cotton, Trinitro-Toluol, forgings, etc., while one plant produces airplanes, of which over 3,000 have already been turned out.

Munitions.

The Imperial Munitions Board has done wonderful work for the Canadian ship-building industry. Indeed, its orders have revived the almost lost art of building wooden ships in this country, an industry that forty years ago flourished, especially in the Maritime Provinces. Through an advance of $10,000,000 by the Dominion Government, made possible very largely through the last Victory Loan, the Board was enabled to award contracts for the building of $25,000,000 worth of wooden ships. This programme was, in time, extended until now orders have been given for the building of 90 ships, of which 46 are wooden and 44 steel, at a cost of $66,000,000. These ships are being built in British Columbia, Ontario, Quebec and the Maritime Provinces. In addition, the French Government has through the Board, placed orders for 50 wooden ships to be built in Canada to cost $21,000,000.

WOMEN OF CANADA

A CALL TO SERVICE

You serious-minded women.

You women who lead in your communities, whose advice is sought in the councils of women, who think for yourselves and your neighbors.

On you, to-day, falls a great responsibility. On you depends to a great extent, the support your community will bring to Canada in her prodigious war effort.

For you by your example and by earnest, friendly counsel, can guide hundreds into the habits of thrift, self-denial and patriotic sacrifice now so vital to our success in prosecuting the war.

★ ★ ★

Canada's part in the war can be maintained only by the help of all her citizens.

We produce food and munitions.

We maintain a big army in France.

It is only our surplus that can be used for war purposes—the part over and above what the civilian population consumes at home. The less each Canadian consumes, the less food, the less clothing, the less anything that is the product of labor and material, the more is available for fighting purposes.

Waste, then, at this moment, is unpatriotic, for it directly retards our war effort.

But that is not all. Canada urgently needs the money that is spent on unnecessary things.

Canada has no longer any foreign source of loans. She can borrow only from her people.

The vast shipments of farm produce and munitions, the huge operations of our steel industries, shipbuilding, lumbering, cannot be financed, unless Canadians themselves advance the money to the nation.

Victory Bonds are Canada's pledge to repay those advances. The Victory Loan is the great fund that maintains all of Canada's military, industrial and agricultural operations. It is, in short, the working capital of the nation.

The women of Canada can do much to insure the success of the Victory Loan 1918.

They can help by restricting their purchases for home needs. They can contribute directly by buying Victory Bonds. They can use their influence with their neighbors, and through clubs and other organizations encourage the buying of Victory Bonds.

By placing Canada's needs first, by realizing to the full the importance to Canada of the Victory Loan 1918, they can contribute mightily to its success.

★ ★ ★

You serious-minded women of Canada, your duty lies clear before you; let the full force of your energy, your influence and your devotion to our cause be exerted now to

Insure the Overwhelming Success of the VICTORY LOAN 1918

"Home, Sweet Home"

The Song Familiar to Every Heart Written by a Wanderer From Home

"Home, Sweet Home." Everybody knows the song, and much has been written about it, but few people really know anything about its history, says Theodor A. Hoeck, in the *Delineator*.

"Home, Sweet Home," as one writer puts it, "is essentially English in sentiment and feeling, but curiously enough was written by an American, John Howard Payne."

John Howard Payne was born June 9, 1791, in New York City. When he was a little fellow his father moved to East Hampton, at that time the most easterly town on Long Island.

It is a romantic little town, settled by fine New England families, who lived in amicable relations with the red men who lingered about this ancient home of the Montauk tribe. The young Paynes roamed among pleasures if not among palaces in this town, and the home, which is still kept intact by its present owner, although appearing "homely" to modern eyes, must have been quite fine in its day. Undoubtedly the remembrance of it inspired Payne to write the familiar and famous poem.

His Early Life.

Payne's father was a school-teacher in East Hampton, and a fine elocutionist, so in "speaking," which formed a prominent part in the school programme, the son soon excelled. When thirteen years old, Payne became a clerk in a mercantile house in New York. His ability to write asserted itself even at this time, for he secretly edited a paper called the *Thespian Mirror*. Dr. Francis, in his book, "Old New York," says of him at this period: "A more engaging youth could not be imagined; he won all hearts by the beauty of his person, his captivating address, the premature richness of his mind and his chaste and flowing utterance." A gentleman who met him and saw indications of great promise, sent young Payne to Union College at his own expense. His studies, however, were stopped by the death of his mother and pecuniary losses of his father.

Young Payne had to do something to help support the family, and it does not seem strange, when one considers his personal appearance and early training, that he decided to become an actor in order to do this. It is a remarkable fact that when only seventeen years old he achieved a wonderful success as "Young Norval" at the Park Theatre, New York. After this he played in several of the large cities, and was acting in Boston when his father died. Soon after his father's death he sailed for England and appeared at Drury Lane Theatre, London, when only twenty years of age, again with great success. He continued acting for about five years, when he turned his attention to writing plays. For about twenty years he enjoyed a good deal of success mingled with a greater proportion of bad fortune. He was much praised, but his life, nevertheless, was sorrowful and hard.

When Payne penned the lines of "Home, Sweet Home" he was alone, in a foreign country, stranded in Paris, away from everything he held dear. The sweet sadness that pervades this simple poem is exquisitely expressive of the melancholy he felt at the time. It is said to have been written one dreary January day in 1823.

The song was first sung by Maria Tree elder sister of Mrs. Charles Kean, at Covent Garden Theatre, in an English opera or operatic melodrama, entitled "Clari, the Maid of Milan," the words being written by John Howard Payne, and the music composed and arranged by Sir Henry Bishop. The song was, one might say, an instantaneous success, and during the first year about three hundred thousand copies of it are said to have been sold.

Naturally, the success of the song made several people wealthy; but unfortunately poor Payne was not among this number as he had sold his rights. Over Bishop's music there is much difference of opinion. Many writers say the melody is not original and that Bishop had used it before.

Others say it is a Sicilian air, but no Sicilian air has ever been traced that is anything like it, so it is safe to say that Bishop's own story of it is true:

Bishop had been engaged in his early manhood by the once eminent firm of Goulding, D'Almaine & Co., music publishers of Soho Square, to edit a collection of national melodies of all countries. In the course of his labors he discovered that he had no Sicilian air, and as a Sicilian melody had been announced, Sir Henry thought he would invent one. The result was the now well-known air of "Home, Sweet Home," which he afterward arranged to the verses of John Howard Payne.

Each Needs the Other.

It has often been said that Bishop's melody, not Payne's words, has given "Home, Sweet Home" its vogue, but when we get at the facts, it is easy to see that this is not so, for the melody failed when set to other words. In the case of "Home, Sweet Home" each needs the other, and together they make the most simple, direct appeal to "one of the most universal sentiments in the human breast."

The song is, therefore, Anglo-American, and, as Dr. Charles Mackay asserts, "has done more than statesmanship or legislation to keep alive in the hearts of the people the virtues that flourish at the fireside, and to recall to its hallowed circle the many wanderers who stray from it."

Payne left England and returned to the United States in 1832. Ten years later, and again in 1851, he was appointed consul at Tunis, where he died April 9, 1852.

In His Old Age.

Speaking of his hard life, Payne said: "How often have I been in the heart of Paris, Berlin, London, or some other city, and have heard persons singing, or hand-organs playing 'Home, Sweet Home' without having a shilling to buy myself the next meal or a place to lay my head! The world has literally sung my song until every heart is familiar with its melody, yet I have been a wanderer from my boyhood. My country has turned me ruthlessly from office, and in my old age I have to submit to humiliation for my bread."

He has been criticised for saying this, because he left his country of his own free will; but criticism is very useless in this case, as it raises the question: Would the poem ever have been written had Payne not left his own country?

In 1883 W. W. Corcoran, who when a boy had seen Payne act, had the poet's remains transferred from Tunis to Washington, and reinterred in Oak Hill Cemetery, with suitable obsequies.

Incidents Connected with the Song.

The Philadelphia *Record* gives one: No common poet ever received a more enviable compliment than one paid to John Howard Payne by Jenny Lind, on his last visit to his native land. It was in the great National Hall of the City of Washington where the most distinguished audience that had ever been seen in the Capital of the Republic was assembled. The matchless singer entranced the vast throng with her most exquisite melodies, but the great feature of the occasion seemed to be an act of inspiration. The singer suddenly turned her face to the part of the auditorium where Payne was sitting, and sang "Home, Sweet Home" with such pathos and power that a whirlwind of excitement and enthusiasm swept through the vast audience. Webster himself almost lost his self-control, and one might readily imagine that Payne thrilled with rapture at this unexpected and magnificent rendition of his own immortal lyric.

When the late Colonel Mapleson, a noted impresario, asked Adelina Patti to sing for him so that he might judge the quality of her voice, she responded by singing "Home, Sweet Home."

Madame Albani, who has probably sung "Home, Sweet Home" more times in more corners of the globe, than any other singer, relates how she met the late Lord Kitchener at Government House, Calcutta. After dinner he asked her to sing.

"What would you like me to sing?"

Lord Kitchener considered a moment. "'Home, Sweet Home,' please." At the end of the song he said, "Thank you," in his quiet way and relapsed into thoughtful silence.

Every woman who buys Bonds stands behind a soldier.

New Ideas for a Cold Weather Hike

Get Ready Boys, and Plan an Outing and Council-Fire for the Next Week-End

The old-fashioned idea that outings should be confined to hot summer days is fast fading and becoming an item in the down and out idea records. The real reason we hike more in summer is because we have more time but in the winter there are always free Saturdays. And if there is snow on the ground so much the better, for we can haul duffel on our bob-sleds and whenever we come to the top of a hill we can pile aboard and coast down.

The following instructions are given by Dan Beard in *Pictorial Review:*

First. Lay your plans for a hike, fixing the date and the place as well as the exact route over which you are to travel. Next, get the list of boys, Scouts, or Pioneers, who will agree to go. Third, find out who will furnish the bacon, who will furnish the chocolate or cocoa, the sandwiches or bread and butter, and all the other things necessary for the comfort of the midday rest and meal in the open. Fourth, have your dinner committeeman made responsible for the production of all the food; that is, he must see that the ones who agree to furnish certain articles, do not neglect or sidestep their part of the work. Fifth, see that the camp director is responsible for the production of the sleds, robes, blankets or shelter tents, which may be necessary.

Select a captain, whose duty it is to take command of the hikers, and to see that the other officers neglect nothing in their plans. The Captain is also guide, Pioneer and Scout for the expedition, so he should be one who knows the country, the roads and by-paths, as well as how to throw the diamond hitch, mend a broken sled and in fact, to "be prepared" for any emergencies that may arise.

In order to decide upon the amount of food required it is, of course, necessary to know exactly how many boys expect to be present. A teaspoonful of cocoa makes a teacupful, so if you allow two teaspoonfuls for each boy, that should be plenty. My secretary tells me that she can eat five sandwiches at a meal—if that is true, and I do not doubt it, then allow five for each boy.

What we need in the open, especially in winter, is good, hearty food such as pork and beans, beefsteak, and flapjacks, also something hot to drink, like a cup of steaming cocoa or chocolate. If you have eggs and milk, and both of these can be easily carried on a one-day hike, you may have flapjacks that will warm the cockles of your heart. Some people claim that a tablespoonful of snow is equal to half an egg, if used with corn-meal; so mix your batter stiff and just before you empty it into the frying-pan, add enough dry snow to thin the batter when the snow melts.

But, Pshaw! boys, why should I load you up with cooking directions when you have a mother or aunt or big sister who has cook-books filled with them, and can give you more recipes than you could ever carry out even though you were to graduate as a professional chef?

Of course this is to be a bob-sled hike, and I take it for granted that the reader has a bob-sled of his own, or can borrow one. So, also, it is taken as a matter of course, that he knows that if he happen to be living south of the snow belt, he may use a coasting wagon in place of a sled.

The bob-sleds are to be used for two purposes, or I might say three; as pack animals, as benches, and as tables. To use them as pack animals, the duffel is lashed on their backs. Take care to fasten it well.

While the cook or cooks are preparing the feast, the other boys may busy themselves by propping one of the bobs up on heaps of snow until it is high enough for a table, and then arranging the other bobs on each side of the table for benches.

In arranging the table bob, remember that the runners are made to slip over the snow easily, and consequently you must see that they are blocked by heaps of snow in front of them, or by pieces of wood under the bows to prevent them from slipping from their perch on the snowballs, and spilling the hot cocoa in your lap and scattering your beans and bacon over the snow.

A bob-sled council-fire will be a novelty, and may be arranged. All troops of Boy Scouts or stockades of Boy Pioneers attending the council-fire should be equipped with lanterns and bells strung on their belts or on their bob-sleds. This will make a novel and picturesque torchlight parade going and coming. The sleds will serve as seats around the council-fire, and also for sport on the way to and from the meeting.

The first troop to try this will be the Pioneers in winter council-fire work, and like all pioneers, they will have the satisfaction of starting a new thing knowing that thousands of others will gladly take up the trail after pioneers have shown the way.

The usual order of procedure for a midday camp where we have time for ceremonies, is about as follows: 1—Collect fire wood. 2—Light fires. 3—Totem Bearers line up five paces in front of the chief's seat and stand at attention. 4—All Scouts come to attention and give salute. 5—Totem Bearers return to their places and each Patrol or Stockade gives its own yell in turn. 6—All give the Camp-Fire yell. 7—All Scouts come to a salute and repeat in unison the Scout law. 8—All remove their hats and repeat the Pioneer or Scout oath. 9—"Squat!" At this order all the stockades or patrols sit down on their own bob-sleds. 10—The chief listens to suggestions or complaints. 11—The chief assigns the men to their different duties. 12—The cowboy call is given of Roll Out—Grub! Grub! 13—Pack up. 14—Hit the trail for home. This order is merely a suggestion, which may be modified and changed to suit the occasion. It is not even necessary that the boys on the hike should belong to the Scout Organization, or even to the Boy Pioneers, but we do expect them to be what we know all our readers are, real husky, clean-minded, clean-talking, fun-loving boys. Boys who have plenty of sand in their make-up, and courage to do whatever they know to be right, at all times. Boys who know how to fight, to fight for things really worth while; for the preservation of the forest and animal life, for right living, for better citizenship, for better schools, for more parks, and playgrounds, for a high standard of personal honor and loftier ambitions in life.

THE FINAL TEST

FROM A PHOTOGRAPH TAKEN AT THE EDISON RECORDING LABORATORIES

BEAUTIFUL Anna Case of the Metropolitan Opera Company sang the "Mad Scene" from Lucia for the December list of Edison Re-Creations.

Did Mr. Edison's recording experts succeed in obtaining an absolutely perfect Re-Creation of her voice? That was the all-important question and there was but one way to answer it. Miss Case stood beside the New Edison and began to sing the number again. Suddenly she paused and the New Edison continued the song alone. Was it possible to distinguish Anna Case's voice from the New Edison's Re-Creation of it? Other artists who also had made recordings for the December list listened to the comparison. The Re-Creation was pronounced an exact duplication of Miss Case's wonderful voice.

Similar tests with similar results have been made by thirty different artists in public before more than two million people and have been reviewed at length by America's principal newspapers. Ask for a copy of the booklet "What the Critics Say" containing reprints of what the newspapers have said about these amazing comparisons.

The New Edison, termed by the New York Globe "The phonograph with a soul," is the only sound reproducing instrument that sustains the test of direct comparison with the artists who make recordings for it. The New Edison is the only sound reproducing instrument that can bring into your home the work of great singers and instrumentalists exactly as presented by them on the stage.

May we send you a complimentary copy of our musical magazine "Along Broadway?"

Some Literary Traditions of Toronto

(*Continued from page* 12.)

circumstances and the greatest woman poet that Canada has so far produced—Isabella Valency Crawford.

"I had to tell her," says Mrs. Harrison, still regretful after all the years, "that we didn't pay for poetry."

Miss Crawford needed to be paid. She and her mother, the last save one brother, of a brilliant ill-fated Irish family, had come up from Peterborough to live in Toronto, and Valency, then in the late twenties, was trying to earn some money by the sale of those poems—glowing, splendid flame-like things—that everyone is proud to proclaim as great work to-day. But there was no sale. She would take them to the "Telegram" and the "Mail," and there they appeared for a brief day, and she made a little money out of serial stories—in no way up to her poems—and so she and her mother eked out a living in a room over Stuart's grocery shop on the corner of King and John streets. But the struggle was too hard, and she died at the early age of thirty-seven. Her poetry was collected and published by Mrs. John W. Garvin some years after her death, and during her life time it must have been a great satisfaction to her that she had the sympathy and support of Mrs. Harrison, who called attention to her one little paper-covered volume of verses, "Old Spookes Pass," both in "The Week," and with the powers-that-be in Ottawa. But to the people at large Miss Crawford was not even a name.

When you pass that dismal corner of King and John streets will you not sometimes say an "Ave" for the soul of that young genius who lived and died in such cruel poverty in Toronto? Here is her tribute to the city that ignored her:

She hears the marching centuries which Time
Leads up the dark peaks of Eternity:
The pulses of past warriors bound in her;
The pulses of dead sages beat in her;
The pulses of dead merchants stir in her.
Half queen, half child she bounds
To meet the coming Time, and climbs the steps
Of the tall throne he builds upon her strand.

At the time of the existence of "The Week" arose the herald of the "Canada First" slogan—a journal by name "The Nation," which also bore a distinctly literary tone. And these publications died away and there were none to take their places. The "Canadian Magazine," then coming into existence, could hardly have possessed very discriminating readers, for such young writers as Arthur MacFarlane, Harvey O'Higgins and Arthur Stringer believed the Toronto field so barren that they joyously escaped to New York, there to win a substantial recognition, as Bliss Carman and Charles G. D. Roberts had done before them.

In journalism, at this transition period, among the women writers we find one bright particular star who arose suddenly out of the west and became the best-loved newspaper writer, man or woman, that Canada has ever known—I mean, of course, "Kit" of the "Mail," that Irishwoman whose magnetism and warm human sympathy, as well as a vivid and sure journalistic touch, won her a new place and proved (first, I think, among the writers of her day), that a woman's page may be something more than a collection of cooking recipes and beauty hints, and uplift, and industrious clippings. Kit's "Kingdom" was absolutely her own. Into it wandered, weekly, thousands of men and women who were lured again and again by a charm that was at times almost uncanny. There was a mystery about "Kit" that held her readers by a spell. She was adored and imitated by every youthful feminine newspaper writer of twenty years ago, and when she died, while yet a comparatively young woman, in 1915, a great multitude of Canadians felt that they had lost a dear friend.

To be personal for a moment, I must say that the old red brick building at the corner of King and Bay streets where, as a young writer, I began to edit a department alongside of Kit's "Kingdom" is to me in every sense a literary shrine because of one ardent personality who felt and shared more of the mystery of life than any newspaper writer I have ever known.

The aspect of a city, its outer form or body, always acts and re-acts upon its artists. Toronto is not a picturesque city, but its streets and houses have meant something to a writer calling herself "Susanne Marny," whose "Tales of Old Toronto," published some ten years ago, are quite full of romance and color, while Mrs. Forsyth Grant's reminiscences, which appeared in the "Canadian Magazine" during 1914, are so delightful that they should be preserved in book form. The author is the daughter of Sir John Beverley Robinson, at one time Lieutenant-Governor of Ontario.

Poets who have done much of their work, nearly all in fact in Toronto, are Virna Sheard and Helena Coleman, both Canadians, while Marjory Pickthall, English by birth and distinctly un-Canadian in feeling, wrote nearly all of her very exquisite poems here.

One cannot speak of literary Toronto without a reference to Dr. George Parkin, for so long the principal of Upper Canada and later the superintendent of the Rhodes Scholarships at Oxford University, and to Dr. Archibald MacMurchy, for many years Rector of the Grammar School which was finally submerged into the newer title of High School or Collegiate Institute of Jarvis street. Dr. MacMurchy's volume "Canadian Literature," with its brief autobiographical notes on Canadian writers, was the first of its kind, and is still an invaluable addition to the library.

All these personalities tinge one's thoughts of a town and in themselves help to make its literary tradition. A strange jumble of "traditions," you will say! A college, a second-story back room over a grocery shop, a colonial mansion, a newspaper office! Yes, but the abode makes little difference as long as it has been inhabited by a living spirit, the power of whose flame is sufficiently bright to endure the test of time. In the end these lines must prove the test:

Whoever makes a thing more bright
He is an angel of all light.

Remember how skeptical you were about trying for the first time many of the food products you now use daily? It was the *actual use* that eventually convinced you of their value. Why, then, hesitate about trying

Swift's Premium Oleomargarine

So many housewives have learned, by *actual use*, of the delicious tastiness, purity and wholesomeness of this economical spread for bread that you should have no hesitancy in using it.

It is appetizing in appearance—nutritious in value—delicious in flavor. Comes to you fresh—packed in one-pound cartons—untouched by hand—and actually saves you money on every pound you buy. It bears the seal of Government approval and you will approve it, when you

Phyllis the Dairymaid is in Demand

(*Continued from page* 26.)

to $60 a month and board. It is estimated that at least fifty girls could be placed in cheese factories in Eastern Ontario next summer.

Girls on the Dairy Farm.

Some weeks ago the writer came upon three dairymaids on a big farm near Niagara Falls. They were busily at work, and there was much more of the 1918 war worker about them than of Phyllis, the Dairymaid, of pastoral fame.

"Like your work?"

"Well, rather. We're just as keen about it as we can be," vouchsafed a rosy-cheeked girl.

"Are you an old hand at the game?"

"Why, no, we just learned this summer. We want to stay on through the winter, but our manager doesn't need so much help now."

And later their employer, speaking enthusiastically of the work that his trio of dairymaids had done, declared that he would employ forty girls to milk his cows next year, provided he could get them.

There will certainly be no dearth of openings for the girl who takes up this work. There is immediate need for just such help. At the same time it is more than mere emergency work. It is a profession that stands waiting to be adopted by the best type of girl the country can produce—a profession that will be worth while for her, and one that will bring prosperity to the Dominion in years to come.

What London Thought of its Baseball Game

"As strenuous as a pillow-fight in a boys' dormitory," is the characterization which the London *Times* gives the baseball game played between the United States Army and Navy teams on July 4. It was an awakener for the English, a revelation of America at play; and the afternoon, "crammed full of extraordinary moments," passed "in such a pandemonium as was perhaps never heard before on an English playing-field." The United States seemed to be shouting in chorus, and Great Britain joined in, "a little breathless, but determined to make a good show of lung power." The writer says that the afternoon took them completely away to those distant times when they could rejoice under a blue sky without looking for Zeppelins and Gothas. The game was played on the Chelsea Football Grounds, and, says the writer:

"Never, moreover, was a football ground so arrayed. The rather dingy surroundings were shut out by a square mile or two of flags, 'Old Glory' and the Union Jack predominating, but the rest of the Allies not being forgotten. The grand stand was gorgeously draped, and the King and Queen went to their seats by a flowery way.

"Both for distinction and for enthusiasm the gathering was without precedent in baseball, or rather, 'the ball game,' as the more knowing among the spectators were careful to call it. Everybody appeared to realize that this was the kind of match that makes history. It was symptomatic and symbolic; for two peoples who have learned to play together are not far from complete understanding."

The King started off the festivities. The Army players dressed in green with blue caps, and the Navy, in blue trimmed with red, assembled before the Royal box, and the King descended among them, shook hands with the captains, and produced a ball on which he had written his name. The game started with this ball, but another was soon substituted, as it was the intention of the Anglo-American Baseball League, which had arranged the match, to save the autographed ball as a memento for President Wilson. The account continues:

The onlookers, who were estimated to number forty or fifty thousand in all, were gently persuaded to encroach no further on the field of play; and the game began. Now, baseball tempts every man to exaggeration. As all London ought to know by this time, it is one of the fastest and most exciting methods of getting breathless ever invented. It calls for great skill, and its rewards are salaries beyond the dreams of avarice. The dignity of cricket it disowns; the tremendous tumult of football is as the recreation of well-mannered mice by comparison to it. The players live on springs, possessing the activity of a high-grade machine. They think by lightning, and field, catch, and throw with the certainty of a stop-watch. As if the chaff of the spectators were not sufficient for them, they chevy one another. The pitcher can grin diabolically, if he be a good pitcher; and his comrades are thereby reassured and the striker daunted. The catcher is padded like an armchair, and must be able to take punishment with the calm of a prize-fighter.

All these qualities were superbly displayed in this match. We should not care to say which was the better side, because, frankly, we do not know. But the Navy won by two to one, and appeared to deserve its victory. Some of the catches in the long field, or whatever the baseball "fan" calls it, were enough to rouse a Gunn or a Bonner, those past heroes of the pavilion-rails, to emulate. The throwing was as near perfection as the human arm can make it. Those who saw baseball for the first time must have agreed that a first-rate player is worthy of his hire.

Many present yesterday made no secret of their ignorance. It may be that the prize for hard work, had one been offered to the whole assembly, would properly have gone to the American officers who strove hard and continuously to explain fine points to their English companions, fair and otherwise. These people, though often corrected, persisted in describing the pitcher as the "bowler," the catcher as the "wicket-keeper," and the striker as the "batsman." But American chivalry was very patient. It smiled through every mistake, and never once vaunted the ball game at the expense of cricket. For the credit of England it should be added that the superiority of cricket, when believed in as an article of faith, was most courteously suppressed.

At the end came a moment which, of all the wonderful moments that had characterized it, was the most wonderful. The game had been won for the Navy. The Navy in its own corner of the field had previously packed serried ranks of sailors to shout and demonstrate as soon as the last stroke was made. The crowd surged on to the field. Among them, in single file, their hands on one another's shoulders, like one huge snake, the sailors twined their hilarious path. The uproar was tremendous. Englishmen cheered, Americans yelled, tin instruments of various kinds brayed a raucous din. The King and the Royal party stood looking on. Suddenly, as by magic (whose magic it was did not appear, but it worked), the tumult dropped into silence. Across that silence drifted the soft, almost pathetic, first chords of "The Star-Spangled Banner," played by the band of the Welsh Guards. Hats came off. Sailors and soldiers stood to attention, saluting. After all that noise the quietude, accented by the poignant music, came near being painful. The meaning of this most significant of all ball games was carried along the air. There was more cheering afterwards, but cheering of a radically different kind. The crowd awoke to consciousness that the afternoon had passed into the history of two great nations.

A Chelsea veteran in his scarlet coat was in the crowd. Somebody wondered "what he thought of it all." Somebody else said musingly: "I wonder what the Kaiser would think of it all if he could be here." It can not be denied that, superficially, the two great nations were just making an afternoon of it.

With painstaking care *The Times* explains to its readers just what a "rooter" is and to what rites he is addicted:

The "rooters" for three parts of the time were lords of the situation. "Rooters" are the zealots who assemble in companies to howl their respective sides to victory. There were boards at the entrance to the grounds directing Army "rooters" to go one way, Navy "rooters" another, and telling them the number of shillings they must pay for their places. It struck one as a small sum before the game began; but when the game had ended those shillings appeared an unjustifiable and impudent tax on the hard work of honest men.

The "rooter" toils with his mouth, to which sometimes he attaches a megaphone. Judging from yesterday, the Army "rooter" is a tame and inarticulate creature compared with him of the

Music and the Home Beautiful

(*Continued from page 22.*)

Let it be clearly understood, however, that these are the luxuries of the wealthy. Their musical importance lies in the fact that they enable the reproducing instrument to be introduced into the most meticulously designed interiors, without detracting from the general effect. But it must not be imagined that the music they will give forth will be any better in quality or more appealing than that produced by less expensively enveloped machines. I would not advise anyone to forego the pleasure that the possession of such a machine and a fine set of records can give until he can afford to purchase one of these beautiful modern art models. As a matter of fact, manufacturers have for some years been making very sightly cabinets at prices within the range of the average man's purse. Even in the cheapest machines of the standard order, the records that may be used are precisely the same as in the case of the costly creations in English Gothic and hand-carved oak. After all the main value of the reproducing instruments lies in the pleasure they give and the facilities they provide for hearing the best music interpreted by the finest artists, in the environment of home. The new development is, nevertheless, interesting as a demonstration that one of the most marvellous of inventions may be made a delight to the eye, as well as to the ear.

STRANGE USE FOR A PALACE.

The Picture Gallery, St. James's Palace, never held just such a gathering as met one afternoon lately, to make a formal presentation to Queen Mary of the innumerable gifts in honor of the Royal Silver Wedding. The 125 branches of Queen Mary's Needlework Guild were represented, as well as others who had contributed to the shower. Replying to a formal speech of presentation by Princess Beatrice, the Queen expressed both surprise and pleasure at the wonderful contribution for troops both in and out of hospital. Gifts valued at £30,625 7s. 6d. were exhibited in Queen Anne's drawing room, and £9,268 7s. 1d. was contributed in money. In addition, 66 cases are on their way from overseas, and the beautiful pieces of silver donated for sale have not been valued.

Magnificent stacks of blankets pleased the Queen particularly. There were 30,000 pairs of socks, and these reached almost to the ceiling in one corner of the room. There was an equally immense supply of soap, which war had made valuable enough to be given place of honor in a King's palace. Love for the Empire, for the Queen and for the soldiers would necessarily arouse great enthusiasm in the assembling of these gifts. Children and tiny tots claimed the privilege of sending something for the shower, and countless old ladies sent their tokens of love. Among these was an old christening spoon from the one to whom it was given eighty-five years ago. Another dear old lady of eighty-eight sent a beautifully knitted set of "washers." These gifts will be duplicated many times, it is safe to say, in the 66 cases that are still to be unpacked. China, Hawaii, California, Falkland Ids., Rio de Janeiro and Tasmania represented, literally, the four corners of the earth, anxious to do honor to the Queen and the cause dearest to her heart.

THE LADY WITH THE LAMP.

There is in France a young English V.A.D. who serves King and country and the whole world by trimming between two hundred and three hundred lamps every day. If anyone has ever attempted to keep one lamp in order, that person will not envy the V.A.D. Neither will the fine grade of patriotism underlying the lamp trimming be overlooked. The work is performed in a cold, dark cellar, and the worker is alone much of the time; but the thing that keeps her steadily and cheerfully at work is the fact that every lamp will be needed at night in the hospital to which the cellar belongs. It happens that this particular hospital is one established in an old French chateau, picturesque and full of charm, historically, but entailing a vast amount of extremely hard work because chateau and monasteries were not constructed, centuries ago, with an eye to perfect sanitary arrangements. Highly cultured Englishmen, over draft age or physically unfit, count this difficult work no hardship. They have become expert stretcher-bearers, have driven ambulances under fire, and do countless things that are much more difficult than similar work in English hospitals in France.

DOGS' WOOL.

The spinning of dogs' wool has proved a success, and several offices have been opened in London to receive and prepare the combings. The Ladies' Kennel Association, Belfast Chambers, Beak street, Regent street W., receive the wool, sterilize it and clean it, after which it is sent to the central work rooms for spinning. The wool from Pekinese and collies is especially beautiful; the old grey sheep dog is also responsible for delightful knitted jackets that stand no end of wear, and launder beautifully. All soft-haired dogs yield lovely wool, and the hair from wire-haired dogs is used to stuff pillows for the wounded. The Countess of Gosford, Royal Academy, Piccadilly, W., has charge of this industry.

DOING IT RIGHT.

There is danger of missing much of the zest of the brilliant achievements that characterize this war through not understanding the marvellous skill upon which the success of those undertakings depends. In the Zeebrugge glory, for instance, most people think only of the valor needed by those who manned the ships—a valor requiring them to face a vigorous and fairly disastrous bombardment. The sailors, according to the usual idea of the victory, did the same thing which our soldiers do every time they go "over the top" and clean out dug-outs.

The fault is not to be laid at the door of the public, however, for they would cheer all the more lustily if they knew more of the cost of the victories in the way of preparation, the skilful laying of plans beforehand, and, above everything else, the years of technical training which were necessary before Zeebrugge or the bottling up of the Koningsberg or any other great victory was possible.

The "placing of the ship the way he wished it to lie" was considered epitaph enough by his commander when speaking of the gallant captain of the Vindictive. It was indeed the placing of the ship that was the real achievement. Landsmen have no way of knowing that unless a ship sinks on an even keel one end will be carried down stream and the other will stick up in the air. The ship will finally settle in the line of the channel—and will not obstruct navigation. German submarines and other vessels would still be going in and out of Zeebrugge had the captain of the Vindictive not known how to do this masterly thing of sinking his ship to lie across the channel instead of lying parallel. Two other captains knew the same thing, and there the three vessels lie to-day with mathematical precision, as is now known from a photograph taken by a German officer in a low-flying aeroplane. How the photograph came into British hands is another story.

This is not the first time that German vessels have been bottled up during this war by British ships that blocked the harbor completely because their captains knew how to sink a ship the way it should lie. An old collier, the Newbridge, was given that honorable work to do when the German cruiser Koningsberg was penned up in 1914 in the Rufigi river. The Newbridge had to be anchored head and stern, and there was a heavy fire from the shore. The rest of the story reads like the account of a crew's picnic ashore. After she was anchored into position the crew pulled the inlet valve, and while the ship was settling, the crew stepped into the boat that was waiting, fired the fuse that would blow out some of the bottom plates, and then left her to do what she was meant to do.

It gives one a pleased feeling to know that in this war both the Germans and the Turks have attempted to block the harbor in which British ships were lying, and that both have failed completely and clumsily.

Know Art. Currie---Well, Rather!

(*Continued from page* 25.)

election to its presidency, an office he has held since 1907.

General Sir Sam Hughes in that notable burst of energy on the outbreak of war, had one thought uppermost in his mind—he wanted Currie. A telegram was dispatched proffering the command of a battalion of infantry, and with as great celerity the compliment was acknowledged and the burden of the responsible post accepted. The then Col. Currie arrived at Valcartier Camp as officer commanding the 50th Victoria Scottish, but before the first great armada set out for Britain's shores Currie had started sky-rocketing.

Promotion to command the Second Infantry Brigade was his first advancement. What he has since done at the front is an old and thrilling story. Recognition by General Alderson, decoration with the Distinguished Service Order, appointment as commander of the Second Canadian Division, Knighthood from the King, and at length selection by British General Headquarters as Commander-in-Chief of the Canadians were the steps in the ladder by which he has attained a pinnacle of fame.

Again and again the shock troops of the allied armies through an unbroken succession of major victories Currie, with his indomitable forces has won fame, honor and respect for Canada among the nations of the world, and in his home land, he and they have made transcontinentally immortal the name of the lad who first saw light of day on the old Fourth Line of Adelaide.

Perchance still with the instincts of a hustling real estate man, he has again and again retrieved for France her battered townsites, and for Albert, King of the Belgians, his cherished "close-in subdivisions," but through it all, on the testimony of those who have known him best Over There he remains to-day a splendid "blending of ability, humility and simplicity."

No wonder Strathroy gasped!

Since the time of Columbus did any boy ever spring such a surprise on the folks 'round home? Now, like the enthused populace of Genoa, you will find them any day, swelled with elation and recounting a set of standard tales of the life of the commander in his days of schooling, twenty-five years or more ago; stories of his prowess on the field of sport; of his accepted leadership among the little group of scholars in the old country school house; of his aggressive shaping, even in his youth, of a dominant and commanding personality. To young and old the honorable prefix of his knightly title, or the appellation "General Currie" are too distant for usage among old friends, and close ones.

And so should you happen some of these days to drop in at Strathroy on a pilgrimage to the Currie homestead, you will content yourself with the rendition of somewhat stereotyped, though pretty reminiscences of the great.

If you seek for his intimates of those good old boyhood days stop any man along the street, and then in answer to your questioning, watch the prideful bosom swell:

"Know Art. Currie? Well, rather!"

A Lesson in Pure English

Writing in *Harper's Magazine*, William Dean Howells, with characteristic urbanity, calls the rising generation to account for its cruel abuse of the King's English in the ensuing imaginary conversation between an elderly gentleman—the essayist—and a sprightly young lady who breezes in upon him with the words, "Well I hope she gets it":

At this the essayist put his hands to his ears and lamented, "Oh, my dear child, my poor girl!"

"Well, what is it now, Uncle?" she tenderly entreated him, for she knew that she often afflicted him by her very common parlance, and was always sorry for it. "Have I gotten something wrong?"

"Wrong! Don't you know that you mustn't, that you really *can't* say, 'I hope she gets it'?"

"What is the reason? What would you say yourself?"

"What, but what all who speak English must say: 'I hope she may get it,' or, 'I hope she will get it.'"

"Oh! Then saying 'I hope she gets it' isn't English?"

"No, never."

"And what is it, then?"

"It is Yiddish."

"Oh, everybody says it!"

"Do they? So much the worse for them and so much the better for nobody who doesn't."

"Yes, but what's the use of worrying about these sort of things?"

"This sort of things!" he hissed.

"I mean *this* sort. I suppose I shall try to speak English, as you call it, but as soon as I get away I am afraid I shall speak Yiddish again. There is an awful fascination in it, and after you have gotten over the first strangeness you don't notice it. But couldn't you write out a little paragraph, or something, and put in all the things I

(*Continued on page* 55.)

What London Thought of its Baseball Game

(*Continued from preceding page.*)

Navy, whose voice is that of ocean storms.

The Navy sang like this:

Give 'em the ax, the ax, the axo.
Give 'em the ax, the ax, the axo.
Where? where? where?
Right in the neck, the neck, the necko.
Right in the neck, the neck, the necko.
There! there! there!

Who gets the ax?
Army! (*Very loud*).
Who says so?
Navy! (*Much louder*).

Then it sang like this:

One, two, three, four, five, six, seven.
All the Navy goes to heaven.
When we get there we will yell,
"Army, Army, go to ——" (groan).

The strain changed, with the words:

Strawberry shortcake, huckleberry pie,
V-1-C-T-O-R-Y!
Are we in it? Well, I guess!
Navy, Navy! Yes, yes, yes!

In honor of the King and Queen arose the chorus:

'Rah! 'Rah! 'Rah!
'Rah! 'Rah! 'Rah!
'Rah! 'Rah! 'Rah!
King George, Queen Mary,
Great Britain.

No printed page, however, can deal adequately with the merits of the "rooter." He needs music to get justice; something more, or something less, than music.

To faithful American fans, there will be a decided element of humor in the terminology of the English writer when he attempts a technical description of the game:

The Navy battled first, but it was not until the fourth innings that a run was scored. Then Ensign Fuller crossed the home plate through a fine two-base hit by McNally. This success was greeted uproariously by the Navy's "rooters," and when Fuller scored a second run in the sixth innings—making it two-love in their favor—the greetings were redoubled. The pitching and fielding were brilliant, and just when it looked as if the Army would be beaten pointless, Tober made a fine two-base hit in the ninth innings, and as Lafitte followed him with a "two-baser," it took Tober home, and thus the Army registered their single run in their last knock.

The pitching of Pennock, for the Navy, and Lafitte, for the Army, was the feature of the game, and these two players, who are famous in the United States, worthily upheld their reputations. Pennock "struck out" 14 batsmen, and Lafitte allowed only five scattered hits. The scores were:

NAVY—0, 0, 0, 1, 0, 1, 0, 0, 0—2.
ARMY—0, 0, 0, 0, 0, 0, 0, 0, 1—1.

The line-up was as follows:

UNITED STATES NAVY.—Lee, right field; Vannatter, third base; Hayes, second base; McNally, first base; Egan, left field; Fierros, short stop; Maney, centre field; Fuller, catcher, and Pennock, pitcher.

UNITED STATES ARMY.—Maender, left field; Dorn, second base; Blackmoore, short stop; Tober, first base; Lafitte, pitcher; Batholemy, catcher; Rawlings, right field; Dublynn, third base, and Mims, centre field.

Official Umpire.—Arlie Latham, formerly of the New York Giants.

Summing the whole situation up, *The Times* is complacent:

Nothing really dimmed the brilliance of yesterday afternoon. Of good play there was plenty, and it was admired by Americans and Englishmen alike. As a spectacle the game and the audience might strive for pre-eminence. Naval officers rubbed shoulders with Army officers, the uniforms of the United States of America with those of the United Kingdom. Admirals enjoyed themselves with the light-heartedness of A.B.'s, and private soldiers could hardly laugh more delightedly than did generals. The Stars and Stripes was worn or waved by every man, woman, and child; and there could be no doubt whatever that its adoption meant a whole-hearted acceptance of America as a comrade in play and a near relation in the great work that lies before the two big English-speaking families.—*Literary Digest.*

A ROSE ENCHANTED

(*Continued from page* 15.)

Nicholas, is long life for a rose. But there was something about the blossom, we remarked? Yes, yes, I remember. It was scentless, and my mother would have none of it. Women are like that, and I myself care not for such roses in my garden." So saying, he rode away, the jingling groom following.

A great desolation swept over the little princess-rose as they went.

He cared not for such in his garden! Oh, if he only knew! she thought. If he only knew! If she could but find a way to tell him! But there was no such way. Everything passed because she had no sweetness. Almost she wished she were a cinnamon rose, or a briar. Perchance, then, the King would have broken her from the stem and fastened her on his doublet and worn her away. Quickly she scorned herself for the thought. She, a princess—truly a princess, though enchanted! For a little only. Pride and anger filled her heart. Then she was left again to loneliness, and these things passed away.

Day after day passed, and now she had come to watch the bridle path hour by hour for the dark figure on the great black horse. Hour by hour she listened for the jingling buttons of the little groom.

And again one morning of sunshine they came.

This time the king drew his horse up suddenly beside the rose bush.

"Now, by Flora, the goddess of all flowers!" he exclaimed, "but this is past belief! The scentless rose still blooms, Nicholas! How many days since we took this path before?"

"Eight days, Your Majesty," returned the little groom.

"Sixteen in all since my mother rode here with me then," said the king "and still but half-blown. Dismount and bring hither the golden pot, Nicholas."

The princess-rose trembled with excitement. "What next?" she thought, "what next?"

The king leaned down and touched the flower. "Unscented still," he said, "but of a rare beauty. I will have this golden pot and plant taken to the room-of-books in the palace—Nicholas. Call the gardener."

The old man came, pulling his forelock of white hair.

"A strange rose, this, Bellman," said the king, "and one that knows not the time to die. Have it taken to the palace."

"Ay! Your Majesty," the old man answered. "It be a rare queer rose—as you say. I see all things in thy garden, but never have I seen bird or bee or moth or butterfly stop near her. It seems a friendless thing, to these old eyes, and belikes is lonely."

"Lonely!" echoed the king, "then I should indeed have it taken to my palace. Loneliness reigns there, Bellman,—in spite of all the court."

"Is not thy mother with thee—my Master?" questioned the gardener.

"She is there, Bellman, but is ill since yester eve. My brothers are at enmity with us, as you who have known us always, have heard. The friend I love best has been lately killed in battle—and peace has not yet come. Much I envy you your days of peace here in the garden. But we must ride on—so good-morrow to you, old friend."

The rose listened until the last sound died away.

Then came an under-gardener and carried the golden pot and rose-bush to the palace. Afterwards an unbending footman placed them by a window in the room-of-books. It was a quiet room and filled with a golden gloom. Books lined the walls from floor to ceiling. There was no other flower in all the place and the red rose shone like a flame in the room.

A gladness flooded her, and though the place was more quiet than the garden, and there was no one in it, she was no longer lonely. For this was the king's palace, and sooner or later he would return to it. She listened for his step and watched for him.

By and by he came, and seeing the flower, went over to it, and lifted the half-blown bud.

"Most lovely thing," he said. "Whence have you this power to live? Dost not know you have out-stayed your time? Art perchance a rose of Heaven—blown by unkind fate on earth, and therefore fadeless? No. Not so. The roses of Heaven would be sweet of perfume."

Night came, but the rose was not afraid, for she thought of the king's words and waited for him to return.

Time went on, and always when His Majesty came into the room-of-books he stopped by the rose and marvelled at it.

"So lovely still!" he said one morning. "Not one petal dropped! Give me your secret, little rose, that I may keep eternal youth. And yet—no! I have no youth to keep, though my years are not many. Wars and the rumors of wars age me. Strife in the court, the jealousy of my brothers, the illness of my beloved mother, all these take the joy out of life. If I knew love—such love as one dreams of—But no, again. There is no beauty in all my court I could so love. They are like you—little rose. Every one like you. They lack sweetness—soul. The nameless something—without which they are worthless.

"If you had been sweet, little rose, you would have been plucked long ere this. Ay—plucked and carried to the queen, for by my faith, never was there so bewitching a flower!"

Again he went away—and through all the hours that followed the rose-princess listened only for his step.

But there came a day of mourning to the palace, when it was hushed, and no slightest sound of mirth by hall or stair drifted into the room-of-books. No one of all the courtiers came and wondered at her lasting bloom. For often now they came and wondered at her—old scientists and philosophers: wise men of diverse cults, alchemists, and theorists, as well as the young and frivolous courtiers. The rose had become the fashion of the hour as a topic and diversion, and all knew of her beauty. But by the king's order no lightest touch was to be laid upon the plant in the golden pot.

To-day, though, no one entered the room-of-books except a little page to fetch a breviary, and he was garbed most dolefully in black from head to toe.

Having got the book, curiosity took him over to the flower.

"Queer little thing!" he said as though half-afraid: "All the court is guessing about thee! I myself think thou art enchanted, and if I could steal one crimson leaf and wear it upon my heart I never would grow old either. But that would not suit me to remain as I am. I would be a man. 'Tis hateful to be young and sent hither and thither at the whim of a maid-of-honor, and then, peradventure ha' one's ears boxed at any mischance. Truly I desire to be a man speedily! But hark you, sweet one. I want not to grow ancient! Nay verily! Nor to die! I like not the aspect of death. I like it not at all. Heed you, little rose. The Queen-Mother is dead, and to be entombed to-morrow. And she was not so ancient—and was of a merry heart withal. Yet she is dead," he shivered a little. "In the chapel she lies in state. To lie in state is a sorry business, lovely rose. Sooner would I be a page and alive!"

So he left the room, peering fearfully around, for the place was full of shadows.

The little rose was alone again, but she had now no thoughts for herself—nor any self-pity. All her thoughts were with the young king. It was the weight of his loneliness that hurt her—and she only felt his sorrow.

At noon the next day a bell began tolling. One by one the solemn, heavy sounds fell, setting the air a-quiver. The rose shuddered as she heard them.

"She is dead!" the bell said. "She is dead!—is dead! She is dead!" over and over and over again.

To be dead, thought the little rose. Why was it to be so feared? Did they not say in her own country that no fairy died but only changed? Yet, what was this change? Who could tell? Her godmother had warned her to hold fast the magic perfume, or she would die.

Fear possessed her. Mad fear! She remembered the face of the little page when he had told of the Queen's lying-in-state.

And as she thought, the door of the room-of-books opened, and the king entered. There was no change at all in his garments, for he ever wore black, but his young face was like carven ivory.

He walked up and down the long room—up and down. Presently he stopped beside the rose-bush, and stood looking at the crimson flower.

"Wonderful!" he said at last. "Most wonderful of all things I have seen! A deathless rose in this world of death. Yet who would wish to live long, O wonder flower?" He shook his head and smiled a little. "I can think of but one thing that would detain me, willingly. I would know love before I pass on —" Then he shrugged his shoulders as at a fancy. "To be a king—and yet have bestowed upon one the gift of true love also. 'Tis too much to ask of Fate."

Again he paced the floor and again paused by the flower. This time he touched it lightly.

"O beautiful—most beautiful!" he repeated. "If you were only sweet! Then I would to-day carry you to my mother as my last gift. She lies in such lonely grandeur, little rose. Methinks you might even yet bring her some comfort. The great wreaths and arches of white flowers — the mourning tokens — seem not to belong to her at all."

The rose looked into the sorrowful face above her and trembled. Suddenly she understood that the hour had come when there was but one thing left for her to do. She must set the magic perfume free to sweeten the air, since the king wished it.

Then she would be carried to the

A Splendid Programme Promised For The Ontario Institutes Convention Held In Toronto

At the Provincial Convention to be held in Toronto, on November 19, 20 and 21, 1918, provision will be made for the discussion of Institute work in general by the delegates. Patriotic work will, of course, be given most prominence how to finance for patriotic effort organizing workers and encouraging them. Girls' work in the Institute will again receive attention. The department appreciates the splendid opportunity, when the war is won, of extending this work, and methods to be followed will be fully discussed. Plans for making district annual meetings of greater value and the responsibility of the district officers in general will be considered.

The evening meeting of the 19th will be of a devotional character, and a well known clergyman who has spent some time on the field of battle will be the speaker. A number of returned soldiers will lead in the singing.

On the morning of the second day, Demonstration Lecture Courses in Domestic Science, Sewing, and Home Nursing will be fully reported upon and their importance emphasized. It is expected that during the coming winter there will be considerable increase in this feature of Institute endeavor.

Food conservation, with emphasis on community effort, war-time cookery, etc., will have a place on the programme, and the part of women in farm work will be reported upon and plans for 1919 outlined.

The work of the Provincial Housing Commission will be brought before the convention and its application to rural conditions outlined.

The afternoon and evening of the second day will be devoted to health and educational matters. Medical inspection of schools will be fully considered, organizing for the work, the part that Institutes may take in organizing and carrying on the work, as well as "follow up work" by nurses and clinics. It is expected that a leading educationist will give an address. Child Welfare work as encouraged by the Provincial Board of Health will be fully explained. The possibilities for rural schools will be considered and encouraged.

On the morning of Thursday reports from the Eastern and Western Ontario conventions will be given and the Nationalization of Institutes will be dealt with, followed by general discussion and resolutions.

In the afternoon, Thursday, the delegates will be taken to the Davisville Hospital for Returned Soldiers, where one of the leaders in the re-education of soldiers will give an address and the delegates will be given an opportunity to visit the hospital, as well as the work rooms and class rooms. This should prove a very interesting and profitable occasion.

Greetings From An Ontario Institute Lecturer, Now Organizing in Northern England.

London, England,
Sept. 7th, 1918.

To the Superintendent of Ontario Women's Institutes:

Dear Sir,—Thanks so much for the literature and sample books you sent.

Ontario Women's Institutes have given birth to a great idea which bids fair to influence even wider fields than the British Empire. It has swept like a prairie fire over these islands, only instead of blackness and desolation in its wake spring up the green growth of a larger life outlook and grand rural progress.

Last October, when the Board took them over from the Agricultural Organization Society, there were 140 Institutes. To-day there are nearly 700. The first Institute was started by our Mrs. Watt, of British Columbia, in September, 1915, at a little place with a big name—Llanfairpwllgwyngyllgogerychyrndrobwllllantysiliogogogoch, Wales. Now, please remember when you are telling of this to Ontario Institutes to pronounce *every* letter in it, for in Welsh there are no silent letters.

The Institutes proved one of our best mediums for fighting the submarine. We concentrated in our programme this year on food production, food economy, and food conservation, and the organized rural home-makers formed one of the very best allies of the Government, against our enemy. Now, they are looking looked to as one of the chief factors in the forward looking national reconstruction schemes.

We are surprisingly democratic. Our president and secretaries range from a Marchioness to a tailor's wife, a countess to a cobbler's wife. The unit in common is the British home. It is a beautiful and inspiring thing to see. Better homes for everyone is the slogan. The Board of Education here is also actively co-operating and freely and generously placing their lecturers and demonstrators at the disposal of the Institutes.

So great, indeed, is the general appreciation of the organization that our Mrs. Watt, who organized the first branches, has been given a decoration and made a "Member of the British Empire." Her son has received a decoration for distinguished conduct in France, and when he gets leave, mother and son will go before the King, together, to be decorated, but the mother's will take precedence of her son's.

We had a delightful and successful

(*Continued on following page.*)

GALT WOMEN'S INSTITUTE HOLDS ITS FIRST COMMUNITY FAIR

One of the most unique as well as successful affairs ever undertaken by the Galt Branch was the Community Fair recently planned, organized and carried out by this enthusiastic body of workers. The community idea was introduced by Mrs. E. J. Baird, of Galt, who, when visiting in New York, saw it worked out so successfully in that city that she decided it could well be adopted in a suitable manner by the women of the Galt Institute.

Mrs. E. Barlow, President of the Galt Women's Institute.

Accordingly it was undertaken, the co-operation of the "town fathers," being secured a town block in the residential district was closed to traffic for the evening decided upon—August 27th. Flags, bunting, lanterns streamers flowers and gay booths were everywhere, and the trees lining the street gave the whole scene a beauty which could not have been obtained indoors. It was indeed a community fair — everyone came, and everyone found something planned for his enjoyment.

At the entrance to the avenue where the affair took place hung a remarkably fine old "Royal Standard," which formerly had flown from the mast-head of the King's yacht, the "Osborne," and was loaned by a returned sailor. The homes on both sides of the street were prettily decorated and lighted, and on one verandah a continuous programme was given. A Highland piper added to the enjoyment of many a canny Scot—for Galt would not be true to its traditions without at least a touch of the "land of the heather."

Community singing was a new feature in Galt, but all joined heartily in the patriotic choruses, and several solos were sung by the ladies.

The money-makers consisted of a "bat the Kaiser," indoor quoits, raffles on a doll, banner and crocheted yoke. Booths for ice cream, lemonade, home baking, fancy work, flowers and a fish pond all added to the revenue, but probably the booth which was most popular was that in which hot boiled cobs of corn were sold. In the tea room, after the tea was enjoyed, a very excellent fortune-teller revealed the secrets of the past and the mysteries of the future to the eager listeners.

Mrs. E. J. Baird, who introduced the Community idea in the Galt Institute.

Four hundred and forty-four dollars was the amount made by the members of the Institute through their Community Fair, the Red Cross eventually receiving the money.

Every woman who buys Bonds stands behind a soldier.

Canadian Women's Institutes

(Continued from preceding page.)

Women's Institute summer school for two weeks at Bangor University, Wales, in July. Mrs. Lloyd George gave us a nice address on the closing day. I had the pleasure and honor of representing England (and, of course, Canada) at the first convention of the Scottish Women's Institutes in June. They are closely following Ontario's constitution, as they consider it still the best of any. We are expecting ideas and originality from the Scottish Institutes. There seems to be just one danger threatening our English movement—that of too complicated machinery for successful administration. However, I think the strength of directness and simplicity will be apparent later.

The work has been strenuous, but a great joy, and we take immense satisfaction in having, with the noble help of Canada and the U.S.A., conquered the submarine danger. I have thought of you and my dear Ontario fellow-workers so often this year with a certain happy feeling that we were co-operating closely still, though on a wider scale than ever before, for "Home and Country." I hope you will give my greetings to the Ontario Women's Institute members and tell them every little branch that is doing good work is an inspiration, and has helped not only to save but to upbuild the Empire, as well as its own community.

Yours truly,

(Sgd.) EMILY J. GUEST,
Organizer of Women's Institutes
for the North of England.

A Women's Institute Exhibit and a Red Cross Market Day.

The Women's Institute of Thunder Bay had an exhibit at the West Algoma Agricultural Fair, held at Fort William, September 15th, 16th and 17th. It consisted of canned fruits and vegetables. Vegetables grown from seed obtained from the Department, some war-time cookery, for which recipes were given, some camples of canned fruits with corn syrup were also shown. Institute Banners were used for decorating; also small sheaves of grain tied with blue and gold. It seemed to attract a good deal of attention, and will no doubt interest a great many in the work.

Three of our Institutes, viz., Slate River, South Neebing and Fort William, held their annual Red Cross market day in Fort William, September 5th, and brought in vegetables, farm produce, butter and eggs, and sold them on the market, making $135.00 for the Red Cross work. This is becoming quite an annual event, and the people look forward to this day each year.

The Institutes of our district are each canvassing their respective townships for the Sailors' Fund Campaign, which is being held this coming week. The work is entirely in the hands of the Women's Institutes in the different townships.

WOMEN'S INSTITUTE AND RED CROSS CANNING CENTRES.

The establishment of community canning centres, chiefly for the purpose of putting up supplies of fruit, vegetables and chicken, in various forms, for use in the Canadian military hospitals overseas, and, to a limited extent, in Canada, was well begun at Parkhill a year ago. This year the Institutes Branch of the Department of Agriculture has succeeded in establishing centres at seven points—Parkhill in Middlesex County, Barrie in Simcoe County, Niagara-on-the-Lake in Lincoln County, Mapleton in Elgin, Guelph in Wellington, Stratford in Perth, and Grimsby East in Lincoln.

An opportunity is afforded in these centres for the women of the community to bring their own produce, containers and supplies and put them up for private use. Advantage has been taken of this in only a few of the centres, for the women are more anxious that the soldiers should be well provided for rather than that they put the stores in their own cellars. The Institute officers have been most loyal in appealing for supplies to be sent to these centres, and not only the members of the Institute, but many others have contributed most liberally.

The Parkhill and Barrie centres have as their objective ten thousand chickens each.

The Department of Agriculture has provided up-to-date equipment, consisting, among other things, of a boiler for steam supply, large galvanized steam kettles, vats, pulping machines, closing machines and apparatus for sealing tin cans, and, in the majority of cases, a motor for power supply. Local Red Cross Societies and other women's organizations, such as the I.O.D.E., have most heartily co-operated in supplying free labor, and the Department furnishes a qualified demonstrator to direct the work.

The Canadian Red Cross Society has undertaken to furnish sugar, containers, vinegar and spices. Most valuable assistance has been rendered by the Red Cross canning kitchen at Hamilton and the Provincial Experimental Fruit Station at Vineland in organizing the work, installing the equipment and directing operations.

It would appear that these centres will furnish goods to the value of at least $100,000 for shipment overseas this year. When it is remembered that much of the fruit and vegetables utilized at these centres would otherwise be wasted, the value of the effort is very apparent. There is no doubt but that the establishment of centres will be considerably extended another year, and when the time comes that supplies are not required in large quantities for our military hospitals, the value of community effort will have been so fully demonstrated that canning centres will be a permanent feature.

The Men Going to Siberia Need Comforts.

To be "sent to Siberia" sounds like a sentence of penal servitude, and when we heard that some of our Canadian troops were to serve on the Eastern front, we thought it meant exile to a land of drear desolation. It is a relief to hear that the climate resembles very closely that of our own North-West, and that the Government is equipping our men with generous completeness for winter conditions.

Yet, when all is said and done, the Siberian Expedition is going to have peculiar hardships and difficulties of its own. It will have much of the boredom and probably little of the excitement of battle, and it is well known that the monotony of war tests the spirit and morale of the troops more than actual fighting.

There will be great scope, therefore, for us who stay at home to provide some of the extras and comforts which carry even to the best-equipped soldier a message of good cheer. Transportation, both by sea and land, between Canada and Siberia is strictly limited; we must send what is wanted, and only what is wanted.

The Militia Department has accepted the services both of the Red Cross and of the Canadian War Contingent Association, and will give transportation to the comforts they provide. These will be under the charge of a special Commissioner, who will issue the goods to the hospital units or to the battalions, as the case may be, so all supplies will be looked after carefully.

We are asked not to load up the stores until the advance party has reached Siberia and can survey the situation, but both medical and combatant officers agree that the best service we can perform is to minister to the comfort and entertainment of the men by sending such things as gramophones, modern and suitable monthly magazines (with advertisements cut out and the stories stitched together), stationery, indelible pencils, hard candies, properly packed in tins; tobacco in all forms, and chewing gum; all kinds of relishes to vary monotonous food. Then socks, of course, and probably other warm garments in limited quantities, such as Balaclava caps and scarves.

Christmas will afford a great opportunity for service. The C.W.C.A. wants to give the Canadians a taste of Christmas. Transportation is too limited to

admit of an appeal for individual Christmas stockings or parcels, but we can and will (funds permitting), provide plum pudding, smokes, candles, etc. for the Christmas dinner. Contributions of cash for this purpose are needed immediately, as Christmas cheer must be ready in Canada early in November if it is to be in Siberia by Yuletide.

Possibly the demand may be largely increased if we are asked to furnish comforts for some of the Imperial troops now serving there. But money is going to be the chief need for Siberia. Contributions will be gladly received by the treasurer of the C.W.C.A., 56 Church street, Toronto, or at local receiving centres of the Association.

ADELAIDE M. PLUMPTRE.

THE DEMONSTRATION LECTURE COURSES APPRECIATED.

The following extract from the secretary of an Institute which has just completed a sewing course, speaks for itself.

"The class was composed of three or four matrons, five girls of about eighteen and about five girls of fourteen or thereabouts.

"Nearly every pupil made herself a cotton housedress, some made a separate skirt besides and nearly every one made herself in the last five lessons a 'best' dress of poplin, charmeuse or messaline. There was not a mistake made in any of the completed work.

"The education of some of the young married women of the class has been sadly neglected in this branch of sewing, and they were sure to be burdensome to their young farmer husbands sooner or later if it had not been for this opportunity granted to our Institute by your department.

"Our own daughter, now eighteen, never before very fond of sewing, has resolved, since taking the class, to make all her own clothes hereafter.

"A little daughter of thirteen, Ursula, for several years a prize winner in sewing at Rural School Fairs, was one of the hardest workers in the class. Her two dresses, one of percale and one of serge, are very pretty and well made.

"But I must not fail to mention two remarkable members of the class. They are sisters, and for the past four years motherless. They are now seventeen and fifteen respectively, but were almost ignorant of even mending. To them especially and to their father will this be a pleasure and a means of economizing."

In reporting a Home Nursing and First Aid Course taken by Institute members at Wiarton, the secretary writes:

"A woman who had taken Home Nursing Course succeeded in resuscitating a drowning boy."

NOTES FROM GREY COUNTY WOMEN'S INSTITUTE.

The following extracts have been taken from addresses delivered at the 12th Annual Convention of the Grey County Women's Institute, held at Hanover, September 18th, 1918.

First. The address of welcome given by Miss S. L. Jamieson, Hanover.

We cannot but feel that service is the basis and real foundation of the Women's Institute—service which is promoted and inspired by our love for humanity and our wish to help each other, and the great interest we take in home and country.

Service, real service, means sacrifice, and that is the keynote of the Women's Institutes, and if we as Women's Institute workers strike this note in unison it will vibrate throughout eternity and only God himself can weigh the influence.

We have many opportunities to develop mentally along different lines, and these opportunities have been given us mainly through the Women's Institute organization. But, we must remember that because we have increased opportunities we have also increased responsibilities and when each individual realizes and feels—I think feels is the word—these responsibilities and only when we thoroughly understand the meaning of our beautiful motto: "For Home and Country," can the Women's Institute achieve the very highest possible influence. As members of this organization let us do our utmost, and this organization will be a credit to our Dominion, this Dominion of ours which from coast to coast pulsates with a new life, with a greatness yet unborn. We cannot but feel that Canada has a great future before her, and let us as Institute workers, do all we can along all those lines of work which fall upon us.

Extract from reply to address of welcome, given by Mrs. R. Brandon, Owen Sound:

"We are all glad to be here for the purpose of exchanging thoughts and ideas which may incline to the betterment of our home and country. It was in the interest of 'Home and Country' that Women's Institutes were first organized, and with that motto ever before the members they have continued and worked out its demands. Why did our motto have the two words instead of the one word 'Home'? Listen! The one is the development of the other. There would be no country worth while, were there no home, but there are homes, and homes of like standard—the self-centred home and the unselfish home. In the self-centred home may be found comfort, refinement, yes, and hospitality, but lack of responsibility for those who are not within its gates—while in the unselfish home we find those same attainments, comfort, refinement, and hospitality with a feeling of responsibility for the neighborly claims of those without, and thus will several such homes develop a community, which must spontaneously broaden into a country, finally expanding into a nation. Ah! that word Nation which is so very dear to each one of us to-day. That Nation for which we on the altars of sacrifice are offering not only our first born, but in many cases our every son and many of our daughters, too. Home and country to-day have reached the zenith of their importance, and as such must be safeguarded, and by us—the women. We who cannot follow our brave boys, aye, and girls, too, overseas, can show our loyalty in conforming to what is required of us. Save, serve and carry on and as someone has said, 'Go on.' Literally speaking there is more to do than 'Keep the Home Fires Burning.' We must stretch our hands across the seas and give to the saviours of our Nation the necessaries of life, and this is only possible by strict conservation at home.

"I have not the time to go into detail, nor is it necessary, for we women of Canada are all impelled by the spirit of loyalty to do whatever our hand findeth to do with our might, consequently, we are surely united in our efforts to hold up the hands of those who are at our Nation's helm.

"In conclusion let me apostrophize our beloved Empire:

"Great Britain! At the mention of thy name,
All lustred with thy glory, might and fame,
We raise our heads in pride,
And ponder thus—were we not Britons free,
If every drop of blood were not of thee,
What matters all beside?"

"England! We speak thy name with steadfast mind,
Does danger threaten thee?
In joy we find and prove our loyalty.
Thou seat of Kings, thou guardian of the deep,
Must be safeguarded, tho' a Nation weep,
We offer all for thee.

"O Canada! We breathe thy name in prayer,
May we find strength to ever do our share,
Our love for thee to prove.
O Canada! For thee we live or die,
Let this then be our triune battle cry
Pride, Loyalty and Love."

Splendid, practical addresses were also given by Mrs. James Airth, Chatsworth; Mrs. Rogers, of South Grey, and Mrs. H. Downs, Maxwell. Space in this issue will not permit extracts from these reports.

Miss D. M. Sutherland, of the Ontario Department of Agriculture, also addressed the Convention.

Competition in Canning by Girls.

The following note from Miss McIntosh, Assistant to the District Representative in Peel County, tells of an interesting competition organized by the Women's Institute and the District Representative:

A few notes re our work with the canning teams. A team of four girls was chosen from each junior Women's Institute and the Girls' Club of Brampton. A canning demonstration was given at which peas, beans, tomatoes and one fruit were canned, the girls taking notes. The rules of the competition were given and arrangements were made for one demonstration class with each team once a week, until the finals. Eight classes were held with Ebenezer and Streetsville, and seven with Brampton, Alton, and Caledon. At the classes, the girls did the actual work, canning peas, beans, carrots, beets, corn, tomatoes, strawberries, raspberries, gooseberries, peaches, pears, apples and plums. The making of jams, pickles, jellies and canning of meats was taken up.

Different plans for the team work were made out and tried, and a final one decided on. At the last four classes the canning of corn, tomatoes and peaches was practised, as these were the products we had planned to be used in the competition. The girls brought their home canning to the final meeting and we chose from among them fifteen jars for exhibit.

Three-burner oilstoves and the large utensils were supplied locally, while the smaller equipment was brought from home.

The teams were all dressed in white uniforms—the Victory Dress with Cap made by the girls. Each team had its own color, the color being evident in the initial on the cap and in small ties.

The competition demonstration was held in the Department of Agriculture tent on the fair grounds, Brampton. It commenced with testing the jars. The corn was husked, cooked, packed, placed in hot water bath. Tomatoes were blanched, cold dipped, packed, placed in bath; peaches blanched, cold dipped, etc., syrup made and added, processed.

The products were all placed on the table within the hour and a half after starting.

Miss Roddick, MacDonald Institute, and Miss Ethel Chapman, of Toronto, were judges.

The Activities of the Institute at Athens in Brockville County.

In writing of the work of this Branch, the secretary states:—

"In regard to our method of raising money for patriotic purposes, I may say we find our present method most satisfactory. A committee canvassed our town and asked for monthly cash donations to continue during the war, or as long as they feel able to pay the amount subscribed.

"At our regular monthly meetings we appoint collectors, two for each quarter of the town, who collect the promised amount the Thursday before our meeting, when a report of the month's work is given.

"We have organized bands of workers in the surrounding country. These we supply with work. In our village we meet every Wednesday to cut out garments which are given to four distributors, one in each quarter of the town. The finished garments are sent to one centre, where they are packed. The yarn is in the hands of one of the members who gives it out, takes in the socks and ships them.

"When we wish to raise money for regular Institute work, outside of Red Cross and patriotic work, we have a concert, usually a play put on by local talent. This part of the work is in the hands of a dramatic club composed of Institute members.

"Our girls nearly always assist in the programmes—not only in the musical part, but also give some fine papers. They also assist in collecting the monthly donations.

"We usually keep something going in our Institute besides the patriotic work. We have a splendid library in our town. The librarian, who is an Institute member, is paid by the Institute. Five out of nine of the Library Board are Institute members.

"This year we purchased ten window boxes, filled with plants, for our town hall, and we paid a man to care for them.

"Not being able to have our village school entered with the rural schools for their fairs, we held one last year and one this year. The Institute furnished the seeds, and purchased the prizes. The prize list included vegetables, flowers, poultry, sewing, cooking, handicraft, essays, writing. The fairs which were a success were under the man-

(Continued on following page).

Every woman who buys Bonds stands behind a soldier.

Canadian Women's Institutes

(Continued from preceding page.)

agement of the Institute. We arranged a concert at night.

"At our last meeting our large Institute room was packed. We had grandmothers' day. Every grandmother and elderly p rson was invited. Those who could not walk were brought in cars. Our programme consisted of vocal and instrumental music—old time music—and a paper was given on 'Ancient History of Athens.' The old people were asked to relate incidents of their childhood here. Refreshments were served, after which each grandmother was presented with a bouquet. I may add that we had not served refreshments for months."

The programme for the year includes the following subjects:—"Canning and Preserving," "Garden Pests, and How to Destroy Them," "How to Keep Well," "Labor Saving Devices," "Corn and its Products," "Life of Some Noted Women," "Why I Make My Own Clothes, and How," "Developing the Individuality of the Child," "Canadian Railways," "History of the Red Cross," "Folk Lore," "The Education that Led to Germany's Attitude," "Important Events of 1918," "Some Canadian V.C.'s and How They Were Won," "Petroleum and its Products," "Evolution of Woman as a Citizen," "Women's Institute and the School," "Influence of Environment." Musical numbers are given at each meeting.

The Bonnechere Institute and the School.

For the past two years this Institute has given prizes for the best collection of vegetables at the Rural School Fair, and, in addition, has given prizes for singing and public speaking.

Each month two members of the Institute visit the school, who have a message for the pupils. This is appreciated by both teacher and pupils. This committee also inspects the sanitary condition of the school.

A drinking fountain has been installed and individual cups are used.

PRINCE EDWARD ISLAND REI ORT.

All Institutes have done a large amount of patriotic and Red Cross work, sending comforts and boxes to the boys at the front, and assistance to the Halifax sufferers.

The Marshfield Institute is supporting a prisoner of war, and giving considerable time to school and community improvement. They sent boxes to all local boys overseas.

Cornwall-York Institute visited the school occasionally during the year.

The Meadowbank Institute purchased an organ for the school, the funds being raised by a children's concert. Christmas boxes were sent to the boys and a prisoner of war was supported.

New seats for the school room were provided, 74 pairs of socks were knit and a prisoner of war was supported, by the Fairview Institute.

North River Institute raised $276.09 during the year, $74 of which was sent to the Halifax relief, and one prisoner of war was supported. A committee from the Institute visited the school and through their interest a new blackboard was purchased.

In addition to a large amount of patriotic Red Cross work Montague Institute kept the schools cleaned, and Lakeview provided a new hard wood floor in its school. Ray of Hope installed a water tank in the school.

Pandora Range Reservoir is and does—

One thing a hot water reservoir should do—heat water.

And one thing it should be—easy to clean.

The Pandora flue system does the one—heats the water by carrying a continuous steady volume of heat to and along the length and depth of the reservoir.

The Pandora reservoir is easy to clean because it is seamless porcelain—enamelled white, with round ends. It can be lifted out with ease and washed as readily as a vegetable dish.

Different from the old-time, dark, built-in metal "tank" that had to be emptied with a dipper and cleaned by guess.

But the reservoir of the Pandora Range is modern, convenient, sanitary and good to look at, just like the Pandora is in every other way.

"The Magic of the Pandora"—Booklet Free

This is one of the many features of the Pandora Range described in "The Magic of the Pandora," a little booklet full of information that every woman will want before she buys a range. Write for it to the nearest McClary branch.

The Peacemaking Perambulator

(*Continued from page* 13.)

enough." Teacher's eyes at once became pensive.

"Did you get what you wanted the other day when you cried for it?" Rosie asked blandly.

"Not yet, Rosie—perhaps some day," Teacher replied, stooping to kiss the eager, uplifted face.

Saturday Rosie "helped" in the store and the house, unmindful of the world about. Her thoughts wandered to regions remote.

"*She* said we could if we wanted to bad enough," Rosie told herself as she tended shop whilst Dad Martello enjoyed his midday meal in the kitchen. "And I want to so bad I'm all bad in me."

Suddenly from those regions remote came the glimmer of an idea.

Rosie gasped before the magnitude of it. Her breath came hard and fast; her eyes sparkled. Presently she laughed softly.

"Why, sure," she said aloud. "Why, sure thing!"

Later in the afternoon, when the rush was on, Rosie slipped out to the dark and silence of the back shed. In the far corner she saw the imposing top of the once glorious hand-organ. Then followed such a moving and shuffling of boxes and crates and barrels as ever a twelve-year-old tried to move in a decade.

It was almost dark when she returned to the house. Luckily, no one had noted her absence, for as a rule Rosie came and went as she pleased, save when the dark had fallen. Dad Martello had set the hour, and Rosie had been taught obedience.

The mysterious, wonderful Dream Man of the World could have told that Rosie slept little that Saturday night, though it was a secret between them.

It was grey dawn in Rosie's little room when she slipped out of bed and pattered, in her bare little feet and pink nightie, across the floor to the window. Away beyond the roofs and the roofs, and beside the uplifted spires, the day glowed a rosy welcome in the heavens. Below, the street was silent and dark, lined in shadows. Rosie leaned far out.

"Oh, I do love the sleepy things the best," she whispered. "When it's all quiet like God."

She watched entranced, for the freshness of the day and Rosie's wee heart were as one.

Then, when the sun had found a stopping place even in the corners of the street below, she turned back to her room.

"I guess it's time now," she shivered. "I guess I'll have to hustle."

And hustle she did—that is, as best she could, for the pink Sunday bow upon her hair wouldn't tie with Rosie's help alone. It needed Mother Martello, as did the buttons on her best Sunday frock with the lace-pleated skirt. But Rosie, nevertheless, was very proud of the little girl who looked back at her from the mirror.

Rosie, slippers in hand, noiselessly opened the door, tiptoed through the hall and down the stairs to the stillness of the kitchen. Here she paused to put on the slippers, then cautiously opened the back door and let herself out into the yard. Rosie had never been abroad quite so early before. The beauty and freshness of the new-born day filled her with an ecstasy.

Out in the shed all was in readiness, save for a few desultory manœuvres that necessitated the bob-bob of a pink ribbon bow, and the flop-flopping of pleated skirts of lace.

Then out into the light of day did Rosie Martello wheel the family pride—the hand-organ of her grandsire.

Out into the light of day—through the yard—bump down the curb to the roadway. Rosie paused to regain her breath and fan her flushed face with two reddened hands.

"Gee!" she ejaculated.

Something that sounded very much like Dad Martello's voice caused her to start vehemently; there was no time to lose. She took the affair in hand and trundled the old organ down the street as fast as her strength would permit.

Around the corner she halted.

"Now I'm goin'—I don't know where to go. Teacher said—"

Thereupon she gripped the handles and rattled on her way.

Small wonder it was on this sunny Sabbath morn that Miss Pass was awakened by the weird strains of some unwonted music. She listened dreamily.

"And there La Traviata sighs
Another sadder song;
And there Il Trovatore cries
A tale of deeper wrong;
And bolder knights to battle go,
With sword and shield and lance,
Than ever here on earth below
Have whirled into—a dance."

So thought Miss Pass, as, impelled by the witchery of the sunlight across her bed, and witching notes of somewhat wheezy melody, she jumped out of bed, slipped into her kimono and hastened to the window.

"Why, Rosie Martello!" she gasped.

The music ceased peremptorily.

Rosie looked up to the window, waving her hand long and gleefully.

"Whatever are you doing?"

"Well, I ain't doin' nothin' yet, but I'm trying to. Money is awful slow coming in," she announced.

"Don't go yet," Teacher called, then miraculously disappeared.

"Perhaps she's gone for some money." Rosie assented slowly, with a shake of her head, turning manfully to that extraordinary organ-handle that would "get stuck" in spite of her most pushing efforts. Her little arms ached.

Presently Teacher appeared—not at the window, as Rosie expected, with probably a handful of pennies, but in person—right in the roadway beside Rosie herself.

The surprise affected the music. For the second time it stopped abruptly.

"Now, tell me about it," Teacher demanded.

Rosie wondered if she were angry; her voice sounded so, but her face did not look it.

"Why," Rosie began, "you said we could get what we wanted if we wanted it *bad*. I do want that p-e-r baby carriage awful, so I am just out earning it."

Then the unexpected came. Rosie was hugged until her best white dress was in danger of ruin. Soon Teacher was turning the refractory handle, while Rosie stood close by in silent admiration.

"Just you go to that house and that house and that house," Teacher commanded, with little gestures towards the respective abodes, "and tell them what you want."

Rosie was off.

She was the first to sense the coming disaster. Coming down the front steps of "a very kind house"—she saw *it*.

Principal Blain!

She did not deem it queer that he should be there; it was enough for her that he was.

Rosie didn't know that it wasn't quite the ordinary thing for any young man—particularly a school principal—to pass, early on a Sunday morning, the home of his lady love. Rosie didn't know, either, that he was a man first and a principal after—and that, being a man his feet wandered where his heart led.

Rosie's heart beat fast.

The mean old thing! Suppose he tried to stop her teacher now—to make her cry again, perhaps.

Down the steps, across the lawn and up the street she raced.

"Say! say!" she panted, halting beside the imposing personage of Principal Blain.

But the man did not heed her. He saw rather a vision—a girl down the street—a girl in a pink morning dress, with the sunlight full upon her tousled, fair hair—a girl turning the handle of a wheezy organ.

"Say! say!" Rosie cried again, tugging at his sleeve. "If you make her cry again, I'll—*I'll hate you.*"

Principal Blain instantly became attentive.

"Made *her* cry—why, you are mistaken."

"Oh, yes, you did," Rosie chided. "Last Tuesday—because I *saw* her."

"You did, eh? Where?"

And Rosie told him. He listened, with pursed lips and squinted eyes.

"Well, by gad!" he interrupted, presently. "Say, little girl—what's your name? I'm going to marry her *anyway*. Let's tell her now."

But Rosie told it first.

"Oh, Teacher! Teacher!" she called,

The Passing of the Old Maid

(*Continued from page* 16.)

One day this autumn, the ability of a certain Miss Capable was being discussed, when a newcomer asked guilelessly: "Isn't she an old maid?" There was a sudden silence, and then one of the discussed lady's admirers exclaimed: "Why, certainly not. She's just Miss Capable. Of course one never thinks of her age, at all."

"But does she try to keep young?" insisted the newcomer, who was so accustomed to thinking of age as a barrier or a label that she could not rid herself of the idea that Miss Capable should be thinking of retirement or disability, if she had passed the fortieth milestone.

"No, she doesn't try anything," said the admiring one. "She is too busy to consider anything but what she is doing or what she is going to do next."

The contact with world issues which the war has brought has hastened the exit of the conventional, nervous and fussy Old Maid. With such a shock as the world has not known before, women have been brought face to face with ghastly scenes and have proved equal to war's sternest demands. In truth, as soon as various avenues of work opened to women, as soon as the gates of opportunity swung inwards, the Old Maid began to depart from the scene and to leave a keener-eyed, warmer-hearted sister, to take her place and make a pathway for herself.

The abject, meek Old Maid, who was a dependent in the house of a relative or an "in-law," sees now that there is work for each and every one of us, and that independence is a state to be desired. The curious thing about modern conditions is, that the more helpful we are, the more independent we become. It is as if Kipling's prayer were answered:

"Help me to need no aid from men
That I may help such men as need."

The Old Maid of the past often found that her services were constantly in demand in various households, with no remuneration therefor, and with scant gratitude displayed. It was considered the duty of the unmarried sister to be at the beck and call of the married members of the household, to nurse her sister, Mrs. Jones, through nervous prostration, to hasten to the bedside of her nephew, Jimmie Smith, when measles had laid that active young person low, to give her life in any emergency in the household of Cousin Susie, whose lot it had been to marry a shiftless husband. There was not a cent forthcoming for these many and varied services, there were faded and cast-off garments bestowed upon the unfortunate spinster and she usually ended her days eating the bitter bread of dependence. Such may not always have been the lot of the woman who was unmarried, but too often she ended her years in humiliation.

Now, the woman who sets out to earn a living finds that she may be a doctor, a nurse, a lawyer, a dietitian, the head of a hospital, a journalist, an insurance agent, the manager of a sales department—oh, all manner of important and delightful things, if she will only use her talents to the very utmost of their multiplication. No one thinks of calling the busy and efficient woman of to-day, unmarried though she be, by the outworn title of Old Maid. It belongs to the days when woman apologized for earning her daily bread (with an occasional cake), when she was proud of not knowing how to endorse a cheque or make out a receipt. The most embittering occupation in the world is thinking about one's own little self—and the modern woman of ambition and achievement has no time for any such contemplation. If she has her own little romance, which did not end in marriage, it does not seem to interfere with her living happily ever after. As an aunt, she is an exceedingly up-to-date chum, even knowing things about the baseball score and the movie stars. She is a thoroughly good sort, not given to criticizing the young person and quite equal in smartness of dress to her own aspiring nieces. She finds the world a kindly place, this modern bachelor maid, and would not think of sobbing in the twilight over a shabby rose or a faded forget-me-not. Wherefore, we shall not weep over the exit of the Old Maid, who has really outlived her usefulness.

The Younger Brother

(*Continued from page* 10.)

objects—bark of tree—quill of beast—sweet hay—she, who was the embodiment of things primitive and unspoiled!

"But—" he said, wonderingly, "when did you find time to do it? You must work for your mother all morning you say!"

"I tell my mother I have a sore foot, an' I make my little sister do my work. I tell her I kill her if she don't." She smiled sweetly.

"Oh," said Mac, "how did you get them to let you out snowshoeing on that sore foot?"

"I jus' say my foot all right now, an' walk out."

"Madeline, you're a little humbug," he laughed, "but I love you for it!"

She became serious. "You lof me?"

"Of course."

"We git married, mebbe?"

"Haven't got any dough."

"We build a little shack in the woods, an' catch rabbits, an' in summer we fish an' pick blueberries. That's easy. Say, will we?" She pulled at his sleeve pleadingly.

"I'll race you," cried Mac, "to our tree!"

Breathless, they reached the fallen pine, and once more he lifted her to a seat among its fragrant branches.

The collie sat down before them, brushing his tail over the snow, and making noises in his throat.

"One would think he was really saying something," said Mac.

"My father have a dog once that talk," replied Madeline, "a little black dog, an' one day when my father is goin' shootin', that little dog follow him down the road, an' my father take him back an' throw him in the house, an' then he shut the door tight, an' peek in the winder, an' listen, an' he see the little dog sittin' on the middle of the floor alone, an' say to itself out loud—*'I wish I had went!'*—jus' like that, an' my father put his gun in the winder an' shoot him dead, 'cause he don' want a little dog talkin' to hisself like that. Jus' shoot him dead!" Her eyes were solemn, but a furtive smile curved the corner of her mouth, making a little dimple there, that was a nest for kisses, Mac thought.

But he did not kiss her. Some protective instinct towards her kept him from that—just yet. She was so ridiculously ignorant, such an easy prey, and yet—her very ignorance and wildness, made her somehow remote.

He was filled with sensations whose savour was new to him; his worries of the past three days seemed like a dream. For the first time in his life he was interested in himself and in the effect of another personality on his own.

That night when he went to bed he put the little box under his pillow, unseen by Ernie. When they were covered up, Ernie muttered, "This bed smells like a load of hay to-night—what's got into it?" Mac made no reply, but he felt for the sweet hay box.

Later, Ernie made an announcement that came like a thunderbolt to Mac. "Don't bother putting on those moccasins, Mac," he said curtly, after dinner, "I'm going out myself this time."

"That's right," encouraged Uncle Tom, "and be sure to go up the lane to the woods; that's the best walk, eh, Mac?"

Mac grunted sullenly.

"Well, do you think you've got a mortgage on the snowshoes?" demanded his brother, staring at him.

"I ain't saying anything," growled Mac. "Go on."

He saw Ernie depart, wishing that he would fall and break a limb, but he knew very well that he would not. Ernie did everything well. He sat gloomily by the stove thinking of Madeline waiting in the lane. He even thought of the little black dog that

A Rose Enchanted

(*Continued from page 47.*)

dead queen and laid in her hand—and afterwards there would be no more—no more of all that she had known.

Yet strangely—now she felt no fear. A warm wind blew in through the window. The rose bent before it and the red leaves uncurled. The wind blew again, and the rose unlocked the leaves about her heart. In a moment a heavenly sweetness floated through the room-of-books.

With a cry of astonishment the young king looked about. "'Tis passing strange!" he said. "The air is turning golden, and sparkles as with broken stars! Now 'tis filled with incense! The perfume of Araby—or the wind from over a thousand gardens!"

Then he remembered the plant in the golden pot.

"The rose! the rose!" he exclaimed. "It is the deathless flower of all the world that hath unsealed its balm! O lovely one, I will carry you to the queen and you will give her joy even yet."

He lifted the rose to his lips and kissed its petals, but even as he touched them, they curled at the edges and their color faded. One loosened and fell to the floor, then another.

The king gazed in sorrowful amazement at the change. Then as still another leaf fluttered to his feet a soft darkness crept over the room-of-books. Deeper and denser it grew until it was like the Egyptian dark of old. A peal of thunder followed, that shook the very palace.

Afterwards light and silence came back, little by little, until sunshine flooded the place.

The king stood as before, his hand about the rose. He had not broken it from the stem, yet the leaves were still withering fast. But more strange than even this--beside the king stood one as kingly as himself—only he was fairy small! His robes glittered with gold and silver embroidery and many colored gems, and upon his head was a crown.

"O Mortal King!" he said, bowing deeply. "I come from a land you know not beyond the last river. Far have I searched for the flower you hold—that I might bear it home. Only now, within this last moment have I found my way hither, and no methinks I have come too late. It is not a rose you hold, O Mortal King, but a princess of fairyland who is enchanted. The ancient and wise one who so enchanted her has departed to another life—and alas! the charm has worked out to this dire conclusion.

"In the heart of the rose was hidden a magic perfume. While the leaves held it fast, she lived, but if she gave the perfume to the air—death was her portion."

The young king looked steadily upon the withering flower from which the leaves still fell.

"Alas!" he said. "I am unacquainted with the ways of fairyland. The ways of my own troubled country are often beyond my power of understanding,—yet it seems this little rose—and none other was e'er so lovely—gave her sweetness to me, and brought death to herself thereby. Would, O Fairy King, that I had power to return life to one so dear."

The Fairy King lifted his hand on which was a dull gold ring.

"O Mortal Majesty!" he replied. "The fairy who placed this enchantment of the rose upon the little princess, gave also to me this wishing-ring. It is yet potent to grant one wish of the three it once could give. Only harm has come of it before. Now we will see what remains. Hold fast thy withering flower and I will wish upon the fairy's ring!"

Slowly the golden light faded again from the room—and deep darkness fell. Then the voice of the Fairy King sounded in the stillness.

"O ancient ring!" he said. "Grant me the one last wish in thy keeping! I wish that the rose-princess be restored to life!"

Once more came the rolling thunder, and the soft return of the sunlight.

The dazzling fairy king had vanished as he came, but in the room-of-books stood the young king as before. His hand touched no fading rose on the top branch of the green bush in the golden pot,—for there was no blossom of any kind there; only beside him was surely the loveliest princess in all the whole world! A Mortal Princess!

Her eyes were dark as purple pansies and her face colored like the apple blooms of May. She wore a gown silvery as cobwebs on the grass at dawn, but not a jewel decked her beauty anywhere. The red-gold of her hair floated about her and dazzled the young king's eyes—as in the other days the eyes of the little grey elves used to be dazzled by it.

She looked up into his face and smiled happily.

"O lovely princess!" he cried. "From what far country have you come? I pray you tell me! I pray you tell me!"

"Nay—I know not," she answered as one bewildered. "But what matter? I seem to have come over a long road—and all the way I have been watching for you—yes—all the way!"

"And I too," he said, taking her hand, "have come over a long road, and have been looking for you, my princess."

"Come!" she said. "There is a scent of roses on the air. Let us go out into the garden!"

"Verily—yes, sweetheart," he answered. "We will go into the garden. But first, first—" and a mist dimmed his eyes, "I must take you to one who sleeps. Her dreams will be sweeter afterwards."

So hand-in-hand they went out of the room-of-books, taking all for granted as well as each other,—and asking no unanswerable questions of life, for this is the old fond way of all true lovers.

THE END.

The Peacemaking Perambulator

(*Continued from page 52.*)

when they were within hearing distance. "He's going to marry you—he said so."

For the third time that morning the music suddenly ceased.

Miss Pass came around to the curb, and gasped.

"Did *you* say *that?*" she asked.

Principal Blain nodded.

"I sure did."

"Well—what about Tuesday?"

"Oh, drat Tuesday!" he exclaimed, "I don't give a hang if you want blue paper all over the house—inside and out."

Rosie was plainly shocked.

Teacher laughed softly.

"And now I don't give a hang, either, whether it's blue or not."

"Then I'll marry you in June."

"Or be sorry if you don't," Teacher teased.

Rosie opened her eyes and her mouth in wonder.

There was an awkward silence.

"Rosie," Teacher finally commanded, "go to that house over there and tell them what you want."

Rosie went reluctantly.

She didn't know that Principal Blain kissed her teacher behind the shadow of her grandsire's hand-organ.

And needless it is to add—after it was all over—*Billy Got His Perambulator.*

THE END.

The Younger Brother

(*Continued from preceding page.*)

talked, and when Uncle Thomas asked him what he thought about so deeply, he replied—"I wish I had went"—and then got very red and laughed.

At four o'clock the housekeeper came in, much elated, carrying a long parcel. It contained the new snowshoes and moccasins, which her husband had just fetched from the station, and could not Mr. Mac put them on at once and give his brother a surprise?

Mr. Mac, it appeared, would like nothing better. He lost not a second in changing to the moccasins, and grimly making secure the thongs of the snowshoes. He wished that they were seven league boots that he might in one stride reach the woods, where Ernie—let Ernie have a care! let him have a care!

In the lane the track of Ernie's snowshoes was joined by another, one that had kept the width of the lane between them, and seemed to go falteringly, as though there had been backward looks for him. His whole heart strained toward her—that sweet brown thing whom he had not yet kissed. He began to run.

When he entered the woods, the tree trunks were already bronze before the sun; the crisp brown leaves on the beech trees rustled mysteriously. A rabbit skipped across his path. What was it that meant? Bad luck? Death? He ran on.

He had no need to search deeper into the woods. There they were—sitting on his own fallen tree, their backs to him,

(*Continued on following page.*)

The Gillette Razor Still $5

How many of the every-day needs can you buy now as cheaply as before the war? Clothing has gone up; food has gone up; coal is almost a luxury; and war taxes have nearly doubled the price of tobacco and matches.

But the Gillette Safety Razor still costs the pre-war price—five dollars.

There has been no advance, though wages, materials, and the hundred and one items entering into the making of a Gillette Razor have soared.

Increased Output Keeps Down Cost

New and improved processes have helped to lessen production costs, but the big factor has been increased output. Light, power, supervision, and other "overhead costs" remain very much the same whether the factory is run to capacity, or not.

Our great objective, then, was to increase the output so much it would offset the advance in wages and materials.

Here is the interesting thing. War, which increased the cost of labour and materials, also provided the increased ***demand.***

The Allied armies are literally a vast congress of Gillette users! Where we sold one razor in 1913 we now sell more than ten. The production of Gillette Blades has increased in even greater proportion.

Many people with friends at the front buy Gillette Blades in carton lots and slip a packet into letters going overseas—some are bound to escape the submarines and other perils of war.

Five dollars is still the price, and figured out on the basis of years of service, the Gillette provides about the most inexpensive enjoyment the average man can have.

The richest man alive cannot buy better shaving service than the five dollar Gillette will give you.

Gillette Razors and Blades may be purchased from Jewelers, Druggists, and Hardware Stores throughout Canada.

GILLETTE SAFETY RAZOR CO., OF CANADA, LIMITED,

Office and Factory: 65-73 St. Alexander St., Montreal.

Mac, the Younger Brother

(*Continued from preceding page.*)

her snowshoes dangling, a faint mist of smoke over Ernie's head.

He crept towards them, straining his ears to catch what Ernie was saying. Ernie was speaking in a very low tone—he always did—but suddenly he stopped speaking, dropped the cigarette from his fingers, and caught the girl in his arms. He began to kiss her so fiercely that her head-cloth fell back, uncovering her sleek dark head, and she clung to his coat for support.

Then, in a stride, Mac towered over them.

"You cur—" he said, between his teeth.

Ernie turned on him sharply. "What the devil do you mean?" he snarled, like a dog with a bone.

"If you're not afraid," said Mac, "take those snowshoes off, and I'll show you."

Ernie slipped to his feet and bent over and unfastened his snowshoes with a little laugh. "Oh, you want it, do you? You'll get it all right, my son—you interfering puppy—I'll teach you!"

The girl stood silently, alertly, watching them, as a doe might watch two bucks fighting in the forest.

A moment, and they had slipped off their coats and stood facing each other, their faces burning like pale lamps in the dusk.

Mac landed the first blow. It was on Ernie's cheek, and made what seemed, in the stillness of the wood, a loud thud. They were at it then, sharply, blow upon blow, savage and glad of the fight. Once their knuckles came together with a jar, and while Mac held off for a second with a numbed hand, Ernie's left caught him on the lips, and he felt the blood trickling down his chin.

The girl gave a sharp cry, and Mac, turning his eyes to see whether he could read love in her face, was undone.

Ernie struck him twice, on the forehead and throat. He went down, striking his head sharply on a jagged stump, and lying motionless when Ernie bent over him.

"Had enough?" gasped Ernie, grinning. There was no reply; the knock against the stump had been harder than any he had given.

Ernie meditated, sucking his knuckles. Then he propped his brother in a sitting posture against the stump, saw his eyelids flicker, tied on his own snowshoes, snatched up his coat, and ran after the girl, who, with her green head-cloth streaming behind her, was hurrying down the lane.

They were both out of sight when Mac opened his eyes. He opened them dreamily, as though in no hurry to regain his consciousness. He stared in lazy speculation at the many blue footprints in the snow about him. The trees seemed to have crowded closer, like inquisitive wild things. Bit by bit, he remembered the walk up the lane, the discovery of Ernie's treachery, the sound of blows, and that look in Madeline's face, that had lost him the fight. He could not rightly remember what he had seen in that look—two frightened fawn's eyes, hands clasped to her breast, that was all.

He was whipped—he knew that—he knew, too, in spite of the accident of the look, that Ernie was the better man—he had felt that all along—a bad way to feel in a fight. Ernie was a devil of a fellow! Sure to get the best of him.

He was wonderfully calm, floating in the brilliant deep air of the evening, somewhere near the tops of those grim old pines. He had no desire to come down just yet. He preferred to float and hover in that upper space, looking down, seeing all the little things of earth so clearly.

For one thing, he felt sure that he was now a man. Madeline, with her little white teeth, had bitten through the shell of life, and given him to eat of the bitter sweet fruit. He knew, for the first time, beauty—his soul was bathed in it. Life opened up before him, portentous, exhilarating, serene. He might have been cast out of Heaven, yet he would tread the earth singing. For all that he lay there deserted, like a beaten dog, he was the victor, because he had come out of these experiences a man, while Ernie was still a sulky boy.

He took a handful of snow and held it to his lips. It came away red. Well, it was the red badge of courage—he would face with fortitude the disgrace their father had brought to them. He would no longer be treated as a child.

He got up and put on his snowshoes. It was nearly dark. A streak of ashes of roses burned beyond the tree trunks. Mac's figure detached itself from the other shadows of the place, and struck swiftly down the lane. A few stars were already out. As he passed the shack he paused. The blind was drawn. It was enshrouded in silence—perhaps Madeline wept inside! Tears smarted in his own eyes, but he trudged on resolutely towards his uncle's house.

Ernie's snowshoes stood on the verandah. He took off his own and placed them alongside.

The room seemed very hot and bright when he entered. Jock came and licked his hand. Mac could not quite make out what was going on. He saw Ernie sitting by the table, his face buried in his arms, and their uncle standing over him, gazing blankly at a telegram he held in his hand. He turned a drawn face to Mac.

"Uncle—" stammered the boy.

"Mac—this is terrible news for you. Your poor father—the word came just a few minutes ago—he's dead."

"Dead!" repeated Mac, losing all his color. "What's that, Uncle Tom? I don't understand. How—how did he—

Ernie raised his head. "Oh, Mac," he said brokenly, "father's killed himself—he was found—with a revolver—in a hotel in Chicago—a beastly *cheap* hotel—good God! What shall we do?"

There was silence. The voice of the Scotchwoman came from the kitchen, singing, as she made the evening meal:

"Safe in the arms of Jesus,
Safe on His gentle breast."

Mac took a step forward.

"Uncle Tom," he said, "will you lend us money enough to get back—home?"

"My dear boy—of course."

"Could we catch a train to-night?"

"There's one at seven, but you cannot take that—you wouldn't have time to snatch a bite."

"We'll go on that," said Mac steadily. "We've got to get there as soon as possible—to mother—and to look after—things."

Uncle Tom considered. "Mrs. McDonald could put you up a bit of lunch, and I'll tell McDonald to harness the colt—"

"Please do," said Mac, and the uncle disappeared into the kitchen.

For the second time that day, the two brothers faced an emotion that mastered them.

Ernie got to his feet and came close to Mac. The dog pressed in between them.

"I—I—" said Ernie. He could get no further, but their hands gripped.

Tucked inside the bearskin robes of the cutter, with the colt scattering fragments of snow over them, as his long legs stretched over the miles, Mac rode into the darkness of the future.

Strangely enough, something Madeline had said on that first meeting came to him now—

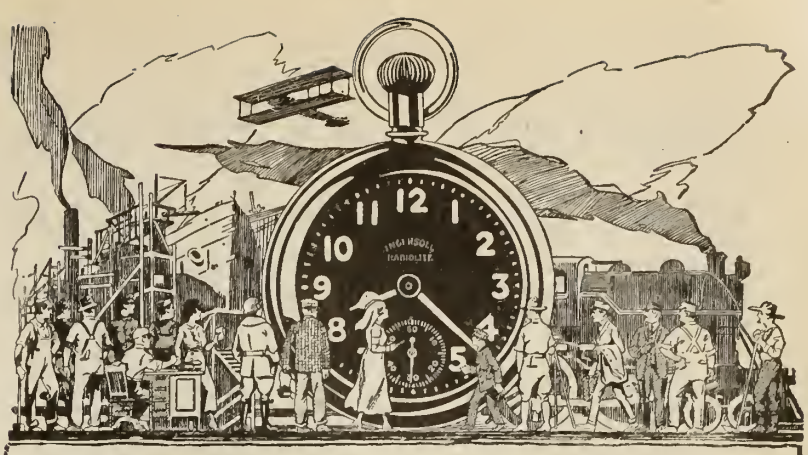
"I was thinking—" she had said, with that delicious twilight in her eyes—"I was thinking that I lof this day."

A Lesson in Pure English

(*Continued from page* 44.)

oughtn't to say so that I could memorize them and not say them?"

The essayist smiled. "I had thought of something of the kind. Suppose we try a little fable?"



"Oh, splendid!" and she clapped her hands rapturously together while he swiftly wrote:

AN EXEMPLARY PARABLE.

"There was once a beautiful young girl who had been 'picked' by all her acquaintances for her many brilliant and amiable qualities and for her devotion to her uncle. She knew how much he suffered 'over' neologisms, especially ugly ones, and she was always trying to shun them in her talk with him. By a prodigious effort she had, as she believed, 'gotten' past some of the worst, but she thought she 'would

If All The Watches Suddenly Stopped Ticking—

How could the thousands of shipyard workers continue their team-work?

How could the armies of factory hands be ready for the "start work" whistle?

How could railroads with their big groups of employees run on time?

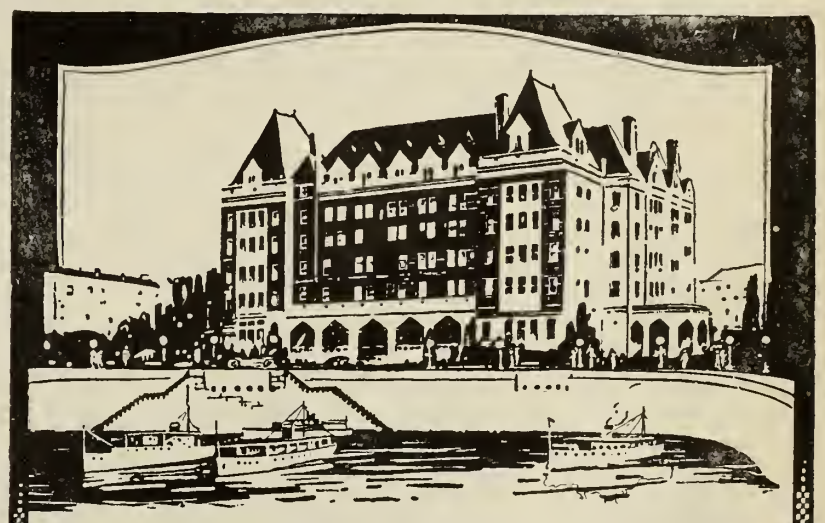
How could the mails be delivered?

How could the newspapers bring the world's news to your doorstep each morning?

A good watch is a necessity. That's why men and women of every profession and occupation depend upon Ingersoll and there is a model to suit everyone.

There is the *Waterbury* with 4 jewels and the *Reliance*, the master 7-jeweled watch, which are the Ingersoll aristocrats—handsome watches that men are proud to carry.

Radiolites that tell time in the dark are indispensable to mine and factory workers, farmers, nurses and soldiers.



The well known *Maple Leaf* is sturdy and reliable and dealers have special models for boys and girls and for women.

Buy a watch with the name INGERSOLL on the dial and you are guaranteed a good time-keeping service.

Some Years Ago a Man with Ideals Decided to Publish a Good Magazine in Canada—

AT that time there were plenty of good magazines to be bought on Canadian newstands. But they were all American magazines, reflecting the views and exalting the greatness of the United States.

Magazines exert a tremendous influence on the welfare and progress of a nation. They mould public opinion. And this man with ideals regretted to see Canadians dependent on the United States for their magazine reading. He felt that Canada had the natural resources itself to become a great nation. So he decided that, cost what it might, Canada would be the possessor of a great magazine which would be ALL-CANADIAN.

That Canadian with ideals was Colonel John Bayne Maclean. The outcome of his determination is

MACLEAN'S

"CANADA'S NATIONAL MAGAZINE"

MACLEAN'S is big because Canada is big. It faithfully reflects Canadian ideals.

In its special articles, written by men and women best informed on their subjects, it comments on and supplements the news of Canadian and international importance.

It publishes the best stories that are written—those distinctively Canadian stories the country has come to know as MACLEAN'S stories, because they deal with the life, work and affairs of the Canadian people in original, vigorous and vital ways.

MACLEAN'S is broad, breezy, fearless—"The most talked-of publication in Canada." After reading it you will realize why it is recognized as one of the best edited periodicals in the world. It is quite probable you had no idea such a great magazine was being printed in Canada, for it would almost seem impossible to produce a magazine in this country which would measure up to the best magazines in the United States, since that country has an English-speaking population about twenty times as large as ours.

And it would have been impossible had it not been that the MacLean Publishing Company is the largest organization of its kind in the British Empire, owning and printing 14 famous magazines and business newspapers—which is probably a record not approached by any other firm in the world.

A Bargain!—3 Months for 50c

MACLEAN'S sells for $2 a year—should be more. We want you to get acquainted with MACLEAN'S, for we know that after we once introduce you to "Canada's National Magazine" you two are going to be friends for life. So, to make you known to each other, we will accept your subscription now for only 3 months to start off with. In other words, we want you to "try out" MACLEAN'S, and see for yourself just how good it is!

Don't miss this unusual opportunity. Simply sign the coupon, pin a postal note to it, and mail it to us

TO-DAY!

Tear off here and mail

The MacLean Publishing Company,
143 University Ave.,
Toronto, Ontario.

I accept your offer. I am enclosing 50c to pay for MACLEAN'S MAGAZINE for 3 full months. Please start me off with the big November issue.

Name .....

Address .....

(If you prefer to pay for a longer period right now, you may attach $1 for six months, or $2 for a year).

Interesting Facts About Influenza

Influenza, which is now sweeping over Canada from one end to the other, is a very old disease. It was known in ancient times, and as early as 1510 it over-ran the whole civilized world. For centuries it has periodically swept over various parts of the world. The last great world epidemic was in 1889-1890, when it was generally known by the French name of la grippe. The disease has always travelled from east to west.

Symptoms.

The symptoms are similar to those of a heavy cold; more or less severe headache, cold in the head and throat, fits of sneezing, flushed face, chills, aches and pains in the back and limbs, pains in the eye-balls and behind the eyes, general physical depression, and temperature rising to between 101 and 104 degrees.

How to Prevent It.

As it is such an old disease, doctors have naturally learned a great deal about its prevention and treatment. The first principle of prevention is to keep away from those infected, and the second, to build up the germ-resisting parts of the body by nourishing foods, dressing comfortably, getting lots of sleep, and by living in the open air and in bright, well-ventilated rooms as much as possible. The mouth, throat and nose should be systematically and frequently disinfected by antiseptic inhalations, sprays and washes. Such preparations as chloretone and listerine are well adapted for this purpose.

In fighting previous epidemics, doctors found quinine a useful preventive. One grain of sulphate of quinine mixed with (but not dissolved in) a wineglassful of cold water makes an excellent antiseptic gargle. The antimicrobic properties of quinine are well known, and its use as described above at once relieves the symptoms of sore throat, which result from the strain of the fight between the white blood corpuscles and the invading germs in the tonsils—the body's first line of defence. Quinine is also given internally with success as a preventive. Inhalations of oil of eucalyptus, thymol, oil of mountain pine and the like, are also valuable as preventives.

How to Treat It.

When a person is struck by influenza, only one course lies open. That is to take to bed with the least possible delay, and call a doctor. Rest, warmth and quiet are three sovereign remedies of the primary disease, and the best preventive of its more deadly complications, of which pneumonia is the most frequent. While there is no specific for influenza, yet there are many drugs which play a useful part in relieving it, such as quinine, aspirin and various tonics, anti-neuralgic, antiseptic and heart medicines, to be prescribed by the physician in charge.

What to Eat.

The dietetic rules which apply to any fever apply equally to influenza. Liquid foods at first, solids a little later on in a gradually ascending scale from lightly boiled fresh eggs to chicken, roast joints, etc. Water, cold or hot, may be sipped or "egg water" may be given. This excellent dish is prepared by blending with a pint of cold water, the whipped whites of from two to four eggs flavored with salt of cinnamon. Then the animal broths may be given. There are many cases in which even the lightest foods are spurned with loathing and common sense must be used in adapting diet to the particular case in hand.

Precautions Against Influenza.

1. The sick should be separated from the healthy. This is especially important in the case of first attacks in the household.

2. Discharges from the nose and mouth should not be allowed to get dry on a pocket handkerchief or inside the house, office or factory. They should at once be collected in paper or clean rags and burned. If this cannot be done, they should be dropped into a vessel containing water.

3. Infected articles and rooms should be cleansed and disinfected. Use disinfectants everywhere. Wash the hands frequently.

Use Klim at Every Meal

There is no need for the children to go without all the pasteurized separated milk they can drink. Buy Klim in the 10 pound tin from your Grocer. Then you will have enough to make 40 quarts, as you need it. Klim is 100% nutrition in dry powder form. It is pure. Nothing except the water and butter fat is removed from the original milk. It is the water in the milk that makes it spoil. The children get plenty of the necessary fat in butter, bacon, eggs, meats, etc. No chemicals or sugar is added—Klim has the natural milk flavor—taste and prove it.

Klim costs less than bottled milk. You can afford to give the children more and to use larger quantities in cooking. It keeps perfectly in the tin until all used. The tins have handy covers. No holes to punch or jagged edges to scratch the fingers.

Order Klim to-day from your Grocer

Victory Bonds

The Inhalation Treatment for Whooping-Cough, Spasmodic Croup, Colds, Catarrh, Asthma, Bronchitis, Coughs.

Established 1879

Simple, safe and effective, avoiding internal drugs. Vaporized Cresolene relieves the paroxysms of Whooping Cough and Spasmodic Croup at once; it nips the common cold before it has a chance of developing into something worse, and experience shows that a neglected cold is a dangerous cold.

Mrs Ballington Booth says: "No family, where there are young children, should be without this lamp."

The air carrying the antiseptic vapor, inhaled with every breath, makes breathing easy and relieves the congestion, assuring restful nights.

It is called a boon by Asthma sufferers.

For the bronchial complications of Scarlet Fever and Measles, and as an aid in the treatment of Diphtheria, Cresolene is valuable on account of its powerful germicidal qualities.

It is a protection to those exposed.

Cresolene's best recommendation is its 38 years of successful use.

Sold by Druggists. Send for descriptive booklet.

Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist or from us, 10c. in stamps.

Canada Needs More Scouts

EVERY boy in Canada should belong to the Canadian Boy Scouts. The splendid training and the new education a boy receives as a Scout not only helps him to be a better man and a better citizen, but also prepares him for true National Service in a democratic and unmilitary manner.

The trim and neat appearance of most Scouts is due to Miller Official Uniforms — recognized everywhere as the best made and most proctical Uniform. Over 90 per cent. of the Boy Scouts in Canada are equipped with

MILLER OFFICIAL BOY SCOUT UNIFORMS AND EQUIPMENT.

We have a most interesting book explaining the Scout principles and rules. It is free for the asking. Send for it to-day.

MILLER OFFICIAL UNIFORMS AND EQUIPMENT.

are on sale by most reliable dealers throughout the country. If you cannot secure the genuine Miller Official equipment from your dealer we will gladly supply you direct.

THE MILLER Manufacturing Co. Ltd.

11-16 York St., Toronto, Ont.

Also sole makers and importers of Miller Choir Gowns, Specialty Clothing and Uniforms and Equipment.

Tried and Tested Recipes

By MARION HARRIS NEIL.

STEAMED VANILLA SOUFFLE.—Prepare the tin by first greasing it and then cut a double band of paper wide enough to stand and to reach down to the middle of it, four inches above the top of the tin, and long enough to fold around it and overlap a little way. Grease this band, and tie it around the outside of the tin. This forms a protection to prevent the mixture falling over the sides of the tin when it rises. Also, grease a round of paper to cover the top. Blend two tablespoonfuls of butter with four tablespoonfuls of flour in a saucepan over the fire, then add one-half cupful of milk, stir until it boils and becomes thick, remove from the fire to cool, then add four tablespoonfuls of honey or syrup, yolks of three eggs, one by one, stirring each thoroughly, one teaspoonful of vanilla extract and the stiffly beaten whites of eggs. Pour the mixture into the prepared tin, cover with the greased paper, and steam slowly and steadily until firm to the touch. If cooked too quickly the souffle will rise rapidly without becoming firm, and will then sink in the middle when it is turned out. Serve hot with sauce poured round or served separately.

Cherry souffle is made by adding one-half cupful of cut preserved cherries to above mixture.

STEAMED BROWN BREAD.—Mix one cupful of corn meal with one cupful of rye meal, one cupful of Graham flour, one-fourth cupful of brown sugar, three-fourths teaspoonful of baking soda and one and one-half teaspoonfuls of salt, then add three-fourths cupful of molasses and one and one-fourth cupfuls of cold water, and stir all together until thoroughly mixed. Pour into a greased mold, cover with lid, and steam steadily for eight hours. This mixture may be steamed in two baking powder cans.

STEAMED FRUIT ROLLS.—Make a dough of one cupful of flour, one cupful of corn flour, one-half teaspoonful of salt, two teaspoonfuls of baking powder, one tablespoonful of melted butter substitute, and milk or water enough to make a soft dough. Roll thin, spread with jam or thick jelly, preserved cherries, chopped apples, or stewed fruit; fold and cut to fit baking powder cans one-half full, cover tightly with lids, and steam until rolls are done. Have the cans well greased, also lids. Serve hot with hot milk or any preferred sweet sauce.

LEMON SQUASH.—One-half fill a tumbler with cracked ice. Add to it the strained juice of one lemon and two teaspoonfuls of sugar or honey. Fill up the glass with soda water, mix all together and serve at once.

To make lemonade:—Wipe four lemons, cut off the rinds in very thin flakes, place these in a pitcher and add one dozen lumps of sugar. Remove all the pith from the lemons, and slice them into the pitcher, taking care to remove all the pips. Pour on four cupfuls of boiling water, cover the pitcher, and leave until the lemonade is cold. Then strain it off, and sweeten to taste. Add a few small pieces of ice and serve with wafers.

PANCAKES WITHOUT EGGS.—Sift two tablespoons flour and a pinch of salt into a bowl, and mix slowly into a batter with one-half cup milk, add one tablespoon brown sugar and a little powdered nutmeg. This batter must be beaten fifteen minutes, and each pancake will take about ten minutes to cook. If you have a large frying pan, two or three cakes can be cooked at the same time. These are delicious if eaten with brown sugar and butter.

NUT AND RAISIN BROWN BREAD.—One teaspoon soda, one-half cup (seven ounces) molasses, two cups (one pint) sweet or sour milk, one-half cup (three ounces) brown sugar, one teaspoon salt, one cup (four ounces) chopped English walnut meats, one cup (four ounces) flour or barley flour, two cups (ten ounces) Graham flour, one cup (one-half pound) seeded raisins.

Stir soda into molasses, add milk, sugar, salt, nuts, flours and raisins. Mix and turn into greased and floured narrow pan, and bake one hour in moderate oven.

GRAHAM BISCUITS.—Two cups (ten ounces) Graham flour, three teaspoons baking powder, one teaspoon salt, two tablespoons (one ounce) butter substitute, one cup (one-half pint) milk or water.

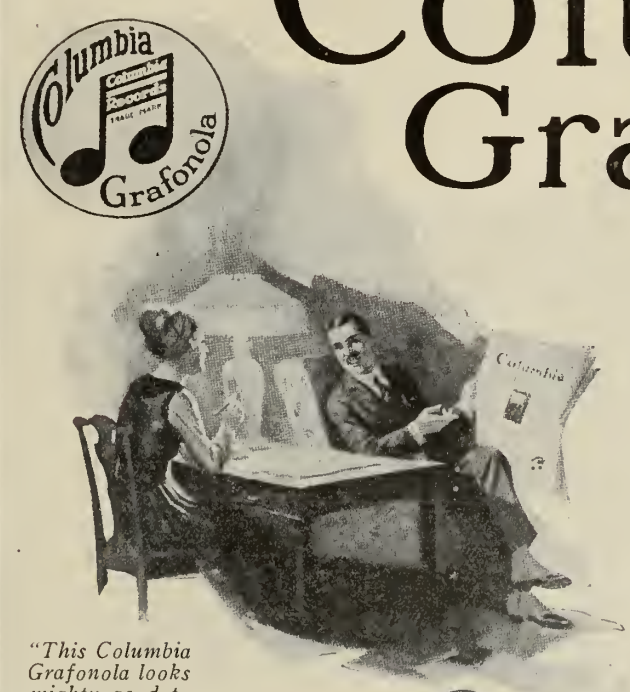
Put Graham flour into a bowl, add baking powder and salt. Cut and rub butter substitute into flour. Mix milk or water into flour with a knife, adding milk gradually. Turn out on to floured board and roll until one-half inch thick. Cut in small rounds and bake in hot oven ten minutes.

CEREAL WITH DATES.—One cup (one-half pound) fine cereal, four cups (one quart) boiling water, one teaspoon salt, one-half cup (two ounces) stoned dates.

Stir cereal into boiling water, add salt, and cook in double boiler one hour, add dates and cook ten minutes longer. Serve hot with milk. This will mold well.

Figs, raisins or stoned prunes may be used instead of dates.

FARMER'S CAKE.—Soak over night two cupfuls of dried apples and one pound of prunes. Drain and remove stones from prunes. Cook apples, prunes, two cupfuls of molasses, one teaspoonful of powdered cinnamon, two teaspoonfuls of powdered mace, one-half teaspoonful each of powdered cloves and nutmeg for one hour. Remove from the fire, add two cupfuls of flour, one cupful of barley flour, one cupful of corn flour sifted with one-half teaspoonful of salt and two teaspoonfuls of baking soda, then add two cupfuls of seeded raisins, one cupful of honey, one cupful of brown sugar, one cupful of water and one cupful of creamed butter substitute. Mix and pour into a greased cake pan, cover with a greased paper and steam for three hours, then remove paper and bake in moderate oven for one and one-half hours.



TUNNEL TERMINAL—MONTREAL.

The new Terminal Station of the Canadian Northern Railway in the heart of the city, 415 Lagauchetiere street west, two blocks from Windsor Hotel and Station and Bonaventure Station.

Mount Royal Tunnel opens for through passenger traffic between Montreal, Ottawa and Toronto and all points west on October 20th.

Double Portion of New Fashions Next Month

On account of the present tremendous congestion on all transportation lines, and unforeseen difficulties resulting from the influenza epidemic, "Canadian Home Journal" has been forced to hold the November Fashion pages over for the December issue. There are, therefore, no Fashions in this issue, but the next number will contain a double instalment of the newest and smartest early Winter styles.

Make Housekeeping a Profession

By KATHLEEN DESMOND.

Looking at the "Help Problem" From a New Angle

A short time ago there was a discussion dealing with the "Servant problem." Very timely are the ideas, as never could there be a greater need for trained and efficient "help" in homes than there has been in the stricken districts where the mothers and children have been down with the "flu," left totally without help of any kind; doctors staggering to keep up with the demand; nurses torn between the incessant and urgent calls from one home to another.

A suggestion has been made that an entirely different class of people should be organized to work in homes. The "domestic servant," "wages," "maid-of-all-work"—and "mistresses" must go. The revolt from both mistress and maid has come to stay—the whole system has gone to the scrap heap with a hearty fling.

Now what is to be done to replace all this with something worth while and on entirely different lines?

Some really capable and sensible women could get together and discuss starting a hostel, in a suitable situation—one for the present—later in various districts, as a centre for our "house orderlies," as we would name them. The school board to be immediately approached for accommodation—with a kitchen and accessories for instruction in household order and efficiency. There is such an equipment in the Central Technical School on Borden street, Toronto, with the most capable teacher possible, and, no doubt, others could be so equipped. This is the vital starting point. Next, to find the right kind of pupils, as those who, as a general rule, offer themselves as "domestics," have proved to be a failure—"which nobody can deny." Then we want an entirely different class to apply.

"You will never get them," is the encouraging remark made to all of these suggestions, but, with the general of old—and the present day also—we reply: "There are no Alps."

The Canadian girls are intelligent and resourceful, and many of them are endowed with plain common—or uncommon—sense. They have proved their worth in this voluntary aid, given here and there in the city, doing every kind of job that turned up to be done during the epidemic. It has been at times a little difficult to get the call for "help in the house" answered—but on the whole they have done nobly.

Now this shows the good material that is there. Can we use that material to make up into another success? How many women and girls "found themselves" during these strenuous days? Many a one, perhaps, realized that they were round women in square holes, in offices and stores—that their tastes lie among the niceties and variety of homes; that sweeping and dusting is anything but monotonous, and that turning out a well-cooked dinner is more satisfactory than dozens of well-typed sheets of foolscap, laid on a desk.

But what prospect have they of taking a satisfactory place along this line of business? They do not want to become "merely a domestic," which, by the way, properly carried out, is the cleverest line of business any woman can take up.

Can we make people remove their mind's eye from that "servant" viewpoint, and behold an opening for a new profession—with a dignity and standing before unthought of?

A house orderly is a person who is trained—has her diploma—wears her uniform—displays her badges, with added bar for added efficiency. Her place in the community is assured—and it entirely depends upon her own manner, deportment and adaptability, whether she holds her place with honor.

We remember the outcry when women of title, and of the aristocracy in the Old Country took up nursing, wore a uniform, and undertook all the duties involved, proving that the education and advantages they had always enjoyed fitted them the better for these tasks, which, taken as a whole, were often much more unpleasant than ordinary housework—even if in someone else's house.

The scrubbing of a hospital ward could not be less tiring or "degrading" than scrubbing Mrs. Brown's kitchen. The more culture and refinement the house orderly is blessed with, the better the kitchen would be scrubbed.

We get down to the bottom of things, on the kitchen floor. But supposing there is someone else to do that—there is all the wonderfully interesting work in a house, that calls for efficiency.

With a cook, who has added the bar of a "dietitian" to her badge, the mother of the family feels comfortable.

The artistic woman knows that her art treasures will be carefully dusted and replaced by the orderlies who have qualified along these lines. The thousand and one varieties of efficient work needed to be done, to take honest care of household goods and chattels, to feed growing children, tired mothers, and weary office men, and make the environment of a house into the restfulness and charm of a home—is this a profession unworthy of the attention of the girls of to-day?

How it can be organized is already thought out.

Every woman who buys Bonds stands behind a soldier.

For Safety's Sake--- get "Yale" to-day

PLACING dependence upon locks that are insecure is not only inviting trouble, but it is unnecessary.

The burglar or vagrant cannot steal or harm as long as he is on the outside of your house. Keep him there with locks that will not only defy his efforts to break in, but will forestall even his trying.

He knows it is no use trying to pick or force a Yale Cylinder Night Latch—for safety's sake put them on doors that are now unsecurely locked.

He only needs to see the "Yale" trade-mark on a Padlock to realize that he is face to face with a sturdy watchman that cannot be passed.

And if he sees "Yale" on the builders' hardware that protects and decorates your house he knows it is "bad business" to even attempt to get by.

You can get the certainty of protection with "Yale"—and the time to get it for safety's sake is to-day—at your hardware dealer's.

Time and Money

We want and we will liberally pay one energetic lady in each community to represent the "Canadian Home Journal."

We already have scores of local representatives in our big Home Journal Club, and some are making as high as $100.00 per month.

There are still many towns and villages in Canada in which we have not a representative and if you have any spare time that you desire to turn into money, write us to-day.

The remuneration of a "Canadian Home Journal" representative is according to the time and activity devoted to the work.

If you have plenty of time and energy there is practically no limit to your income or territory, for we make special provision for the live ones.

The women of Canada require more money to-day than at any time in the history of the nation. The "Home Journal" will supply that money in exchange for your time.

Write us to-day.

Canadian Home Journal
71 Richmond Street West
Toronto

"His Gift," by Mabel Burkholder, and "The Return of Peter Piper," by Mary McLellan, are two excellent Christmas stories to appear next month.

Interesting Letter From France

Which the Censors Have Never Seen

By ARTHUR E. RUNNELLS, C.C.S.

The breaking of this day found me in a dugout forty-five feet under the ground. Here I had been hurried at 11 p.m. the previous night to be safe from Hun air raids. Dressed in pajamas and a rain coat I waited for two hours while the Huns rained hell from heaven. The concussion was so terrific that each time a bomb fell the legs of my pajamas would swell out. During all this time anti-aircraft guns kept the heavens screeching with shrapnel, from which all must seek shelter, while bombs fairly racked the earth.

When two hours of suspense were passed we came forth from our lair only to find that Providence had guided the Hun destruction into waste places. We then turned into our blankets and slept soundly until the daylight broke on a beautiful Sabbath morning.

At seven o'clock, in company with Col. Geo. O. Fallis, A.D.C.S. lines of communication, France, I hurried south by car to a railway battalion waiting to be addressed by Col. Fallis. The run was through one of the finest sections in all the world. Fields of wheat, rye, oats, vegetables, were rich with abundant harvest; all of which were being cared for by old men, women and little children, who toiled all day Sunday in the fields. There is no Sabbath in war. Our course took us over battle grounds made famous by the Napoleonic wars, now covered with golden grain, as the now war-ridden battle fields will yield ripening harvests to unborn generations who will wish they could have lived in these days of historic and heroic grandeur.

At nine o'clock Col. Fallis and I stood before a battalion of railway troops who were paraded for this service by Major Meredith, of Vancouver, B.C., who had planned and requested that we conduct this service for his men.

At 10.15 we were fifteen kilometers away at another railway camp where parts of three battalions had been brought in on open freight cars to attend religious service. This time I preached and Major Jackson, of Winnipeg, was in command. He requested that the Sacrament be given to his men. Here let me point out that the officers everywhere are most deeply interested in the welfare of their men. They accord the "Padre" every possible assistance in his work.

At 12.30, noon, we lunched in the officers' club in a thriving town in Northern France. Fifty minutes later we were on our way again—this time to seek two battalions engaged in the battle of ———, whose chaplains had been wounded. After a three hours run over the busiest highway in all the world, past thousands of transport vehicles, motor lorries, loaded with grain, hay, petrol, meat, drugs, Red Cross supplies and munitions of war, all moving with rapid pace up to the front where the greatest victory in the war was achieved. We came to the sentry posted at the entrance of a city of 400,000 inhabitants in peace time, now completely deserted, not a soul dwelling in its silent streets. On, on, up these broad streets, guarded by the ubiquitous Tommy, came the incessant caravan of motor transports, reminding one of an invasion of caterpillars as I had seen them on the old farm in Quebec. To the sentry we presented our "white pass," permitting us the freedom of the battle ground, to which the eyes of Canada and the whole world were turned in hopeful expectancy. For the Hun that expectancy was being rapidly turned into the bitterness of gall.

Just outside this city the Canadians "kicked off" in what will be known to future generations as the famous Battle of Amiens. On the morning of the first day of this battle the shelling was terrific. The enemy had been completely surprised and repulsed. Harvest fields had become the stamping grounds of mighty armies. Towns, villages, hamlets were laid waste, often not one stone left upon another. Again half ruined walls mark the tragedy of war, gutted houses with their furniture dangling loose, doors battered and broken, which once opened on prosperous streets now stand ajar to a shapeless mass of ruin. With every mile this harvest of hell was more complete. I have looked upon the lava-burned slopes of Vesuvius, but neither earthquake nor volcano could destroy more unmercifully. The very soil suffered, groaning and travailing in pain, while the trees of the field stood broken and weeping. Lorries, guns, wagons, crops, barbed wire—a chaos, a weird scene of desolation. In all these broken towns and villages the German had replaced the street names in his own language. But twenty hours previously he fully intended to winter here.

Looking out upon it all and much more that I shall not describe, I mused that land that had been overrun with the lava of a volcano was wonderfully fertile when the lava was passed, so from this tortured soil, upon which the intermingled blood of great races had been poured out will spring forth a living harvest of victorious righteousness.

For five miles west of the battle line the highways of communication took on a new aspect. We were now coming into the zone of death; in that zone where nothing is done save under the mantle of death. Red Cross ambulances now had the right of way, for they brought down the brave lads who had been bruised and broken by the engines of war. Everyone in this dust clouded highway was silent and reverent. This precious procession passed on down to base hospitals where our nurses, our own Canadian girls, "The Angels of Mercy," wait to nurse back to life and strength their brothers who have passed through "the valley of the shadow."

We came to a road running parallel with the battle line. Here the Hun army had entrenched in this sunken road. Through the hedge running along this highway they had camouflaged six-inch guns commanding a plateau stretching away to the west. Over this open level country Toronto battalions came, and assisted by the splendid work of the cavalry, captured these guns, many prisoners, and piles of ammunition.

At eight o'clock the sun was westering with rapid pace and night would soon stretch its protecting veil over these gruesome scenes of desolation upon which we looked as we stood on an elevation where the scream of shell turned the very cloud-lands into an inferno and made one for the moment question the rational control of the universe.

We turned our faces toward the setting sun, from scenes which lie in the power of no human language to describe.

Between us and the undulating hills in the distance could be seen the cavalry in thousands returning from battle to find rest and food to fit them for the fight of the coming day. In the broken villages at nightfall could be seen the heroic fellows: men just from the battle, worn, feverish, dirty, yet splendid in that spirit which holds absolute control over the jaded body. These men, the Knights errant of a new civilization, had been fortunate enough to live through a glorious day.

Back over the shell-ploughed roads we hastened lest darkness should overtake us. Festooned from tree to tree along this highway were electric wires which crossed and recrossed, each bearing its own grave message. In a large grain field at our right the captured guns, numbering hundreds, were being parked until they could be properly disposed of.

Along the famous valley up which Canadian troops had fought their way to victory but two days before, our motor carried us. The curves of the Somme gleaming in the setting sun reminded one of a trail of fire on our western prairie. On this memorable day we had travelled more than two hundred miles over ground every inch of which was consecrated by more blood and tears than any other soil the world o'er.

As I turned into my blankets I realized as never before that:

"We measure life by loss and not by gain,
Not by the wine drunk, but by the wine poured forth.
For love's strength standeth in Love's sacrifice,
And he who suffers most has most to give."

Every woman who buys Bonds stands behind a soldier.

The Work of the Red Triangle on the Transports

By JOHN MELDUM.

Imagine a transport built for the stowage of cargo or cattle crowded with khaki-clad men, and providing the most indifferent accommodation even for the officers, and some idea will be obtained of the trials and tribulations endured by the dauntless men who cross the sea to teach manners and morals to the ravaging Hun. Steam winches and other equipment littering the deck, steep and narrow gangways, dark passages that twist and turn and have a trick of leading one back to the starting point without having reached one's objective, crowded and dimly-lit sleeping and eating quarters may all contribute to dispel monotony, but they certainly do little to enhance the joy of life.

Place several thousands of men accustomed to the sweep and freedom of the prairies, or the unrestricted liberty of the bush, in such "cribbed, cabined and confined" quarters, and very little is needed to convince us that anything that can be done to ameliorate the lot of these men is deserving of hearty support.

In April permission was granted by the military authorities to the Canadian Y. M. C. A. to send a military secretary with each transport proceeding overseas, whose sole duty would be to organize religious and recreational programmes for the men during the voyage. These transport secretaries are given the honorary rank of Captain, and they carry a comprehensive equipment consisting of gramophones, stationery, games, magic lanterns and frequently a hand organ. Their duties are onerous and responsible, calling for unfailing tact and constant good nature.

Some of the practical difficulties experienced in this new phase of Y.M.C.A. work are related by Captain Fred. W. Coyne, one of the first "Y" men detailed for work on the transports.

Captain Coyne secured the Isolation Ward on the aft deck as an office, on the understanding that he was to vacate on the first outbreak of infection. Fortunately it was not necessary to find other quarters, but the hospital provided accommodation for equipment only and could not be used as a recreation room by the men. Several tours of the vessel revealed no available space for "Y" work, but a trifling detail like that does not daunt your Red Triangle worker. Convinced that somewhere there *must* be a suitable location for his purpose Captain Coyne set out once more on a voyage of discovery. Up on deck were two cattle stalls invitingly empty. There was little else about them that was inviting, however, but permission having been obtained, the "Y" man got to work, and before long those stalls were cleaned out and filled with tables and benches. The front was closed in with canvas on which was emblazoned the Red Triangle sign.

During the voyage Captain Coyne also carried on a programme of concerts and religious services in the dining saloon, and he provided equipment for deck sports which were indulged in as far as space made this possible. Perhaps the greatest and most enduring work done during the voyage consisted of individual services for the men. There were many young and lonely boys on board, some of whom had never seen a ship before, and who were desperately home-sick. Amongst his happiest recollections Captain Coyne counts numberless acts of service he was able to perform for these lonely lads, whose hearts were behind them in Canada but whose faces were bravely turned towards the east.

Captain William C. Ross, who has made several trips as a Transport Secretary, has also had some experience with a converted cattle-boat, with very little emphasis on the "converted." On his first voyage the men were confined in nine holds with no provision for lounge and no room on deck for more than fifty men at a time, as twenty-nine steam winches, with all their appendages, monopolized a good deal of deck room. All of these handicaps made the "Y" programme at once difficult of realization and pressingly necessary.

It is not only in France in the trenches that the ingenuity of the "Y" man is taxed to the utmost to find premises where none exist. Captain Coyne solved his problem by rigging up two disused cattle stalls, and Captain H. S. Clugston, on one of his trips, found a centre for his work in a shower bath room. On another occasion he was provided with accommodation on the main deck, and in both locations fine work was done. Captain Clugston enjoyed the confidence and hearty co-operation of the officers, the N.C.O.'s and the men, and on several occasions the O.C. presided at "Y" concerts given to over 500 men at one time.

An ordinary day's Y.M.C.A. service on board ship is given by Captain P. C. Reed. From breakfast till 10 a.m. Captain Reed was busy planning the day's programme. He was assisted by a Y.M.C.A. committee consisting of a sergeant, a corporal and private from each of the five drafts on board. From 10 a.m. to 2.30 p.m. was spent in interviews with the men. Deck sports and visits to hospitals filled the time until 5 p.m. From 5.30 to 6.20 Bible study and meeting for prayer was held in a room set apart for the purpose by the O.C. An entertainment was put on in each of the five sections between 7 and 9 p.m., and Captain Reed's day always concluded with a visit to the men in the sick bay. Captain Reed was fortunate in having ample room for his work, and as the ship was detained in port for several days he was able to get his committee and programme in working order and well under way before sailing.

With 2,000 soldiers on board, including 300 Serbians, Captain Ernest Phillips reports that he "had some glorious times" during his first trip. In addition to the recreation and amusement programme, a Bible Study Class was conducted far down in the depths of the vessel amongst the ropes and boxes. On reaching Liverpool the men were lined up on the wharf where they caught

(*Continued on following page.*)

A Lesson in Pure English

(*Continued from page* 55.)

better' get him to give her a full list of them and then learn it by heart; because really it seemed as if he would 'end up' sometime by 'going insane' 'over' them. Without some such aid she would never be able to see how one phrase was 'different than' another, and unless she wanted to have a really 'ill man' on her hands after she had 'gotten' the list, she set herself to memorize the hateful words with as much ardor 'as would have done the most devoted daughter.' "

"This is very sweet of you, Uncle," she said, after she had read the parable once or twice. "Very sweet, indeed, though I don't deserve the nice things you say of me. But now I understand perfectly, and I shall never hurt your feelings again, if you will only explain more particularly about some of the neologisms you have marked. I can see why you should despise such a woman's word as 'gotten' and why, as a strong Pro-Ally, you must simply loathe 'over' because it is a translation of *uber*. I think myself that 'picking' rather unpleasantly suggests dressing fowls, and, after a little reflection, anybody would rather not say 'different than' or 'would better.' I suppose one would not like to say 'ill man,' much as one would dislike being so far out of the fashion as to say *sick* man. But what is the matter with 'end up'?"

"Nothing, except that it uncouthly oversays what *end* sufficiently says."

"Oh, I see! Well, that is all right, then, but what is the matter with 'going insane'? Why not say that?"

"Because it is getting too far away from the original locution 'going mad.' That was good, and 'going crazy' naturally followed, but when people become so refined as to wish to mask the notion of madness, they are obliged by the fitness of things to say *become* insane, and not *go* insane."

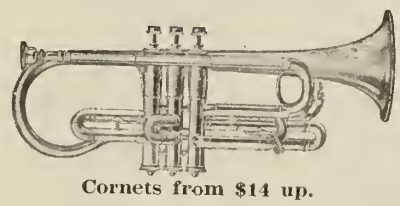
What Part Does Music Play in Your Life?

Mandolins from $8 up.

You enjoy it of course. But how much? Can you get along without it? For your sake we hope not.

After all, you get out of life only what you put into it. To be truly happy you must develop the tastes and interests which bring happiness. And music is one of the chief of these.

Make music mean more to you than mere entertainment. Make it a real and lasting resource. Make it enrich your life.



Guitars from $12 up.

Specify whether Spanish or Hawaiian.

Learn to Play Some Musical Instrument

Violins from $14 up.

Cornets from $14 up.

Banjos from $10 up.

You'll really find it quite easy, and the pleasure you will derive from accomplishment, from the ability to play at home or at social functions, or perhaps at public affairs or concerts, is something that will more than repay you for the comparatively small effort of learning.

The Work of the Red Triangle

(Continued from preceding page.)

sight of Captain Phillips watching the landing operations from the bridge of the transport. "Three cheers for the 'Y,'" sang out a stentorian voice, and the call was responded to again and again.

"Captain," said the O.C., coming up to the Red Triangle man, "that's worth something, and you deserve it!"

Evidence of the strong home ties of the French Canadian is seen in the enormous consumption of "Y" stationery consumed by them on a recent voyage across the Atlantic, when Captain S. R. Byles distributed no less than 10,000 sheets of notepaper and 8,000 envelopes. Writing was not the only relaxation of the men for Captain Byles got rid of nearly 2,000 magazines. At one of the concerts organized during a return voyage addresses were given by Hon. Dr. Beland and Hon. N. W. Rowell, Brig.-Gen. N. R. Kenyon, C.B., acting as chairman.

What the "Y" secretary would do without the gramophone in dugout, hospital and transport, it would be hard to imagine, and Captain J. P. Gerrie's report of how his instrument, as well as a portable organ and guitar, were carefully carried into every section of the vessel, is an illuminating commentary on the affectionate regard entertained by the men for these untiring entertainers.

Reference has been made to the religious work carried on by the "Y" men on board the transports, and it is impressive to note in the various reports the emphasis laid upon this form of service throughout. Captain Gerrie relates how at one gathering one hundred men raised their hands in response to a call to lead the straight and clean life. On one ship carrying French Canadians the R. C. Chaplain co-operated most heartily in furthering religious work on board. At a Sunday morning service on a return voyage, led by the Chaplain the lesson was read by a returning Canadian "Y" officer, prayer was offered by Commissioner Mapp, of the Salvation Army, and the address was given by Mr. Barnett, of the American Y.M.C.A. One result of the holding of Bible Study of groups was the distribution of a large number of New Testaments and the signing of hundreds of decision cards.

In several cases no Chaplains were on board and the "Y" secretary was entrusted with the work of conducting divine service in addition to his regular religious programme. A very impressive experience is related by Captain Clugston in this connection. During a Saturday evening concert considerable excitement was caused by the discharge of a depth bomb in close proximity to the vessel. The programme fell flat, and someone sang out,

"Captain, you had better carry on yourself!"

Captain Clugston stepped on to the platform and told the men that just as the cruisers and destroyers were round about them to protect, so underneath were the "everlasting arms."

Next day, at the request of a number of the men, and by special permission of the O. C., Communion Service was held in the Saloon. Each man wore his life-belt, and members of nearly every denomination partook.

Religious talks are always popular, and often lead to interesting discussions. Not infrequently excellent addresses were given by some of the soldier boys themselves.

The influence of this religious work on board the transports is deep and lasting in many cases. One man sought out the "Y" secretary and said:

"Well, Cap., when I came on board this ship I was going the wrong way. Now I am going straight, and I want you to write and tell the folks at home."

As the secretary says in his report: "It is a hard life, but it is one of the best places I know of to get to the greatest number of men, and do the most in the shortest time."

Much might be said in praise of the mental, moral and spiritual worth of the service the Red Triangle men are rendering on board the transports today, but it is all summed up in the testimony paid to one of the "Y" secretaries at the end of the voyage. Said the O.C.:

"This is the first time we have had the help of the Y. M. C. A. on the troop ship. It is also the first time I have had no orderly room cases!"

All designs shown in this catalog are fashioned after the late Fall New York models.

The Canadian Women's Magazine Publishing Co., Limited

Volume Fifteen — WILLIAM G. ROOK, President, Toronto — Number Eight

Copyright, December, 1918, in Canada, by The Canadian Women's Magazine Publishing Company, Limited, Toronto.

A Glance Into The Coming Numbers of Canadian Home Journal

No magazine can stand still. There is no pleasant "middle ground" in which a publication may bask in the light of past glory. It must either die outright, or keep abreast of the times, enlarging, growing, and adding features of up-to-the-minute interest. It must live and throb with energy, reflecting the spirit of the times, or cease to exist entirely.

The "Canadian Home Journal" during the coming year will prove how very much alive and alert it is. An abundance of new features have been planned, the most important of which is

A LARGE ROTOGRAVURE (OR PICTURE) SECTION. Starting in the January number, there will be at least eight pages of pictures printed in sepia added to "Canadian Home Journal." Note that we say added, for this section will be inserted over and above the ordinary size of the magazine. Pictures of particular interest to Canadians will be shown on these pages, as well as those of international interest.

We shall be glad to receive photographs from our readers for these pages, and will pay for all used in the magazine. Any subject, and any size will be accepted.

CARTON MOOREPARK HAS PAINTED SIX COVERS FOR NEXT YEAR.

These are already in our possession, and in order that none of the freshness and brilliancy of color be lost the plates which will print your covers have already been made. J. W. Beatty, R.C.A., who has just returned from France, will paint one cover, and the other five (but this is a very great secret) will be reproductions from famous pictures and art treasures of past ages.

The stories for 1919 are as bright, crisp and inspiring as it is possible to obtain. We have already contracted for the finest collection "Canadian Home Journal" has ever published.

Marion Harris Neil will guide our readers in cookery matters, as she has so splendidly in the past. Scarcely a day passes without either a letter or a comment about the excellence of the recipes prepared exclusively for "Canadian Home Journal" by Marion Harris Neil.

FOR THE JOURNAL JUNIORS.

The Children's Hour. Free Lunches for the Birds, by Ethel Bain... 25

Never in the past have we given the children the space in the magazine that we are planning to devote to their interests next year. The "Canadian Home Journal" is for every member of the family, and it is not fair to squeeze out the pages for the little folk.

These are a few of the good things planned, but others will come in at the last minute—red hot, too important to be held for even one month—and we shall do our utmost to crowd them in if it upsets all our plans. Nineteen-nineteen will be an outstanding year for "Canadian Home Journal."

CHRISTMAS DON'TS

DON'T limit the Christmas wreaths to your front windows. Hang them in the back windows, too, and give the butcher's boy and the groceryman and the other toilers the benefit of the decorations. Save half of your cheerful words for back-door callers.

Don't give your poor little friend a "pair of sensible shoes." Shoes are not a sensible present for a youngster, no matter how poor he is. He wants skates or a sled. The very best present you can give him is something to make him happy. That's all there is to Christmas.

Don't say, "I don't believe in Santa Claus," for that means you don't believe in yourself.

—"Pictorial Review."

Comfortable Shoes —that Wear Longer

Gone are the days when heavy, ugly shoes were the only "economy" shoes. The smartest shoes for men, women or children, are now built on trim, modern Neōlin Soles.

And Neōlin Soles wear longer—much longer even than thick old-style soles.

Neōlin Soles are modern in every way —in appearance and economy — ***and in comfort.*** For these are flexible soles—easy on the feet, even on factory shoes and farm shoes.

They are waterproof soles, too, conserving health, especially for children who cannot be kept indoors on rainy days.

Neōlin Soles are not confined to any one class of shoes. You'll find them in all stores at all prices. You'll find them on Milady's smartest street shoes—on business shoes for men—on work shoes—on school shoes—on house shoes. Ask your dealer to show you Neōlin-soled shoes. Have the repairman nail or sew full-soles or half-soles of Neōlin on your present shoes.

But be sure it is Neōlin—see that the name is on the bottom of the sole.

Again 'Tis Merry, Merry Christmas Time

THE JOY BELLS OF PEACE.

Peace! With bated breath we waited, listening, hoping, trembling. Distant bells sounded on the soft stillness of the early morning. Could it mean peace? Dared we hope? Or was it merely the noise of the busy world waking to take up its daily task? But no, louder and clearer came the shrill piercing notes of a siren proclaiming unmistakably that the significant moment had arrived for which we had waited, hoped and prayed for four long, anxious years.

Slowly comprehension came. Our boys were safe. The price had been paid, and the world's liberty established. Joy, gladness and peace reigned. The thought was too wonderful, too portentous to be grasped.

Nor yet is the meaning of peace realized, as it comes at this blessed Christmas season. Upon this war-wrecked, suffering world there will dawn the sweetest Christmas mankind has ever known, and the benediction of the "Prince of Peace" will rest as upon the shepherds watching their flocks on the hills of Bethlehem. A new world will be born, for the old has passed away. Old ideals, old prejudices, old misconceptions have given place to a higher hope, a deeper faith, and a broader love and understanding. Through grief and loss we have groped our way upward to the very mountain top of human experience—fittingly let us celebrate the birthday of the Christ Child who came to us that we might learn the glory and strength of self-sacrifice.

"Never before has the world had such a revelation of the divinity of human nature," said Sir John Willison recently. "Those who do the world's common drudgery and those who have worn fine linen and fared sumptuously every day have fought, suffered and died together in the trenches. All have responded to a common appeal and all have shared in common sacrifice and common glory. Unless there is a mortal and ineradicable defect in our civilization there will be fruits of sympathy and understanding from all this bloody sowing."

COMMUNITY BUILDINGS AS SOLDIERS' MEMORIALS.

There has already started in the United States a movement in favor of the erection of community buildings or homes instead of the usual monuments as memorials of the brave who have fallen in battle and at sea. The idea is an excellent one and in keeping with the highest ideals of true democracy. In every part of Canada and the United States there will be a desire on the part of all to commemorate the heroic deeds of our soldiers and sailors; how much better it would be to build suitable community buildings for the free use of the people than to erect the customary marble shafts.

SHALL WE CONTINUE RED CROSS WORK?

From women's societies all over Canada comes the question, How does the coming of Peace affect our Red Cross work?

To be able to reply correctly to these inquiries we also have put this question to the headquarters of the Red Cross, and secured from them the assurance that Red Cross work is still needed along directed lines. There is an ever-increasing number of wounded soldiers coming into Canada, and as no supplies have been retained here a certain amount of the usual kind of work will still be required, but it should be done under the direction of the Society in order that there may be no waste of certain lines.

There is, however, a channel of work which cannot be too ardently advocated, and one which should appeal very strongly to the woman heart. This is the making of clothing for the destitute French, Serbian and Belgian refugees. The Red Cross Society has undertaken this work for the months of November, December and January, and they ask the co-operation of every one interested in bringing comfort to these destitute, suffering people.

The Belgian and Serbian Relief Societies and the Secours National have all been consulted and agree that there can not possibly be any overlapping of work. The need is so great that too much in any line cannot be had. Red Cross materials now on hand may be made up in garments for the refugees and it will be considered regular Red Cross work. Patterns are also supplied by the Headquarters of the Red Cross in Toronto. Both queer and interesting is the clothing when made according to directions, and many who have no decided talent for knitting will find real delight in fashioning these garments with their huge waist bands and odd straight lines. A small square sticker, on which a Red Cross is printed and the letters "Canada" stand out prominently in white, is placed on each piece of clothing.

Peace does not mean inactivity for any one. Workers are needed as never before in the tremendous task of reconstruction in both Canada and Europe. Shoulder to shoulder the womanhood of our land must continue the task so gloriously begun. The cruel days are past, the suffering and agony of the darkest hours are over and no longer will there be that constant longing for, yet dread of, news. Now duty points straight to the glorious task of rebuilding, healing and comforting—so truly woman's work. It is not the efforts of the few outstanding leaders which will count for most, but the same untiring sticking to it of the united womanhood of Canada which has so characterized their efforts in the past.

This Gift Will Be Remembered When Christmas Is Past

Why not follow the plan of Christmas giving adopted by many of the best Canadian women, who have reduced the expense and have not lessened the value of the gift? Their plan is to send a year's subscription, costing only $2.00, for the "Canadian Home Journal," to their friends. This avoids many weary days of shopping through crowded stores, and does away with the extra expense and trouble of sending presents through the mails.

At the bottom of this page we have printed a coupon that you may use, in which to fill in the names of your friends, then attach a money order for the necessary amount to cover cost, and we will do the rest. Just as soon as your list reaches us we will enter the names on our mailing lists and will address an envelope in which we will send to each of your friends named a beautiful Christmas card printed in full colors, bearing the information that you have requested us to send the "Canadian Home Journal" for a year as your Christmas present. The beautiful card and a copy of our splendid Christmas Number will be mailed to each that they may be received on Christmas morning.

What more suitable or appreciable gift could be given to a Canadian woman than a year's subscription to the "Canadian Home Journal," which is owned, published and edited by Canadians, who spend your subscription money amongst Canadian workmen? Why not subscribe only to Canadian publications this year? Sample copies sent free on request.

We will send a year's subscription—12 copies of the "Canadian Home Journal"—to any part of Canada or Great Britain, at the following special Christmas rates: Two subscriptions $3.50; three subscriptions, $5.00; four subscriptions, $6.00. Extra subscriptions above four, $1.50 each. If your friends live in the United States, 50 cents extra must be included for each subscription going to that country to pay the extra postage.

SPECIAL NOTE.—Order before the Christmas rush, to make sure that the present will be received by your friend on Christmas Day. Lists of names containing Western addresses should reach us by December 16th. Ontario and Eastern addresses may be sent in as late as December 20th, and we will promise delivery on Christmas morning. Give full names and initials, and full addresses of both friend and sender. All orders must be sent to

CANADIAN HOME JOURNAL

71-81 Richmond Street West **Toronto**

Cut out this Coupon, fill in names and addresses of persons to whom you desire us to send a year's subscription, give your own name and address, attach a money order, then mail to us and we will send your Christmas present to arrive on Christmas morning.

"On the low rocker the man in khaki sat with Buddy asleep in his arms."

Before the war Peter Piper was a ne'er-do-well. When he returned he was a hero.

The story of the transformation is cleverly told by

Mary Maclellan

Illustrated by
E. J. DINSMORE.

THE RETURN OF PETER PIPER

"GET right off to sleep, now, Buddy," Sarah Ann Piper warned as, with adroit fingers, she tucked the white and red squared quilt about the railings of the little enameled cot, "Get right to sleep now, for if Santa Claus comes up to this window and sees a light, he'll turn right around and walk off again."

Buddy shut his eyes tightly, squirmed a moment under the checkered covering of quilt, then laughed softly.

"All right Mummie,—say to Santa Claus—Buddy's all 'sleep."

Sarah Ann Piper smiled down upon the three year old baby of hers as she reached up to turn off the gas. Life had given her little of its gold, but she found in her children a valuable recompense. Tip-toeing across the room she paused a moment by the window before pulling down the shade. The five o'clock December sunset was at its best. The wonderful color of sky, and glistening snows held Sarah Ann immobile for a few seconds. In girlhood days the world of the out of doors had been her chief glory and delight. Years of toil and suffering had robbed her of many old ideals but sometimes across the span of years there came on the wings of a treasured memory a dream awakening to the beautiful. To-night the glory and peace of the early Christmas Eve stirred unfrequented depths of her soul. Already twilight was blueing the snows, and faintly erasing the surrounding neighborhood. There was much to be done ere dark. Sarah Ann pulled down the blind with an impatient jerk, and turned for a last survey of the crib in the semi-darkness. Convinced that Buddy had speedily drifted to the border realm of dreams, she tiptoed across the carpetless floor to the door.

"I knew he was about all in," she commented softly, "It was a shame to put him to bed so early and on Christmas eve, but to-morrow he will forget the disappointment."

Softly she shut the door and hastened through the sitting room to the kitchen.

"Supper nearly ready, Sarah Ann?" she called sharply.

A child of some twelve years came from the little pantry carrying a plate of bread.

"Yes, sure 'tis, mother," Sarah Ann Junior retorted blithely. "I may be too slow for you other times, but I can hurry Christmas; Jimmy isn't back though."

The woman frowned.

"Jimmy always did take after your father for alacrity," she hinted a trifle sarcastically. "There isn't any time now to sit around waitin' for him, we'll eat now."

And suiting the action to the word she sat down at the table and reached across for bread. The little girl followed her example.

"Isn't it just great, mother," Sarah Ann Junior glibed gaily, helping herself to the warmed over potatoes, then passing them across to her mother, "Isn't it just great that we can have a real Christmas this year. We never had any before. Last year Buddy was sick, and all other times father was home. He never was much for Christmas."

"Never was much for anything" the mother corrected as a rattling at the door indicated Jimmy's tardy return.

Jimmy was ten, and "sellin' papers," so in his estimation he was just twice that age. Silently he took the scolding he knew was forthcoming and settled down to his supper. Sarah Ann Piper eyed him critically, something was the matter—she was mother enough to discern that. Ceasing to gibe at him she awaited an explanation, but Jimmy silently attended to his meal.

"What's up now Jimmy?" she questioned presently in a relented tone,—"Haven't done anything wrong, I hope."

The boy stolidly shook his head.

"Suppose I got ter tell sometime" he began, "or somebody else will,—Dad's home."

Sarah Ann Piper sat up with a quick start.

"What?" she gasped.

"Dad's home. Saw him down near the Royal Hotel. He didn't see me though, that's what made me late. I kinder hung around to see what he was doin.' Dad looked kinder different somehow."

He turned to his mother for some comment. She sat motionless, her very lips livid. Sarah Ann Junior followed Jimmy's gaze, a timorous look came into her eyes.

"I suppose now" she said almost tearfully, "I suppose now we can't have any Christmas if Dad's home."

Sarah Ann Piper stirred suddenly, and leaning across the table she sharply slapped her daughter's hand.

"Don't be silly" she exclaimed, "Of course we'll have our Christmas. Your father has spoiled enough of your life without trying to do so any more."

The three resumed the meal in silence. The children were too preoccupied to notice that their mother ate little more. Jimmy's retentive mind and ready tongue were soon in splendid working order. Sarah Ann Junior listened to the day's exploits with gleaming eyes. His talk was partial to Christmas as was her pleasure loving little soul.

The supper over, Sarah Ann commanded the children to wash the dishes while she attended to secretive preparations for the to-morrow in the sitting room.

Once alone in the dark room she sank trembling into a low arm chair and covered her face with her hands. Life was turning golden for them again, why must Peter Piper return to shadow it all?

Thousands of others—noble and needed men were slain in the great conflict across the seas. Why had the war not claimed him too?

Like the far away echo of some lost reality came the clatter of dishes, and the dish washing campaign from the kitchen. It seemed hours she sat there planning, contemplating, reasoning. Presently she rose, at the threshold she paused.

"Oh God" she prayed softly, "When he comes make me ready for him."

The last dishes were being speedily put in their proper places as she re-entered the kitchen. She smiled convincingly as she watched the two willing workers. Unconditionally her children would stand up with her against the man who had forfeited all right to be their father.

Searching for her purse in the cupboard, she found it, and deducted two quarters from its contents.

"Run over to the grocery after you are through" she commanded, "We'll need some brown sugar for our taffy, ten cents worth of nuts and a package of dates. Everything else is in the house, but I forgot these until a moment ago."

Sarah Ann Junior's eyes sparkled with excitement as she passed her mother, dish pan in hand.

"Isn't it great," she vouchsafed.

Once alone in the house Sarah Ann Piper lit the gas in the sitting room, drew a basket of small parcels out from under the couch and began to sort and label them accordingly. Her mind was calculating future possibilities.

Distinctly she heard the opening of a door—footsteps in the kitchen. Christmas was most assuredly a magical thing—a hastener of little feet. She smiled as she stooped to shove the basket into its hiding place.

Suddenly the little room thrilled with a deep tender masculine voice.

"Sarah Ann—I'm back."

Petrified she waited his next words. There was a long silence. Slowly she turned about.

"Well?" she demanded calmly.

The sight of the man standing in the doorway sent a tremor through her. Instinctively she remembered Jimmy's assertion at the supper-table. "Dad looked different somehow." How true his words might be she had not previously reasoned.

Now the reality of them struck her forcibly. There was a something in the face of this man she had never seen there before—not even in her courtship days. There was a sudden impulse within her to go to him, to forgive all in one mad gladness of re-union. Simultaneously she remembered the children.

Sarah Ann Piper had been many creatures,— but a coward *never*. She would stand by them to the last.

So he still wore his khaki. Was he a soldier, she wondered sarcastically.

"Well?" she reiterated.

He came a step towards her.

"Well, aren't you going to welcome me home?"

"Welcome you home" she almost screamed, all the pent up resentment of years breaking forth in one mad torrent of words—"Welcome you home! Why should I ever wait to welcome you home, you who made it a hell for us until they sent you away? "Home" she laughed hoarsely, "Yes, yes, it's home

(*Continued on page* 56.)

THE MASTER MIND OF THE MOVIES

ILLUSTRATED BY PHOTOGRAPHS.

J. Gordon Edwards.

"Salome" dancing the "Dance of the Seven Veils" for King Herod in the banquet hall of Herod's temple.

At the left Mr. Edwards may be seen directing this entire scene. Beside him is his camera man.

On the opposite page is shown the banquet hall in Herod's Temple being erected.

IT was a Canadian who gave to the world two of the greatest film masterpieces ever flashed upon a screen—"Cleopatra" and "Salome"—J. Gordon Edwards, who proudly acclaims the fact that he was born in Canada, and in addition boasts that he received his military training there. And then again, he is proud that his only son, Jack, a manly chap of twenty, enlisted in the Royal Flying Corps of Canada, leaving Cornell University to do his bit for the land that gave birth to his illustrious father.

Seldom, if ever, is there very much written about the man with the brains who conceives and puts into execution a moving picture. With a few exceptions, they have become famous only through the efforts of personal press agents, who pounded into the minds of the "fans" the greatness of the director, giving the production secondary consideration. The result justified the hard-working publicity agent's most sanguine expectations; when a new picture is released by these much-heralded gentlemen, the movie "fan" goes to the theatre with the firm belief that he is to see a good photoplay.

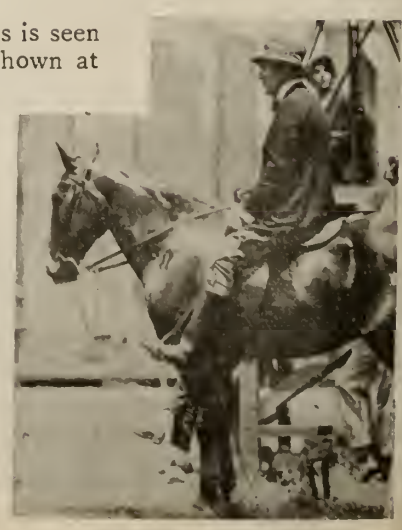
Comparatively few people had heard of J. Gordon Edwards up to the time of his productions of "Cleopatra" and "Salome," excepting those directly interested in the producing field. Although he is given due screen credit for his productions, it soon escapes the mind of the theatregoer—the star is the only one who makes an impression. For more than four years Mr. Edwards has hidden his light under a bushel—for he is an extremely modest man; he shuns publicity, and is content to rest on what he has done.

Before the filming of "Cleopatra," Mr. Edwards was busy turning out six and seven-reel photo-dramas—all money-makers so far as commercial success was concerned, and all perfect insofar as dramatic values were involved—without a thought of his own personal aggrandizement or the foisting of his own personality on the public. But when that marvellously perfect and magnificent production of "Cleopatra" was shown to an admiring multitude of fans throughout the world, followed by that intensely vivid and dramatic production of "Salome," they wanted to know something about the master mind who had made the pages of history come to life again in living and breathing characters—about the man who could handle the great "mob" scenes with such marvellous skill, who could stage an almost historically accurate naval battle.

A little over six feet in height, he has an erect, soldierly bearing, a high, intellectual forehead, a face devoid of wrinkles, unless brought into play by a smile that starts at his lips and gradually illuminates his entire countenance, and when in repose he has the cast of a thinker, student and scholar. His hair is slightly tinged with silver, brushed back on his head. A cigar always either between his fingers or in his mouth.

J. Gordon Edwards' eventful life makes interesting material for a biographical sketch. Before his advent into the field of the silent drama, he was

(*Continued on following page.*)

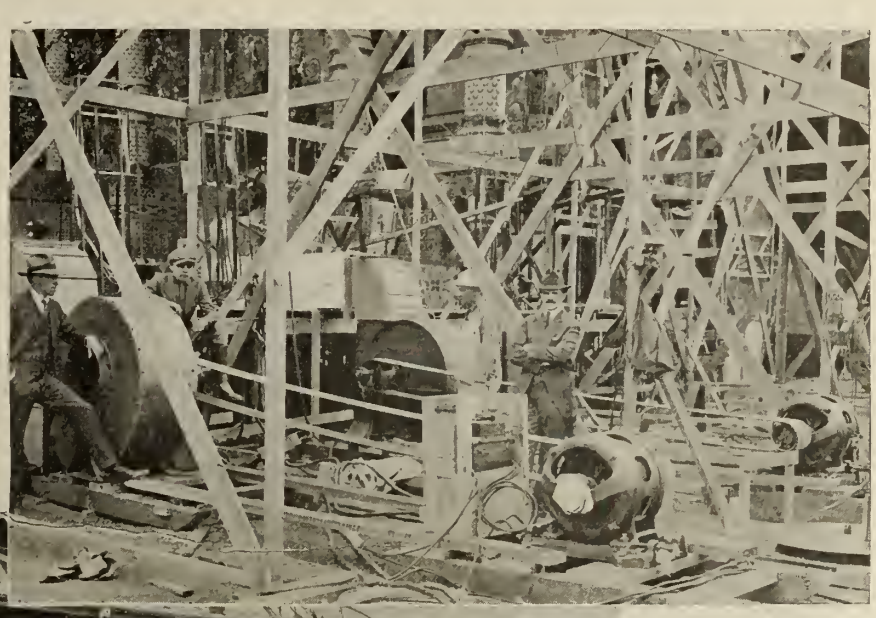


Theda Bara, who takes the part of "Salome," has just exclaimed "There is no God!" Beside her may be seen Herod and John the Baptist.

Following this declaration, by a marvelous lighting effect, the face of John the Baptist lights up, he calls upon Jehovah, and a bolt of lightning comes crashing down, destroying the Herodian god "Jove." Terrific crashes of thunder followed by wind, throw the entire assembly into panic. See the pictures on the opposite page explaining the mechanism for producing this storm.

At the right Mr. Edwards is seen directing the mob scene, shown at the left.

The First Story Ever Published of J. Gordon Edwards—How he Obtains Wonderful Screen Effects.



By A. L. SELIG.

Constructing a village for the films.

This picture gives an idea of the enormous amount of work required in preparing the setting for films such as "Salome." Note the row of electric lighting apparatus in the foreground. "Salome" was photographed in California, where no glass roofs are required.

The propellers of ten aeroplanes and huge electric blowers were placed in position to produce the wind in the storm which brings the picture of "Salome" to its dramatic close. Truly, one of the most spectacular scenes ever produced on the screen.

The travelling transformer used to supply the vivid lightning effect in "Salome" in the storm scene.

Left: Miss Bara gives her interpretation of a scene in "Cleopatra."

Right: Mr. Edwards directing a scene in "Cleopatra."

(*Continued from preceding page.*)

first an actor, and later a stage director. As the latter, he had under his direction such celebrated and famous stars as Henrietta Crossman, Wilton Lackaye, Cecelia Loftus, James K. Hackett, Amelia Bingham, Marguerite Clark, Virginia Harned and a host of other well-known men and women. In addition, he had many years' experience on the stage in big productions, and for many years was leading man in Broadway successes and in the leading stock companies throughout the United States and Canada, so we see that he is more than duly qualified to hold the position of director-general of the William Fox organization.

J. Gordon Edwards was born in Montreal, Canada, of Scotch-French parents. His father, who was born in Inverness, Scotland, was the owner of a large farm just outside of Montreal. Young Edwards was given a good schooling, and then entered the Military School at Kingston. He spent three years there studying military tactics, and as he showed a proficiency in the artillery branch of the service, gave most of his studies to that. He distinguished himself in that arm of the service during the examination manœuvres by receiving a possible 45 out of 48 points in proficiency and marksmanship. He was publicly commended by the Brigadier-General of Canada, who was present, and also by members of the English nobility who were guests at the manœuvres.

Shortly after this, Mr. Edwards' father died, leaving just enough to support his mother, and the young man, who had set his heart on becoming a military man, was forced to leave college. He had no idea what profession to follow, but having heard of the great opportunities in New York, determined to go to that city.

While sitting in the smoking-room of the St. Lawrence Hall Hotel waiting for train time, Mr. Edwards' attention was attracted to a gallery of portraits of famous stage stars. After studying them for a while, the thought gradually came to him that he would like to go on the stage. No sooner did he strike New York than he sought a theatrical engagement. Some friends advised him to see Joseph Howarth, who at that time had the leading stock company playing Shakespearean repertoire. Struck by the young man's appearance, Howarth engaged him to play small parts, and it was not long before Mr. Edwards was playing leads.

In 1892, Abbey, Schoeffel and Grau were getting ready to produce their big spectacle, "America," which was to be one of the attractions during the World's Fair in Chicago. They had heard of Mr. Edwards, and engaged him to play the parts of Columbus, George Washington and Abraham Lincoln. The production had a long run in Chicago, where it played at the Auditorium, and after the Fair was brought to New York City, where it ran for a long time at the Metropolitan Opera House. Later, the company went to London, where it had a long and successful engagement.

After this, Mr. Edwards was engaged to play leads in several productions, and gradually became a stage director in charge of many of the famous stock companies playing in the various big cities of the United States and Canada. It was while Mr. Edwards had charge of the stock company of William Fox's Academy of Music in New York that he had his first opportunity to enter the motion picture field. At that time William Fox contemplated entering the producing field, and in looking around for a man who could further his plans, singled out Mr. Edwards. After outlining his ideas, Mr. Fox sent Mr. Edwards to Europe to study the methods of the various studios in Paris, Italy and Germany, prior to the organization of a photoplay company in the United States.

After spending six months travelling about Europe gaining first hand knowledge of the technical and dramatic sides of the producing of photoplays, Mr. Edwards was just able to leave England on the last boat over, when war was declared by Germany. Had he tarried a little longer in Berlin or Vienna, he would have been interned as a Canadian, and the motion picture art would not have had the impetus it did through the efforts of Mr. Fox and Mr.

(*Continued on page* 57.)

His Christmas Gift

By
MABEL BURKHOLDER

Author of "The Last Laugh," etc.

Illustrated by E. J. Dinsmore.

A FEW days before Christmas, Dr. Lett had found it to his advantage to go to Inchcolm, and he was grimly pleased to observe the commotion his unexpected appearance created. It seemed he had set the sleek servants jumping about like acrobats; yet this was his home—or, more correctly, his wife's—and he had a right to be there. He felt an amused contempt for them because they feared him, and his manner while at his country house became, if possible, more gloomy and masterful than he was wont to display in the city.

"Well, well," he said to himself, looking down on the rear of the house from the high window of his room, "when I have completed my wonderful invention, and have become as famous as I deserve to be, I'll speak a word of praise for these humble folk who have fed and housed me in some of my bitterest moods. The world cannot afford to neglect me much longer. I'm winning out—slowly winning out."

His room, after a day's occupation, was what he invariably reduced it to—a belittered workshop, with little to suggest luxury or comfort. He had ordered away all articles for which he had not immediate use, and had caused to be carried in several tables and benches, with a bewildering array of tools. And in the midst of it, with hardly sufficient space to set his feet, he worked, ate and slept, refusing to see any person until he had tried out some idea which had occurred to him for the perfecting of his invention.

All around the room lay parts of the machine on which he was working. It was not set up in shape that would suggest its use to an outsider, but in his mind he always called it his "sea-bird," and his friends knew it was a small, improved kind of seaplane, a racer of marvellous speed, capable of carrying only one or two men, yet invaluable in war time for taking observations in perilous places and getting away safely.

"Christmas is coming, my Lady-bird," he said, patting lovingly a portion of the machine, "and some time between that and the New Year a test will be made in a Southern city, far away from this ice-bound coast, where you will prove what you can do before admiring multitudes. If you fail me, little sea-bird, I shall die. For I love nothing in the world like you."

When he had been in the house twenty-four hours it occurred to him that he had not seen his wife. He supposed she was about somewhere. Probably it was she who had knocked on his door early in the afternoon, whose call he had neglected or forgotten to answer. She knew he had come down to the barren island of Inchcolm to perfect the last details of his invention. Why couldn't she leave him alone until his idea burned itself out, and he felt the need of human companionship!

He thought, perhaps, even then he would not see her, but would slip quietly back to the great city, and there await the day of testing. Probably the sight of her would unnerve him, for a blind fury sometimes mastered him when he allowed his thoughts to dwell on her. Ah, better that he should see nobody but Hobson, the only servant he allowed in the room, a much-suffering individual, who glided in and out without noise, and who sometimes served two or three trays of food before he made the happy selection that suited his master's palate. Yes, he was determined that he would see only Hobson.

As he stood gazing down on the rugged cliffs that formed the western boundary of the island, his wife crossed the lawn, coming up from the boat-house. She did not observe him, for night was falling, and he hastily drew back from the window. But he studied her in detail, as she crawled rather than walked to the door, and he thought that never before had he seen her look so plain and uninteresting. What ailed her that she dragged her steps so? Was she getting old? He glanced swiftly at himself in the glass to see if time was playing its tricks on him also. But the figure he saw reflected was upright and alert, the head sparsely sprinkled with gray, the face keen and cold, with proud eyes and contemptuous lips. Then he remembered that he was six years younger than she.

Her name was Sibyl. Good Lord, what a name for a woman as ungraceful as she! If that name, so suggestive of witchery and charm, of deep world-wisdom had belonged to another woman in the city, who had been designed by nature for him and by a bitter fate separated from him . . .

Bah! He could take his medicine. It was not as though he had been forced into his present position. The choice had been his own. He had *asked* this sibyline creature to become his wife because he knew she was to have an income of five hundred dollars a day on the death of her parents. Obligingly they had died, and she inherited quite as much money as he expected. She had been pointed out to him as the deaf and dumb daughter of a multi-millionaire, a person of fine character, but quite a long way past her youth and without prospects of marriage. As he was then also quite a long way past his youth, penniless, soured, because he could not get the world to listen to his ideas, he had proposed marriage to her, not concealing the fact that he needed her money. There was but little pretence of love. Usually they lived apart. He remembered that he had once felt sufficient interest in her to teach her to talk. No one else had been able, but he had persisted, as one might persist with a parrot, his tenacity overcoming all difficulties, until at last she was able to articulate a hundred words in a guttural fashion which few but himself and the servants could understand.

As he watched her, she stopped and spoke to a servant at the door. He shuddered at the weird sound.

As darkness descended, the doctor became engrossed in his work once more. He was above and beyond all sounds of the house. Only the tide rushing into the rocky chasms at the foot of the cliff sounded a dull monotone in his ear. But his invention was too nearly completed to absorb him fully. He was exhausted, and could not concentrate. He went to his desk and wrote numerous letters. At last he yielded to the fierce hunger that always ate at his heart, and wrote a page to the lady in the city, the serpent-wise woman, with sea-green eyes and the hair of a mermaid. It seemed he had to have her praise, though he knew it was not much better than flattery, and that she did not understand his invention in the least.

A closely-written sheet lay before him, when he glanced around to see Hobson standing at a respectful distance.

"Your wife, sir. She wishes to see you, sir."

Into Dr. Lett's voice crept the irritation he felt.

"Tell her not now—she knows I am busy."

The servant stood his ground.

"She has something, sir, she thinks it will please you to see."

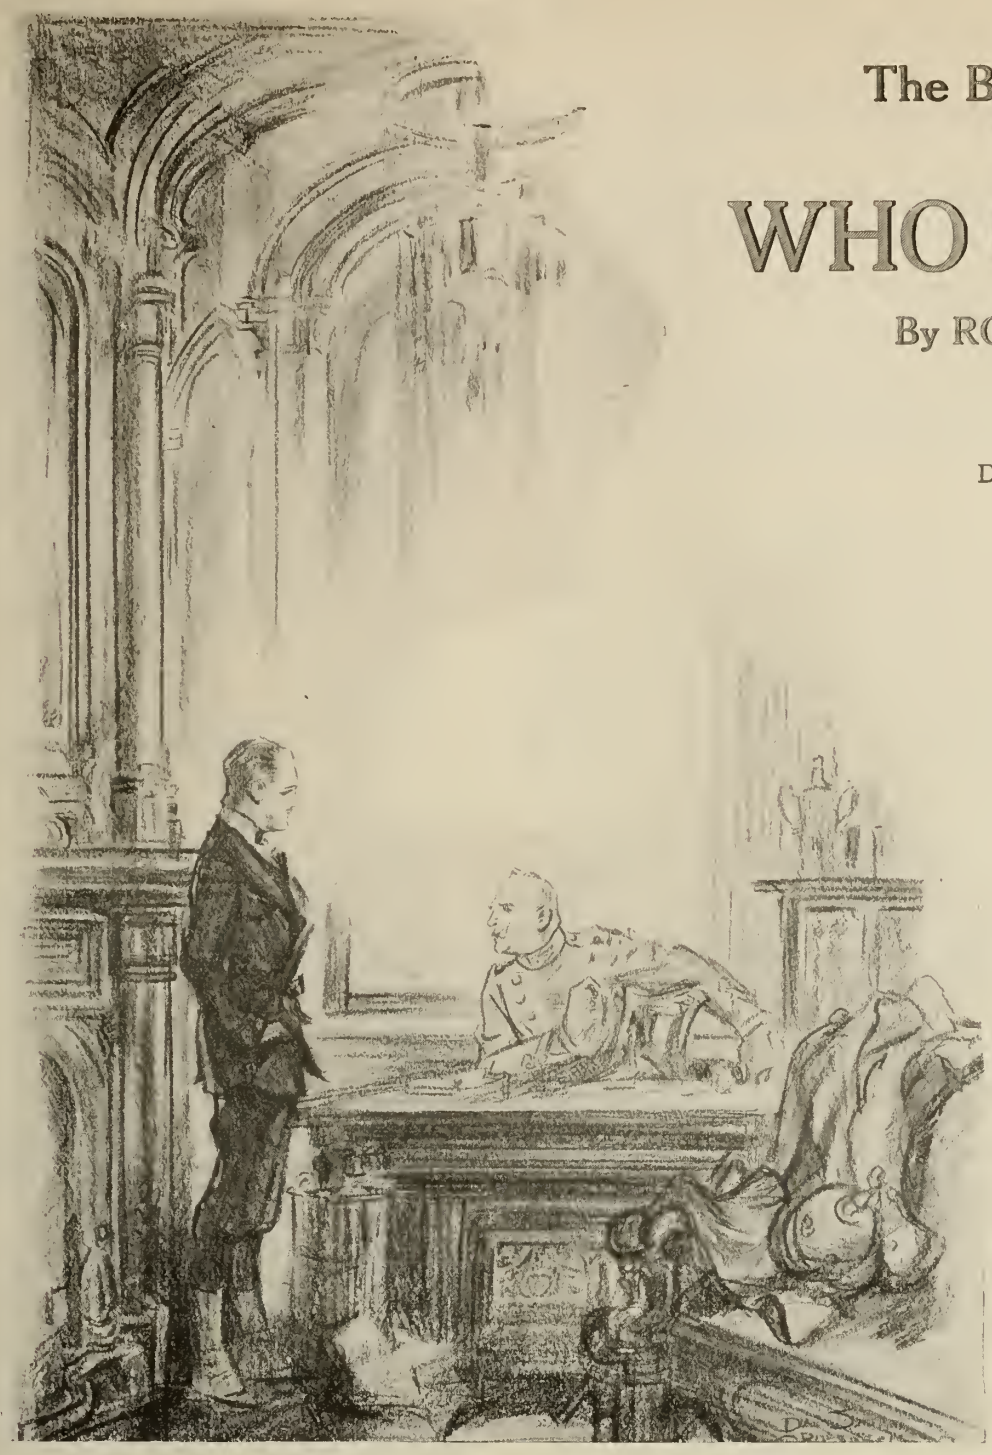
Then the amazed doctor discovered that there were several persons behind Hobson. His wife was there—and another person in the uniform of a nurse. The latter carried what looked like a roll of clothes.

"W-what is this?" the amazed man demanded, springing up and confronting the small thing, as he might have faced his worst enemy.

Then the person in nurse's uniform spoke.

"It is your son, William Henry Lett."

Before he could reply, his wife pressed forward, articulating in her thick tones:



"His name — William — same as yours — six weeks old—"

The man remembered then that she had mentioned frequently in her letters that she had had a wretched summer, and had been ill. This explained the stoop of her shoulders which had annoyed him, for now that he saw her closely everything about her bespoke physical illness. She was too old to bear a first child. No doubt she had tried to tell him all in her letters, and he had been so engrossed in his work that he failed to understand.

(*Continued on page* 48.)

She raised the paper to her lips, kissing it fervently again and again. She was beautiful in her innocent rapture.

Young Guild looked steadily at the man in grey, and the man in grey gazed steadily back.

The Beginning of the Great War Romance

WHO GOES THERE

By ROBERT W. CHAMBERS

Illustrated by
DAN SAYRE GROESBECK.

The scenes of this story are laid in Belgium and England at the beginning of war. Captured as prisoner, Kervyn Guild is taken before the German General, who offers to spare his life and others and save a Belgian village if he will proceed to England and return with the General's daughter, who was caught there at the outbreak of the war. Guild undertakes the mission, arrives in England, but finds getting away is another matter. Read what happens.

THEY had selected for their business the outer face of an old garden wall. There were red tiles on the coping; dusty roadside vines half covered the base. Where plaster had peeled off a few weather-beaten bricks showed. Bees hummed in the trampled herbage.

Against this wall they backed the first six men. One, a mere boy, was crying, wiping his frightened eyes on his shirt-sleeve.

The dry crash of the volley ended the matter; all the men against the wall collapsed. Presently one of them, the boy who had been crying, moved his arm in the grass. A rifle spoke instantly, and he moved no more.

There came a low-spoken word of command, the firing squad shouldered rifles, wheeled, and moved off; and out of the sea-grey masses of infantry another squad of execution came marching up, smartly.

A dozen men, some in sabots, trousers, and dirty collarless shirts, some in well-cut business suits and straw hats, and all with their wrists tied behind them, stood silently awaiting their turns. One among them, a young man wearing a golf-cap, knickerbockers, leather-spats, and with an absolutely colorless face, stood staring at the tumbled heaps of clothing along the foot of the wall as though stupified.

Six peasants went first; the men more smartly attired were to wait a little longer it appeared.

The emotionless and methodical preparations, the brisk precision of the operation, the cheerful celerity of the firing squad made it the more terrifying, stunning the victims to immobility.

The young man in the golf-cap and knickerbockers clenched his tied hands. Not an atom of color remained in cheeks or lips, and he stood with face averted while the squad of execution was busy with its business.

Houses lining the single village street began to leak smoke; smoke writhed and curled behind closed window-panes. Here and there a mounted Uhlan forced his big horse up on the sidewalk and drove his lance butt through the window glass.

Already the street was swimming in thin strata of smoke; the sea-grey uniforms of the German infantry seemed part of the haze; only the faces of the soldiery were visible—faces without bodies, thousands of flat, detached faces, thousands of little pig eyes set in a blank and foggy void. And over everything in the close, heavy air brooded the sour stench of a sweat-soaked, unwashed army.

A third squad of execution came swinging up, apparently out of nowhere, their heavy half-boots clumping in unison on the stony street.

The young man in the golf-cap and knickerbockers heard them coming and bit his bloodless lip. After a moment the rhythm of the heavy boots ceased. The street became very silent, save where window glass continually fell tinkling to the sidewalk and the feathery whisper of flames became more audible from within the row of empty houses.

The young man lifted his eyes to the sombre and sunless sky. High up there above the mist and heavy bands of smoke he saw the feathery tops of tall trees motionless.

Presently through the silence came the clatter of hoofs; Uhlans cantered past, pennons whipping from lance heads; then a soft two-toned bugle-call announced an automobile; and presently it loomed up, huge, through the parted ranks of the infantry, a great grey, low-purring bulk, slowing, halting, still purring.

A grey-clad general officer sat in the tonneau, a grey-uniformed hussar was seated beside the grey-liveried chauffeur.

As the car stopped, several officers were already beside the running-board, halted stiffly at attention. The general officer, his cigar between his gloved fingers, leaned over the edge of the tonneau and said something in a very quiet voice.

Instantly a slim, stiff infantry captain saluted, wheeled sharply, and walked straight to the little file of prisoners who stood with their wrists tied behind their backs, looking vacantly at the automobile.

"Which is the prisoner-hostage who says he is American?" he snapped out in his nasal Prussian voice.

The young man who wore a golf-cap took a short step forward, hesitated.

"You?"

"Yes."

"Fall in again!"

The officer nodded to a sergeant of infantry, and a squad of men shoved the prisoners into single file, facing not the fatal wall, but westward, along the street.

"March!" said somebody. And the next moment again: "Halt!" rang out with the snapping brevity of a cracked whip. The general officer leaned from the grey tonneau and looked steadily along the file of hostages until his glance fell upon the young man in the golf-cap.

"What is your name?" he asked quietly in English.

"My name is Guild."

"The rest?"

"Kervyn Guild."

"You say you are American?"

"Yes."

The general officer looked at him for a moment longer, then said something to the hussar aide-de-camp.

The aide threw open the car door and jumped out. A lieutenant took command of the escort. The hussar whispered instructions, turned and came to attention beside the running-board, then, at a nod from the general officer, jumped up beside the chauffeur. There came the soft-toned, mellow warning of the bugle; the grey machine glided off into the mist; the prisoners and escort followed it, marching briskly.

As they passed the end of the street two houses on their right suddenly roared up in one vast, smoke-shot tower of flame, and a brassy glare lighted up the mist around them.

Somewhere near by a woman began to scream; farther down the street, more windows and doors were being beaten in. From farther away still, came the strains of military music, resonant, full, magnificent. A detail passed with spades to bury the dead who lay under the wall. All was order, precision, and cheerful despatch. The infantry column, along the halted flanks of which the

(Continued on following page.)

WHO GOES THERE

(Continued from preceding page.)

prisoners were now being marched, came to attention. Company after company marked time heavily; shouldered rifles. Uhlans in file came spurring through the centre of the street; a cyclist followed, rifle slung across his back, sitting at ease on his machine and gazing curiously about.

Out of the end of the village street marched the prisoners and their escort, but presently halted again.

Directly in front of them stood the grey automobile drawn up by the roadside before a pair of iron gates. The gates swung from high stucco walls. On top of the walls were soldiers sitting, rifle on knee; a machine gun commanded the drive, and across the gravel more soldiers were digging a trench, setting posts, and stringing barbed wire which they unwound from great wooden reels.

Through the gates escort and prisoners threaded their way, across a lawn already trampled by cavalry, and straight on toward a pleasant looking and somewhat old-fashioned house set amid older trees and shrubbery, badly broken.

Half a dozen grey-clad staff officers were eating and drinking on the low stone terrace; their horses picketed on the lawn, nibbled the crushed shrubbery. Sentries pacing the terrace and on guard at the door came to attention as the lieutenant in charge of the escort marched his prisoners in.

At a word from him an infantryman went from prisoner to prisoner untying the cords that bound their wrists behind them. Then they were marched into an old-fashioned drawing-room on the left, sentries were placed, the remainder of the escort sat down on the floor with their loaded rifles on their laps and their backs against the wall. Their officer, the lieutenant, walked across the hallway to the room on the left, where the sentry admitted him, then closed the door and resumed his heavy pacing of the black-tiled hall.

The sergeant in charge of the escort lifted his helmet with its grey-cloth covering, scratched his bullet head, yawned. Then he said, jerking a huge thumb toward the drawing-room: "There's a good wall in the garden behind the house. They'll make the fruit grow all the better—these Belgians."

The lieutenant, coming out of the room opposite overheard him.

He went into the drawing-room where the prisoners stood by the windows looking out silently at a great pall of smoke which was hanging over the village through which they had just been marched.

"Which of you is the alleged American?" said the lieutenant in hesitating but correct English.

The young man in knickerbockers rose from a brocaded armchair.

"Follow me. General von Reiter does you the honor to question you."

The young man looked the lieutenant straight in the eye and smiled, stiffly perhaps, because his face was still pallid and the breath of death still chilled it.

"The honor," he said in an agreeably modulated voice, "is General von Reiter's. But I fear he won't realize it."

"What's that!" said the lieutenant sharply.

But young Guild shrugged his shoulders. "You wouldn't understand either. Besides you are too talkative for an underling. Do your duty—if you know how."

"Swine of a Yankee," said the lieutenant, speaking slowly and with painful precision, "do you suppose you are in your own sty of a Republic? Silence! A Prussian officer commands you! March!"

Guild dropped his hands into the pockets of his belted jacket. "You little shrimp," he said good humoredly, and followed the officer, who had now drawn his sword.

Out into the hall they filed, across it to the closed door. The sentry on duty there opened it; the lieutenant, very red in the face, delivered his prisoner, then, at a nod from the grey-clad officer who was sitting behind a writing desk, saluted, faced about, and marched out. The door closed sharply behind him.

CHAPTER II.

YOUNG GUILD looked steadily at the man in grey, and the man in grey gazed as steadily back from behind his desk.

He was a man of forty-five, lean, well built, blond, and of regular features save that his cheekbones were a trifle high, which seemed to crowd his light blue eyes, make them narrower, and push them into a very slight slant. He had the well-groomed aspect of a Prussian officer, dry of skin, clean-shaven save for the mustache *en croc*, which his bony but powerful and well-kept hands absently caressed at intervals.

His forehead was broad and benevolent, but his eyes modified the humanity and his mouth almost denied it—a mouth firm without shrewdness, not bad, not cruel for the sake of cruelty, yet moulded in lines which promised no hope other than that iron justice which knows no mercy.

"Mr. Guild?"

"Yes, General."

General von Reiter folded his bony hands and rested them on the blotter.

"You say that you are American?"

"Yes."

"How came you to be among the Yslemont hostages?"

"I was stopping at the Hotel Poste when the Uhlans and cyclists suddenly appeared. The captain of Uhlans took the Burgomaster with whom I had been playing chess, myself, the notary, and other leading citizens."

"Did you tell him you are American?"

"Yes. But he paid no attention."

"Had you a passport?"

"Yes."

"Other papers to establish your identity?"

"A few business letters from New York. They read them, but told me they were of no use to me."

"Why did you not communicate with your nearest Consul or with the American Minister in Brussels?"

"They refused me the use of telephone and telegraph. They said that I am Belgian and properly liable to be taken as hostage for the good behaviour of Yslemont."

General von Reiter's hand was lifted meditatively to his mustache. He said: "What happened after you were refused permission to communicate with the American representatives?"

"We were all in the dining-room of the Hotel Poste under guard. At the Burgomaster's dictation I was writing out a proclamation warning the inhabitants of Yslemont not to commit any act of violence against the German soldiery and explaining that we were held as hostages for their good behavior and that a shot fired at a German meant a dead wall and a squad of execution for us and the destruction of Yslemont for them—" He flushed, hesitated.

"Continue," said the general.

"While I was still writing the shots were fired. We all went to the window and we saw Uhlans galloping across the fields after some peasants who were running into the woods. Afterward two stretchers came by with Germans lying in them. After that an officer came and cursed us and the soldiers tied our hands behind our backs. We sat there in the dining-room until the Uhlans came riding into the street with their prisoners tied by ropes to their saddles. Then a major of infantry came into the dining-room and read our sentence to us. Then they marched us out into the fog."

The general crossed his spurred boots under the desk and lay back in his chair, looking at Guild all the while.

"So you are American, Mr. Guild?"

"Yes, General."

"In business in New York?"

"Yes."

"What business?"

"Real estate."

"Where?"

"Union Square, West."

"What is the name of the firm in which you are associated?"

"Guild and Darrel."

"Is that your partner's name?"

"Yes. Henry Darrel."

"Why are you here in Belgium?"

"I was making a foot tour in the Ardennes."

"Your business vacation?"

"Yes. I was to meet my partner in Luxembourg and return to New York with him."

"You and your partner are both absent from New York at the same time?"

"Yes."

"How is that?"

"Real estate in New York is quiet. There is practically no business now."

The general nodded. "Yes," he said, "much of what you tell me has been corroborated. In the Seegard Regiment of Infantry Number 569 you were recognized by several non-commissioned officers and men while you stood with the hostages awaiting—ah—justice," he added drily.

"Recognized?" repeated Guild.

"The soldiers who recognized you had served in New York hotels as clerks or waiters, I believe. The captain of that company, in consequence, very properly reported the matter to Colonel von Eschbach, who telephoned to me. And I am here to consider the matter."

Then, folding his arms and looking hard at Guild out of narrowing eyes that began to slant again:

"The hostages of Yslemont have justly forfeited their lives. Two of my officers have been murdered there in the streets. The law is plain. Is there any reason why these hostages should not pay the proper penalty?"

"The burgomaster was in the act of dictating—"

"He should have dictated faster!"

"These gentlemen did not fire the shots—"

"But those over whom they exercised authority did!"

Guild fell silent and his features paled a little. The general watched him in silence for a moment and an inquiring expression came into his narrow eyes.

"Well?" he said at length.

Guild lifted his eyes.

"Well, sir," repeated the general. "I have said that there is no reason why the hostages taken at Yslemont should not be turned over to the squad of execution outside there in the hallway."

"I heard you say it."

The general looked at him curiously. "You have nothing to say?"

"No."

"Not for yourself?"

"No."

"As a matter of fact, Mr. Guild, what was your ultimate object in passing through Yslemont?"

"I have already told you that I had intended to make a foot tour through the Three Ardennes."

"*Had* intended?"

"Yes."

"Was that still your intention when you were made prisoner?"

After a moment's hesitation: "No," said Guild in a low voice.

"You altered your plan?"

"Yes."

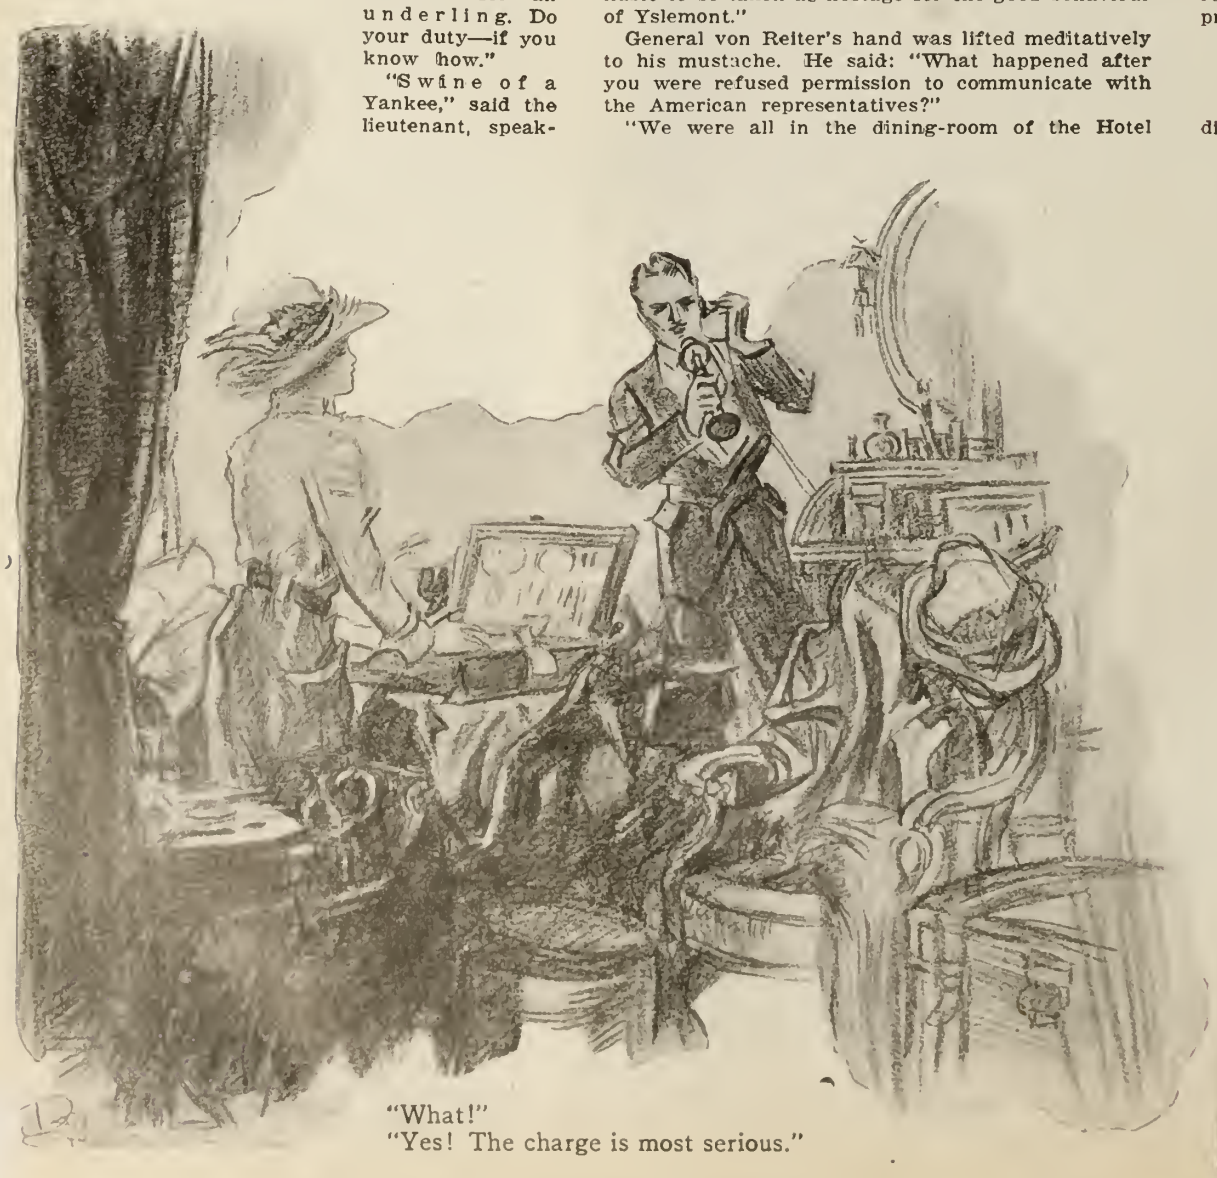
"You decided to employ your vacation otherwise?"

"Yes."

"How?"

"I decided to enlist," said Guild. He was very white, now.

"Enlist?"



"Yes."

"In the British army?"

"The Belgian."

"Oh! So now you do not remind me that, as an American, you claim exemption from the execution of the sentence?"

(Continued on following page.)

"What!"
"Yes! The charge is most serious."

WHO GOES THERE

(Continued from preceding page.)

"I have said enough," replied Guild. A slight color showed over his cheek-bones.

"If I shoot the Burgomaster and the notary and the others in there, ought I to let you go—on your own representations?"

"I have said enough," repeated Guild.

"Oh! So you refuse to plead any particular exemption on account of your nationality?"

No answer.

"And you, by your silence, permit yourself to be implicated in the responsibility of your fellow-hostages?"

No reply.

"Why?—Mr. Guild. It is, perhaps, after all because you are not an American in the strictest sense of that often misused term?"

There was no response.

"You were born in America?"

"Yes."

"Your father, perhaps, was born there?"

"Yes."

"Oh! And *his* father?"

"No."

"Oh! You are, I see, quite candid, Mr. Guild."

"Yes, when necessary."

"I see. Very well, then. Where do you get your Christian name, Kervyn? Is it an American name?"

"No."

"The name, Guild—is that an American name?"

"Yes."

"But—*is* it *your* name?"

"Yes."

"Was it, by chance, ever spelled a little differently—in times gone by, Mr. Guild?"

"Yes."

"Oh! And how, in times gone by, was it spelled by your—grandfather?"

Guild looked him calmly in the eyes. "It was spelled Gueldres," he said.

"I see, I see. That *is* interesting. Gueldres, Kervyn Gueldres. Why, it sounds almost Belgian. Let me see—if I remember—there was such a family inscribed in the Book of Gold. There was even a Kervyn of Gueldres—a count, was he not? —Comte d'Yvoir—Count of Yvoir, Hastiere, and Lesse. Was he not—this Kervyn of Gueldres, many, many years ago?"

"I congratulate General von Reiter on his memory for such unimportant history as that of Belgium," said Guild, reddening.

"Oh, we Germans are studious in our youth—and thorough. Nothing is too unimportant to ignore and"—he smiled grimly—"nothing is too vast for us to undertake—and accomplish."

He lifted his hand to his mustache again. "Mr. Guild," he said, "at the elections in America you —ah—vote of course?"

"No."

"What?"

Guild remained silent.

The general, stroking his mustache, said pleasantly: "The Belgian nobility always interested me; it is so exclusive and there are so few families of the *classe noble*. Except for those ten families who are independent of Court favor—like the Croys and De Lignes—there seem to be only about thirty families who possess the privileges of the Golden Book. Is this not so?"

"General von Reiter appears to know."

The general seemed gratified at this corroboration of his own memory. "And," he went on amiably, "this Belgian nobility is a real nobility. Once of it, always a part of it. And, too, its code is so rigid, so inexorably precise that it seems almost Prussian. For example, the code of the Belgian aristocracy permits none of its members to go into any commercial business, any trade—even forbids an entry into high finance. Only the Church and Army are open to it; and in the Army only the two Guides regiments and the Lancers are permitted to young men of the aristocracy." He gazed almost mildly at the young man: "You are in business, you tell me?"

"Yes."

"Oh! Then of course you have never been a soldier."

Guild was silent.

"*Have* you ever served in the army?"

"Yes."

"Really! In what American regiment have you served?"

"In a militia regiment of cavalry—the 1st New York."

"How interesting. And—you have never served in the regular army?"

"N—" but Guild hesitated.

General von Reiter watched him intently.

"Did you reply in the negative, Mr. Guild?"

"No, I did not reply at all."

"Oh! Then would you be good enough to reply?"

"If—you insist."

"I insist."

"Very well," said Guild, reddening, "then I have served in the—Belgian army."

The general nodded without surprise: "In what regiment?"

"In the first regiment of Guides."

"You came from America to do this?"

"Yes."

"When?"

"When I became of military age."

"Noblesse oblige?"

No reply.

"In other words, you are an American with all the Belgian aristocracy's sense of responsibility to race and tradition. You are a good American, but there are inherited instincts which sent you back to serve two years with the colors—to serve a country which for ten hundred years your race has defended. And—the Guides alone was open to a Gueldres—where, in America, a Guild was free to choose. Monsieur, you are Belgian; and, as a Belgian, you were properly seized as a hostage and properly sentenced to pay the penalty for the murderous misbehavior of your own people! I approve the sentence. Have you anything to say?"

"No."

The general regarded him closely, then rose, came around the end of the desk, walked across the room and halted directly in front of Guild.

"So you see there is no chance for you," he said, staring hard at him.

Guild managed to control his voice and speak clearly: "I see," he said.

"Suppose," said von Reiter, still staring at him, "I ask you to do me a favor?"

Guild's face was marble, but he managed to force a smile: "You ask a favor of a prisoner a few moments before his execution?"

"I do. Will you grant it?"

"What is it?"

"Nothing dishonorable to a good—American."

"That is not enough; and you know it."

"Very well. I shall tell you then. I have a daughter in England. I can't get her away from England—I can't get word to her. I—" suddenly his dry, blond features twitched, but instantly the man had them under iron control again, and he cleared his throat: "She is in England near London. We are at war with England. I want my daughter out of the country. I can't get her out. Go and get her for me!"

For a full minute the two men gazed at each other in silence. Then von Reiter said: "I know enough of you. If you say you'll do it I'll free the Burgomaster and the others in there—" he jerked his bony thumb toward the hallway outside—"If you say you'll do it—if you say you'll go to England, now, and find my daughter, and bring her here to me—or conduct her to whatever point I designate, I'll not have those men shot; I'll not burn the rest of Yslemont; I'll see that you are conducted to the Dutch frontier unmolested after you carry out your engagements with me. Will you do it?"

Guild met his intent gaze with a gaze as searching:

"What is your daughter's name?"

"Her name is Karen."

"Where am I to find her?"

"Thirty miles out of London at Westheath. She is known there as Karen Girard."

"What!" said Guild sharply.

"She chose to be so known in her profession."

"Her profession?"

"She has been on the stage—against my wishes. She is preparing herself further—contrary to my wishes. Until she disassociates herself from that profession she will not use the name of von Reiter."

Guild nodded slowly: "That is why your daughter is known as Karen Girard?"

"That is why. She is a young girl—nineteen. She went to school in her mother's country, Denmark. She imbibed notions there—and, later, in England among art students and others. It is the well-born who succumb most easily to nonsense once the discipline is relaxed. She has had her way in spite of my authority. Now it is time for such insubordination to cease. I wish to have my daughter back. I cannot get her. You are—American—to all intents and purposes, and you would be under no suspicion in England. Your appearance, your speech, your manners all are above suspicion. You *can* do this. I have made up my mind concerning you, and I trust you. Will you go to England, find my daughter and bring her back to me here; or, if I am ordered elsewhere, will you escort her to my country place in Silesia which is called Rehthal?"

"Suppose I do not find her? Suppose I fail?"

"You will return here and report to me."

"If I fail and return here and report my failure, does that mean the execution of the gentlemen in the drawing-room yonder?"

"It does."

"And the destruction of Yslemont?"

"Absolutely."

"And—" the young man smiled—"incidentally it means my own execution, does it not?"

"It does."

They gazed at each other with intense interest.

"Under such circumstances do you think I'll come back if I am not successful?" inquired the younger man.

"I am satisfied that you will return if you say you will."

"Return to face my own execution?" repeated Guild, curiously. "You believe that of me?—of a man about whom you know nothing—a man who"—his animated features suddenly darkened and he caught his breath a moment, then—"a man who considers your nation a barbarous one, your rulers barbarians, your war inexcusable, your invasion of this land the vilest example of treachery and dishonor that the world has ever witnessed—you still believe that such a man might consider himself bound to return here if unsuccessful and face one of your murdering platoons? *Do* you?" he repeated, the slightest intonation of violence beginning to ring in the undertones of his voice.

Von Reiter's dry, blond features had become greyer and more set. His light blue eyes never left the other; behind their pale, steady scrutiny he seemed to be considering every word.

He drew in his breath, slowly; his very thin lips receded for a moment, then the fixed tranquility returned.

"We Germans," he said drily, "care nothing for what Europe may think of us or say about us. Perhaps we are vandals, Goths, Huns—whatever you call them. Perhaps we are barbarians. I think we *are!* For we mean to scour the old world clean of its rottenness—cauterize it, cut out the old sores of a worn-out civilization, scrape its surface clean of the parasite nations. . . . And, if *fire* be necessary to burn out the last traces—" His light blue eyes glimmered a very reflection of the word—"then let fire pass. It has

(Continued on following page.)

Bush sprang from the passage-way behind him and struck him with something short and heavy.

WHO GOES THERE

(Continued from preceding page.)

passed, before—God's Angel of the Flaming Sword has returned again to lead us! What is a cathedral or two — or pictures or foolish statues — or a million lives? Yes, if you choose, we are barbarians. And we intend to plow under the accumulated decay of the whole world, and burn up its rubbish and found our new world on virgin earth. Yes, we *are* barbarians. And our Emperor is a barbarian. And God, who creates with one hand and destroys with the other—God—autocrat of material creation, inexorable Over-Lord of ultimate material annihilation, is the greatest barbarian of all! Under His orders we are moving. In His name we annihilate! Amen!"

A dead silence ensued. And after it had lasted a little while the tall Prussian lifted his hand absently to his mustache and touched it caressingly.

"I am satisfied, whatever your opinion may be of me or of my people, that you will return if you say you will, successful or otherwise. I promise you immunity if you return with my daughter; I promise you a wall and a file of men if you return unsuccessful. But, in either event, I am satisfied that you will return. Will you go?"

"Yes," said Guild, thoughtfully. They stood for a moment longer, the young man gazing absently out of the window toward the menacing smoke pall which was increasing above Yslemont.

"You promise not to burn the remainder of the village?" he asked, turning to look at von Reiter.

"I promise not to burn it if you keep your promise."

"I'll try. . . . And the Burgomaster, notary, magistrate, and the others are to be released?"

"If you do what I ask."

"Very well. It's worth trying for. Give me my credentials."

"You need no written ones. Letters are unsafe. You will go to my daughter, who has leased a small cottage at Westheath. You will say to her that you come from me; that *the question which she was to decide on the first of November must be decided sooner*, and that when she arrives at Rehthal in Silesia she is to telegraph me through the General Staff of her arrival. If I can obtain leave to go to Silesia I shall do so. If not, I shall telegraph my instructions to her."

"Will that be sufficient for your daughter to place her confidence in a man absolutely strange to her and accompany that man on a journey of several days?" asked Guild, slightly astonished.

"Not quite sufficient," said von Reiter, his dry, blond visage slightly relaxing.

He drew a rather plain ring from his bony finger: "See if you can wear that," he said. "Does it fit you?"

Guild tried it on. "Well enough."

"Is there any danger of its slipping off?"

Guild tried it on another finger, which it fitted snugly.

"It looks like any other plain gold ring," he remarked.

"Her name is engraved inside."

"Karen?"

"Karen."

There came a short pause. Then: "Do you know London?" asked von Reiter.

"Passably."

"Oh! You are likely to require a touring car. You'll find it difficult to get. May I recommend the Edmeston Agency? It's about the only agency, now, where any gasoline at all is obtainable. The Edmeston Agency. I use it when I am in London. Ask for Mr. Louis Gratz."

After a moment he added, "My chauffeur brought your luggage, rucksack, stick, and so forth, from Yslemont. You will go to the enemies' lines south of Ostend in my car. One of my aides-de-camp will accompany you and show you a letter of instructions before delivering you to the enemies' flag of truce. You will read the letter, learn it by heart, and return it to my aide, Captain von Klipper.

"There is a bedroom above. Go up there. Food will be sent you. Get what sleep you can, because you are to leave at sunrise. Is this arrangement agreeable to you—Monsieur le Comte de Gueldres?"

"Perfectly, General Baron von Reiter."

"Also. Then I have the honor to wish you good night and a pleasant sleep."

"I thank you and I have the honor to wish you the same," said Guild, bowing pleasantly.

General von Reiter stood aside and saluted with stiff courtesy as the young man passed out.

A few moments later a regimental band somewhere along the Yslemont highway began to play "Polen Blut."

If blood were the theme, they ought to have played it well enough.

CHAPTER III.

At noon on the following day Kervyn Guild wrote to his friend Darrel:

"Dear Harry:

"Instead of joining you on the Black Erenz for the late August trout fishing I am obliged to go elsewhere.

"I have had a most unpleasant experience, and it is not ended, and I do not yet know what the outcome is to be.

"From the fact that I have not dated this letter it will be evident to you that I am not permitted to do so. Also you will understand that I have been caught somewhere in the war zone and that is why the name of the place from which I am writing you is omitted—by request.

"We have halted for luncheon at a wayside inn—the gentleman who is kind enough to accompany me, and I—and I have obtained this benevolent gentleman's authorization to write you whatever I please as long as I do *not*

"1st. Tell you where I am going.

"2nd. Tell you where I am.

"3rd. Tell you anything else that does not suit him.

"And he isn't a censor at that; he is just a very efficient, polite, and rather good-looking German officer serving as aide on the staff of a certain German major-general.

"Day before yesterday, after luncheon, I was playing a quiet game of chess with the Burgomaster of a certain Belgian village, and was taking a last look before setting out for Luxembourg on foot, rucksack, stick, and all, when—well, circumstances over which I had no control interrupted the game of chess. It was white to go and mate in three moves. The Burgomaster was playing black. I had him, Harry. Too bad, because he was the best player in—well in that neighborhood. I opened with a Lopez and he replied most irregularly. It certainly was interesting. I am sorry that I couldn't mate him and analyze the game with him. However, thank Heaven, I did announce mate in three moves, and the old gentleman was still defiantly studying the situation. I admit he refused to resign.

"I left that village toward evening in a large, grey automobile. I and the gentleman who still accompanies me slept fairly well that night considering the fact that a town was on fire all around us.

"In the morning we made slow progress in our automobile. Roads and fields were greenish grey with troops—a vast horde of them possessed the valleys; they enveloped the hills like fog-banks turning the whole world grey—infantry, artillery, cuirassiers, Uhlans, hussars—all mist color from helmet to heel—and so are their waggons and guns and caissons and traction-engines and motorcycles and armored cars and aeroplanes.

"The latter are magnificent in an artistic sense—perfect replicas of giant pigeon-hawks, circling, planing, sheering the air or sailing high, majestic as a very lammergeier, fierce, relentless, terrible.

"My efficient companion who is reading this letter over my shoulder as I write it, and who has condescended to permit a ghost of a smile to mitigate, now and then, the youthful seriousness of his countenance, is not likely to object when I say to you that what I have seen of the German army on the march is astoundingly impressive.

"(He smiled again very boyishly and says he doesn't object.)

"Order, precision, a knowledge of the country absolutely unhesitating marks its progress. There is much singing in the infantry ranks. The men march well, their physique is fine, the cavalry are superbly mounted, the guns—(He shakes his head, so never mind the guns.)

"Their regimental bands are wonderful. It is a sheer delight to listen to them. They play everything from 'Polen Blut' and 'Sari,' to Sousa, "Tannhauser,' and 'A Hot Time,' but I haven't yet heard 'Tipperary.' (He seems puzzled at this, but does not object.) I expect shortly to hear a band playing it. (I have to explain to my efficient companion that 'Tipperary' is a tune which ought to take Berlin and Vienna by storm when they hear it. It takes Berlin and Vienna to really appreciate good music. He agrees with me.)

"Yesterday we passed a convoy of prisoners, some were kilted. I was not permitted to speak to them—but, Oh, those wistful eyes of Scottish blue! I guess they understood, for they got all the tobacco I had left. (My companion is doubtful about this, but finally shrugs his shoulders.)

"There is an awesome noise going on beyond us in—well in a certain direction. I think that all the artillery ever made is producing it. There's practically no smoke visible against the clear blue August sky—nothing to see at all except the feathery cotton fleece of shrapnel appearing, expanding, vanishing over a hill on the horizon, and two aeroplanes circling high like a pair of mated hawks.

"And all the while this earth-rocking diapason continues more terrible, more majestic than any real thunder I ever heard.

"We have had luncheon and are going on. He drank five quarts of Belgian beer! I am permitted a few minutes more and he orders the sixth quart. This is what I have to say:

"In case anything should go wrong with me give the enclosed note to my mother. Please see to it that everything I have goes to her. My will is in my box in our safe at the office. It is all quite clear. There should be no trouble.

"I expressed my trunk to your care in Luxembourg. You wrote me that you had received it and placed it in storage to await my leisurely arrival. In case of accident to me send it to my mother.

"About the business, my share in any deals now on should go to my brother. After that if you care to take George in when he comes out of Harvard it would gratify his mother and me.

"He's all to the good, you know. But don't do this if the business does not warrant it. Don't do it out of sentiment, Harry. If he promises to be of use, and if you have no other man in view, and if, as I say, business conditions warrant such an association with a view to eventual partnership, then if you care to take in George it will be all right.

"He has sufficient capital, as you know. He lacks only the business experience. And he is intelligent and quick and it won't take him long.

"But if you prefer somebody else don't hesitate. George is perfectly able to take care of his mother and himself.

"This is all, I think. I'm sorry about the August fishing on the Black Erenz. It is a lovely stream and full of trout. All Luxembourg is lovely; it is a story-book country—a real land of romance. I wish I might have seen it again. Never were such forests, such silver streams, such golden glades, such wild-flowers—never such hills, such meadows, such skies.

"Well—if I come back to you, I come back. If not—good-bye, old fellow—with all it implies between friends of many years.

"Say to your kind friends, the Courlands, who so graciously invited you to bring me with you to Lesse Forest, that I shall not be able to accept their delightful hospitality, and that my inability to do so must remain to me a regret as long as I live. (These guns are thundering enough to crack the very sky! I really wish I could hear some band playing 'Tipperary.')

"Good-bye for a while—or indefinitely. Good luck to you.

"Kervyn Guild."

"Is that quite acceptable to you?" asked Guild of the young Death's Head hussar beside him.

"Quite acceptable," replied the officer politely. "But what is there remarkable in anybody drinking six quarts of beer?"

Guild laughed: "Here is the note that I desire to enclose with it, if I may do so." And he wrote:

"Dearest:

"You must not grieve too much. You have George. It could not be avoided, honorably. He and I are good Americans; we are, perhaps, something else, too. But what the Book of Gold holds it never releases; what is written there is never expunged. George must do what I did when the time comes. I would have done more—was meaning to—was on my way. Destiny has ordered it otherwise.

"While I live I think always of you. And it shall be so until the last.

"This letter is to be sent to you by Harry Darrel only in the event of my death.

"There's a good chance for me. But if things go wrong, then, good-bye, dearest.

"Kervyn.

"P.S.

"Tell George that it's up to him, now.

"K."

My Gift to You

By Perrin Holmes Lowrey.

I wished for wealth to buy you splendid gifts
Proportioned to my large regard for you;
I wished for jewels, warm with colored rifts
Of sunset, constant rubies, opals blue
With shifting lights, bright, versatile and fine;
I wished for gold to buy the things that lend
A glow to life—that I might give them all
To you, my friend.

And then I said in sadness: "All of this
Is tinsel to the heart that feels and knows!
A gift must be a part of one—a kiss,
A thought, a feeling—one that goes
In pointed sweetness to the other's heart.
I'll give a gift that grows. I will not bend
To artificial, purchased things; I'll give
My friend a friend."

And if the simple gift I give is poor
And worthless in your eyes and dear esteem,
I'll make it better, for the gods, I'm sure,
Will help one to become one's dearest dream.
And, as the seasons come and swiftly go,
I'll dream my dream, and daring shall ascend
To meet my dream: It is, because of you,
To be a friend.

And thus at each succeeding Christmas-time
I'll give a better gift, my friend, to you,
That draws a little nearer the sublime
Of perfect friendship, candid, tender, true!
Each year I'll give myself, the better me,
Developing for you. For I intend,
Since I am yours, my friend, to try to be
A better friend.

How We Get Our Raisins

Where They Are Grown—And A Few Interesting Facts About Their Food Value

By HOLGATE THOMAS.

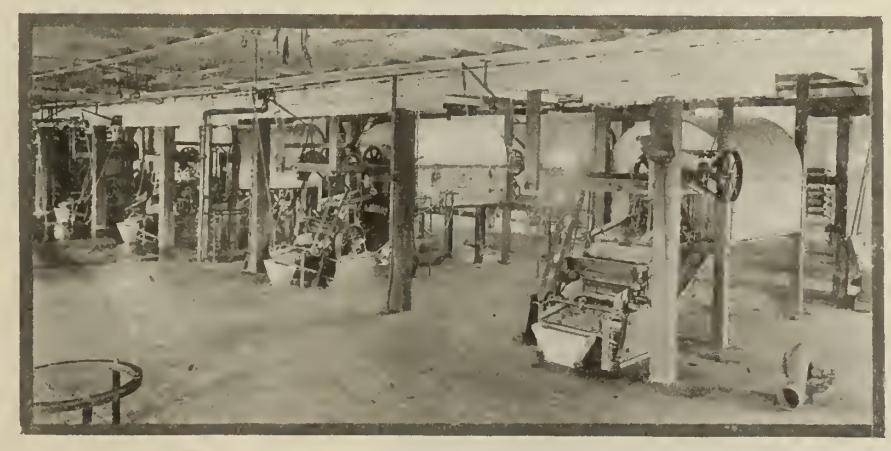
ILLUSTRATED BY PHOTOGRAPHS.

Several years ago Dr. Josiah Oldfield, one of England's most noted physicians, an expert upon dietetics and known to scientists throughout the world, in the course of an article relative to the value of different articles of diet, said, "I consider the raisin the greatest food known to mankind." Dietetic research since that time has resulted in scientific endorsement of Dr. Oldfield's views, and to-day the greatest food experts of the world are a unit in declaring that the raisin, as an article of general diet, is surpassed by no single article of food which the world produces. And this endorsement is by no means theoretical, for raisins now find a place upon the menus of many of the greatest sanitariums and hospitals; they are provided for a definite scientific purpose and they are recognized solely for their food value as represented by the sugars and mineral elements which they contain, all of which are essential, in greater or less degree, to the maintenance of bodily health.

The history of the raisin is lost in the mists of antiquity. In the days of Solomon and the patriarchs of the old Testament, the raisin was the food of kings, and there are frequent references to it in the Bible. The first raisins were undoubtedly wild grapes, dried on the vines in the sun, but there is evidence that, even centuries before the Christian era, grapes were cultivated and, after curing by the sun, stored away for winter use. The tired wayfarer in those days was welcomed with "the milk and cheese of goats and a few clusters of raisins," and the "fruit of the vine and fig tree" is frequently referred to in early writings. More recent history shows the cultivation of the grape and its drying into raisins in Greece, in the Ionian Islands and in parts of Egypt, and later on in Spain, the latter country furnishing practically all raisins used in this country until the California raisin industry had developed into commercial proportions. To-day the State of California furnishes by far the greater portion of the world's supply, and as demand increases the supply is being increased to meet it.

The California raisin industry is centred in the great San Joaquin Valley, a strip about 300 miles in length and sixty to seventy miles wide, bordered on the eastward by the great snow-covered peaks of the Sierra Nevadas, and on the west by the Coast Range. To the south the valley is enclosed by the Tehatchapi mountains, rising to an altitude of over 8,000 feet. The floor of the valley is a little over 300 feet above sea level, and the "pit" in which it lies gives the wonderful climatic conditions necessary to the growing and preparation of a crop depending upon the sun. There is almost an entire absence of humidity during the growing and drying season, the mountains forming an impassable barrier to the few storms that strike the southern California coast during the summer, while the location of the valley is too far south for it to be affected to any great extent by the storms which, forming in more northerly latitudes, sweep across the country in a well defined line. Temperatures range high in summer, but not uncomfortably so, owing to the extreme dryness of the air. Snow is unknown, and what little precipitation there is occurs during the winter months. All arable land is under irrigation, the water being supplied by the melting snows of the surrounding mountains, brought to the valley through great irrigation canals from dams in the mountain valleys, where it is held until needed.

A bunch of Muscat grapes. One hundred thousand tons are produced from this variety.



A prolific variety of seedless grapes known as the Thompson.

The California raisin industry had its start in 1853, when a few cuttings of foreign raisin grapes were imported for experimental purposes. It was not until 1878 that the first California raisins were placed upon the Eastern markets. Like all great industries, the initial growth was slow, the total crop in 1879 being only about 500 tons. From that point, however, owing to the immediate demand for the product, the growth of the raisin industry was rapid, and the crop by 1886 totalled 7,000 tons. In 1892 the California crop, for the first time, equalled that of Spain, and since that time the volume has continued to increase. The crop of 1917 was 162,500 tons, and it is estimated that the crop of 1918 will be about 175,000 tons, this, of course, including all varieties.

There are three true varieties of raisin grapes, the Muscat, the Thompson Seedless and the Sultana. The Muscat, the largest variety, contains the greatest proportion of sugar, and is packed for the trade in both loose, seeded and in clusters. The loose raisin is the natural product with stems only removed; the seeded raisin is the same as the loose raisin, with the seeds removed by mechanical process, and the cluster raisin is just as the raisin comes from the vineyard, on the stem, cleaned and packed by hand. Thompson Seedless raisins are grown without seeds, and are packed loose in boxes and cartons of various sizes, according to demands of the trade. The Sultana raisin is also a seedless variety, and is used extensively as a substitute for currants. There is some difference in the analysis of each, although all have approximately the same food value, as shown by the accompanying table, prepared by the Department of Home Economics of the United States Agri-

(Continued on page 52.)

A modern seeding machine which cleans and pasteurizes the raisins and removes the seeds.

Raisins drying in the sun. The grapes are laid out on trays and dried in the sun. Nothing is added to the raisin.

A Muscat vineyard in winter. The vines are cut close, leaving only stumps, and the new growth each year bears the grapes.

Beautiful Vancouver

Showing Haunts That Pauline Johnston and Other Writers and Poets Have Loved

By KATHERINE HALE.

VANCOUVER is the city in all Canada where it would seem a literary atmosphere needs not to be induced or introduced, but is there, waiting only to be breathed into life, to be molded into shape by men and women who have the vision, the understanding and the long patience to become creative artists.

On account of the great natural beauty of her setting, and the soft sea airs which surround her, airs more equable than those of England, there is a sort of late-blooming-rose quality about the whole place that should make a natural setting for work that above all things requires a beautiful leisure.

It may be recalled that when Monsieur Labore, a distinguished visitor from Paris, the defender of Zola and Dreyfus, by the way, was in Vancouver some years ago, he was very much struck by the curious effect which the mere situation of the city produces. "Next to Paris," he said, "I am ready to give my affection and my wonder to this strange young Colossus on the shores of Burrard Inlet. Wonderful transformation will take place here, for the destiny of the world must lie in the hands of those on the Pacific Coast, where the civilization of the Occident will have to be subjected to the survival test of the ancient civilization of the Orient."

And indeed the very approach to Vancouver is startlingly dramatic. You sweep down to the coast through a great day and night of mountains—the Rockies, brown and terrible, and the green Selkirks. Then, through crowded gorges and beside swift rivers you journey until the hand of the sea, felt from far away, seems to reach out and soften all the air; the altitudes melt away, and you go to sleep.

At dawning you are in flat country again, with a glimpse of wider tidal rivers, and presently the guard calls "Vancouver," and the train runs into an unassuming station. "World's end!" is the thought in your heart at that moment.

It is early morning, and if you are fortunate, you may get your first glimpse of the city from a certain famous club high up in the Pacific Building and overlooking the Inlet. Great windows seem to let in a liquid radiance. There lies the Pacific, seen for the first time. Blue glimpses of it are rimmed about with hills, some snow-capped, some purple-veined, some misted in rose. The picture was to the writer an enchantment that called one out into the streets, because the promise of the streets was sure—there would be more enchantments to follow. Vancouver is like a fairy book—each page you turn contains the surprise of a fresh story, mostly told in those "colored pictures" that are, Chesterton assures us, the only true form in which to take either literature or history.

Have you wandered, lost, among those giant trees in Stanley Park, or spent hours by the little English bay purring to itself in the lovely colors of the sunset? Have you, after a day at Capilano, found yourself on a melancholy little street of the Indian village at its foot—street of the Lost Tribes, it would seem—where women, old beyond all telling, limp to and fro in the late sunshine and follow the visitor with weird, entreating cries? There is something haunting about that queer street, and the cry of an old Indian woman can ring through the years.

One hot June night we left a very excellent dinner to follow the lure of a friend who knows Chinatown and had chosen for us to see a bit of a certain play then running its long course in the native theatre. I remember the bewildering beauty of the

Where Occident and Orient will some day meet.

stately street with its cloistered gardens and the glimpse of the hills and ocean at each turn of the way. Then it would seem that in ten minutes we were in a world so different that it might have lain in another hemisphere; a world of crooked little streets, unpeopled streets for the most part, as at the close of day friend Chinaman plays Fan-Tan with due secrecy. But we went in and out of dingy little shops where stoical merchants had to be induced to produce hidden treasures, and where the odors were not those of Araby. Then, as we came out of one little shop, there was a thin, far-off sound like that of some ancient viol being carelessly tuned. It drew us near an open door, the door of the Chinese theatre.

Vancouver is a little city of roses and hollyedges and mysterious gardens. Sometimes I found myself in England, sometimes in Italy. Then suddenly came a breath of the Pacific, the glimpse of a turbaned Hindoo, or the lazy glance of almond-shaped eyes as a Japanese passed—and behold the Orient!

In a place where East is bound to mingle with West in the long run, the element of romance is never lacking. Indeed, it is here for the taking, as yet untouched. Vancouver possesses what theosophists call an "old" soul—that is to say, she in herself is undoubtedly a city with a soul. The inhabitants of a city have little or nothing to do with this quality. Here I should say that the people are largely divided into two classes; the radical and the sporty, and the conservative and the sporty. In other words, there are those who have come to the Farthest West to make money and have a good time, and there are others who have come to make money and remain English. The first are progressive and the second are picturesque, and they make a strange combination.

The glimpse of a turbaned Hindoo.

Where Pauline Johnston is buried in Stanley Park.

Here commerce and sport are much more vital subjects than literature. But if you do get near enough to the subject to refer to it delicately with either class, the answer will vary considerably. Should you be so fortunate as to obtain conversation with an actual British Columbian, one who has been born west of the Rockies, and you speak of a little group of well-known writers living here, he or she will be apt to say with a shrug: "Oh, these people are Easteners. They just happened to come to live in Vancouver."

And if you talk with a newcomer, he or she is sure to remark: "You understand there is no real Far-Western school of writers. The country has not seized the imagination of its own people."

That is really the situation in a nut-shell.

And yet, is the accident of birth so important as we are always trying to make it appear? It seems to me that that writer is really native to the soil who has become so impregnated by its bodily and spiritual essence that he or she becomes in some way an echo or interpreter of the precious "special" quality, or racial feeling, or ultimate principle that lies close to the heart of a country or a city and makes it what it really is.

Who will say, for instance, that any daughter by birth of Vancouver could have loved the land more deeply than Pauline Johnson, of Brantford, Ontario, who spent her last days on the Pacific Coast, and whose "Legends of Vancouver" speak the very spirit of the country she was more deeply akin to than if she had been born of it? The truth is, she has been the only spokesman, in any real sense of the word, for Vancouver so far.

Then I read certain Rhymes and Ballads of Tom MacInnes, and instantly I taste the glamor, the romance of East-and-West, the splendid, "outlandish" something that only rises to the heart of one who in reality, or in imagination, sails strange seas and loves queer companions better than tame ones. In most of the poetry of Mr. MacInnes I meet adventure in its most alluring guise, adventure of real rogues from the Seven Seas. And I know that he could not write just as he does if he had not lived a part, at least, of his life in Vancouver, where one can sometimes see:

"A full-rigged ship unutterably fair,
Her masts, like trees in winter, frosty bright."

MacInnes, born in the East, is as Canadian-of-the-Far-West as Masefield is English-of-the-Near-East. But how, and why? Well, these are among the pleasant little enigmas of literature.

There is a branch of the Canadian Woman's Press Club in Vancouver, one of the bright lights of which is Ethel Cody Stoddard, whose pen name, Lady Van, is so well known in the West, and an Arts Club for men, and there has just been formed an association to be called "Friends of Canadian Literature," which sounds promising. Just now the presses are busy with some recent publications from this city. A romance of British Columbia has just been written, entitled "The Chivalry of Keith Leicester," by Robert Alison Hood, a Scotsman by birth, who is a graduate of the University of California and has lived for the past ten or twelve years in Vancouver. The story gives some description of

The Girls' "Carry-On" Column

By BETTY O'HARA.

You Are Responsible For Our Soldiers' Christmas

THE OVERSEAS BOXES.

If we would really be patriotic, not to mention up-to-date, we would not be winking and blinking over fancy bags or boudoir caps or making cob-webby underwear for our friends, but our minds would be turning to thoughts of the sterner necessities of life; socks and trench caps, fudge and even the once despised chewing gum should form a basis of "what we shall give for Christmas" to the boys in Flanders.

Germany's brutal domination seems to be on the wane, and yet our boys are fighting as hard as they ever fought since the beginning of the war. The casualty lists are tremendous, and we dare not slacken our efforts. We must keep our soldiers smiling.

Why should we not each make ourselves responsible for one soldier's Christmas happiness, and then we would indeed be doing our bit for one Christmas at least. If we can afford to have only one plum pudding, let us send it overseas and have a rice pudding instead. Why, next day we will never know the difference, except we may have a wonderfully happy feeling inside, not at all "plum puddeny," but twice as comfortable.

To the boys over there we must send useful things. A heavy kit bag is not made any lighter by our sending three or four books, a snapshot album, which, although it is the best you can secure, is not as light as it might be, and after a soldier has done a ten-mile route march its weight seems to be double. "But what can a fellow do? The people at home sent it, and, dear me, you hate to spoil anything from home, but it sure is as heavy as the dickens," he says as the men tramp on.

Then we must remember not to send cake without a generous supply of fruit in it. It may be the greatest success ever, yet, if the sender could be with it at its journey's end, I am sure she would be very much surprised at its semblance to dog biscuit. "Some cake!" she would hear the boys say. "I suppose that girl is an angel, as you say, but I am afraid the cake would not answer the same description. This is the kind you should put your teeth in as soon as it is popped out of the oven, and it would take some hustle to do that." So you see that when we send Christmas boxes overseas we must remember that they have a long, weary journey ahead of them, and if the contents do not improve with age, then change the contents. It is a terrible disappointment to open a beautiful box tied with ribbons and decorated with maple leaves, and then not be able to eat what is in it, and all the more so for the boys at the front, whose chief diet is skilly and jam.

THE BOYS AT HOME.

Then for the returned soldiers. Probably for many of them this is the first Christmas in their own dear Canada, and it is your privilege and mine to make it a happy one. "Our boys" are very much inclined to think that returned soldiers are not wanted here, that Canadian people do not appreciate them, and especially at Christmas we must try to eradicate that idea.

If you have a big farm and lots of fresh eggs and butter, why not write to one of the nearby military hospitals and ask that a couple of returned soldiers be allowed to spend a few days at Christmas with you. Have all the chores and housework done and take a holiday yourself, and just see what a happy Christmas it makes. And war yarns—goodness me, they can tell the funniest, weirdest stories you ever heard in your life! I must tell you what a wonderful time one of the most lonesome patients at our hospital had last Christmas.

Jimmy was the noisiest patient in his ward, and the explanation he gave us for appearing at one of our military hospitals one morning minus both legs was the startling admission that he had cleaned up the whole Germany army in three hours and then got out. He got out alright, and all his life he will carry around that terrible reminder of his harrowing experience.

"Take me back to dear old Blighty" —the song came into the ward with gusto, and immediately Jimmy's turned-up nose and happy smile appeared at the doorway. "What's this mean?" I asked, as I pointed to his bed littered with all the articles of clothing Jimmy possessed. "Why, sister, I'm going away for Christmas!" announced Jimmy in high glee. "Look at all the buttons I have sewn on. It isn't so bad when you once get at it," he explained, as I began to notice his strenuous efforts to replenish his wardrobe, for I soon saw a vast improvement to Jimmy's habitual buttonless tunic. He had been mending socks by the dozen, and even buying a few new ones and a silk shirt, if you please. "I'm going to have a riproarious time, you bet," he finished, as he sat down beside his bed, needle and thread in hand, to continue his task. And it was a happy boy who sailed out of the room on the orderly's back and was carried to the motor car waiting for him at the door. And have a riproarious time he did. Four days after, when Jimmy wheeled himself into A2 ward, the same broad grin had a little happier tinge to it. "Had my breakfast brought up every morning, a soft-boiled egg, toast and coffee, at 10 a.m.," was the first announcement after we had fairly bewildered him with questions. "And I wasn't wakened up to have my bed made every morning either," with a funny smile at me. "It's the best holiday I've had since I took a trip across the pond," he concluded. And I was so glad to have had Jimmy, of all the patients in the whole hospital, especially invited for a Christmas vacation. He had had such a hard time of it, poor boy. That is only one of hundreds, yes, thousands, of cases where we could give the returned soldiers a little change, and when we think of it, it is very little compared with the struggle they have had and the weary hours of working and suffering which must still be theirs before they can become even a semblance of their former selves.

And do not let us forget, when we

(Continued on page 44.)

The Women's Aid Department is now being rapidly organized, and its members will soon take their places in our Canadian Military Hospitals.

I. Volunteer Section (V.A.D.'s.)
   a. Nursing Members.
   b. Function Trainers.

II. Special Service Section—Massage.

III. General Service Section.
   a. General Service Superintendent.
   b. Assistant Superintendent.
   c. Head Clerks.
   d. Clerks.
   e. Stenographers.
   f. Telephone Operators.
   g. Head Cooks.
   h. Assistant Cooks.
   i. Housemaids.
   j. Charwomen.
   k. Sewing Women.

Salaries are paid for Special Service Section and also General Service Section.

Betty O'Hara will answer any questions regarding the W.A.D., either through the column or by post if stamped and addressed envelope is enclosed.

Shampoo

IVORY SOAP, because of its purity and mildness, does not affect the scalp's oily secretion, yet because of its wonderful cleansing power, it thoroughly absorbs the dirt and surplus oil. Rinsing, therefore, removes easily and entirely all this matter with the lather, leaving the hair in condition to dry soft, silky and glossy. You will like an Ivory Soap shampoo.

A Health Talk About Nature And Her Vigilant Care

By DR. LAURA S. M. HAMILTON.

As I write, the whole country is struggling in the clutches of the influenza epidemic. By the time this is published I trust that it will have become a thing of the past.

Perched up on a hill top, the party, of which the "man of the house" and myself form part, have been safe thus far from any breath of the "plague," only reading accounts in the newspapers, and hearing of it no nearer than five or six miles over the mountains. So, though it has seemed almost selfish, yet, considering that more than half our party were little children, and that our homes were in the most infected cities, we were fain to remain in our security. But, alas, and here surely is a curious phase of human nature, not one of all our neighbors, who are mostly prosperous farmers, would supply us with enough wood to keep one small stove going for a few weeks longer, and have the children out of danger.

Not for money, and assuredly not for love, could they be persuaded to help us. They pled lack of all sorts of things, time, and teams, and strength, and man-power, but never one of them came near the truth, and pled lack of grace.

There may be somewhere in existence a genealogical table in which the line of ancestry of certain Canadian farmers and Christ's Pharisee are shown to be identical. In any case it is not difficult at times to trace it.

So we had to gather together our babies, and take long train journeys, in cars reeking with disinfectants, and suggestions, to plague-infested cities, feeling absolutely convinced, as we choked with the nasty but useful formaldehyde, that, bad as influenza might be, we were leaving behind us a class of people that were worse and more hopelessly infected with a germ of far greater power for evil than even the germ that is causing so much sorrow and illness to-day.

Like the man who said "pigs is pigs," so we would say germs is germs, and this article is intended to consider them and some of their peculiarities.

Germs live in a pabulum. Pabulum means food. That is, they live in the food. Germs do no work. They just exist, and continue existing by absorbing the food with which they are surrounded. Their one function may be said to be reproduction. They reproduce their kind with a rapidity that is unknown in higher forms of life. When they have reproduced, they die.

There are "good" and "bad" germs. Possibly they are all of a highly moral character, and it is only the necessities of their existence, or the exigencies of their environment, that make them appear to us otherwise. (Why should one's mind take a sudden leap back again to the farming community to which I referred in the opening paragraphs of this paper?)

Unfortunately, it seems that we are impelled by the exigencies of our environment to give more consideration to bad germs than good ones.

It is owing to the germ's cycle of life, and more largely even to its death and the continuous and violent effort of Nature to rid herself of the intruder, that the many alarming and possibly fatal symptoms of disease occur.

Every living organism produces gases and fluids during its life, and even more by its death. Such gases and fluids, when produced within the functioning organs of another living organism by a so-called disease-breeding germ, act as more or less virulent poisons, and set up a train of symptoms according to the kind and situation of the poison.

On the other hand, no sooner does Nature find a foreign body setting up housekeeping, as it were, within her grounds, which she had intended for other purposes, than she goes to work to eject the intruder.

She gathers together the white corpuscles of the blood, which have been aptly called "the policemen cells," and are in themselves of the same character as the germ, except that, instead of being parasites, they have a work to perform.

These she sends in quantities to the affected part to eat up the intruders. If the body has not enough on hand, Nature hurries to manufacture more.

It is this extreme activity of Nature in her endeavor to throw off the poison of the foreign body that is the cause of what is called "fever," so that the extent or "height" of the fever or heat produced really shows two things, viz., the virulence of the poison and the activity of the body in rejecting it.

Serums and vaccines and anti-toxins have been somewhat humorously described as "appetizers" for the white blood cells, enabling them to more quickly and effectively dispose of the offending germ.

The atmosphere surrounding any collection of human beings must necessarily always contain a greater or less quantity of disease germs. This makes it impossible to avoid inhaling them. In times of epidemics, or in close proximity to sick persons, this danger is, of course, greatly increased.

The question naturally arises as to whether it is possible to avoid the inhalation of disease, or having been exposed to danger, how to neutralize it?

Popular ideas on this subject are really very funny!

One of the children came running in recently while we were yet residing on our hill-top, to say that the whole family at the farm were wearing rags tied round their necks, with little balls of camphor in them to keep away influenza. "What was camphor, and would it keep away influenza?" was eagerly demanded. Of course he was told "no," but, said one grown-up gravely, "if the wearing of camphor balls makes them *think* they are safer than without them; then the camphor will help to keep away influenza."

To our great joy, one of our infants being sent to that farm to buy some eggs on a wet, miserable day, solemnly told the stern mistress thereof that the feet of the overworked little chore boy were wet. This important matter not receiving the instant attention it would have done in her own home, she repeated the information with insistence, adding that he would certainly be in danger of influenza because Dr. ——, the Commissioner of Health, of the State of X. had said that people must keep their feet warm and dry. The chore boy, to his amazement, was sent to put on dry footwear in the middle of the day.

At another house sulphur was burned constantly, but a child in the house had greatly enlarged adenoids and tonsils. And so one might go on enumerating these curious remainders of the old heathen ideas of charms and fetishes. As a matter of fact, Nature is so much on the alert to eject the foe, that what we have to do is just to assist her.

The multiplication of white blood cells and the carrying off or elimination of waste matter, is as I have already described, a process which she commences the very moment the germ of disease finds lodgment within.

What can we do to assist Nature?

First, we can see to it that food or pabulum for the germs to lodge in is at a minimum in our bodies, and if by ill chance we have reason to believe that we have been infected, we can by rest and assistance at elimination give Nature all possible chance to do good work.

The influenza germ is believed to enter through the nose and throat, and having set up a primary inflammation there, passes to other parts of the body. Its habits are rather eccentric, and it appears to have power to affect various organs, in a manner that hitherto has puzzled the medical profession, because of the apparent impossibility of following its vagaries.

The deduction to be drawn from this is, that it is the part of wisdom to keep the whole body in a condition of well-being, paying special attention to the mouth, nose and throat. Thus you will see that the family who continually burnt sulphur in the house were really only inviting trouble, by keeping the throat in a constant state of irritation, the while they had a room and welcome as it were for that particular germ all in readiness in the case of the child with adenoids and enlarged tonsils.

In the same way the family who wore camphor tied about their necks, and let the chore boy go with wet feet, or otherwise neglected his general health had their welcome for the germ ready also, besides keeping the general health of the whole family at a minimum by the condition of nervous dread they were living in, being reminded continually of their fear by the unfamiliar odor and the band about their necks. They could hardly have chosen a better symbol of the yoke of dread that ignorance and selfishness often bind their victims with.

All this time, sunshine and fresh air, Nature's most powerful disinfectants, together with the tonic and stimulants of unselfish work *for others*, and the possibility of sweet sleep when the labor of the day was done, lay just within their reach only to be passed by as beneath their notice.

The eliminative processes of the body, otherwise the garbage disposal, must be carefully attended to, for collected waste matter within the body forms a situation par excellence for any disease-breeding microbe. Just in the same way as flies collect and swarm in spite of screens and swatting unless one sees to it that all garbage and waste is completely removed from the premises and destroyed.

The eliminative processes of the body consist of the skin, the lungs, the kidneys, and the bowels.

To cleanse the first, water, exercise, fresh air and sunshine are needed. To cleanse the second,

FLU-FIGHTERS AT THE MANITOBA RED CROSS SOCIETY.

The mask is worn by all "flu-fighters" in the West, and the members of this Winnipeg group are well equipped for their task.

The New Way to Manicure

Don't cut the cuticle—see how easily you can give your nails a wonderful manicure

Alice Brady, known to theatre-goers from const ta caast, snys: "I have found Cutex the quickest, ensiest and mast effective way of tnking care of my nails"

Elsie Janis, whose vivacity and clever acting have made her a favarite in every American city, says: "I am delighted with Cutex. I have just finished my nails nnd find it mast wanderful"

Photo by White Studio, N.Y.

DISCARD your manicure scissors forever.

Cutex, the perfect cuticle remover, softens and removes surplus cuticle without cutting — does away with tiresome soaking of the nails — takes half the time heretofore required.

With Cutex gently work around the base of the nail, pushing back the cuticle

Cutex is absolutely *harmless.* It was formulated to do away with that cutting which specialists agree is so ruinous. You will be amazed to see how easily you can give your nails a delightful manicure with Cutex.

Just how to manicure your nails the Cutex way

Open the Cutex package. In it you will find orange stick and absorbent cotton. Wrap a little cotton around the end of the stick and dip it into the Cutex bottle.

Then work the stick around the base of the nail, gently pushing back the cuticle. Almost at once you will find that you can wipe off the dead surplus skin. Rinse the hands in clear water.

Finish with a touch of Cutex Nail White. It removes any stains from underneath the nails; leaves them wonderfully white and absolutely clean.

A touch of Cutex Nail White underneath the nails leaves them immaculate — snowy white

Cutex Nail Polish gives just the quick waterproof finish you want

Cutex Cake Polish rubbed on the palm of the hand and passed quickly over the nails gives them a soft, shimmering polish—the most delightful you have ever seen.

One application makes a decided improvement

Until you use Cutex, you cannot realize what a great improvement even *one application* makes, you cannot know how attractive your nails can be made to look.

Try it. See for yourself how quickly it gives your nails the shapeliness every one admires.

Start to have exquisite nails today

Ask for Cutex, the harmless cuticle remover, wherever toilet preparations are sold. Cutex comes in 35c, 70c and $1.50 bottles. Cutex Nail White is 35c. Cutex Nail Polish in cake, paste, powder, liquid or stick form is 35c. Cutex Cuticle Comfort, for sore or tender cuticle, is also 35c. If your favorite shop has not yet secured its stock, write direct.

NORTHAM WARREN
New York and Montreal

Send 21c for complete manicure set

Don't think you can get along with old-fashioned cuticle-cutting — even for another day! Send at once for the Cutex set illustrated below and know the difference. Mail the coupon today with 21c (18c for the set and 3c for postage) and get your complete Cutex Manicure Set, enough for at least six "manicures." Address MacLean, Benn & Nelson, Limited (Canadian Distributors for Northam Warren, New York and Montreal), Dept. 1101, 489 St. Paul Street West, Montreal.

Above is the Cutex Traveling Manicure Set wrapped with its new design for Christmas giving. The box itself is beautiful — paper covered to resemble leather, lined with pink. The set contains full-size packages of the Cuticle Remover, Cutex Nail White, Cutex Cake Polish and Paste Polish, also a flexible steel file, emery boards, orange sticks and cotton. For Christmas this year these sets are especially appropriate. Their price is low — their usefulness no one will question. Sold in all drug and department stores. Price $1.50

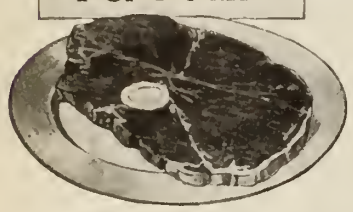
The New-Day Price Tags

Should Show Calories Per Pound

The Vital Point In Food Cost

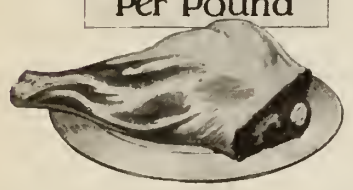
The calory is the energy unit by which governments and experts measure food.



It is a major factor to consider in combating cost of living. Figure what you get per dollar as compared with Quaker Oats.

In these foods, for example:

Cost Per 1,000 Calories

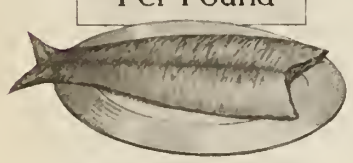


Quaker Oats - -	5 cents
Meats Average -	40 "
Fish Averages -	40 "
Canned Salmon -	33 "
Canned Corn -	30 "
Potatoes - - -	13 "
Canned Peas - -	54 "

890 Calories Per Pound

Most meat foods cost you 7 to 10 times Quaker Oats for the same calory units. And some foods cost you 20 times as much.

860 Calories Per Pound



Then Quaker Oats is better-balanced than these costly foods. It is richer in minerals. It is more nearly a complete food.

The oat is probably the greatest food that grows.

Use Quaker Oats to reduce your meat cost. Every dollar's worth used in that way saves $7 on the average.

365 Calories Per Pound

Then mix it with your flour foods. The more you use the more you save, and the better you are fed.

This great food in these times gains a multiplied importance.

Quaker Oats

The Extra-Flavory Flakes

Use Quaker Oats, because it means superlative flavor at no extra price.

It is flaked from queen grains only—just the rich, plump oats. We get but ten pounds from a bushel. It means the cream of the oats and the maximum enjoyment.

35c and 15c Per Package

Except in Far West

Peterborough, Canada. **The Quaker Oats Company** Saskatoon, Canada.

2056

Quaker Oats Bread.

1½ cups Quaker Oats (uncooked),
2 teaspoons salt,
½ cup sugar,
2 cups boiling water,
1 cake yeast,
¼ cup lukewarm water,
5 cups flour.

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water. Let stand until lukewarm. Then add yeast which has been dissolved in ¼ cup lukewarm water, then add 5 cups of flour.

Knead slightly, set in a warm place, let rise until light (about 2 hours). Knead thoroughly, form into two loaves and put in pans. Let rise again and bake about 50 minutes. If dry yeast is used, a sponge should be made at night with the liquid, the yeast, and a part of the white flour.

This recipe makes two loaves.

Quaker Oats Muffins.

⅔ cup Quaker Oats (uncooked), 1½ cups flour, 1 cup scalded milk, 1 egg, 4 level teaspoons baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.

Turn scalded milk on Quaker Oats, let stand five minutes; add sugar, salt and melted butter; sift in flour and baking powder; mix thoroughly and add egg well beaten. Bake in buttered gem pans.

Quaker Oats Cookies.

Mix dry 2 cups Quaker Oats (uncooked), 3 cups flour, 1 teaspoon cinnamon, 1 teaspoon salt.

Mix 1 cup sugar, 1 cup lard.

Put 1 level teaspoon soda in a small cup of sour milk. Add this to sugar and lard, then add dry ingredients, roll thin, cut in squares and bake. Raisins—2 cups—make an excellent addition.

An Afternoon In Antivari

By E. A. TAYLOR.

Next Let Us Pay a Visit to Serbia and See it as it Was Before the War

I felt distinctly cheated in Antivari. When a city is marked as such on the map, you expect to find it when you land there.

"Is this a Serb joke, Marko?" I asked severely of the handsome young Serbian, in black hose, leather sandals, and white kilts and jacket, whom I had hired as an attendant and guide, but who always treated me as his friend.

Marko absently fingered the revolver in his belt. "The predatory powers of Europe," he began dreamily; "first Turkey, and now Austria—"

I interrupted. "Please don't quote your newspapers, Marko, I have no knowledge or understanding of Serb politics, but I want to go to Antivari. You can't persuade me that Austria, however bad she is, sneaked across your border, 'lifted' a large city bodily, then hurriedly planting a century-old forest of olive groves to conceal the evidence of her crime, bolted with her prey to her own land."

Marko smiled; he was a leisurely youth in thought and action, and I looked round me, as our horses stopped to drink at the wayside brook. Three miles away the waves of the Adriatic splashed on a lonely beach. All round us was the rich valley of the Crmnitza, and between the huge twisted trunks of the olives I had glimpses of fields of tobacco and tasseled corn, with vineyards on the slopes of the hills. And also much good land still in forest and unused, the "crowded millions of Europe starving for land" are not in evidence here in the Balkans.

I had spent some time in that eastern corner of Europe as an agent of a Toronto firm of agricultural implement makers, and I had grown to decidedly like the Serbs. They are a Slav people, akin in race to the Russian Slav. Many of them are in the Serb kingdoms of Montenegro and Serbia, some are still under Turkey, and many millions are the unwilling subjects of Austria. "A thoroughly bad lot," said an Austrian officer to me just before my first entry into the Balkans. "The Serb countries are not fit for a man of education to even travel through. They are a nation of cut-throats, the most treacherous race on earth, and always discontented. They need holding down with a heavy hand, as we are doing in Bosnia and Herzegovina."

I entered Serbia with some misgivings, for all I knew was that it was fertile, while Montenegro was barren; it grew much corn for home consumption, and was beginning to raise wheat for export, which last meant there might be an opening for Canadian trade. I knew nothing of Serb language or politics, and I only knew Serb character as described by the Austrian, but hoping that a man who was intelligent enough to be a good farmer would have too much sense to cut the throat of a harmless foreigner, I started in, carefully unarmed.

Now for the Serb as I knew him—a short, stockily built man, usually blonde, and slow seeming to my Western energy. From newspapers and history I learned that he had the regrettable habit of "removing" kings and statesmen that he didn't like, with a revolver. But as I met him, on non-political grounds, murders were rare. I cannot say if he is treacherous or not in dealing with "predatory foreign powers," but I do know that in business he can be depended upon for a straight deal.

At first sight I thought the farms showed thriftlessness; the crops were good, but the outsides of the buildings looked uncared for. I had grown used in Germany and Austria to see women working in the fields—that is a necessity when the country is aiming at a big army before everything, and little Serbia, I knew, must arm in self-defence. I learnt much of the Serbs at the first cattle market I attended. The pig was there, in vast numbers, and very large in size. He is *the* farm animal of Serbia, though he is raised mainly for export, sheep being for home consumption. I wandered round, dodging the horns of cattle and the heels of horses, for all the beasts were loose in the wide market, while their owners drank quarts of cold water. (Water is the national drink of Serbia; certainly every farmer makes plum brandy, which he puts up in bottles three inches high, but this is used very sparingly. I never saw a drunken peasant in Serbia.) Also they discussed politics with fierce interest. When a man wanted to collect his particular pigs, for instance, from a mob of uniformly good-tempered, placid animals, he threw down some beans to make them get up, and then they followed him to wherever he wished. Now a tame animal means a well-fed and kindly treated one, and where I have known one man to wilfully misuse a beast, I have known ninety-nine to be cruel through carelessness or ignorance. It followed that the Serb was a careful and intelligent farmer, though he would not (perhaps a legacy of fear from the days of Turkish rule) make the *outside* of his farm buildings show it. Within, I grew to know, everything was neat, and spotlessly clean, and no Canadian woman could be prouder of her household linen, her jams and jellies, and her good cooking, than the wives of my Serb farmer friends. I never met a drunken man or a tramp in Serbia, and as a people they are one of the most moral communities on earth, perhaps because serious moral offences, like murder, are always punished with death by shooting—the legal form of execution in Serbia.

But to return to Antivari, or rather to get there. I had heard of it as an old Venetian city, from whom it was taken by the Turks, who held it till its capture, in 1878, by Montenegro, in whose possession it still was. I had wished to visit it, for a holiday, and so started for there with Marko. He had dismounted to drink, as well as the horses, and then, we had only gone on a few yards, when he said, "There is Antivari."

A walled city on a hill in the midst of a wide valley, but—a city without a wreath of smoke above its roofs, and without a sound of life. As we drew nearer I saw the houses were roofless, and the towers on the walls fire-scarred and shattered. We rode through silent streets where the grass grew high, while a quarter of a century of forest growth flourished among the houses. It was an eerie place, even at noon of a June day.

"I presume," I said, "that Montenegro has not enough people to spare to colonize her captures. But I hope this place has some inhabitants somewhere, I shall want dinner very soon."

"Oh, yes, plenty of people further on" said Marko, cheerfully.

I followed his lead, thinking of the Serbian inns I had known. In Belgrad and other cities there are haughty palatial hotels modelled on those of Paris, but the inn of the country town is original, you pay for your room, and meals as you have them. But though it has kitchen and dining room, it allows food peddlers to enter at all hours and feed its lodgers, if they like. The "bread man," the "cake man" and the "salad man," all visited you in turn. The "hot stew man" and the "hot sausage man" came at regular meal times, with their wares in a huge steaming tin drum slung round their necks. In large pockets these men also carry plates and knives and forks. Eight cents rent these latter, and buys enough for a good meal.

On the further side of the empty city we came to a miserable little Turkish village, and then a gipsy camp, but no sign of anything like an inn. "I hope you do know of one here," I said, sternly.

"There is no inn here," said Marko, with a happy smile, "but we are going to stay with that rich widow, whose brother, the Archimandrite of Studenitza, gave you a letter of introduction to."

I was used to Marko's knowledge of all my private papers, but I remembered that the little coast steamer that had landed me here would not call again for a week, and though the Serb, when he does not suspect you of being the spy of a "predatory power," is the soul of hospitality, I did not relish quartering myself on a lady I was totally unacquainted with. But it was no use telling Marko this—"But she is rich, oh, so rich, Gospodar." Besides her beautiful farm, she has"—he lowered his voice impressively—"two thousand florins (about eight hundred dollars) in a bank."

(Continued on following page.)

An Afternoon in Antivari

(Continued from preceding page.)

Before us was a good sized, white-washed house, with a red tiled roof. In front of it, under a magnificent oak, sat four young girls, three in correct muslin dresses, according to the Paris fashions for that year, and one in the gala costume of the Serb girl—white dress with wide kimona sleeves; scarlet girdle, with a kind of small striped apron in front. White head-dress, the veil hanging down behind, and a string of coins above the forehead. She was the youngest of the four, a true Serb, with candid blue eyes, but a more refined type than the broad-faced, sturdy-limbed women I had met hitherto. Beside her stood a big, handsome girl, so thoroughly western in her looks and bearing, that I would have thought she belonged to our end of Europe, had not a second glance shown the high cheek bones, and the slightest possible slant to the eye—the ineradicable sign of Tartar blood that marks the Bulgarian. Number three, pretty, dark-eyed and vivacious—the Slav with a cross of Italian blood, I guessed as Roumanian. The fourth I was not sure of—a lovely oriental, of the Asia of the "Arabian Nights," not of the Mongol, —she lay in a hammock.

Behind these four stood an older woman, in the short skirts of the Serb woman at work, and neither shoes nor stockings. She carried a fresh killed sheep, which she hung up by its hind legs, and started to cut up very skilfully with a meat axe. It was she who shouted to us—"A million times, in the name of God, come in."

Open flew the house door, and an elderly woman—the "rich widow" herself, Maria Brankovich—appeared. She was also in Serb full dress, like the young girl's, with the addition of a green satin, sleeveless jacket, embroidered with gold, and very many strings of coins and beads in her head-dress—"A million times, in the name of God, come in," she cried heartily.

This was all before I had shown the Archimandrite's letter, after I was adopted as one of the family, and introduced to the lady butcher—"Sister-in-law, Ljubitza Bulatovich." My girl of the "Arabian Nights" was "Grandson Georg's wife, Thalia. "She was Greek," my hostess explained. "It is not best to marry foreigners, but Georg was at school in Athens, and met her."

Georg, it appeared, was a railway surveyor, at present working round Antivari. "A railway to join us with Serbia would make us a real city, but that Austria, she will not allow it to be built. Perhaps you understand these things, Gospodar, I do not, but Georg says Austria and Germany control the big railways in central Europe, and will not let us have this little one. He works, but he says it will never be used while Austria has that great Germany behind it, to keep us back."

My Bulgarian was Nadelka Petrovna Dimetroff, wife of a Bulgarian engineer, hired by the Serbian government to work with Georg. The Roumanian—Carola Xinopel—was also a married woman, on a visit to Thalia, whose schoolmate she had been. Lastly, my blue-eyed Serb was "the Djevojka (maiden) Milena, sister of Georg."

Sister-in-law, with the axe stuck in her girdle, studied me thoughtfully. "The other foreigner who came here did not believe in the Trinity," she said. I hastened to assure her that my religious views were fairly orthodox. Then my hostess said, "I fear that to-day we cannot feed you properly, for it is one of our fasts, and we have no food ready."

"Gospoditza," I begged. "As you admit that I am a fellow Christian, you must allow me to eat as you do to-day. You must not cook extra for me."

"Gospodar, I know the rights of a guest. If this had been a Christian fast you might have joined in it with us, but it is only a Serb one. Still my husband was once with our legation in Paris, and there I learned how you of the West do fast, so you shall do that here."

Then she was gone with sister-in-law and the maiden, leaving me in the big, blue and white parlor, well furnished in western style, except the low, eastern divan at one end, with the arm rack well filled with modern rifles and revolvers above it. Also there were plenty of books and magazines, mostly French and Russian, with all the Serb papers. Evidently, though my hostess chose to keep carefully to old Serb customs in her household, she was not at all ignorant of the big world beyond.

Then I turned from books to study the Balkan problem as personified in three good-looking young women. Greece lay on the divan, too lazy and supercilious to try to be agreeable. Roumania was rather shy, but Bulgaria was neither, she had been educated, she said, in the Constantinople College, of the American missionaries. And she was most up-to-date in her knowledge and talk. I decidedly enjoyed her entertaining of me, though I was surprised at her passionate admiration for Germany. "I thought it was Russia that Bulgaria looked up to," I remarked.

"Russia, oh, Gospodar, she is what you would call a back number. We cannot admire a nation that was beaten by that Asiatic Japan. No, Germany only has reached a condition where it is impossible for anyone to defeat her, and that gives her the right, as Treitshke and Nietzsche teach, to rule the world. Might is really the only right."

"Surely they did not give you Nietzsche to read at a Missionary college, Gospoditza?"

"Oh, Gospodar, the missionaries were good, but one grows past such things. Then their country, the United States, has no army, so she cannot be great like Germany."

I was just thinking I preferred sister-in-law to this combination of undigested education and militarism gone mad, when dinner was served. We took our seats at the centre table, still covered with a dark, heavy table cover. Sister-in-law and the maiden waited on us, for in no Serb circles that I have moved in, are there women servants. Among the better-off people poor relations and unmarried daughters act as maids. Sister-in-law spread a newspaper in the middle of the table, while the maiden gave each of us fine damask table napkins, which we laid on the table before us. Then we each drained our glass of water, with the murmured invocation, "To the glory of God." Again the maiden filled our glasses, and again we drank, this time "To the Holy Cross." The third time is "To the Sacred Trinity." These three toasts are obligatory before every Serb meal, no matter how simple, and I suspect that "other foreigner, who didn't believe in the Trinity," merely refused the third drinking of wine, coffee, or water, because he thought he had taken enough.

The first course was the usual one in Serbia, corn bread, cheese, cream, and a salad, but only I had cream and cheese, for the Orthodox Church prohibits animal products as well as flesh, fowl and fish, on fast days. Then we had fish, for me, and vegetables, and a dessert of fruit, cakes and coffee.

After, I went to speak to Marko, and returned to find Greece and Bulgaria quarrelling fiercely on the lawn. Greece, waked up at last, looked like a vision of eastern tragedy as she cried, "But you did burn our library, you can't deny that you did."

Bulgaria, looking contemptuously modern and western, shrugged her shoulders. "I don't deny it, but what a fuss to make about such a little thing. Don't you call it ridiculous, Gospodar?"

Startled at being involved in what I imagined must be some Balkan suffragettism, I only murmured, weakly, "What library was it?" while Greece swept off disdainfully, followed by Roumania, who seemed to sympathize with her.

"The library at Alexandria. The conceit of those Greeks is too ridiculous, because they say Alexander the Great was a Greek, then Alexandrina, in Egypt, is part of their 'kingdom of intellect,' as they call it. You never heard anything like it outside the opera-bouffe."

"I'm afraid I don't understand, Gospoditza, when was this library burned?"

"Oh, somewhere about thirteen hundred years ago, you have read of it, Gospodar. The Bulgars were coming in about that time, and it pleases the Greeks to say they did it. I don't care if we did. I know we are the only people fit to rule in the Balkans. Roumania is not much better than Greece, with that wolf and the twin babies of old Rome stuck up in her cities. Her claim of Roman blood is as ridiculous as Greeks to-day thinking they are like the ancient Greeks."

Just then my hostess came out with the maiden, and Bulgaria went in. "Are you learning more of the Balkan question, Gospodar?" she asked. "Do you realize that Greece hates Turkey

(Continued on page 44.)

There's Christmas Cheer in Pictures from Home

To a homesick boy at the front, a picture of the children romping through the snow is worth more than the Croix de Guerre.

Pictures of mother, how much they mean to him now. And of kid sister—perhaps she is "wearing her hair up" by this time—all the old familiar scenes that mean home, yes, and snapshots, too, of that little girl with the big blue eyes whose heart was the only objective he knew before the war—these will mean a world of comfort to the boy who is lonesome among a million strangers.

The Y. M. C. A., the Red Cross, and kindred organizations are doing a world of good in ministering to the bodies and minds of our boys. But in their hearts, homes are first. Cheerful letters and cheerful pictures from home—these will keep their hearts light and their courage high.

CANADIAN KODAK CO., Limited

TORONTO, CANADA

COMFORTABLE TRAINS AND GREAT SCENIC BEAUTY WHEN YOU TRAVEL C.N.R.

Spend Your After-war Vacation On the North Pacific Coast

ENJOY GOOD HEALTH AND RECREATION WHERE SUNSHINE ABOUNDS

Travelling west from Montreal, Ottawa or Toronto, the great Hinterland back of Lake Superior is soon reached, with its score of mighty rivers clothed to the edge of their dark depths with a tangle of forest, and interspersed here and there by rocky ridges—the bright green of the under-

MOUNT ROBSON.

brush and the shadowy white of the birch breaking indiscriminately the heavy evergreen of the predominating pines.

Nearing the head of the Great Lakes, Nipigon Forest Reserve is traversed with its world-famous trout streams; then Fort William, and Port Arthur, where the largest grain elevators on the Continent stand sentinel, and where immense shipbuilding industries and a continually increasing tourist traffic is rapidly developing a great commercial centre. Beyond, a picturesque route lies through the Rainy Lakes district and Quetico National Park, reaching Winnipeg by a fertile and gradually rolling prairie.

West of Winnipeg the prairie continues, with its teeming activities. A choice of routes are here available, either through the central districts; by the southern route through Brandon, Regina and Saskatoon; or through Northern Manitoba, Saskatchewan and Prince Albert, to Calgary and Edmonton. And here at the foothills of the Rockies time may well be spent in studying the great commercial and agricultural opportunities of the Last Great West and its infinite possibilities as the outpost of a mighty nation, where work, enterprise and prosperity go hand in hand.

From Edmonton the prairie is soon replaced by the haze-clothed mountains in the distance, and following the banks of the Athabaska River, the line traverses Jasper National Park and on through the Yellowhead Pass—the Great Divide, the headwaters of the Fraser. Yellowhead, as tradition has it, is named after a mighty Iroquois-Scotch trapper known as Tete Jaune, or Yellowhead, who hid or cached his furs at this spot, and stood a tower of strength and a true beacon to the wayfarer in the tempestuous days of old.

The scenery at this point is grand—a narrow, rocky gorge covered with dark pines below and light green shrub above surmount the seething currents of the Fraser, and towering on every side and lost in the clouds are the snow-clad peaks of giant Mount Robson, the highest known in Canada. Such is the surrounding chosen by an appreciative country in the selection of a fitting tribute to the memory of a famous British nurse martyred by Germans in Belgium, October 12th, 1915—"Mount Edith Cavell."

Turning south from the Yellowhead, the Canoe and Albreda Rivers are followed, succeeded in turn by the North and Main Thompson Rivers, meeting at Lytton the lower waters of the main Fraser. From here we cross and re-cross, hugging its mighty and picturesque banks through to Vancouver.

MOUNT EDITH CAVELL.

Nowhere in this mountainous and river-valley journey of over 700 miles from the gateway to the Rockies clear to the Pacific does it grow monotonous or time hang heavily, so insistent are the attractions which flash past the windows of the comfortable Observation car. Pictures do not portray, nor words describe, the great beauty and grandeur of the mountains, and the sublime thoughts instilled as we sweep through chasm and by rugged peak or raging torrent where nature undefiled holds sway.

Music and Christmas

By HECTOR CHARLESWORTH.

Give Music a Place in the Yuletide Festivities

The association of music with the celebration of Christmas is a tradition that has prevailed ever since the festival was celebrated. It even begins with the divine event itself. In the narrative of St. Luke we are told that after the angel had startled the watching shepherds with "good tidings of great joy, which shall be to all people," suddenly there was with the angel a multitude of the heavenly host praising God and saying:

"Glory to God in the highest and on earth peace, good will toward men," or, as the modern translators have it, "on earth peace to men of good will."

Throughout the centuries it has been assumed by the poets and painters who have treated this episode that the heavenly host praised God with music. A Provencal poet of the Middle Ages, in one of his Noels or Christmas songs, describes the angel as one "who sang a thousand times sweeter than a nightingale."

Countless preachers have dwelt on the significance of this appearance to poor shepherds as proof that the newborn Truth, made flesh, was a religion for democracy. If we accept the message as such, we may carry the thought further and rejoice in the fact that this most important of all the recorded manifestations in connection with the birth of Jesus at Bethlehem was attended with music; that the prediction of peace for suffering and oppressed mankind was accompanied by divine harmonies. We have here a potent religious sanction for those who believe that music, like Christianity, should be a boon for "all people." It is significant also that those churches born of the Reformation which in their zeal for reform for a time banished Christmas and called it a heathen festival, also banned music in their conventicles.

The truth is that to most people who cherish the sentiment which pervades Christmas, music in one form or another is so intimately associated with it as to be inseparable. Christmas is, or should be, the season of rejoicing, and joy—as Walter Pater said of Art—constantly aspires toward the condition of music. In all countries the sacred festival—the Christmas of us English-speaking folk; the Noel, or Birth, of the French; the Weihnacht or Sacred Night of the Germans; the Yule of the Danes—was for centuries ushered in by music.

The celebration of Christmas as a feast did not begin with the early church. It cannot be traced back farther than A.D. 336, and apparently had its origin at Rome, and from thence spread to the then existing national churches and to other countries as they embraced Christianity. In 567 the Council of Tours decreed the Twelve Days from Christmas to Epiphany as a festal season. It is regarded as certain that St. Augustine brought it with him to England, and it is recorded that Christmas Day, 598, witnessed the baptism of more than ten thousand English converts; for in those early years the happy thought was conceived of celebrating Christmas by bringing new souls into the fold. It is probable that the early Christmases were ascetic and austere, but as the festival became more generally observed it became increasingly genial, until in the Middle Ages the term "merry" most accurately described it. In other words, it became something warm and homely and adapted to the instincts of humanity, a mystical rapture expressing itself through the joys of this earth. The evidence of this is to be found in the ancient Christmas poetry, the origins of which are obscured by the mists of time—carols and hymns which were probably parts of miracle and mystery plays written to body forth the facts and legends of the Nativity. That music began to play an ever-increasing part in them is evident from the fact that in the Middle Ages poetry and music were, for the most part, one and indivisible. The modern poetry of the printed page was unknown to the people, who could not have read it even had the art of printing been existent. The multitude of mediæval Christmas songs and ballads that have survived were clearly written to be sung.

Even the Reformation, which changed many things, did not destroy this aspect of Christmas. In England, from which we all get our ideas of the proper celebration of the feast, the carol-singers long kept up the old spirit. The great novelist, Thomas Hardy, has in his early tale, "Under the Greenwood Tree," described the quaint musical ceremonies that prevailed in the rural districts of Devonshire and Dorsetshire—the country he calls Wessex—during his boyhood.

It is possible that the present war has destroyed the last vestiges of the traditional ceremonies by which Christmas carols were sung by rural villagers to usher in the sacred morn, but it was possible for the casual visitor to hear and enjoy them in sequestered parts of England until quite recently. Joseph Silvestre, who has written a book on the ancient carols, tells of a Christmas eve he passed, not so many years ago, in the village of Seven Oaks, Kent, when he was awakened by the sweet music of youthful voices singing the old carol, "God Rest You, Merry Gentlemen," in the frosty, moonlit air; and nearly a century earlier, Washington Irving had a similar experience. Of late we have heard much of the importance of community singing, and it is worth while remembering that community singing had its origin centuries ago in the celebration of Christmastide. Such musical rejoicings were indeed an affair of all people; it was not merely the humble peasant who took occasion to lift up his voice in song; it was customary with the bishops, in the days when bishops were great territorial magnates, to sing carols among the clergy on Christmas Day. It was possibly this mode of celebrating the Nativity which led an European visitor to England in Shakespeare's day, to describe the motherland as "a nest of songbirds."

The vast majority of people to-day cherish certain beautiful hymns and melodies as intimately associated with the best beloved of festivals, but they are not so ancient as the carols to which one has alluded. The greatest of these is "Adeste Fidelis"—"O! Come All Ye Faithful!"—which is now sung in almost every church, Protestant or Catholic, on Christmas Day. Its rhythmical melody, even more than its words, have endeared it to everyone who holds Christmas in his heart, and it is a favorite in nearly every country of Western Europe. In its mingling of joy and devotion it is a complete expression of all that Christmas signifies; yet it is not, as many suppose, ancient. It is conceded to be of French origin, and to have been composed by some ecclesiastical musician about the year 1700. Owing to the fact that it was customary to sing it in the Roman Catholic chapel of the Portuguese Embassy in London, during the closing years of the eighteenth century, the impression got abroad that it was Portuguese in origin. It will surprise many to learn that it was first sung in an Anglican Church as late as 1841, when it was translated from the Latin by Rev. Mr. Oakley, one of the Tractarian followers of Rev. John Henry Newman, before the latter's conversion to Roman Catholicism, to be sung by his congregation at Margaret Street Chapel, London. In passing it may be said that to the Tractarians we owe another hymn, which, though not associated with Christmas, is almost as popular, "Lead Kindly Light," and which is from the pen of Newman himself.

This Christmas it is to be trusted most readers will again hear "While Shepherds Watched Their Flocks by Night," though it, too, is comparatively modern and purely English in origin. It was written in the early years of the eighteenth century by Nahum Tate. "Hark, the Herald Angels Sing" was from the pen of Charles Wesley, the brother of the founder of Methodism, and to the eighteenth century we owe another hymn inseparably identified with Christmas in the minds of churchgoers, Byron's "Christians, Awake! Salute the Happy Morn!"

The ceremonial connection of music with Christmas is, however, but one phase. In the traditional celebration of Yuletide in the home music has ever played its part as well as feasting, and it helps to lift it above the reproach of mere gluttony. Song and fun go naturally together. In these modern

Mercury Hosiery

for ladies and men

Narrow Ankles—No Wrinkles

On account of the war, very few of the fine imported lines of hosiery are at present obtainable in Canada. But women can now obtain Canadian hosiery that is superior in finish and fit to the most luxurious pure silk, mercerized lisle, cotton and cashmere lines produced abroad.

We took advantage of the situation created by the war and installed wonderful new machines. They knit Mercury Hosiery with a narrow ankle that fits without a wrinkle, a full-fashioned shapely calf, a widened top that gives utmost freedom and comfort—and seamless from toe to top.

The more fastidious you are the more you'll revel in this elegant Mercury Hosiery. Black, white, browns, grays and the other fashionable shades.

Also Mercury Underwear for men, women and children

Who Goes There

(Continued from page 14.)

He held out the letter cheerfully to the hussar, but the latter had read it, and he merely nodded in respectful silence. So Guild folded it, sealed it in an envelope, wrote on it, "For my Mother in case of my death," and inclosed it in his letter to Darrel.

"Any time you are ready now," he said, rising from the little enameled iron table under the arbor.

The hussar rose, clanking, and set a whistle to his lips Then, turning: "I shall have yet one more glass of beer," he said blandly, but his eyes twinkled.

The grey car rolled up in a few moments. Over it at a vast height something soared in hawk-like circles. It may have been a hawk. There was no telling at such a height.

So they drove off again amid the world-shaking din of the guns paralleling the allied lines toward the west. Ostend lay somewhere in that direction, the channel flowed beyond; beyond that crouched England—where bands were playing "Tipperary"—and where, perhaps, a young girl was listening to that new battle song of which the young hussar beside him had never even heard.

As the grey car hummed westward over the Belgian road, Guild thought of these things while the whole world about him was shaking with the earthquake of the guns.

"Karen," he repeated under his breath, "Karen Girard."

After a while sentinels began to halt them every few rods. The chauffeur unrolled two white flags and set them in sockets on either side of the hood. The hussar beside him produced a letter from his grey despatch-pouch.

"General von Reiter's orders," he said briefly. "You are to read them now and return the letter to me before the enemies' parlementaire answers our flag."

Guild took the envelope, tore it open and read:

"Orders received since our interview make it impossible for me to tell you where to find me on your return.

"My country place at Silesia is apparently out of the question at present as a residence for the person you are expected to bring back with you. The inclosed clipping from a Danish newspaper will explain why. Therefore, you will sail from London on Wednesday or Sunday, taking a Holland liner. You will land at Amsterdam go by rail through Utrecht, Helmond, Halen, Maastricht. You will be expected there. If I am not there you will remain over night.

"If you return from your journey *alone* and unsuccessful you will surrender yourself as prisoner to the nearest German post and ask the officer in charge to telegraph me.

"If you return successful you shall be permitted at Eijsden to continue your journey with the person you bring with you, across the Luxembourg border to Trois Fontaines, which is just beyond the Grand Duchy frontier: and you shall then deliver the person in question to the housekeeper of the hunting lodge, Marie Bergner. The lodge is called Quellenheim, and it belongs to me. If I am not there you must remain there over night. In the morning if you do not hear from me, you are at liberty to go where you please, and your engagements vis-a-vis to me are cancelled.

VON REITER, Maj.-Gen'l.

The inclosed newspaper clipping had been translated into French and written out in long-hand. The translation read as follows:

"Russia's invasion of East Prussia, Posen and Silesia has sent a wave of panic over the eastern provinces of the German Empire, if reports from Copenhagen and Stockholm are to be credited. These reports are chiefly significant as indicating that the Russian advance is progressing more rapidly than has been asserted even by despatches from Petrograd.

"A correspondent of the 'Daily Telegraph' reports from Stockholm that the whole of eastern Germany is upset by the menace of Cossack raids. He hears that a diplomatic despatch from Vienna contains information that the civilian inhabitants of Koenigsberg, East Prussia, and Breslau, in Silesia, are abandoning their homes and that only the military will remain in these strongholds.

"From Copenhagen it is reported, allegedly from German sources, that Silesia expects devastation by fire and sword and that the wealthy Prussian landholders, whose immense estates cover Silesia, are leading the exodus toward the west. The military authorities have done everything possible to check the panic, fearing its hurtful influence on Germany's prospects, but have been unable to reassure the inhabitants. Many of these have seen bands of Cossacks who have penetrated a few miles over the border and their warnings have spread like a forest fire."

For a long time the young man studied the letter, reading and rereading it, until, closing his eyes, he could repeat it word for word.

And when he was letter perfect he nodded and handed back the letter to the hussar, who pouched it.

A moment later the car ran in among a horde of mounted Uhlans, and one of their officers came galloping up alongside of the machine.

He and the hussar whispered together for a few minutes, then an Uhlan was summoned, a white cloth tied to his lance-shaft, and away he went on his powerful horse, the white flag snapping in the wind. Behind him cantered an Uhlan trumpeter.

Toward sunset the grey automobile rolled west out into open country. A vast flat plain stretched to the horizon, where the sunset flamed scarlet and rose.

But it was almost dusk before from somewhere across the plain came the faint strains of military music.

The hussar's immature mustache bristled. "British!" he remarked. "Gott in Himmel, what barbarous music!"

Guild said nothing. They were playing "Tipperary."

And now, through the late rays of the afterglow, an Uhlan trumpeter, sitting his horse on the road ahead, set his trumpet to his lips and sounded the parley again. Far, silvery, from the misty southwest, a British bugle answered.

Guild strained his eyes. Nothing moved on the plain. But, at a nod to the chauffeur from the hussar, the great, grey automobile rolled forward, the two Uhlans walking their horses on either side.

Suddenly, east and west as far as the eyes could see, trenches in endless parallels cut the plain, swarming with myriads of men in misty grey.

The next moment the hussar had passed a black silk handkerchief over Guild's eyes and was tying it rather tightly.

CHAPTER IV.

HIS first night in London was like a bad dream to him. Lying half awake on his bed, doggedly, tenaciously awaiting the sleep he needed, at intervals even on its vision-haunted borderland, but never drifting across it, he remained always darkly conscious of his errand and of his sinister predicament.

The ineffaceable scenes of the last three days obsessed him; his mind seemed to be unable to free itself. The quieter he lay, the more grimly determined he became that sleep should blot out these tragic memories for a few hours at least, the more bewildering grew the confusion in his haunted mind. Continually new details were evoked by his treacherous and insurgent memory—trifles terrible in their minor significance—the frightened boy against the wall snivelling against his ragged shirt-sleeve—the sprawling attitudes of the dead men in the dusty grass—and how, after a few moments, a mangled arm moved, blindly groping—and what quieted it.

Incidents, the petty details of sounds, of odors, of things irrelevant, multiplied and possessed him—the thin gold-rimmed spectacles on the Burgomaster's nose and the honest, incredulous eyes which gazed through them at him when he announced checkmate in three moves.

Did that tranquil episode happen years ago in another and calmer life? —or a few hours ago in this?

His nerves finally drove him into motion and he swung himself out of bed and walked to the window.

His hotel was the Berkeley, and he looked out across Piccadilly into a silent, sad, unlighted city of shadows.

The Children's Hour

By ETHEL BAIN.

FREE LUNCHES FOR THE BIRDS

Christmas Day dawned over the sleeping city of Toronto. In High Park the snow-muffled silence was intense, and as the sun's rays drove away Night's clinging shadows, the frost fairies danced and whirled madly in the newly fallen snow. There was no wind, for Mother Nature seemed to have decided that this day of days, when the Saviour of mankind was born, should be calm and spotless, and she had given every tree a sparkling crown of frozen snow to wear in honor of the festival of Christmas.

A chickadee awakened and hopped out of his nest hole into the world of beauty. "Glorious morning," he cried to a fairy sprite, then ducked his head as she threw a tiny snowball at him. "Missed," he went on, and flew down beside her. "I'm hungry," he said; "still, if there's anything to be found to eat, I'll find it. It certainly looks very hopeless this weather."

"You should eat ice and snow like me," suggested the fairy.

"Not satisfying enough," he retorted. "Goodbye; I'm going to look up Downy," and off he flew, his cheerful call sounding clear through the sharp air.

Downy Woodpecker was just awake as Chickadee knocked at his door. "Glad to see you," he cried as he opened the door. "Hungry! Well, yes, I'd like a meal. Let's go and see if there is anything to be found."

So off they flew together, Chickadee's black-capped head nodding gaily to his friend's chattering, whilst the bright red patch on Downy Woodpecker's neck contrasted oddly with his black and white striped coat. Down through the park they swept, settling here and there, but grubs were scarce and the branches were frozen hard as iron.

"Poor feeding," cried the Woodpecker.

"Yes," replied his friend. "If it wasn't for the thick coat of fat we each have under our skins, we shouldn't long survive this weather."

"That's true. It would mean migration for us."

Just then there was a flash of dazzling blue in the sunlight, and Blue Jay alighted on the branch beside the busy birds. "Hello!" he screamed. "Been over to the free lunch yet?"

"Free lunch!" exclaimed Chickadee and Downy together. "Never heard of it."

"Well, there is one," replied Blue Jay. "I've just come from it. Go down by the old oak tree on the north side and you can't miss it. I tell you it's fine to feel satisfied for once in a while, especially as my own storehouse is frozen over so hard that I cannot break into it at all."

"You're right," cried Chickadee. "Come along, Downy; do let's hurry, for we've barely had a taste as yet."

"I'm with you," the Woodpecker replied.

"They needed no compass to find their way to the north side of High Park. Their God-given instinct was enough to direct them, and soon they came to the old oak tree, and then saw a sight which made them glad.

"Oh, Downy," Chickadee cried in an eager voice. "Blue Jay was telling the truth."

December, 1918.

My dear Home Journal Children:

A Merry Christmas to you all. On this page, which is yours, will be found a list of prizes to be awarded to those successful in our contest series.

Opportunity is being given our clever young people to distinguish themselves, so now, I'm looking forward to seeing all of you go "over the top" by writing me letters for it. The grown-ups are waiting to read of your efforts. Now, are you ready? "Over the top" to larger success for our Canadian Home Journal.

Your sincere friend,

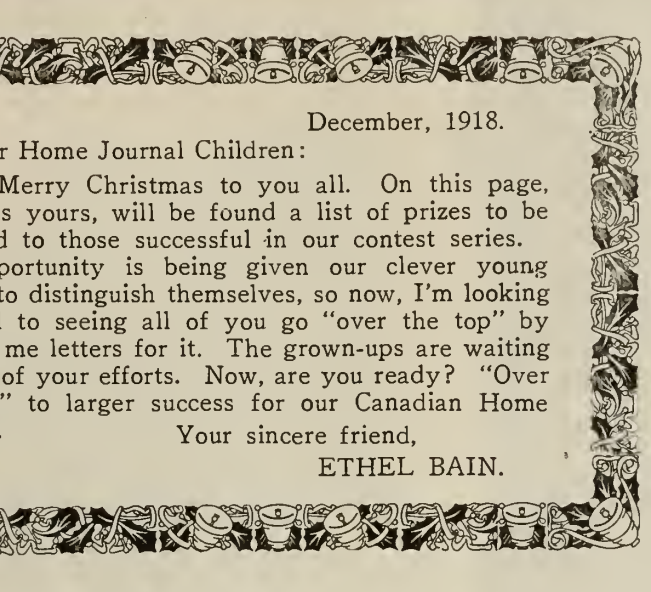
ETHEL BAIN.

"He doesn't always," remarked the Woodpecker dryly.

"Well, he did this time," retorted his friend, "but don't let us quarrel. See that lump of suet. Oh, Downy!" And the next minute he was swinging, head downwards, clinging to and pecking energetically at the piece of fat.

Downy soon followed and flew down to the free lunch that had been provided for the winter birds by a bird lover of the district.

There in a sheltered spot the bird lover had built his free lunch counter. He had chosen a fine fir tree; then about five feet from the ground he had built a table round the trunk of the tree. The table was twelve inches wide, and here he had spread his feast. Dried sunflower and pumpkin seeds, cracked nuts for the ever-cheerful chickadees, a plentiful supply of bird seed and a handful of cheap raisins. On the nearby branches overhead he had tied several lumps of suet. What mattered it if the suet froze hard? The strong, sharp beaks of the winter birds soon pounded pieces out. Here and there he had fastened a bone or two, cooked and raw, bones that were no good for any other purpose, still how the bird visitors enjoyed pecking at the bits of meat and marrow!



The bird lover watched his little feathered guests from a short distance, and his heart warmed to hear the joyous ringing calls, as they quickly found and helped themselves to the welcome feast, for, as the mercury had continued to descend and it had become more difficult for them to find the grubs and larvae in the crevices of the bark on the frost-bound trees, he had realized their plight, and had made plans to save his little friends.

. . . . . .

Happy are they, and especially the fruit farmers, who invite the chickadees, nuthatches and woodpeckers to live in their orchards all the winter through, for they will find few worm-eaten apples the next season. Although the winter birds have hardy constitutions and survive the worst and coldest weather, it is during the terrible snowstorms that prevail in Canada that they suffer the most. They are often forced to take shelter in hollow trees for days together, and many a tragedy happens when they venture out to try and find a meal amongst the storm-tossed trees.

Won't you try to help them this winter? It costs but little to supply a free lunch counter during the hard winter months, and scarcely an hour of the day but it will be well attended. Don't stop feeding them because of the war. Just think how hard they have worked for us all the summer. They have watched over the fruit trees and the now garnered grain. What would have happened if they had not worked on steadily day after day? Why, there would not have been a blade of grass left nor one single leaf on any of our trees. The fruit and grain would have been

Little Nurse Ellegett of Bowmanville, Ont.

Dressed as a Red Cross nurse, this little girl of only four and a half years collected over thirteen dollars in one day for the Red Cross. Her father and two brothers are in khaki—it is little wonder Baby Ellegett likes to "dress up" as a Nursing Sister.

Three Prizes For The Girls and Boys

FIRST—STORY COMPETITION.

Two dollars will be given the boy or girl under fourteen sending in the best story of not more than five hundred words, subject "Something I Have Seen With My Own Eyes in Nature's Kingdom."

SECOND—CAMERA CONTEST.

Two dollars will be awarded the girl or boy sending in the best photograph which she or he has taken.

THIRD—SOLDIERS' SCRAP BOOK COMPETITION.

Two dollars will be sent to the boy or girl under fourteen who sends in the neatest and most carefully made scrap book for a soldier.

These competitions close on December 27th, 1918.

Address The Journal Juniors Club, "Canadian Home Journal," Toronto, Canada.

Who Goes There

(*Continued from page* 24.)

Only a single line of lighted lamps outlined the broad thoroughfare. Crimson sparks twinkled here and there—the lights of cabs.

The great darkened Ritz towered opposite. Devonshire House squatted behind its grilles and shadowy walls on the right, and beyond the great dark thoroughfare stretched away into the night, melancholy, deserted save for the slight stirring of a policeman here and there or the passage of an automobile running in silence without lights.

He had been standing by the window for ten minutes or so, a lighted cigarette between his lips, both hands dropped into the pocket of his pyjamas, when he became aware of a slight sound—a very slight one—behind him.

He turned around and his eyes fell upon the knob of the door. Whether or not it was turning he could not determine in the dusk of the room. The only light in it came through his windows from the starry August night-sky.

After a moment he walked toward the door, barefooted across the velvet carpet, halted, fixed his eyes on the door knob.

After a moment it began to turn again, almost imperceptibly. And, in him, every over-wrought nerve tightened to its full tension till he quivered. Slowly, discreetly, noiselessly the knob continued to turn. The door was not locked. Presently it began to open, the merest fraction of an inch at a time; then, abruptly but stealthily, it began to close again, as though the unseen intruder had caught sight of him, and Guild stepped forward swiftly and jerked the door wide open.

There was only the darkened hallway there, and a servant with a tray who said very coolly, "Thanky, sir," and entered the room.

"What-do-you-want?" asked Guild unsteadily.

"You ordered whisky and soda for eleven o'clock, sir."

"I did not. Why do you try to enter my room without knocking?"

"I understood your orders were not to disturb you but to place the tray on the night-table beside your bed, sir."

Guild regarded him steadily. The servant, clean-shaven, typical, encountered the young man's gaze respectfully and with no more disturbance than seemed natural under the circumstances of a not unusual blunder.

Guild's nerves relaxed and he drew a deep, quiet breath.

"Somebody has made a mistake," he said. "I ordered nothing. And, hereafter, anybody coming to my door will knock. Is that plain?"

"Perfectly, sir."

"Have the goodness to make it very plain to the management."

"I'm sorry, sir—"

"You understand, now?"

"Certainly, sir."

"Very well. . . . And, by the way, who on this corridor is likely to have ordered that whiskey?"

"Sir?"

"Somebody ordered it, I suppose?"

"Very likely the gentleman next door, sir—"

"All right," said Guild quietly. "Try the door while I stand here and look on."

"Very good, sir."

With equanimity unimpaired the waiter stepped to the next door on the corridor, placed his tray flat on the palm of his left hand, and, with his right hand, began to turn the knob, using, apparently, every precaution to make no noise.

But he was not successful; the glassware on his tray suddenly gave out a clear, tinkling clash, and, at the same moment the bedroom door opened from within and a man in evening dress appeared dimly framed by the doorway.

"Sorry, sir," said the waiter, "your whiskey, sir—"

He stepped inside the room and the door closed behind him. Guild quietly waited. Presently the waiter reappeared without the tray.

"Come here," motioned Guild.

The waiter said: "Yes sir," in a natural voice. Doubtless the man next door could hear it, too.

Guild, annoyed, lowered his own voice: "Who is the gentleman in the next room?"

"A Mr. Vane, sir."

"From where?"

"I don't know, sir."

"What is he, English?"

"Yes, sir, I believe so."

"You don't happen to know his business, do you?"

"No, sir."

"I ask—it's merely curiosity. Wait a moment." He turned, picked up a sovereign from a heap of coins on his night table and gave it to the waiter

"No need to repeat to anybody what I have asked you."

"Oh, no, sir—"

"All right. Listen very attentively to what I tell you. When I arrived here this afternoon I desired the management to hire for my use a powerful and absolutely reliable touring car and a chauffeur. I mentioned the Edmeston Agency and a Mr. Louis Gratz.

"Half an hour later the management informed me that they had secured such a car for me from Mr. Louis Gratz at the Edmeston Agency; that I was permitted sufficient gasoline to take me from here to Westheath, back here again, and then to the docks of the Holland Steamship Company next Sunday.

"I've changed my mind. To-morrow is Wednesday and a steamer sails from Fresh Wharf for Amsterdam. Tell the management that I'll take that steamer and that I want them to telephone the Edmeston Agency to have the car here at six o'clock to-morrow morning."

"Very good, sir."

"Go down and tell them now. Ask them to confirm the change of orders by telephone."

"Very good, sir."

A quarter of an hour later the bell tinkled in his room: "Are you there, sir? Thank you, sir. The car is to be here at six o'clock. What time would you breakfast, Mr. Guild?"

"Five. Have it served here, please."

"Thank you, sir."

Guild went back to bed. Another detail bothered him now. If the man next door had ordered whiskey and soda for eleven, *to be placed on the night-table beside the bed*, why was he up and dressed and ready to open the door when the jingle of glassware awaited him?

Still there might be various natural explanations. Guild thought of several, but none of them suited him.

He began to feel dull and sleepy. That is the last he remembered, except that his sleep was disturbed by vaguely menacing dreams, until he awoke in the grey light of early morning, scarcely refreshed, and heard the waiter knocking. He rose, unlocked his door, and let him in with his tray.

When the waiter went out again Guild relocked his door, turned on his bath, took it red hot and then icy. And, thoroughly awake, now, he returned to his room, breakfasted, dressed, rang for his account, and a few minutes later descended in the lift to find his car and chauffeur waiting, and the tall, many-medalled porter at salute by the door.

"Westheath," he said to the smiling chauffeur. "Go as fast as you dare and by the direct route."

The chauffeur touched his peaked cap. He seemed an ideal chauffeur, neat, alert, smiling, well turned out in fact as the magnificent and powerful touring car which had been as thoroughly and minutely groomed as a race-horse or a debutante.

When the car rolled out into Piccadilly the waiter who had mistaken the order for whiskey, watched it from the dining-room windows. Several floors above, the man who had occupied the next bedroom also watched the departure of the car. When it was out of sight the man whose name was Vane went to the telephone and called 150 Fenchurch Street, E.C. It was the office of the Holland Steamship Company.

And the waiter who had entered the room unannounced, stood listening to the conversation over the wire, and finally took the transmitter himself for further conversation while Vane stood by listening, one hand resting familiarly on the waiter's shoulder

After the waiter had hung up the receiver, Vane walked to the window, stood a moment looking out, then came slowly back.

"Gwynn," he said to the waiter, "this man, Guild, seems to be harm-

(*Continued on page* 39).

MONARCH-KNIT

NOW that's what I call a sensible gift! And sensible is really the word—though not quite. For you see the Monarch-Knit Sweater Coat adds distinction of beauty and style to its more ordinary qualities. While snug comfort lies in its ample close-knit folds good taste and refinement of finish are revealed in the little thoughtful touches which contribute grace and picturesque color. It's a coat you'll be proud to wear—or to give. She has already a Monarch-Knit Coat? Then, she'll welcome a box of Monarch-Knit Hosiery. Or if it is a gift for him, let it be a smart Monarch-Knit House Coat. He'll find it mighty comfortable during the cold days. There is a practical and happy gift suggestion here for every one in the family.

THE MONARCH KNITTING CO.
LIMITED
DUNNVILLE : ONTARIO : CANADA
Branches: ST. CATHARINES, ST. THOMAS, BUFFALO.

Manufacturers of Ladies' Silk Knitted Coats, Men's, Women's, Children's Worsted Sweater Coats, Fancy Knit Goods, Hosiery, etc. Also "Monarch" Floss and other hand knitting yarns suitable for soldiers' sox, etc.

Pond's Cold Cream has an oil base. Send for the free sample and try it for cleansing and massage.

Pond's Vanishing Cream is greaseless—contains no oil and vanishes the moment you apply it. It prevents chapping—or relieves it in one application. Send for the sample tube.

Why your skin needs two creams

Every normal skin needs a cleansing and massage cream—and also a protective, skin softening cream. Read why one cream cannot do both.

For cleansing the skin and for the nightly massage, you need an *oil* cream, a smooth, easily spread emollient. Pond's Cold Cream is just the cream for this purpose. It has an oil base and was prepared especially to meet the need for a pure, dependable oil cream.

When you need Vanishing Cream

For the protective cream your skin needs, to keep it soft, white and clear, and to keep it from chapping, use Pond's *Vanishing* Cream. It is greaseless and has for its chief ingredient a product which is recognized by dermatologists as being of the greatest value in keeping the skin soft, smooth, without chapping all winter.

Apply it just before you go out. The moment you use it, the skin absorbs it. It will never reappear on the face—cannot make the skin look oily.

[Photo © Ira Hill]

Billie Burke, whose beautiful skin is the envy of everyone who sees her, says: "No one appreciates Pond's Vanishing Cream more than I."

[Photo © Moody, N. Y.]

Hazel Dawn, whose appealing beauty has charmed American theatregoers from coast to coast, says: "In my work it is necessary to have my skin always clear, smooth and fresh-looking. I am quite sure this would be doubly difficult without Pond's Vanishing Cream."

Some of the famous women who use it

Women of the stage know how to really care for the skin. They, of all women, cannot afford to take any chances in caring for their complexions. These famous actresses would not think of doing without Pond's Vanishing Cream—Frances Starr, Billie Burke, Marion Davies, Phyllis Neilson-Terry, Elsie Ferguson, Pavlowa, Jane Cowl, Constance Collier, Pauline Frederick, Julia Sanderson, Mrs. Fiske, Elsie Janis, Norma Talmadge, and many others.

Neither Pond's Vanishing Cream nor Pond's Cold Cream will promote the growth of hair on the face.

Prepared by scientists

All of the Pond's Extract Company's preparations are made in highly specialized scientific laboratories in a quiet, clean New England town.

Whatever it is that is being originated, nothing is hurried, nothing is offered the public until the famous Pond's chemists say it is the most efficient product for the purpose for which it is intended. This is what it means to have your toilet preparations prepared by scientists rather than merely put up by a manufacturer.

Only the purest and best materials obtainable are used in the manufacture of Pond's Cold Cream and Pond's Vanishing Cream, and all are subjected to the closest examination before entering into manufacture.

You will find Pond's Cold Cream and Pond's Vanishing Cream for sale in all drug stores and at the toilet counters of department stores. Get a tube or jar of each cream today and see how their use will improve your skin.

Get these free samples and test them

If you would like to test Pond's Cold Cream and Pond's Vanishing Cream, fill out the coupon now and we will send you samples of each cream free. Or send 5c for enough of either cream to last two weeks—10c if you wish both. Write today. Address Pond's Extract Co., 146-L Brock Avenue, Toronto, Can.

When to use the Cold Cream

For cleansing

No matter how tender the dust and grime of the day have made your skin, with Pond's Cold Cream you can cleanse it thoroughly without injuring the delicate texture of the skin or creating the least irritation.

For massage

You will find Pond's Cold Cream wonderful for massage. It has just the smooth consistency needed in a massage cream.

If your skin is too dry

Pond's Cold Cream is prepared from ingredients chosen for their beneficial, soothing qualities. Use it if your skin is dry or feels tight. Pond's Cold Cream will add just the oil your skin needs to restore its pliancy.

When Vanishing Cream is necessary

For chapped skin

If the harsh winds have made your skin rough, red and chapped, *one* application of Pond's Vanishing Cream will relieve it.

As a protective

To keep your skin from chapping—to keep it soft and delicately pink all winter, Pond's Vanishing Cream is invaluable. Use it just before you go out. Compare the soft, fresh condition in which it keeps your skin with the drawn, dry feeling that generally follows exposure to the wintry weather.

As a base for powder

The next time you want your skin to look its loveliest, make your finishing touch a dab of Pond's Vanishing Cream. Use it for your neck, arms and hands as well as your face. It is instantly absorbed by the skin, leaving no oily appearance and will not stain gloves, veil or clothing. It makes such an excellent base for powder, that one powdering is sufficient for a whole evening. Notice how wonderfully refreshed it keeps your skin looking—how it takes on the softly transparent, natural coloring that every woman longs for.

Sweet and Savory Dishes for the Christmas Table

By MARION HARRIS NEIL
Author of "Economical Cookery."

"And as for the turkey and celery sauce, you should have seen how our host dispensed it!"

Braised Turkey.

WITH Christmas Day near at hand, the thought in most people's minds is what the season will be like this year. We had hoped that the coming Yuletide season would have seen the realization of that long looked for "Peace on earth, good will to men," but our nation's work is not yet finished in this sad and terrific war.

The need for economy is greater now than ever, yet we must make the Yuletide as happy and seasonable as circumstances will permit, and we must maintain something of that institution which has been such a time-honored custom—the Christmas dinner.

Apart from the dishes cooked for special meals at Christmas time, every housewife should endeavor to make her home as bright and cheerful as possible. The tables should represent examples of good taste and daintiness, for at no other season of the year can this be applied more forcibly than at Christmastide. It is needless for me to add that all this should be done only as far as the means will permit, and no more. It is a mistake for the house mother to overwork herself, and in order to avoid this, preparations must be made beforehand, so that the holiday season is not made a drudge and a burden. It should be the gladdest time of the year; it generally is, but the good housewife ought also to have a full share of it.

Christmas Pudding.

For some years now there has been a gradual weeding out of certain heavy and solid items from the old-fashioned typical fare, and many people have substituted instead more modern dishes of a lighter nature. But in spite of this, there are certain dishes, such as roast turkey, roast goose, plum pudding and mince pies, which always remain in evidence, and may justly be termed the *pieces de resistance* of Christmas fare, forming as they do the staple dishes of the present-day Christmas dinner menu. The following is a good selection of recipes of all kinds of dishes suitable for Christmas meals.

Roast turkey, roast wild duck, braised tame duck or braised guinea fowls, and just plain everyday chickens, under the hands of a skilful cook, have furnished Christmas dinners savory enough to make the mouth water and to linger in the memory of the diner from one year to another.

The worst thing about preparing ducks is to get all the feathers off. It takes a great deal of patience to remove all the down and pinfeathers, for it is best to pick them without scalding them.

When the ducks have been plucked, singed, drawn and cleaned ready to stuff, make a filling by pouring boiling water over a pint of stale bread, pressing out the water immediately, then adding one small apple, pared and chopped fine; one small onion, also chopped fine; one tablespoonful of butter, one beaten egg; salt, pepper, sage and thyme to taste. If onion is not liked, a small carrot may be used instead. Stuff the ducks tightly, sew firmly, tie down the legs, and place a slice of bacon on the breast of each duck after it is in the roasting-pan. Currant jelly or some sour jelly may be served with the ducks to add to their flavor.

Ducks are good, stuffed with a filling made as follows: Into a bowl put one cupful of hot mashed potatoes, add one cupful of bread-crumbs, one cupful of sausage meat, one onion chopped fine, one teaspoonful of powdered sage, one teaspoonful of salt, one tablespoonful of butter and two tablespoonfuls of cream.

CHRISTMAS PUDDING.—Mix four cupfuls of bread-crumbs with one cupful of rye or barley flour, add two cupfuls of chopped suet, one and one-half cupfuls of brown sugar, one teaspoonful each of salt, ginger, cinnamon and allspice, the grated rinds and strained juices of one orange and one lemon, one pound of seeded raisins, one cupful of shredded candied citron peel, four well-beaten eggs and one cupful of milk. Mix thoroughly and divide into two greased molds, cover with greased papers and steam steadily for six hours. Turn out, decorate with blanched almonds, and serve with a sweet sauce or hot, sweet syrup.

The Christmas pudding is a symbolic dish. It is composed of "sugar and spice, and all things nice," which are intended to call to mind the offerings made by the Magi to the Christ Child, and to teach the lesson of giving of one's best to the poor and the weak.

RABBIT WITH RICE.—Wash and clean a large rabbit and cut it into neat joints, or, if preferred, cut the flesh in small pieces away from the bones. Melt one-half cupful of butter substitute in a stewpan, add one onion, sliced, and one cupful of rice, washed and dried, and cook them a few minutes without browning. Then put in the rabbit and cook for five minutes longer, stirring constantly. Add two cupfuls of water or stock and two cupfuls of tomato puree, season to taste with salt and pepper, add a bay leaf, cover with the lid, and cook slowly in the oven or at the side of the stove, until the rice and rabbit are tender and nearly dry. The saucepan should be shaken occasionally to prevent the contents sticking. When ready, serve hot with small rolls of baked or fried bacon.

This dish may be cooked and served in an earthenware casserole.

CHOCOLATE POPCORN.—Into a saucepan put two teaspoonfuls of sugar, add one-half cupful of corn or maple syrup, two ounces of chocolate and one cupful of water, and cook until the mixture hardens when tested in cold water. Pour this syrup over four quarts of crisp, freshly popped corn, and stir well.

CHAFING DISH MINCE PIE.—Chop three large sour apples, peeled and cored, and cook in two tablespoonfuls of butter adding three tablespoonfuls of water if the apples seem dry. As soon as the apples are tender, add one cupful of brown sugar, one-fourth cupful of molasses or syrup, one-half cupful of cider, one tablespoonful of vinegar, one teaspoonful of grated orange rind, the strained juice of one large orange, one and one-half cupful of seedless raisins, two crackers rolled fine, one teaspoonful each of powdered cinnamon, cloves and mace. Heat thoroughly and serve on biscuits or crackers.

PLUM DUFF.—In a large mixing bowl mix one cupful of barley flour, with two cupfuls of flour, add one cupful of finely chopped suet, one cupful of brown sugar, one teaspoonful of soda, salt, ginger and cinnamon, two cupfuls of seedless raisins, three-fourths cupful of molasses or syrup, one egg well beaten and one-half cupful of sour milk or buttermilk. Mix well, turn into a floured bag or pudding cloth, and drop into a large saucepan of boiling water which has an old plate on the bottom. Cover and let it boil hard for twenty minutes, then boil slowly for three hours. Renew with boiling water if necessary. Remove the cloth and serve the duff on a hot plate with any preferred sweet sauce or hot milk.

FRICASSEE OF GUINEA FOWL.—Cut a guinea fowl in small joints, removing as much of the skin as possible and any unnecessary bone. Season two tablespoonfuls of flour with salt, pepper and powdered nutmeg. Dip the pieces of guinea fowl into this, coating them well. Cut one-fourth pound of fat bacon in small thin strips, put these into a hot frying-pan, and cook it without allowing it to become too brown. Now lift it out, draining it from the gravy; put in the guinea fowl and fry it until brown on all sides. Put the pieces of bacon and guinea fowl into a stewpan. Sprinkle a tablespoonful of flour into the frying-pan, stir it over the fire until brown, pour in three cupfuls of water or stock, and continue to stir until boiling. Strain this sauce over the guinea fowl, add two tablespoonfuls of chopped onion, two tablespoonfuls of red currant jelly and one tablespoonful of lemon juice, place the lid on the pan and cook slowly until the bird is tender. Serve hot garnished with small pieces of toasted bread. The grated rind and juice of one orange may be added instead of the lemon juice. An orange or celery salad would be a good accompaniment.

BRAISED TURKEY.—This is a very tasty way of cooking a turkey and especially suitable for one that is inclined to be tough. Prepare and truss the bird in exactly the same way as for roasting, stuffing it or not as preferred. Cover the breast with slices of fat bacon.

Melt one-half cupful of butter substitute in a large saucepan over the fire, then put in a layer of diced vegetables—carrots, turnips, onions and celery in equal proportions. A little tomato and leek may be added as well, if available. Season with salt and pepper and a small bunch of pot herbs. On top of this place the bird, put the lid on the pan, and cook for fifteen minutes, shaking the pan occasionally to prevent the contents sticking. Now pour in enough boiling water or stock to cover the vegetables and just touch the bird, and cover the whole with a piece of greased paper. The cooking should be done in the oven if possible, and the bird must be turned once or twice during the process. The time required will depend on the age and the size of the bird, from four to five hours, but success in braising depends on the long and slow cooking. When ready, place the turkey on a roasting tin, remove the bacon from the breast, brown the bird in the oven, basting it several times with some of the stock. Place the turkey on a hot platter, garnish with small fried sausage, celery, parsley and cranberries. Strain the rest of the stock, remove any grease from the top, and serve as gravy.

Chicken Creole.

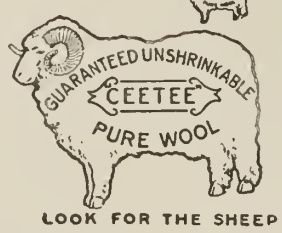
We will not lower the quality of

"CEETEE"

THE PURE WOOL
UNDERCLOTHING
THAT WILL NOT SHRINK

under any condition, nor for any consideration We prefer not to make it at all, rather than do that.

There is no substitute for CEETEE Underclothing—it is in a class by itself. No other underwear like it is being made in America.



But, owing to the Government regulations regarding wool, which allow a very small percentage for civilian purposes, also the scarcity of available ships, we are only able to supply about half the demand for Ceetee, which is made from finest Australian Merino Wool.

However, if our many friends are unable to secure their usual CEETEE Underclothing, we suggest that they try some other Turnbull brand. We guarantee it will give excellent satisfaction.

Turnbull's underwear in all sizes is sold by most good dealers, for men, women and children.

We have been making high quality woollen underclothing for over 60 years.

Remember Our Boys At The Front

To them the cigarette is the panacea for all ills. I have seen men die with a cigarette between their lips, the last favor they had requested on earth. If the soldier is in pain, he smokes for comfort, if he is restless he smokes for solace; when he receives good news he smokes for joy; if the news is bad, he smokes for consolation; if he is well he smokes, when he is ill, he smokes. But good news or bad, sick or well, he always smokes.

SWEET CAPORAL CIGARETTES

Vegetable Dishes for December Meals

New Recipes Which Will Add Interest to the Daily Preparation of Food

By MARION HARRIS NEIL,
Author of "How to Cook in Casserole Dishes."

Vegetables, provided they are carefully cooked, have a marked effect on the system; that is a medical fact. Even the humble cabbage has arisen in esteem since it was authoritatively stated that when young and tender it teems with phosphates needed to enrich the blood.

The Greek philosophers believed that a dish of boiled beets, served with salt and oil, was an aid to mental effort, and it is said that Pharaoh fed his pyramid builders on radishes. The Arabians have always eaten artichokes for liver troubles, and in different parts of the world they are regarded as particularly wholesome for men and women who lead a sedentary life.

Potatoes are said to improve the hair, which may account for the wonderful heads of hair in Ireland. Celery and lettuce are aids for the nerves, and cucumbers and carrots affect the complexion beneficially.

Probably no other plant is so well adapted to cooking in so many different styles as celery, a vegetable that can also be eaten raw, and there is hardly any other vegetable of which every part can be brought to such good account. The trimmings can be used for flavoring purposes, or for soup and broth, while the seeds are carefully preserved for similar uses or to produce celery salt, which in itself forms an ideal table condiment. The flavor of celery is one totally distinct from any other plant, all of its own, and above all, remarkably delicious; whether mixed as a salad or put in a puree, or added to other vegetables, as a soup, or as a sauce, it always retains its original and delicate flavor, which blends as no other plant or flavoring vegetable will blend.

Baked Peas.—Soak one pound of dried peas for six hours, drain them, and cook until tender in boiling stock or water. Peel and chop one large onion and fry it to a pale brown color in two tablespoonfuls of butter substitute. Grease a fireproof dish, sprinkle it over with fried breadcrumbs, and put in a layer of the cooked peas, then spread over the cooked onion, and place the remainder of the peas on the top. Cover with white sauce, sprinkle with breadcrumbs and grated cheese, and dot with tiny pieces of butter substitute. Brown the top in a hot oven and serve.

Spinach Timbale.—Cut two dinner rolls into slices, and cover these with hot milk. When sufficiently soaked, squeeze the bread and mix it thoroughly with two tablespoonfuls of melted butter substitute. Pick and wash two pounds of spinach, and cook it with a very little water until tender, then chop it fine. Peel and chop one onion, and fry it to a light brown in one tablespoonful of butter substitute and add it to the spinach and bread. Now stir in the yolks of two eggs, and salt, pepper and powdered nutmeg to taste. Add the stiffly beaten whites of the eggs and turn into a greased mold which has been lined with thin slices of bacon, cover with a greased paper and bake in a moderate oven for one hour. Turn out on to a hot dish, pour round a little gravy, and serve immediately.

Savory Cabbage.—Trim, wash, drain and boil in slightly salted boiling water a large cabbage. When done, drain off the water, and chop the cooked cabbage rather fine.

Cut one-fourth pound of bacon into fine strips, fry them in a stewpan with two tablespoonfuls of butter substitute, add a small onion peeled and chopped, and fry it to a golden brown. Next sprinkle in one tablespoonful of flour, stir well and add the cabbage. Pour in one-half cupful of milk or stock, season with salt, pepper, paprika and powdered nutmeg, cook slowly for fifteen minutes, and serve hot garnished with small pieces of toasted bread.

Celery Croquettes.—Trim, wash and cut into small pieces two heads of celery, cover them with cold salted water, bring to boiling point and drain. Then cook until tender in boiling water or stock. Drain celery and chop it fine. Melt two tablespoonfuls of butter substitute in a saucepan, stir in four tablespoonfuls of flour, add one small onion chopped, blend these together, add one cupful of milk, stir until it boils, cook for five minutes and put in the celery. Season with salt and pepper, cook for eight minutes, and add two yolks of eggs. Spread the mixture on a plate and let it get cold. Make into croquettes, brush them over with the whites of eggs well beaten, toss them in breadcrumbs or cornmeal, and bake them in a very hot oven or fry them in smoking hot fat. Serve hot, garnished with parsley.

Cauliflower Beignets. — Boil one cauliflower carefully and divide it into small pieces of uniform size, trimming each a little; season them with salt and white pepper, and dip them into cold, thick white sauce. Dip each piece into frying batter and drop into smoking hot fat. Fry a light brown color drain and serve hot.

To Make the Frying Batter.—Beat up one egg, add one-fourth teaspoonful each of salt and pepper, one tablespoonful of oil and one-half cupful of milk. Stir in one-half cupful each of barley flour and flour, and beat for five minutes. Then add one teaspoonful of baking powder. Let stand for fifteen minutes before using.

Escalloped Parsnips.—Mash enough boiled parsnips to make one pint; add two tablespoonfuls each of butter substitute and cream, one egg well beaten, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Put into a greased baking dish alternate layer of parsnip and breadcrumbs, having the crumbs on the top. Melt one tablespoonful of butter substitute in one-half cupful of milk, and pour over the parsnips. Bake until hot and brown, and serve in the same dish.

Mold of Cooked Vegetables.—One cupful of cooked carrots, one cupful of cooked cabbage, two cupfuls of cooked potatoes, one cooked onion chopped if liked, four tablespoonfuls of butter substitute, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Mash the potatoes. Chop the carrots, cabbage and onion. Mix and season with salt and pepper. Melt the butter substitute in a frying-pan, and when very hot put in the vegetable mixture, spread it evenly over the pan. Fry it for five minutes, then raise a corner and see if it is browned; if so, put a plate over the pan and turn the mixture on to it. Slip it back again into the pan, with the browned side uppermost, and fry the second side. If necessary, add more butter substitute for the second frying. Serve it whole on a hot dish, or cut it into pieces.

Any sort of cooked vegetables can be used, including cooked beets; this latter would of course, color the mixture. It is excellent with potatoes only.

Brussels Sprouts a la Chipolata.—Wash and trim a quart of Brussels sprouts. Cook for five minutes in boiling salted water, drain, rinse in cold water drain, and cook in boiling water to cover, with one pound of small sausages. Cook for twelve minutes and drain very dry. Serve the sprouts in a hot vegetable dish with a little melted butter substitute. Broil the sausages for two minutes on each side, and lay them over the sprouts.

Beets a la St. Laurence.—Boil two large bunches of beets, then drain and remove the skins. Fry one chopped onion in two tablespoonfuls of hot butter substitute, add three tablespoonfuls of flour and two cupfuls of stock or water, and cook for five minutes, stirring constantly. Add the beets, salt and pepper to season, and cook for ten minutes. Add two tablespoonfuls of butter substitute and one tablespoonful of vinegar, bring to boiling point and serve.

Red Cabbage a la Hollandaise.—Trim and shred one red cabbage and soak it in cold water for thirty minutes. Parboil for five minutes, then drain. Fry a small chopped onion soft in four tablespoonfuls of butter substitute, add the cabbage and four tart apples, peeled, cored and chopped fine. Season with salt and pepper, and cook uncovered for thirty minutes, stirring occasionally. Add one-half cupful of cream, reheat and serve hot.

My Best Idea

Contributed by Our Readers.

In this Department we will publish the best original items of general interest to housekeepers which are sent in by our readers. For each of the accepted items we shall pay the one sending it fifty cents.

If the description is not clear, we would suggest that the contributor send a rough sketch, making the idea plain, which can be used as a guide to the artist who will illustrate this page.

The CANADIAN HOME JOURNAL *cannot return the items submitted, therefore it is advisable to keep copies of matter sent for consideration.*

Hook Up the Curtains.

Keeping bed-room curtains fresh is a big item in laundry work. But all of us like to sleep with windows raised in spite of the fact that it is hard on the curtains. We tried pinning them up, knotting them up, and swinging them over the bar itself, but in each case they became mussed and wrinkled in a very short time. This spring I placed small dress-hooks in the lower corners of each curtain, with an eye to correspond two-thirds of the way from the bottom of each edge. Each night the curtains can be hooked up for the breezes to blow unobstructed through the room, and when they are let down again next morning the curtains are fresh and unwrinkled. The tiniest hook and eye obtainable will hold the weight of any curtain and will never be detected when not in use.

Setting the Tree A-bloom.

When decorating our Christmas tree I took clothes-pins, of the spring variety, and wrapped cotton around the larger end. Over this I put two layers of red crepe paper and tied it securely. The ends of the paper I cut to look like rose petals and when frilled out it looked like a large red rose. I used these for fastening the gifts to the tree, and it was easier than tying them on, besides being very ornamental. I put them away with my tree decorations and used them again the next year.

Storing Vegetables for Winter.

Try this method of storing vegetables for winter. Take any kind of a tin vessel that has a lid, an old boiler or cream can will answer the purpose. Put your vegetables in these without earth. I have tried this for two years and have had carrots to use in July which were nearly as fresh as when dug.

OBSERVER.
Waldemar.

Labels for Children's Clothing.

The owner of a typewriter can give the mother of several children a very acceptable gift by inserting a bolt of white taffeta ribbon about two or three inches wide in the machine in place of the usual paper, and typing the name and address of the children with a space of an inch or two between each label. These labels are to be cut apart and sewed to the coats, caps, and so forth, of each child. Not only does it help in preventing garments getting mixed at home or school, but lost articles can easily be returned by an honest finder, and in case of accident the name and address of the child is never a mystery. Grownups will find these labels useful too.

Christmas Tree Cookies.

Cut "Christmas trees" from a plain cooky dough, and dot them with tiny red candies to represent lights. They are nice for a children's party or to tuck in the children's Christmas stockings.

For Wash Days.

As the cold weather approaches get an extra supply of clothes-pegs. Instead of overlapping the clothes, and having them freeze together, put two pegs in each article and you will have fewer torn clothes.

L. MERRICK,
Strathroy, Ont.

Hanging Clothes Out of Doors.

I am quite sure this idea will prove helpful, as the winter weather comes on to those who hang the clothes out of doors to dry on wash day. Pin all the small articles, such as table napkins, handkerchiefs, doyleys, collars, to a strong towel before starting out in the cold. Thus two clothes pins are made to do the work of many. And greatly lessening the work, when removing clothes from line.

INTERESTED F. S. D.,
Morrisburg, Ont.

Home Made Drier.

Most of the fruit and vegetable driers on the market are simple in construction, but not every housekeeper can make them herself. A large extension window screen will make an excellent substitute. This can be suspended from the ceiling over the stove, by means of cords attached to the four corners. By having the main cord pass through a pulley or hook in the ceiling and fastened to a hook at the back of the stove, the screen can be lowered or raised out of the way while using the stove for other purposes. Apples, peeled, cored and sliced, one-quarter inch thick and spread on this drier will dry in twenty-four hours. If the screen is old, cheese cloth can be spread on it, which absorbs the moisture and hastens the drying. By using two screens held together by cords, double the amount can be dried at once.

MRS. CHESTER KEITH,
Corn Hill, N.B.

Quick Method in Making Chili Sauce.

Let tomatoes, onions, etc., stew until tender. Put all through the food chopper; the pulp will be much finer and takes much less boiling than the old method.

J. M. McP.,
Brant County.

Handy Fire Starter.

When you want a handy fire starter fasten a small piece of asbestos to a wire handle. Keep it standing in a can of coal oil, then by placing it by the wood and lighting it you need no other kindling, for this will start your fire. When the fire is started remove asbestos and place it back in oil can.

MRS. J. A. LOTT,
R.R. No. 2, Frankford, Ont.

Put Spices in Pies Before Milk.

Always put spices in pumpkin or squash pies before milk is added, or the spices will all come to top while pie is cooking and will not be very tasty looking or tempting.

MRS. F. M. BAILEY,
Walkerville, Ont.

Oilcloth for Wall Covering.

After struggling for years to keep my kitchen walls in good condition, I finally discovered that an inexpensive table oilcloth was an excellent wall finish to wainscot height. The paper-hanger put it on for me over the painted wall, using the width of the oilcloth, which was one and a half yards wide. A cheap picture molding was used as a finish. In its place a narrow oilcloth border might be used. Above the base we used a blue and white paper to match the oilcloth. The oilcloth base can be wiped every week with a damp cloth, and after five years of wear my kitchen looks well. Many of our friends have copied the idea of this oilcloth base with papered walls above.

For the Pump in Winter.

Winter will soon be with us again, and we shall be troubled with our pumps freezing. A simple method of thawing is to insert a piece of lead pipe, say three or four feet in length down the top of the pump and pour the hot water into the pipe. The lead holds the heat, and very often two or three quarts of water will do the trick. This little bit of knowledge has been worth a good deal to me.

E. J. P.,
Eramosa, Ont.

A Polishing Mitten.

When mending socks and stockings every once in a while I come to a pair which I feel are not worth any more yarn, so I cut off the feet, pull the one foot over the other and use them to slip the hand into to polish shoes, nickel work on your stove or for dusting stove pipes or any such work. The legs I keep to patch with, or to make feet for other pairs.

A. C. S.

(*Continued on page* 48.)

"IN TUNE WITH THE TIMES *you find them caring for their native charms in simpler ways—the ways that Nature herself intended.*'

To keep a lovely skin —with soap that rinses off.

Nature says: "Don't hamper my work by using haphazard methods and soaps."

And all Nature asks is a little common-sense coöperation in the care of the skin she is daily trying to give you.

Nature lays great stress on *rinsing*.

She says: "The soap must *all rinse off*."

So, if you want to choose and keep a clear, beautiful, natural skin, you will want to choose, also, a *method* and a *soap*, to take proper care of that skin.

Pure Fairy Soap is made for skins. Fairy Soap is made to cream refreshingly in *and out* of pores, as Nature asks. And when it has performed its perfect cleansing—*off it rinses.*

It rinses off perfectly — after its perfect cleansing.

That is why Fairy Soap is a soap that Nature herself loves—for the care of healthy, natural skins.

The Christmas Puzzle

By TOM WOOD.

Sections 1 and 2 represent two old and well known maxims or proverbs relative to Christmas time.

Section 3 pictures twelve words which you may find in your Christmas stocking—or any other "Stocking." The small letters are merely to identify the answers when listed.

Section 4 illustrates the ingredients of which your Christmas pudding is made.

Can you guess them?

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

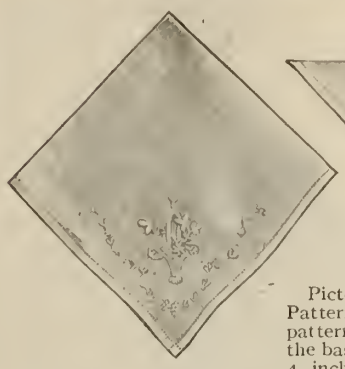
All are eligible to compete.

Answers must be received before December 31 to be included.

THE CORRECT SOLUTION OF THE OCTOBER PUZZLE.

1—Barred Rocks.
2—Wyandottes.
3—Brahmas.
4—Orpingtons.
5—Leghorns.
6—Dorkings.
7—"All is not gold that glitters."
8—"Don't cross the bridge till you come to it."

The first prize is won by David Scott, 43 Rosebery Avenue, Ottawa, Ont., and the second by Nellie Atkins, Collingwood, Ont.



Address all answers to puzzle: The Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto.

Dainty Embroideries for the Practical Christmas Gift

Embroidery No. 11751 on Corset Cover No. 6087

Pictorial Review Transfer Pattern No. 11751, blue or yellow. Six sprays and 1¼ yard of dotted scalloping 1-inch wide supplied. Shown on Ladies' Surplice Corset Cover 6087. Seven sizes, 32 to 44 bust.

No. 12015

No. 12016

No. 12017

Pictorial Review Transfer Pattern No. 12015, blue. The pattern contains 6 transfers of the basket design 2½ inches by 4 inches for a handkerchief. Colored embroidery cotton to match a hem of colored linen is employed for working the basket and the rest of the design is carried out in white.

Embroidery No. 12131 on Camisole No. 7061

Embroidery No. 12182 on Combination No. 6395

Pictorial Review Transfer Pattern No. 12182, blue or yellow. This pattern gives 16 spray designs for use on an envelop chemise, a nightgown, a combination, or corset cover. The design may also be effectively used for the adornment of house-dresses. It is shown used with scallop 12065 on Pictorial Review Combination 6395. Sprays in solid embroidery and eyelet work are applied to the front, and finished with crochet button and buttonhole at shoulders. The graceful festooned sprays are easily accomplished and effective in appearance. Pattern No. 12065, blue or yellow, supplies 6 yards of scalloping. Pattern 6395 is cut in 7 sizes, 32 to 44 bust.

Cross-stitch
No. 12111 for Tea-apron

Pictorial Review Transfer Pattern No. 12016, blue. Six transfers of this charming motif for the corner of a handkerchief are supplied in the pattern. The upper petals of the flower are filled in with seed stitch and the other portions in raised satin and eyelet stitches.

Pictorial Review Transfer Pattern No. 12017, blue. Six duplicates of this design form the pattern. A tiny initial could be placed in the center of the motif. Eyelet stitch may be used for the flower centers, the scattered dots and the outer row of dots in the center motif.

Embroidery No. 12175 on Nightgown No. 6371

Pictorial Review Transfer Pattern No. 12131, blue. Three different designs are included in this pattern. Eyelet and raised satin stitches in white embroidery cotton are used for the design. The filet crochet inserts add to the attractiveness. Ladies' Camisole 7061 used. Seven sizes, 34 to 46 bust.

Pictorial Review Transfer Pattern No. 12175, blue or yellow. The pattern contains 40 embroidery motifs. The surplice gown is cut from Pictorial Review Pattern No. 6371. Cut in 8 sizes, 32 to 46 bust. Crochet directions for edging used on this nightgown may be obtained.

Embroidery No. 12086 on Chemise No. 6828

Pictorial Review Transfer Pattern No. 12086, blue. A square scallop for the eyelets, a plain one for the armholes and a turret-shaped scallop for the neck are included in this pattern for a chemise. Raised satin and eyelet stitches are used to carry out the embroidery, but if preferred the eyelets may be omitted and the design carried out in raised satin stitch. This should present no difficulty even to a beginner in needlecraft. So little smart lingerie is now coming from abroad that it is a great satisfaction to know that right at hand we have the designs and materials, and that with but a little expenditure of time and labor we may become possessed of dainty undergarments for which formerly a high price had to be paid. The chemise is cut from Pictorial Review Pattern 6828. Six sizes, 34 to 44 bust.

Pictorial Review Transfer Pattern No. 11832, blue. The pattern supplies 2¼ yards of this elaborate design 10 inches deep for a petticoat flounce shown below. The fuchsia sprays are worked in solid embroidery and the dots are in eyelet stitch. Scallops buttonhole stitched.

Fuchsia design No. 11832 for Petticoat Flounce

Tea-apron No. 11586

Pictorial Review Transfer Pattern No. 12111, blue. The pattern gives the shape of this charming apron as well as the cross-stitch design and color diagram. The cross-stitch sprays are embroidered with green and two shades of pink. A row of buttonhole loops at the waist-line hold the ribbon ties in place.

Pictorial Review Transfer Pattern No. 11586, blue, for tea-apron. The design combines Italian cut-work, raised satin stitch, and an unusual scallop. If one prefers, the three motifs may be worked with stem stitch and filled with seed stitch.

Embroidery No. 11963 on Nigh gown No. 3720

Pictorial Review Transfer Pattern No. 11963, blue. This attractive pattern is embroidered on Pictorial Review Nightgown No. 3720. Cut in 4 sizes, 32, 36, 40, and 44 bust. This neat little gown suggests the French lingerie which all women admire so much, and the scalloped edges and dainty little sprays are very attractive. An edging of real Valenciennes lace inside the scallops will add to the effect. This is a good style for a full figure.

Pictorial Review Transfer Pattern No. 11831, blue. This pattern contains 2¼ yards of scalloping and design 6½ inches deep. Wreath and bow-knot design for a petticoat flounce. The scalloping and motifs may be used in sections on other pieces of underwear to form a set. Raised satin, stem, and buttonhole stitches are used. White petticoats are necessities for wearing under dressy frocks. The design is graceful and in good taste, and could be applied to lawn, batiste, or washable silk, using a highly mercerized thread.

Wreath and bow-knot design No. 11831 for Petticoat Flounce

By Their Fruits

Best for Baby

After many years' use by parents of all classes, in Royal Nurseries and humble homes, Savory and Moore's Food has the reputation of being a thoroughly reliable food for infants.

The experience of parents, nurses, and medical men all goes to show that babies *do* thrive remarkably well on this famous food, that its use prevents infant ailments, and that it builds up a strong constitution, so important in later life. You may therefore bring up baby on Savory & Moore's Food with the assurance that you are doing the best you can for your child.

MOTHER'S GUIDE FREE

Savory & Moore's little Book, "The Baby," is full of useful information on Infant Management, and contains hints on such subjects as Feeding, Teething, the Toilet, Exercise, Weight, Infant Ailments, and many others. It is just what a young mother requires, and will prove invaluable in the home. A Free Copy may be obtained on application to Savory & Moore, P.O. Box 1601, Montreal.

All the Newest Fall Style Features for the Miss

8007—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5 yards 36-inch velvet. Embroidery No. 12184, blue or yellow transfer pattern. Width at lower edge about 1½ yard. As the season progresses the long floating panels are meeting with more and more favor. They are applied to practically all sorts of frocks to which they give distinct charm. Chiffon velvet or velveteen could be used for this simple frock, the plain bodice of which may have high or round neck and is mounted on a front-closing underbody. Instead of long plain sleeves, flowing sleeves in two sections may be selected. The two-piece skirt is plaited at the back and closes at left side seam.

7885—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 5¼ yards 44-inch check worsted—1⅞ yard 36-inch white taffeta for collar, cuffs, and panel lining—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. A chic frock for Autumn street wear is presented here to be fashioned of check worsted or velours, and with the fashionable apron panel front and back.

8030—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 4⅛ yards 44-inch serge—¼ yard 48-inch broadcloth for collar and cuffs. Width at lower edge about 2⅜ yards, with plaits drawn out. The straight simple lines of this serge frock adapt it particularly to the growing girl. The closing is at the front, and a choice is offered of round and V neck. At long waist-line is attached the four-piece side-plaited skirt.

8022—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5⅜ yards 36-inch satin—1⅜ yard 40-inch Georgette crêpe for sleeves, collar, and vest—1⅛ yard fringe—⅞ yard 36-inch lining for underbody. Here is the fashionable Apronette dress with apron panel front and back finished with fringe. Equally attractive is the blouse with extension ends that are looped at center-front, below a surplice vest. Plain sleeves may replace the Mandarin sleeves.

DESCRIPTIONS CONTINUED ON PAGE 47

Practical Morning and House Dresses, Blouses, and Skirts

8049—Ladies' Blouse. Seven sizes, 34 to 46 bust. Size 36 requires 1¾ yard 40-inch Georgette crêpe—1¼ yard 36-inch check Pussy Willow taffeta for collar. Instead of the shawl collar which is looped in front, a rolling collar falling in a point at each side may be selected.

8047—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 2⅜ yards 36-inch French blue crêpe de Chine—⅜ yard 36-inch beige crêpe de Chine for trimming. Blue and beige and blue and gray are favored combinations for Georgette and crêpe de Chine blouses for the Fall, to be worn with blue or tan tailored suits. This model has softly gathered vest.

8033—Ladies' Blouse. Eight sizes, 34 to 48 bust. Size 36 requires 1⅝ yard 40-inch Georgette crêpe—⅝ yard 36-inch satin for collar and revers—½ yard white Georgette crêpe for vest. The large square collar of satin is joined to revers that frame a vest of white Georgette crêpe.

8045—Ladies' House Dress. Six sizes, 34 to 44 bust. Size 36 requires 4¾ yards 36-inch linen—½ yard 27-inch white cotton poplin for collar and vest. Width at lower edge about 1⅝ yard. A trim morning frock for the housewife showing the new Mandarin sleeves.

8039—Ladies' Four-piece Skirt. Seven sizes, 24 to 36 waist. Size 26 requires 2⅞ yards 44-inch plaid. Width at lower edge about 1⅞ yard. The front and back gores are in panel style.

Simplicity and Good Taste Mark these Children's Models

7848—Child's Dress. Four sizes, 2 to 8 years. Size 6 requires 2 yards 44-inch white organdy. For the best frock or for kiddies' parties, nothing could be cuter than this little frock of crisp white organdy. The collar is novel extending down in tabs at center-front and back that button onto the belt and are trimmed with ribbon rosettes.

6682—Boys' Suit. Four sizes, 2 to 5 years. Size 4 requires 2¾ yards 27-inch check chambray—⅜ yard 27-inch white piqué for collar and cuffs. These little Oliver Twist suits are the very newest thing for the small boy to be fashioned of one material or the little trousers may be of colored chambray, and the double-breasted blouse of white dimity or lawn, with collar like the trousers.

for the little girls' frocks. The fashionable mote collar is shown on this cunning frock finishing the tiny gathered waist. Tucks relieve the plainness of the straight gathered skirt.

7901—Child's Dress. Three sizes, 2 to 6 years. Size 4 requires 2¼ yards 40-inch Georgette crêpe—¼ yard 32-inch figured silk for collar and cuffs. Georgette crêpe vies with organdy and voile in popular favor

8017—Child's Dress. Three sizes, 2 to 6 years. Size 6 requires 2¼ yards 44-inch serge—⅛ yard 36-inch plaid taffeta for collar. Very new in style is the collar that is oval in shaping and is opened on the shoulders.

8023—Girls' and Juniors' Dress. Five sizes, 6 to 14 years. Size 10 requires 2 yards 44-inch serge—1¼ yard 36-inch taffeta—¼ yard organdy. A swinging back panel adds a new style touch to this cunning frock.

Luscious Lemon Pie

Made with Bread-crumbs and without butter

The recipe is by Miss Bradley, principal of Miss Farmer's School of Cookery, Boston. A famous domestic science expert, known the country over. Her recipes are followed by tens of thousands of good cooks.

The incomparable recipe printed below is her idea of a luscious war-time pie.

"A GEM of a pie," is what you will say when you taste this daintiest of pastries. Scores of families already, by unanimous vote, have elected it Best of War-time Desserts. It's a connoisseur's pie. It fairly melts in the mouth. Let your men-folks try it.

The Unequalled Recipe

1½ cups soft bread crumbs
3 tablespoons oleomargarine
1 cup boiling water
½ cup sugar
1½ teaspoons corn starch
2 egg yolks
3 tablespoons Sunkist Lemon juice
Grated rind one Sunkist Lemon
Break bread crumbs into small pieces.

Add oleomargarine. Pour boiling water over. Let stand until soft.

Mix sugar and corn starch, add egg yolks, well beaten, and Sunkist Lemon juice and rind. Combine mixture. Bake in one crust and cover with meringue.

" 'Dripping' may be used in the pie crust," says Miss Bradley, "and a real war-time, though delicious, dessert is thus easily prepared."

Miss Bradley's cost for making this pie, at the time prepared, was "1c per 100 calories." 100 calories in eggs alone would then have cost 4.2 cents. So while economical of materials, this pie is also low in price when measured by the energy supplied.

Send the coupon for "Sunkist Recipes" containing 126 recipes which show how Miss Bradley uses California Sunkist Lemons. These dishes are quickly and easily prepared, and they meet many needs of war-time.

California Sunkist Lemons are juicy, tart, and practically seedless. They are best for all cooking purposes. Also for garnishing because they are waxy, clean and bright.

Don't say merely "lemons" when you order. Be sure to say "Sunkist." That will get the best lemons grown.

CALIFORNIA
Sunkist
Uniformly Good Lemons

CALIFORNIA FRUIT GROWERS EXCHANGE
LOS ANGELES, CALIFORNIA

A Non-Profit, Co-Operative Organization of 8,500 Growers

Use in All Soft Drinks

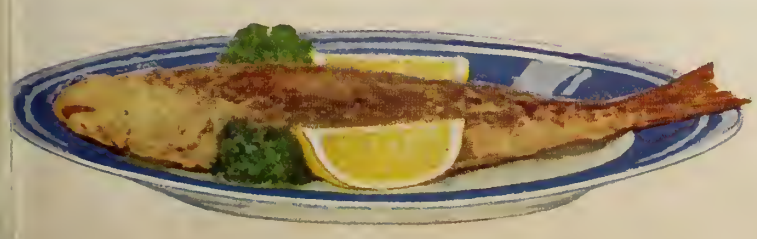
The fresh, pure juices of Sunkist Lemons and Oranges lend flavor and character to all soft drinks.

Try unsweetened hot lemonade as a preventive and aid in curing colds and grippe.

Delicious Salad Dressings

Miss Bradley makes delicious French and Mayonnaise dressings with lemon juice instead of vinegar. Her recipes appear on pages 33 and 35 in "Sunkist Recipes." Send the coupon for this book.

Always Served With Teas



It is more than fashionable and attractive, it is beneficial to serve lemons with your tea.

Lemon is valuable for the digestive aid that comes from its salts and acids.

Ask for California Lemons. You'll find these lemons **uniform in quality**. Delivered to you, if you request it, in the crisp, sanitary tissue wrappers in which they are placed when packed. This fruit is the pride pack of 8,500 California growers if it is labeled "Sunkist."

Reasons for Garnishing

By means of garnishing, sauces and judicious seasoning the housewife can make her family vote in favor of the war-time foods.

Fresh lemon juice is an aid to digestion due to its valuable salts and acids.

WHO GOES THERE

(*Continued from page 26.*)

less. He's known at the American Embassy. He's an American in the real estate business in New York. It's true that Dart telegraphed from Ostend that Guild came to our lines in a German military automobile under a white flag. But he told a straight story. I'll run out to Westheath, and if his business there is clean and above-board, I think we can give him a clean bill of health."

Gwynn said, slowly: "I don't like the way he questioned me last night. Besides, a sovereign is too much even for an American."

"He might have been afraid of robbery."

"He was afraid of *something*."

"Very well. We've passage on the boat if necessary. I'll go out to Westheath anyway. If I don't care for what he is doing out there we can hold him on the dock."

"Another thing," mused Gwynn. "The Edmeston Agency may be quite all right, but the man's name is Gratz."

"He's been under scrutiny. He seems to be all right."

"All the same—his name is all wrong. What was the chauffeur's name?"

"Bush."

"*Busch!*"

"He spells it without a *c*. I saw his signature on the Agency rolls."

"Have you his history?"

"He's Canadian. I've sent for it."

"You'll find that his father spelled his name with a *c*," remarked Gwynne, gloomily. But Vane only laughed.

"I'm off," he said. "Stick around where I can get you on the telephone if necessary. But I don't think it will be necessary."

"I do," muttered Gwynn.

CHAPTER V.

THE journey was the usual one through interminable London streets alternately respectable and squalid; and straight ahead through equally interminable suburbs with their endless "terraces," semi-detached and detached villas, and here and there a fine old house behind neglected garden walls, making its last forlorn stand against the all-destroying inroad of the London jungle.

There had been a heavy haze in London, but no fog. In the country, however, beyond the last outstretched suburban tentacle of the inky octopus, the morning sun glimmered low through a golden smother, promising glimpse of blue sky.

To Guild, one "heath" had always resembled another, and now, as they passed through the country at high speed, there seemed to him very little difference between the several named points which marked his progress toward Westheath. Hedges alternated with ivy-covered walls on either side of a wide, fine road; trees were splendid as usual, sheep fat, cattle sleek. Here and there a common or heath glimmered bewitchingly where sunlight fell among the whins; birds winged their way, waters glimmered, and the clean, singing August wind of England blew steadily in his face strangely reviving within him some ancient, forgotten, pre-natal wistfulness. Maybe it came from his American mother's English mother.

Near two villages and once on the open highway policemen leisurely signalled the chauffeur to stop, and came sauntering around to the tonneau to question Guild as to his origin, his business, and his destination; quiet, dignified, civil, respectable men they seemed to be in their night cloaks and their always smart and business-like helmets and uniforms.

All seemed satisfied, but all politely suggested that passports were now becoming fashionable in England. And Guild thanked them pleasantly and drove on.

"Bush," he said to his chauffeur, "this spy scare was ridiculed by the newspapers, but it looks to me as though it were being taken rather seriously after all."

"It is, sir."

"I understand that about thirty thousand German and Austrian reservists have been arrested in England since war began?"

"I hear so, sir."

"I suppose the country really is swarming with spies. The paper yesterday said that there was still a great and serious leakage of military information out of England. One paper, yesterday afternoon, reported that a number of spies had already been shot in the Tower."

"I have heard so, sir," said the chauffeur smilingly.

He was a blond, good-looking young fellow. Always his lips seemed to rest in pleasant curves as though his reveries were agreeable.

A few hideously modern detached villas were passed, then hedges, walls, a wood, a modern bridge.

"How near are we to Westheath now?" asked Guild, leaning forward in his seat.

"We are there, sir." And the smiling chauffeur slowed the car to a standstill at a cross-roads where furze and broom grew rankly over the heath and a few rather tawdry villas appeared among the trees beyond.

Guild looked at his watch. It was only a little after seven, an unearthly hour for a call upon any young girl, not to mention one to whom he was personally unknown.

A policeman still wearing his waterproof night cloak, came leisurely across to learn what was wanted.

"I am looking for the villa of Miss Girard—Miss Karen Girard," explained Guild.

"Hyacinth Villa, Number 169. Take the road to the right. It is the only house."

"Thank you."

The car moved forward, swung to the right. About a quarter of a mile away stood a small, modern stucco dwelling behind its hedge of privet. Beyond that there were woods again and dewy uplands glimmering with furze and brake.

When they arrived they found the driveway closed by a gate.

"Never mind; I'll walk to the house," said Guild.

The smiling chauffeur leaned back and opened the tonneau door; Guild descended, looked at the iron gate between its ugly stucco posts, peered through it up the drive with its parallel rows of recently planted lime trees. Everything about the place was recent if not brand new—ugly with the ugliness of well-to-do bad taste. Red geraniums and yellow cannas had been planted in fearsome juxtaposition, salvia flanked a red brick terrace—a most unholy combination of color. In the early morning the sun exposed the place without mercy. It was lonesome and amazingly depressing.

Glancing up at the gate again he discovered a nickel-plated label riveted to one of the stucco posts. On it was the name of the place, "Hyacinth Villa," and its number 169.

There was no lodge, no bell, but the wicket gate was not locked. So Guild entered.

"Shall I drive up to the house, sir?" inquired the chauffeur.

"No; wait out here."

There seemed to be no sign of life about the house when at last he arrived in front of it—nobody apparently stirring at that hour. He hesitated; he still wore the same knickerbockers and cap which he had worn in Belgium. His sack, which was now in the car, contained only fresh linen; and he began to wonder what his reception might be in such a costume and at such an hour. He doubted that the unconventionality of the daughter of a Prussian aristocrat might extend far enough to accept him, his rather shabby clothes, and his explanation of the visit.

It was all very well for this young girl to kick over the tradition, cut home traces in the sacred cause of art, call herself Girard, and live in an impossible villa for art's sake. Few well-born Frauleins ever did this sort of thing, but there had been instances. And anybody in Germany will always add that they invariably went to the devil.

Guild rang. After he had waited long enough he rang again. After that he resumed his ringing. Keeping his finger pressed on the electric button and laying his ear to the door. The bell was doing its duty inside the house; he could hear it.

Presently he heard a fumbling of chains and locks inside, the door opened on a crack and a sleepy voice inquired: "Is it you, Anna?"

Guild hesitated: "I wish to see Miss Girard. Is she at home?"

"Who are you?" demanded the voice no longer sleepy.

"My name is Guild. I am sorry to disturb Miss Girard at such an hour, but I cannot help it. Is Miss Girard in?"

"Yes; I am Miss Girard."

"Are you Miss Karen Girard?"

"Yes. Why do you wish to see me?"

"I can't tell you here. Are you dressed?"

There was a pause, then she said: "No."

"Please dress as quickly as you can. Dress for travel."

"What!"

"If you have a travelling dress, put it on. You can pack your luggage while I am talking to you. But dress as quickly as you can and then return and let me in."

She said after a moment's silence: "I certainly shall not do any of those things until I know more about you and about your errand here."

"I have a message for you from General Baron Kurt von Reiter."

"That is possible," she said quietly. "What is the message?"

"I was to say to you that the question which you were to decide on the first of November must be decided sooner."

"I must have clearer proof that your message is genuine. I am sorry to distrust you, but I have been annoyed lately."

"Very well," he said. "Open the door a little more. Don't be afraid. I merely wish you to look at a ring which I wear. I want you to draw it from my finger and look at what is engraved inside."

There was another silence. Then the door crack slowly widened.

"Please extend your hand," she said.

There was just enough of space for him to slip his hand between door and frame, and he did so. There came a light, soft touch on his ring-finger. The ring slipped off.

When she spoke again her voice was altered: "I shall dress immediately," she said. "I shall not keep you waiting long. You will find the door open. Please come in when I have gone upstairs."

"Thank you."

He could hear her light, flying feet on the stairs; he waited a little longer, then opened the door.

The hallway was dark, and he left the door open, then entered the room to the left, which seemed to be a library, music-room and living-room combined. Books, piano, easy chairs and sofas loomed in the dim light of drawn curtains. An easel on which stood a water-color drawing occupied the end of the room, and beside it was a table on which were porcelain dishes, tubes of color and scattered badger brushes.

It was evident that Miss Girard's talents were multiple, for he noticed also a violin and music stand near the piano, and on the violin score as well as on the score spread across the piano the same hand had written "Karen Girard."

He stood by the table, mechanically picking up, one after another, the books lying there. Some of the books were printed in French, some in German, in Italian, in Danish, in Swedish, in English. Miss Girard's name was written in all of them. Miss Girard appeared to be accomplished.

In the dim light Guild began to saunter around the room, encountering various evidences of Miss Girard's taste and mode of living—one or two Braun photographs of Velasquez, Boucher and Gainsborough on the walls—certainly a catholicism of taste entirely admirable;—one or two graceful bits of ancient Chinese art—blue and gold marvels of Pekin enamel; a millefleur tapestry panel, a bundle of golf clubs, a tennis bat, and a pair of spurs.

He thought to himself that when a girl goes in for all of these accomplishments it is because the gods have been otherwise unkind, and that she has to.

At the same time he remembered the voice he had heard through the scarcely opened door—the lovely voice of a young English girl—than which in all the world there is nothing half so lovely.

And it suddenly occurred to him that there had not been in it the faintest kind or trace of a German accent—that only its childish and sleepy sweetness had struck him first, and then its purity and its youthful charm.

Yes, truly, the gods had been kind to this young German girl of nineteen,

Canada Food Board License No. 11-690

The inhalation Treatment for Whooping-Cough, Spasmodic Croup, Colds, Catarrh, Asthma, Bronchitis, Coughs.

Established 1879.

Simple, safe and effective, avoiding internal drugs. Vaporized Cresolene relieves the paroxysms of Whooping-Cough and Spasmodic Croup at once; it nips the common cold before it has a chance of developing into something worse, and experience shows that a **neglected cold is a dangerous cold.**

Mrs. Ballington Booth says: **"No family, where there are young children, should be without this lamp."**

The air carrying the antiseptic vapor, inhaled with every breath, makes breathing easy and relieves the congestion, assuring restful nights.

It is called a boon by Asthma sufferers.

For the bronchial complications of Scarlet Fever and Measles, and as an aid in the treatment of Diphtheria, Cresolene is valuable on account of its powerful germicidal qualities.

It is a protection to those exposed.

Cresolene's best recommendation is its 38 years of successful use.

Sold by Druggists. Send for descriptive booklet.

Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist or from us, 10c in stamps.

THE VAPO-CRESOLENE CO., 62 Cortlandt St., N.Y. or Leeming-Miles Building, Montreal, Canada.

Moore Push-Pins

Canada Food Board License No. 14-385.

Two Model Lasts for Women who prefer a long vamp with narrow or medium narrow toe
Made in all leathers 8 inch or 9 inch height, Louis or Cuban heels, $6 to $10

Solving the Nation's Shoe Problem

A LARGE section of the Canadian public depends upon this company for shoes. Our financial resources and buying power are greater by far than those of any other Canadian manufacturer of shoes; our volume of output is more than twice that of any other. Our sales organization covers the nation from coast to coast, not merely a small section at a time.

Our six branches maintain adequate stocks within the reach of every dealer in Canada, and are now serving more than 5,000 dealers, enabling them to fill orders quickly and to cut down the amount of idle stock on their shelves.

We are making every effort to use this power to help solve the big problem of providing enough good quality shoes to go around. In the face of an actual scarcity of leather, it is difficult; but it can be done if you will co-operate with us. Buy wisely, for service rather than merely for style, and see that the shoes you buy are stamped with the manufacturer's trade-mark.

Who Goes There

(Continued from preceding page.)

but it would be a little too much to ask of these same gods that they endow her with figure and features commensurate with her other charms and talents.

Then he suddenly remembered her profession, and that she was studying still for the dramatic profession. And he knew that this profession naturally required exterior charm of any woman who desired to embrace it.

While these ideas and speculations were occupying his mind he heard her on the stairs, and he turned and came forward as she entered the room.

She was a slender, straight girl of medium height; and her face was one of those fresh young faces which looked fragrant. And instantly the thought occurred to him that she was the vivid, living incarnation of her own voice, with her lilac-blue eyes and soft, white neck, and the full scarlet lips of one of those goddesses who was not very austere.

She wore a loosely-belted jacket of tan-colored covert-cloth, and narrow skirt of the same, and a wide golden-brown hat, and tan spats. The gods had been very, very kind to Miss Girard, for she even adorned her clothes, and that phenomenon is not usual in Great Britain or among German Fraulein, however accomplished and however well born.

She said: "I beg your pardon for detaining you so long on the outside door-step. Since the war began my maid and I have been annoyed by strangers telephoning and even coming here to ask silly and impertinent questions. I suppose," she added, disdainfully, "it is because there is so much suspicion of foreigners in England."

"I quite understand," he said. "Being German, your neighbors gossip."

She shrugged her indifference.

"Shall we talk here?" she asked gravely, resting one very white hand on the back of a chair. "You come from General Baron Kurt von Reiter. The ring is a credential beyond dispute."

"We can talk anywhere you wish," he said, "but there is little time, and somebody must pack a traveller's satchel for you. Have you a maid?"

"She went to London yesterday evening. She was to have returned on the eleven o'clock train last night. I can't understand it."

"Are you alone in the house?"

"Yes. My cook sleeps out. She does not come until half-past nine. My maid serves my breakfast."

"You haven't had any, then?"

"No."

"Can you fix something for yourself?"

"Yes, of course. Shall I do so now?"

"Yes. I'll go to the kitchen with you while you are doing it. There are several things to say and the time is short."

She led the way; he opened the kitchen shutters and let in the sunshine, then stood a moment watching her as she moved about the place with graceful celerity, preparing cocoa over an alcohol lamp, buttering a roll or two and fetching cup, plate, spoon and marmalade.

"Have you breakfasted?" she asked, looking at him over her shoulder.

"Yes—it is very good of you—"

"There will be plenty of cocoa and rolls—if you care for them. The rolls are yesterday's and not fresh."

She poured the cocoa in two cups and looked at him again in grave invitation.

"You are sure there is plenty?" he asked, smilingly.

"Plenty."

"Then—I do seem to be rather hungry."

He drew a chair for her; she seated herself and ate with a youthful appetite. He drank his cocoa, ate his rolls, and tried not to look at her too often.

"This is why I am here," he said. "I saw General Baron von Reiter four days ago under somewhat extraordinary circumstances.

"He told me that since the war broke out he had not been able to communicate directly with you or to get you out of England, and he asked me to find you and bring you to his estate at Trois Fontaines in Luxembourg."

"To Quellenheim?" she asked, surprised and disturbed. "Is he there?"

"No, he is with a field army, and he does not know where orders from staff headquarters may send him."

(Continued on following page.)

Who Goes There

(Continued from preceding page.)

"Still," she said, hesitating, "I should think that he might wish me to go to Silesia—"

"Silesia is threatened by the Russian army."

"Silesia!" she repeated, incredulously. "Cossacks in Silesia?" She sat, her cup of cocoa half raised to her lips, her surprised and disconcerted eyes on his. Then she set the cup aside.

"He wishes me to go to Quellenheim? With *you?*"

"Yes."

"Why?"

"Travelling on the continent is precarious."

Her eyes rested on his; she said with a candour which he began to understand was characteristic of her: "He seems to have confidence in you. I never heard him speak of you. You are American?"

"Yes."

"That is odd. He never cared for Americans."

Guild said: "He could not send a German into England."

"That is true. Nor an Englishman either. No Englishman would be likely to do anything to oblige a German."

She rose: "I don't understand why Anna, my maid, is still absent,'" she added uneasily. "My maid often goes to London, but never before has she remained over night. I don't know why she remained. She knew I was alone in the house."

She lifted her serious blue eyes to Guild, then gazed out of the window, evidently perplexed to the point of apprehension.

"I am worried," she said, "very much worried. But that doesn't help, does it?"

"What was her errand in London?" asked Guild.

"She has a brother there. I suppose it's all right or she would have telephoned me."

He said: "No doubt it is all right. And, may I ask you to hasten?"

She rose: "Where am I to go with you?"

"To London and then to the steamer."

"To-day?"

"To-day is Wednesday. No other Holland Line boat sails for Amsterdam before Sunday, and I have yet our passage to secure and I must also go to the War Office for a few moments. You see we have very little time."

"But I can't pack my boxes then?"

"You will have to leave them."

"You mean I may take only a satchel?"

"A suit-case and satchel if you wish. Leave a note for your maid instructing her to send by express whatever else you wish sent after you."

"Is this haste necessary, Mr. Guild?"

"Yes, it is. I want to get out of England. I am not sure that I can get out if we wait until Sunday."

"Why not?"

"I may be detained. I may not be permitted to leave with you. All foreigners are under more or less suspicion. I am rather sure that I have been under surveillance already at the Berkeley Hotel."

They had moved out into the hall together while he was speaking, and now, together, they went up the stairs.

"If you don't mind," she said, "my room is in disorder, but I'll have to pack there and you will have to sit there if you wish to talk to me."

It was a white and chintz room in dainty disorder.

She went away and returned in a moment or two with a satchel and suit-case. These she placed on the bed, opened, and then, dragging out various drawers of chiffonier and chest, began to transfer her apparel to the two bags.

"I am extremely sorry," he said, "to hurry you so inconveniently."

"I don't mind," she replied, busy with her packing. "You see I am an actress and I have travelled with a company in the provinces. That *was* an experience!" She turned her pretty head and looked at Guild. "I had no maid then, except at the theatres where we played, and I had to share her with three other girls. Really, Mr. Guild, it taught me how to pack things rather rapidly."

Her white hands were flying as she folded and placed garment after garment in the suit-case, serene, self-possessed, quite undisturbed by his presence at the rather intimate display of her apparel.

The garments were bewilderingly frail to him; she tucked and packed them into place; a faint fresh scent seemed to freshen the place.

He said: "I don't think we are going to have any trouble about leaving England. But, if any trouble does arise, would you have sufficient confidence in me to do what I say?"

She continued her packing for a few moments without replying, then turned and looked at him.

And, at the same moment the telephone on the table beside her bed tinkled.

"There is Anna now!" she exclaimed with the emphasis of relief. "Will you pardon me? No, I don't mean you are to leave the room—"

She lifted the receiver: "Yes, I am here. . . . Yes, this is Miss Girard. Yes, Miss Karen Girard. . . . Mr. Louis Gratz? Oh, good morning!"

At the name of the man with whom she was speaking Guild turned around surprised. At the same instant the girl's face flushed brightly as she sat listening to what the distant Mr. Gratz was saying to her.

Guild watched her; perplexity, surprise, a deeper flush of consternation, all were successively visible on her youthful face.

"Yes," she said to Mr. Gratz. "Yes, I will do whatever he wishes. . . . Yes, he is here—here in my room with me. We were talking while I packed. Yes, I will do so." And, turning her head a little she said to the young man behind her: "The Edmeston Agency desires to speak to you."

He rose and took the receiver from her hand and bent over beside her listening.

"Are you there?" inquired a pleasant voice.

"Yes."

"I am Gratz of the Edmeston Agency. Get that young lady out of the house at once. Do you understand?"

"Yes."

"Her maid is in trouble. This agency may be in trouble at any moment. She must not wait to pack. Get her into the car and take her to the wharf and on board at once. Do you understand?"

"Yes."

"Take her as your wife. Do you understand?"

"I understand what you say," he said, amazed.

"That is sufficient. Do as I tell you if you want to leave England."

"Very well. But I must first go to the War Office—"

"No!"

"I must!"

"No. It is useless; hopeless. It would have been the thing to do yesterday. An explanation there would have given you credentials and security. But not to-day. *She* could not hope to leave. Do you understand?"

"No, but I hear you."

"She could not expect permission to leave because her maid has been arrested."

"What?"

"Yes! The charge is most serious."

"What is it?"

"Get into your car with the young lady and start at once. Don't go to the steamship office in Fenchurch Street. Don't go to the War Office. Go nowhere except to the wharf. Your passage has been secured as Mr. and Mrs. Kervyn Guild of New York. The initials on the baggage will be K. G. Your steamer tickets will be handed to you. You will pay no attention to the man who hands them to you, no attention to anybody. You will go aboard and go to your cabin until the ship is out at sea. Do you understand?"

"Perfectly."

"Good-bye."

CHAPTER VI.

GUILD hung up the receiver, then turned around and looked stood a moment in thought gravely at the girl behind him. She gazed back at him as though still a trifle breathless after some sudden shock.

"What did that man say to you over the wire?" he asked in pleasant, even tones.

"He told me to trust you, and do

(Continued on page 45.)

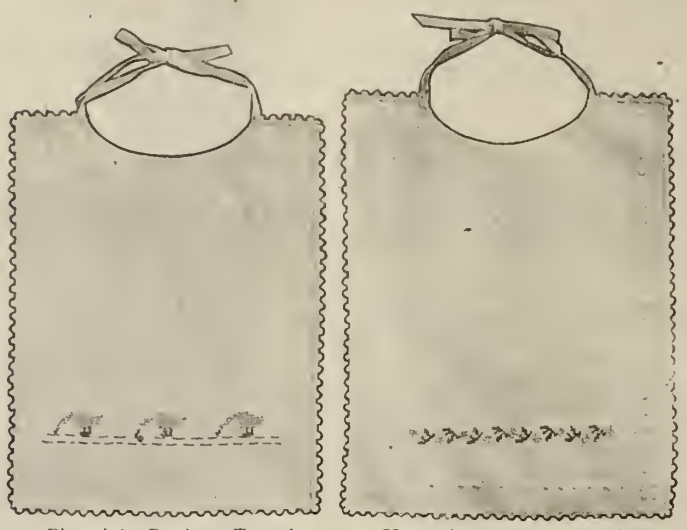
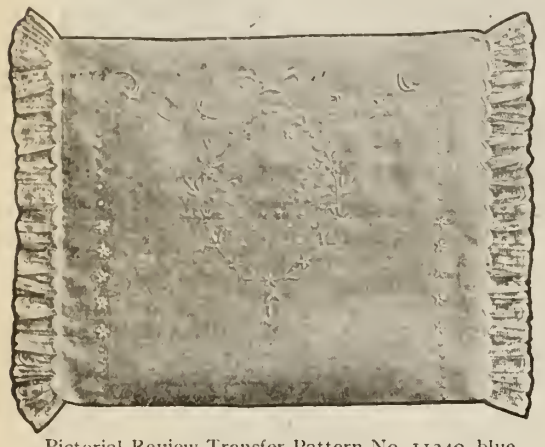
Give the Baby Something Useful as Well as Pretty This Year



Pictorial Review Transfer Pattern No. 12363, blue. This includes 3½ yards each of scallop and four feather-stitch designs. It is attractively illustrated on infants' kimono No. 7368. Sizes, infants, 1, 2, and 4 years.

Pictorial Review Transfer Pattern No. 12339, blue. A very attractive baby pillow embroidered in satin stitch and Roman cut-work with scalloped edges.

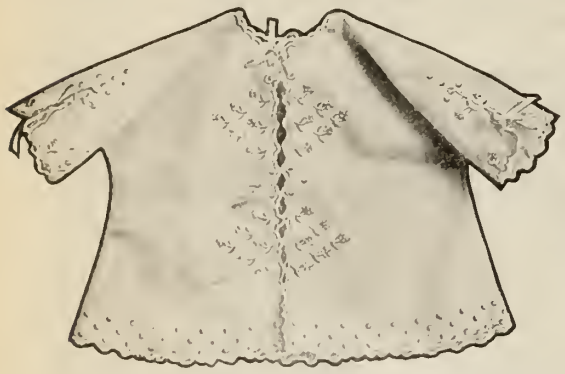


Pictorial Review Transfer Pattern No. 12230, blue, providing shape of collar and cuffs and embroidery design. Shown on Coat 5356. One size.

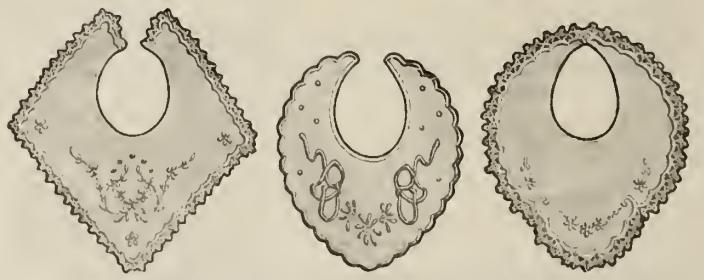
Pictorial Review Transfer Pattern No. 12362, blue. A cunning feeding-bib showing geese in cross-stitch.

Here is another design which is included in pattern No. 12362, also embroidered in cross-stitch.

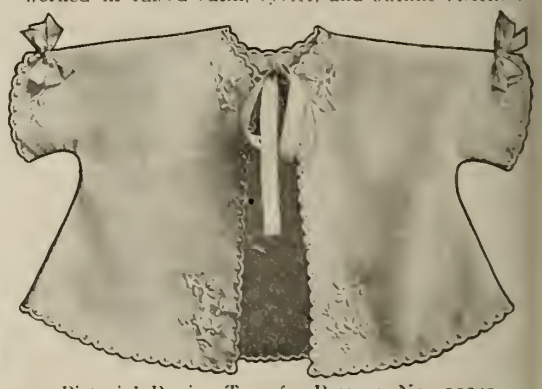
Pictorial Review Transfer Pattern No. 11340, blue. Here is a dainty embroidered pillow-case for the baby. The design with scallop is 13 by 15¾ inches. The pillow may be of nainsook or batiste with lace edging.



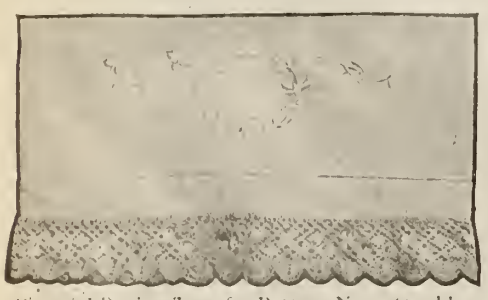
Pictorial Review Transfer Pattern No. 11880, blue. The design and shape of cap are provided. The cap matches sack No. 11881.



Pictorial Review Transfer Pattern No. 12243, blue.



Pictorial Review Transfer Pattern No. 12115, blue. Dainty sprays of lily of the valley for a baby pillow. The design is 6 by 13 inches. The embroidery is worked in raised satin, eyelet, and outline stitches.



Pictorial Review Transfer Pattern No. 11881, blue. The embroidery of this dear little sack matches the cap that is illustrated above at the right. The sack is Pattern No. 5021, one size. The cap is No. 11880.

Pictorial Review Transfer Pattern No. 12238, blue. Nothing makes a more acceptable gift for the baby than hand-embroidered bibs. The pattern provides three different designs, all very attractive.

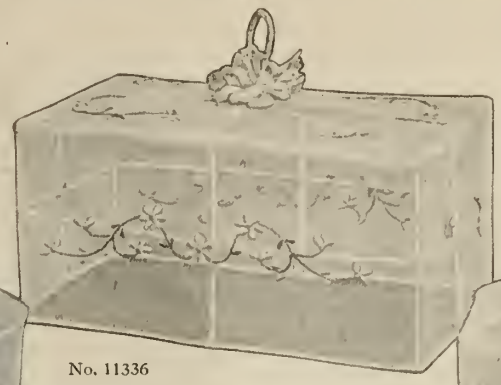
Pictorial Review Transfer Pattern No. 12243, blue. A charming design for baby's sack illustrated on Set No. 5021, including a sack and cap, one size.

Pictorial Review Transfer Pattern No. 11679, blue. Design for baby's pillow or towel.

Pictorial Review Transfer Pattern No. 11069, blue. Here is a handsome carriage-cover which may be fashioned of piqué embroidered in daisy design. It is 26 by 30½ inches.

Pictorial Review Transfer Pattern No. 12240, blue, on Gertrude Petticoat 4958

Embroidery 12455 on Infants' Coat 7767



Pictorial Review Transfer Pattern No. 12077, blue, on Infants' Coat 5356

Novelties in Needlework that Will Make Charming Christmas Gifts

Pictorial Review Transfer Pattern No. 12245, blue, 15 cents. To keep rolls or biscuits hot for the late comer for breakfast here is a daintily embroidered case. Design for two cases 17¼ inches square.

THE woman who is looking for a dainty yet inexpensive gift will find a novelty that is most appealing in the embroidered net covers illustrated below on this page. They are useful for the tea table when it is on the porch in protecting the food from dust and insects.

No. 11336

NOTHING appeals more to the housewife than embroidered household linens, and here are illustrated many that are easy to work and inexpensive to make up. We are all asked to restrict our Christmas gifts to the strictly practical.

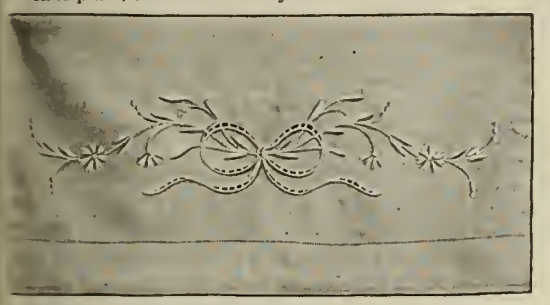
Pictorial Review Transfer Pattern No. 12244, blue, 15 cents. Muffins and toast may be kept hot in an attractive case like this. Two are provided in the pattern, each 17¼ inches square. Attractive little napkins like these are much appreciated as holiday gifts. The Japanese lettering is worked in raised satin stitch, the sprays and dots in eyelets, the scallops buttonholed.

No. 11355

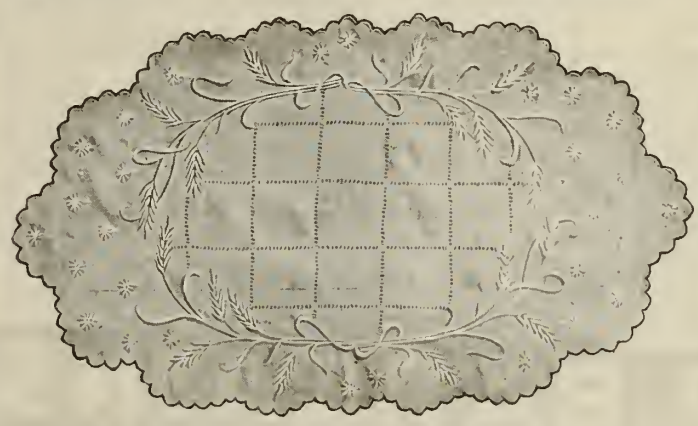
Pictorial Review Transfer Pattern No. 11336, blue or yellow, 15 cents. Above is illustrated an oblong cover of net daintily embroidered which may be placed over a plate of cookies, sandwiches, or sweets. No. 11355 at left, 15 cents, and No. 11339 at right, 15 cents, also illustrate dainty net covers, embroidered, which serve to protect the sweets and sandwiches.

No. 11339

Pictorial Review Transfer Pattern No. 12236, blue or yellow, 15 cents. Here is a dainty design including sixty tiny sprays for embroidering a net cover for the bonbon dish, the cake plate, or sandwich tray.

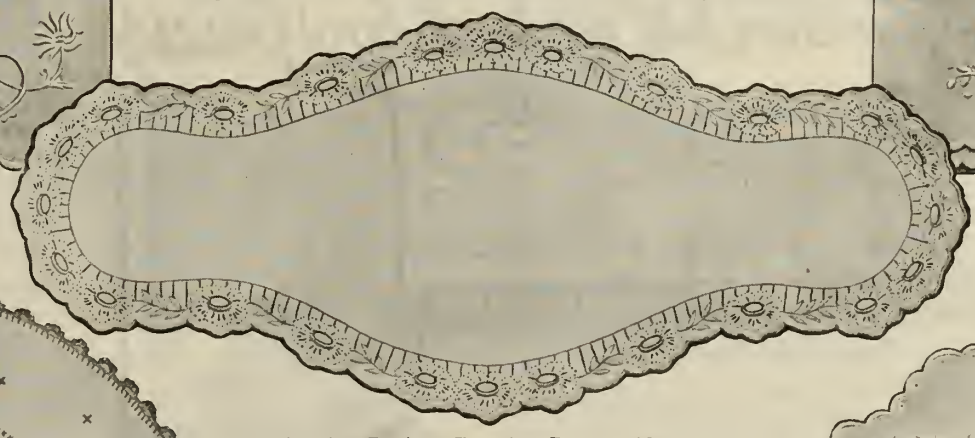


Pictorial Review Transfer Pattern No. 12303, blue, 15 cents. At right and left are illustrated cunning doilies to cover the cream-jug and sugar-bowl. These may be of linen with tiny sprays.

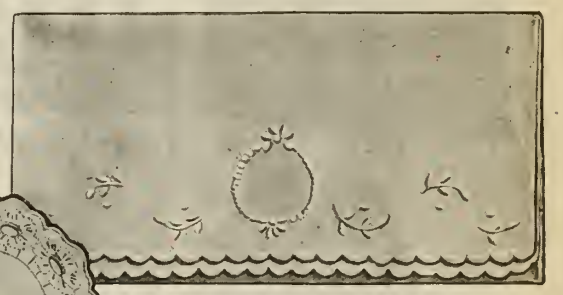


Pictorial Review Transfer Pattern No. 11810, blue or yellow, 15 cents. The plate of sandwiches is given a much more appetizing effect by being protected by one of these covers.

Pictorial Review Transfer Pattern No. 12220, blue, 5 cents. Corn-flower and bow-knot design for sheets nd pillow-cases. Sheet design is 7 by 35 inches, and illow-case or towel design is 4¼ by 20 inches.



Pictorial Review Transfer Pattern No. 11842, blue, 15 cents. Not alone attractive but practical is this oval centerpiece which may also be used as a doily for a large tray. It is 20 by 36 inches.



Pictorial Review Transfer Pattern No. 12222, blue, 15 cents. Above is illustrated a very attractive design for a sheet and pair of pillow-cases that is easily worked.

Pictorial Review Transfer Pattern No. 2255, blue, 15 cents. Embroidery design or a pair of pillow-cases in raised satin stitch, r with dots and centers in eyelets.

Pictorial Review Transfer Pattern No. 12292, blue, 15 cents. Very unusual in shaping is this buffet scarf which is 15¾ inches wide by 38 inches long. It may be outlined with Delft blue embroidery cotton with black for the flower stems and lines.

Pictorial Review Transfer Pattern No. 11682, blue, 15 cents. Transfers for two guest towels 15¾ inches wide are given in this pattern. The leaves and medallions are worked in raised satin stitch, the scallops buttonholed.

No. 12432

Pictorial Review Transfer Pattern No. 12432, blue, 15 cents. A charming centerpiece 36 inches in diameter is provided in this pattern. Illustrated at the right are Transfer Patterns Nos. 12433, 15 cents, and 12434, 10 cents, both in blue only. No. 12433 gives six 10-inch doilies, No. 12434, six 6-inch doilies.

No. 12433

No. 12434

No. 12196
36-inch Centerpiece

No. 12091

Pictorial Review Transfer Pattern No. 12196, blue, 15 cents. Above is a charming centerpiece embroidered in wreaths and garlands of daisies worked in eyelet and raised satin stitches. Below at the left is shown Transfer Pattern No. 12091, blue, 15 cents. This scarf is 21 by 70 inches.

An Afternoon in Antivari

(*Continued from page* 21.)

and Bulgaria, and despises every other nation on earth, her vanity making her an unreliable ally? Roumania would like to be Greece's ally, but will not submit to Greek patronage. She also dislikes Bulgaria, who sneers at the pretensions to descent from ancient Greek or Roman. Bulgaria believes she is the most civilized of our four, and has the finest army, and she feels that she should rule us all, by the right of her might."

"And Serbia, Gospoditza?"

"We despise no one, Gospodar. We try to fear God and deal honestly with our neighbors, but everywhere we feel the hate and greed of Austria reaching towards us with clawing hands."

A little tired of politics, I tried to change the subject by telling the maiden that it was a lovely day. "June 15 is never a lovely day to a Serb, Gospodar," she said, meekly. "We always fast on it because of the Kossovo Polye" (Field of Blackbirds).

"The Gospodar does not understand," said my hostess. "Sing him the ballad of Tsar Lazer, Djevajka."

The maiden had a good, well-trained voice, and even the brightness of that perfect June day seemed shadowed, as she sang what is perhaps the saddest song in the world—now a wailing over the slaying of the Serb army with their Tsar at Kossovo, in 1389, and the crushing of all Serbia by "foes who never spare." Then stern, thrilling cries for vengeance. I felt I was very foolish, yet even in the comfortable twentieth century, when great wars among civilized nations are surely a thing of the past, I felt that a vague horror of blackness was rising somewhere, threatening the simple pastoral people that I had so many friends among. I was glad when the song was ended.

Past the lawn came a troop of lively children, boys and girls, all carrying books, and little pots of ink. There was evidently a school at Antivari, and it was out. I guessed many of the children had come long distances, for the Serb is very keen on education and his public schools are good. In the mountain districts, when winter made the roads impassable, I have known children to be taken to school with a supply of food and blankets, and left to camp there several nights, till the weather improved.

The maiden was attending High school, she told me, with a view to College. "We are learning Shakespeare, Gospodar," she added, shyly.

"And don't enjoy him," I said. She laughed and blushed, and I added, "Shakespeare, when you have to look up every second word in the dictionary, is not enthralling. Did you know that one of my favorites of his plays is of Serbia? It is 'Twelfth Night,' and all happens in a 'city of Illyria, and the seacoast near it'."

"It might have been Antivari," exclaimed the maiden, "only in Shakespeare's time it belonged to Venice, but I know Albania, and Montenegro, and some of Serb Austria, was Illyria, and that the Serbs of the coast, often helped by Venice, kept up a war with the Turk for centuries."

"Well, there is strong internal evidence in Shakespeare's plays that he visited Venice, and nowhere else abroad. And I have imagined that one day he saw a Serb 'Duke' (Shakespeare calls all foreign rulers kings or dukes, perhaps because they are easier to spell.) This one may have been visiting the Republic, and was thanked for his kindness to some shipwrecked sailors, also he may have just married a Venetian girl. So Shakespeare wove the story of the ship wrecked on a strange coast, and the passenger's twin sister, disguising herself as a boy, because she thought her brother dead, and that she might be safer with her sex unknown."

The maiden nodded. "Serb women often did that when the Turk came, hoping to be shot down with the men. But Viola would have been quite safe with us, though, of course, she did not know but what we were the Austrians, or their masters, the Germans.

So I told her the story, thinking that if Olivia had been such another young Serb girl, with frank, innocent eyes, I did not wonder at Sabastian's willingness to marry her five minutes after they first met, and before he even knew her name.

Fearing that the industrial and political development of a peasant Serbia, under a king whose grandfather tended pigs for a living, would make Austrian peasants rise against being ruled by an upper class, Austria struck—and the world was wrapped in flame.

I read of the drive of the War Machine over the homes and hearts of Serbia. Montenegro was cut off from getting food anywhere—then "the Austrians occupied Antivari without opposition," I read. What was there in Antivari to oppose them, I wondered.

I have a letter from a Serb friend, now among the refugees in Greece: "At Antivari the Christians (the Moslems welcomed the invader) could choose between these men or the wilds of Albania, with their deep snow, and uncivilized tribes. A few young men and women got through. Miss Brankowich might have kept up with us, she was a strong girl, but she would stay with her grandmother and old aunt. There is no chance that they survived. The mountain passes must be strewn with our dead women, and old men, and little children. God rest their souls."

The merry children with their books and inkpots—my gracious hostess—sister-in-law—are you all laying dead and uncoffined on those snow-heaped heights? And the maiden, who would not leave you to save herself—little Serb girl, I am glad your white body is there. We in Canada are helping to fight against these men. God rest your souls, my friends, and may your bodies seal your lands against the holding of them by the Hun and his allies.

Girls' "Carry-On" Column

(*Continued from page* 17.)

entertain the soldiers, that they want to be taken into the family. They are just as happy, and more so, with their feet on the kitchen stove, as they are posed in front of an aristocratic electric grate, in a beautiful drawing-room.

Then perhaps some of us, through force of circumstances, cannot invite the soldiers to our homes for a holiday. Well, what is to hinder us from picking out the biggest, shiniest, rosiest apples from our whole orchard, packing them in a box and sending them to a military hospital. The men are provided with essentials, but it is these unexpected extras that are so appreciated.

Did you ever think that cedar that is gathered in the woods may be arranged in wreaths and tied with bright red ribbon to take the place of holly. It makes a perfectly wonderful Christmas decoration; last year some bright, energetic girl conceived the idea, and we decorated a whole ward with it. Holly is expensive, and at long distance range cedar has the same effect.

And if you make up Christmas stockings, do remember to put in only things that are useful. You would be surprised at the number of things that are thoughtlessly and foolishly given a place in the soldiers' stockings which are only a waste of money and an insult to a soldier's dignity. After all, they are just the civilians of a couple of years ago, and they should be treated as men, and not as inmates of a charitable institution. Don't forget to put in a little note with your parcel; it gives the gifts a personal touch that the soldiers very much appreciate. They like to know that a really, truly someone planned and worked to give them pleasure, and not frantically grabbed half a dozen articles and jumbled them all together with the saintly, self-satisfied remark. "Oh, I guess that will do," and shipped them off.

Then there are those who have the privilege of visiting the hospitals. I distinctly remember one woman who brought a couple of her children to the hospital, laden with three boxes of chocolate and three packages of cigarettes. They happened to come into the ward when I was on duty, and immediately opened the candy and allowed each man to take a couple and offered them a cigarette. "You know the children love to do it," she said. "They will talk of this for months," she beamed. "I think everyone should try to do something for the soldiers for Christmas, don't you?" "Yes," I agreed, "it is very kind, I am sure." But if she could have heard some of the remarks I heard after she went out, I am sure she would not have been so proud of her manner of doing something for the soldiers. For the boys had swallowed their pride on their own account, or had been jollied into doing it by some of the other fellows. "Don't spoil the kiddies' fun," I heard one of them say to another, who, I think, was inclined to refuse point blank any cigarettes or candy, on the plea that he wasn't on the charity list yet. But the children went away, glorying in the fact that they had really and truly helped to give the soldiers a little happiness, and I am sure the mother shared the same opinion. But to my mind, and I know the soldiers will agree with me, if she had offered the soldiers the use of her chauffeur and beautiful limousine for a day, she might have accomplished something, instead of trying to find amusement for her children by this extraordinary procedure.

It is only a little incident, but it shows that we may fail to accomplish that which we set out to do by a little misjudgment and loss of perspective on our part. I am sure, if the lady who brought her children to the hospital had thought for a moment how her own brother would have felt if he had been one of the soldiers, she would have hesitated before she made the visit. And whenever we try to help the soldiers, either at Christmas or any other time, we must remember to put ourselves in their places and see how we would feel under the circumstances.

QUESTIONS AND ANSWERS.

Do you think I could get a position as a clerk in one of the military hospitals in New Brunswick? Are special accomplishments necessary? To whom should one apply for such a position?

K. T., New Brunswick.

I am sending you the name and address to whom you should apply for the position. You should have a good idea of clerical work and a St. John's Ambulance certificate, although that is not absolutely necessary. I am also sending you the rate of salary paid. Be sure to state your qualifications

REAL FUR BARGAINS "FROM TRAPPER TO WEARER"

why we can sell at such low prices

Because in the first place, we secure the Raw Furs direct from the Trapper *for cash*—in fact, we buy more raw furs direct from the Trapper for cash than any other firm in Canada—then we select the best and most suitable skins and make them up into the famous **Hallam Guaranteed Fur Garments**—which we sell to you directly by mail "From Trapper to Wearer" for cash. This does away with all middlemen's profits and you receive the benefit.

BEHIND EVERY GARMENT IS THIS GUARANTEE

If *for any reason* you are not satisfied with a Hallam Fur Garment simply send it back and we will at once return your money in full without question.

FREE HALLAM'S 1919 FUR FASHION BOOK

It is larger and better than ever—showing a wonderfully extensive range of Fur Sets and Fur Garments—we do not think there is a fur book published in Canada equal to this—it contains 48 pages and cover, with over 300 illustrations of beautiful furs, photographed on real living people. This shows you how the furs actually appear. It also gives a lot of information about Fur fashions. The articles shown here are taken from this Fashion Book and will be sent on receipt of money.

Write now for *your* copy of Hallam's 1919 Fur Fashion Book—it will save you money.

Address in full as below

THIS STUNNING SET OF BLACK WOLF is remarkable value. Large scarf in fashionable two-skin design, finished with heads and tails, MUFF is roomy warm pillow shape trimmed as shown. The fur is of a rich jet black glossy appearance and is exceedingly serviceable.

M 886, Set Delivered. $15.50

STYLISH, DURABLE COAT OF RICH MINK MARMOT 45 inches in length, made from selected full-furred skins in the newest design. Deep sailor collar, front belt as shown, richly lined with fancy poplin and finished with ruching. A garment that well illustrates the remarkable price savings derived from our FUR FASHION BOOK. MUFF in smart round shape, finished with silk cuffs and wrist cord.

M 724, Coat Delivered.. .$112.50

M 725, Muff Delivered... 13.50

The Girls' "Carry-On" Column

(Continued from preceding page.)

when you apply for the position. You are obliged to sign up for twelve months, after one month's probation.

Regarding clerks, typists and telephone operators for the General Division, do women pay their own expenses while working?

Shelburne, N.S.

Girls in the General Service Division are given a salary; rations, quarters and laundry allowance provided.

Could you tell me how long the Massage Course is, and is it compulsory to go overseas?

Georgetown, Ont.

The Massage Course lasts six months, and after that you are obliged to sign up for one year, for service in Canada. No girls have been sent from Canada overseas in the capacity of "Massage Sisters."

I would like to ask some soldiers for an evening at our house, especially those who have no friends. We live in a city where there is a large camp, but I do not know any of the men. How, dear Betty, should I go about it, as I do not want to do anything that would cause comment.

A. L. F.

Why not telephone the secretary of the Y. M. C. A. of the camp to which you refer? Tell him you would like to entertain some soldiers who have no friends, and I am sure he would only be too glad to help you out, and help some of the boys who are very lonely.

Our club is making up some Christmas stockings, for returned soldiers. Would you please send us the name and address of some hospital where they are needed.

A. B. C.

Enclosed you will find the address of the hospital where they will be most welcome.

I have been knitting a number of socks lately, consequently I have a number of different shades of wool left. As wood is so scarce I was wondering if there was any way I could make use of it.

A. B.,
British Columbia.

Did you ever try to make a stump sock? It is made exactly like an ordinary sock, but instead of a heel and toe they are rounded off just as you would a toe. And is used to hold the bandages in place and keep the stump warm. It should, however, be made a little larger. I am sending you the directions by mail.

We have collected a lot of money for our Canadian Military Hospitals. How would you advise us to invest it where it will be of the most use?

Quartette.

Now that the winter is coming I do not think you could spend your money to a better advantage than to buy a number of hot water bottles for the bed patients. Sometimes the hospitals are not as warm as they should be and hot water bottles are badly needed. You would be surprised how generously some of the patients give these up when they find out that another fellow is a little worse off than they, and there never is enough to go round. You might also make some covers for them too, as it is against all rules in military hospitals to provide a patient with a hot water bottle without a cover. Owing to the absence of feeling in some cases, they are badly burned before they know it.

Could you kindly tell me the age a girl must be to enter a military hospital as a V.A.D.? I am contemplating entering a hospital as a nurse, but seeing this article I thought I might be of service to my country by taking this work instead. I could not, however, afford to pay my board while taking the course.

Saskatoon.

To be a V.A.D. nurse you must be from 21 to 48 years of age. You need not pay your board while taking your course, as you can take it while serving in the hospital if you are accepted.

I am thinking of taking a course as Functional Trainer. Would I be obliged to leave home?

Edith L., Winnipeg.

You must go to Toronto for your training, which is given at Hart House, and lasts about three months; sometimes a little longer. After the training is over you will in all probability be sent back to a Winnipeg hospital. As far as possible the authorities are allowing the Functional Trainers to live at home. If this is impossible you will live in the nurse's quarters and be absolutely under the control of the matron.

Who Goes There

(*Continued from page* 41.)

what you told me to do. He said Anna, my maid, had been arrested."

"Who is he?" asked Guild grimly.

"Do you mean Mr. Gratz?"

"Yes; who is Mr. Gratz?"

"Don't *you* know him?" she said, astonished.

"I have never laid eyes on him. Your father recommended to me the Edmeston Agency and mentioned the name of a Louis Gratz who might be of use to me. That is all I know."

"My—*father*—you say?"

"Certainly, General Baron von Reiter."

"Oh! . . . Then it must be quite all right. Only—I don't understand about my maid—"

"Did Mr. Gratz tell you she had been arrested?"

"Yes."

"On a serious charge?"

"Yes."

"Have you any idea what that charge may be?" he asked, studying her face.

"I haven't any idea," she said; "have you?"

"I don't know; perhaps I have. Is your maid German?"

"Yes."

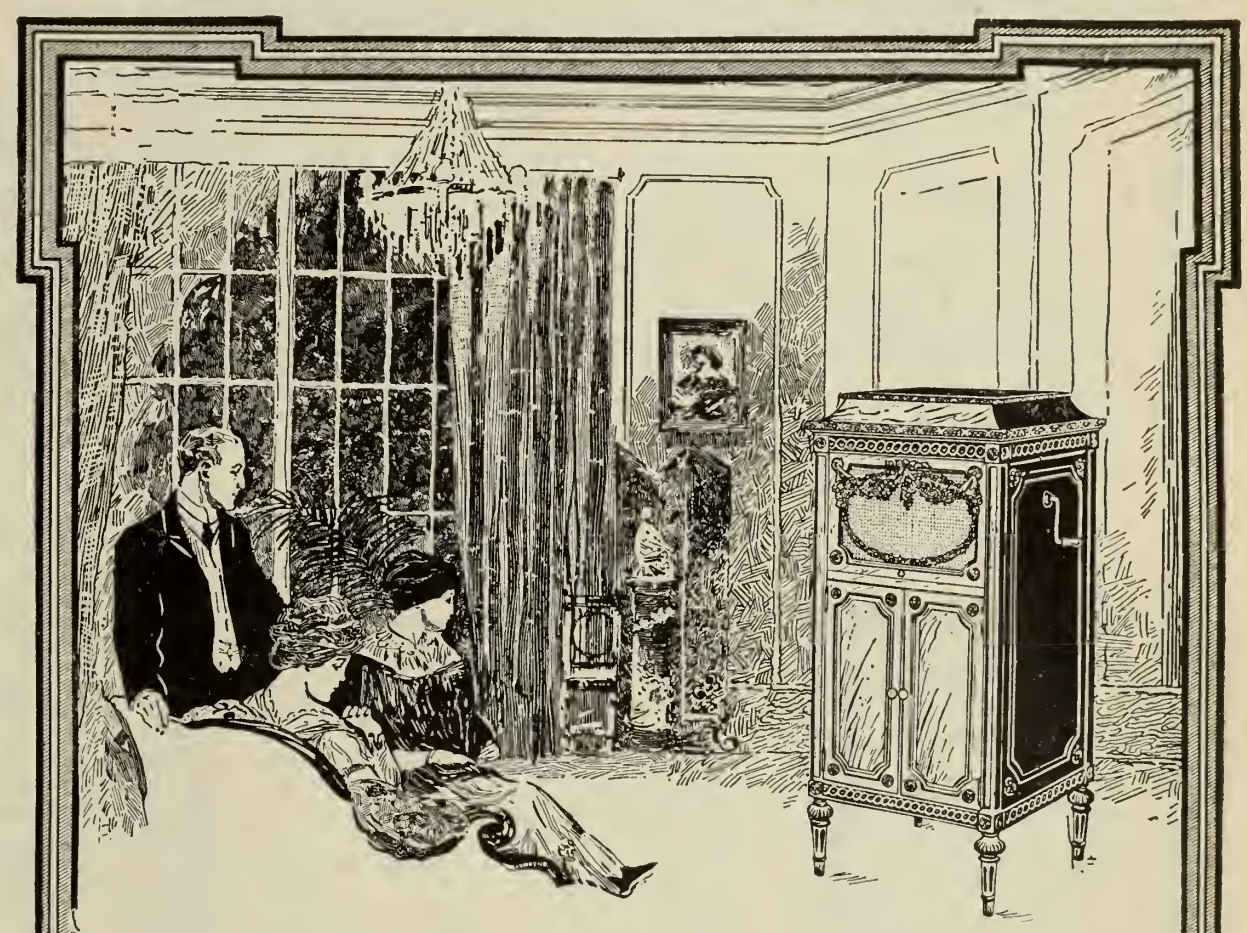
"You brought her with you from Germany?"

"Yes."

"Where did you get her?"

"General von Reiter's housekeeper found her for me."

He hesitated, still looking steadily into those violet blue eyes of hers which seemed to question him so candidly. No, there could be no dishonesty there.



"Miss Girard," he said, "I find that I am going to be very much more frank with you than there once seemed any occasion for being. I am also going to say something to you that may possibly offend you. But I can't help it. It is this: Have you through your letters to or from your father, imparted or received any military intelligence which might be detrimental to Great Britain or to her allies?"

"Do you mean am I a sort of spy?" she asked, flushing to the roots of her hair.

"In substance it amounts to that. And I shall have to ask you to answer me. And I'll tell you why I ask. I didn't intend to tell you; my personal and private affairs did not concern you. But they do now. And these happen to be the facts in my case: I was taken prisoner in Belgium by the cavalry forming the advance of your father's command. It happened four days ago; I was sentenced to military execution, led out for that purpose, reprieved by your father himself on condition that I undertake to find you and conduct you safely to Trois Fontaines near the Grand Duchy of Luxembourg.

"If I am unsuccessful in the undertaking, I am pledged to go back volun-

The Gift That Overshadows All Others

FOR nearly two thousand years, it has been the custom to present gifts betokening Peace and Good-will to one's family and friends at Christmas time, and though most of us may not emulate the Wise Men of the East by bringing Gold, Myrrh and Precious Stones, still we may offer those whom we love a gift which will be quite as precious: MUSIC.

The **Pathephone**

is the supreme achievement amongst Music makers, the most beautiful Phonograph made. It is a lasting, sensible and permanent gift, the FINEST gift you could make,—beautiful, useful, enchanting!

Consider These Big Pathé Advantages:

1. The permanent Sapphire ball—no digging, tearing needles to change.
2. Records that will wear thousands of times.
3. An all-wood tone chamber (on the principle of the violin).
4. Pathe tone control, regulating the volume of sound.
5. Plays perfectly all makes of Records.
6. The exclusive Period design Cabinets. Exquisite Furniture for any home.
7. A complete line of Pathephones to meet every purse.

Although the most beautiful Phonograph made, it costs no more than the ordinary talking machine. In fact, we believe a comparison with other standard makes will show a decided price advantage for the Pathephone.

Let us suggest that as Christmas time is drawing near, you see the Pathé Dealer NOW, while his stock is complete. Write for Catalogue.

THE PATHÉ FRÈRES PHONOGRAPH SALES CO.
TORONTO

A Most Appropriate Gift

THIS year, more than ever before, thrift gifts are the vogue. And thousands of women will welcome these remembrances eagerly. How many wanted appliances will be theirs—things they may have hesitated to buy themselves.

Chief among the home equipment needs that will bring lasting appreciation is a Bissell's Vacuum Sweeper or Carpet Sweeper. An hour's sweeping—drudgery under old methods—can be done in a pleasant half hour the Bissell way.

BISSELL'S
Easy to Empty
Vacuum Sweeper

conserves human strength and carpets and saves hours—a true thrift gift.

Bissell's powerful suction Vacuum Sweepers sell at moderate prices—$8.50 to $13.00; "Cyco" Ball-Bearing Carpet Sweepers at $4.20 to $6.00—depending on style and locality. Sold by dealers everywhere. Booklet "The Care of Rugs and Carpets," on request.

BISSELL CARPET SWEEPER CO., OF CANADA, LIMITED.

Oldest and Largest Sweeper Makers Grand Rapids, Mich., and Niagara Falls, Ont., Factory.

Who Goes There

(Continued from preceding page.)

tarily and face a firing squad. If I am successful I am permitted to go free, and so are my fellow-hostages. And the little town where I was arrested is to be spared."

He passed one hand over his eyes, thoughtfully, then, looking at her very seriously:

"There seemed to be no reason why an honorable man might not accept such terms. I accepted them. But—things have happened here which I neither understand nor like. And I've got to say this to you; if my taking you back to your father means any detriment to England or to the cause England represents—in other words, if your returning to him means the imparting to him of any military information gathered here by you, then—I won't take you back; that's all!"

After a moment, half to herself, she said: "He really thinks me a spy. I knew it!"

"I don't think so. I am merely asking you!" he retorted impatiently. "There is something dead wrong here. I was intending to go to the War Office to tell them there very frankly about my predicament, and to ask permission to take you back in order to save my fellow-hostages, the village, and my own life; and now a man named Gratz, of whom I know nothing, calls me on the telephone and warns me not to go to the War Office, but to get you out of England as soon as I can do it.

"What am I to think of this? What does this man Gratz mean when he tells me that your maid has been arrested on a serious charge and that the Edmeston Agency of a German automobile is in danger?"

The girl stood very still, with one slender hand resting on her satchel, her face pale and quietly serious, her brows bent slightly inward, as though she were trying to remember something or to solve some unpleasant problem not yet plain to her.

"One thing is clear," she said after a moment, lifting her candid eyes to his; "and that is, if you don't take me back, certain friends of yours will be executed and a village in which you seem interested will be destroyed."

"If taking you back means any harm to England," he said, "I won't take you."

"And—your friends? What becomes of them?"

"My friends and the village must take the same chances that I do."

"What chances? Do you mean to go back without me?"

"I said I would," he replied drily.

"You said that if you went back without me they'd execute you."

"That's what I said. But there's no use in speculating on what is likely to happen to me if I go back without you. If you don't mind, I think we had better start at once. We have had our warning from this man Gratz."

He gave her a searching glance, hesitated, then apparently came to an abrupt conclusion.

"Miss Girard," he said coolly, "your father once took a good look at me and then made up his mind about me. And he was not mistaken; I am what he believes me to be. Now, I also have seen you, and I've made up my mind concerning you. And I don't expect to be mistaken. So I say to you frankly I am an enemy to Germany—to your country—and I will not knowingly aid her—not to save my own skin or the skins of anybody else. Tell me then have you any military knowledge which you intend to impart to your father?"

"No," she said.

"Have you any suspicion that your maid has been involved in any such risky business?"

"I have no knowledge of anything military at all. I don't believe my maid has, either."

"You can recall no incident which might lead you to believe that your maid is engaged in that sort of affair?"

The girl was silent. He repeated the question. She said: "Anna has complained of being followed. I have already told you that she and I have been annoyed by impertinent telephone calls and by strange men coming here. Do you suppose they were from Scotland Yard?"

"Possibly. Have you any suspicion why your maid has been arrested?" he persisted. She hesitated; her straight brows knitted slightly again, as though in a perplexed effort to remember and to understand. Then she looked up at Guild out of troubled eyes and shook her head:

"I don't know—I don't know—whatever my suspicions may be—"

"Suspicions!"

"My personal suspicions could scarcely concern you, Mr. Guild."

The snub was direct; he reddened.

"Very well," he said. "What you say gives me a decent chance for life." He drew a quick breath of relief. "I'm mighty glad," he said; "I have—have seen men die. It isn't—an—agreeable sight. I think we'd better go."

"In a moment."

She took her satchel and went into another room with it, closing the intervening door. She was gone only a few seconds. When she returned she had locked the satchel; he closed and strapped her suit-case and took it in his hand. Together they descended the stairway and started through the lower hall.

And what occurred there happened like lightning.

For, as he passed the door of the darkened living room, a man jumped out behind him and threw one arm around his throat, and another man stepped in front of him and snapped a pair of handcuffs on his wrists.

It was not even a struggle; Guild was being held too tightly. The girl shrank back against the wall, flattening herself against it, staring dumbly at the proceeding as though stunned. She did not even cry out when the man who had handcuffed Guild turned on her and caught her by the elbow.

"Come along quietly, miss," he began, when suddenly his voice died out in a groan and he crumpled up on the floor as Bush, the chauffeur, sprang from the passage-way behind him and struck him with something short and heavy.

(To be Continued.)

The Children's Hour

(Continued from page 25.)

entirely destroyed, and all the insect pests would have increased by millions.

Last year I heard of a little boy in Toronto who gave his Christmas tree to his bird friends. It was only a small tree, and the boy was poor, but after the few presents were taken off, he tied one or two bones, some bits of fat and dry crusts on to the tree. Then he carried it into the yard at the back of the cottage he lived in. The birds soon found the treat, and so many came that their weight tumbled the tree over. The boy and his sister ran out and secured the tree fast this time, and soon the birds were back again, and made the poor yard ring with cheerful calls of thanks, and we may be sure their bright eyes saw the happy faces watching them through the kitchen window.

The birds don't ask you for luxuries. They would not eat them if you put them out, and you needn't buy a Christmas tree on purpose. Perhaps you have a garden; then, surely it won't be hard to find a tree that you can use. Don't do it only on Christmas Day. Continue to feed them until the thaw starts; then they will need your help no longer, but they will need your love and protection through their working days.

Very few people realize what our birds are doing for the good and prosperity of Canada. Here in your own journal you will have an opportunity to learn somewhat of the value of our Canadian birds, and by learning yourselves, you can then teach others. Write and tell me of the feathered soldiers that are fighting in your district. Remember they are soldiers, and they have enemies to fight and conquer, that you may have daily food. Don't you want to get to know them?

A Forehanded Youth.

"You are an honest boy," beamed the old lady as she opened the roll of five one-dollar bills, "but the money I lost was a five-dollar bill. Didn't you see that in the advertisement?"

"Yessum," exclaimed the boy. "It was a five-dollar bill I found, but I had it changed so you could pay me the reward."

Free Pattern Service

"Canadian Home Journal" readers will be pleased to learn that through a special arrangement we have made with the Pictorial Review Co., three patterns are now given free with every new and renewal subscription to the "Canadian Home Journal." Any subscriber on renewing her subscription to the journal has only to fill out the pattern application form herewith and mail it with her renewal remittance to the "Home Journal," and three pattern coupons will be forwarded by return mail. These coupons when received at the "Home Journal" office with the size and number of patterns indicated, entitles the subscriber to the patterns described and they will be promptly despatched.

FASHIONS

(*Continued from page* 34.)

7987—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 4 yards 36-inch satin for foundation dress—1⅜ yard 44-inch serge for panels—⅞ yard 36-inch lining for underbody. Embroidery No. 12473, blue or yellow transfer pattern. Width at lower edge about 2 yards. Wool conservation is faithfully carried out in this chic frock, as the only wool that enters into its making is the panels, while the remainder of the dress is of satin. The panels hang from the shoulders front and back, and are mounted on a foundation dress that consists of a front-closing waist joined to a one-piece skirt that may be gathered or accordion-plaited.

8018—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 6 yards 36-inch Pussy Willow taffeta—¾ yard 36-inch white satin for collar, cuffs and vest—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. The tendency toward plain close-fitting bodices is admirably expressed in this frock of French blue taffeta. The bodice is draped slightly toward the underarm to give a snug fit.

8014—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5 yards 36-inch black satin—½ yard 18-inch lace—½ yard 18-inch white organdy for collar—1⅝ yard 36-inch lining for underbody and top of skirt. In the front ranks of fashionable favor is the frock with diagonal drapery which is so attractively illustrated here developed in black satin with the new cavalier collar of lace and organdy.

7904—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 2¾ yards 44-inch check serge—3¼ yards 36-inch black satin—½ yard 32-inch organdy for overcollar and vest—1⅞ yard fringe—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Braiding No. 12147, blue or yellow transfer pattern. Conservation frocks of check worsted and black satin are among the season's favorites. In this model the serge is used for the redingote-like overdress which is mounted on a foundation dress of black satin.

7989—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 3½ yards 54-inch wool Jersey—¼ yard white Pussy Willow taffeta for collar—1¾ yard picot-edged ribbon. Width at lower edge about 1¾ yard. A simple bodice draped to form a girdle effect and full-length panel back are the most attractive features of this frock of beige wool Jersey.

(*Continued from page* 35.)

7754—Ladies' House Dress. Six sizes, 34 to 44 bust. Size 36 requires 5½ yards 32-inch chambray—½ yard 32-inch check gingham. Width at lower edge, about 1⅞ yard. Below a square yoke this simple morning dress is gathered.

(*Continued on page* 57.)

Sweet and Savory Dishes

(*Continued from page* 29.)

CHICKEN CREOLE.—Cut a chicken in pieces for serving; season with salt, pepper and paprika. Melt five tablespoonfuls of butter substitute in a saucepan, add one onion finely chopped and the chicken, and fry until well browned. Remove the chicken, add four tablespoonfuls of flour, two cupfuls of water or stock, three cupfuls of cooked tomatoes, one red pepper chopped, one stalk of celery chopped, and cook for five minutes. Replace the chicken in the sauce, and cook slowly until tender. Arrange the chicken on a hot dish, surround with the sauce and garnish with sprigs of parsley.

PRUNE PIE.—Moisten two tablespoonfuls of cornstarch with one tablespoonful of cold water and add one-half cupful of boiling water and cook for eight minutes. When cool add one beaten egg, two tablespoonfuls of corn syrup or honey and cook for a few minutes, but do not allow to boil. Then add one cupful of cooked prunes from which the stones have been removed, a pinch of salt and one teaspoonful of lemon extract. Put in a ready baked crust and serve.

The following conservation pie crust is excellent for pies:—Into a bowl sift one cupful each of corn flour, barley flour and wheat flour, add one-half teaspoonful of salt, cut and rub in one-half cupful of butter substitute, and mix to a stiff dough with cold water. Chill before using.

SELECTED pure pork—every bit of it!—chopped, to retain the flavor, not "ground" to tastelessness—seasoned to just the right degree of delicacy! Inviting in the carton—irresistible on the plate! Fried (in their own rich fat) to a delicious brown,

Brookfield Brand Pure Pork Sausage

are savory and appetizing enough to rank with the finest meal you remember. And don't overlook their true economy! Not an atom of waste—sixteen to eighteen sausages to the pound: sufficient to serve at least four people generously.

His Christmas Gift

(*Continued from page* 10.)

Now he stood like a being amazed, and looked on his son almost in fear. His face was pale, and his hands trembled so noticeably that he folded his arms and tucked his fingers into his armpits. Then he glanced from the child to its mother, and saw her patient eyes light up with a glory that took the plainness from her face. It frightened him, that new beauty of hers. He could have fled from the look in her eyes, ashamed and afraid. For through those eyes he looked into the depths of a soul that has experienced unutterable pain, intense thirst for love and understanding. How could he have known that she had feelings so fine! How could he have known that his neglect hurt her so cruelly!

"It's all right, my girl!"

He spoke the words with an effort, knowing that she understood some of his simple sentences by the movement of his lips. She was quick to read the sympathy of his face, and in the presence of the others that seemed all he could give her. A moment later he quitted the room without explanation.

Dr. Lett was not as unnatural a father as he appeared on first making the acquaintance of his son. A short time afterward he came and looked at the child again as it slept in a room across the hall from his workshop. He made the discovery that it was good-looking as infants go. It—why, it was like himself! At the risk of waking it, he felt that he must devise a simple test to prove whether its ears were normal or not. He snapped his fingers near its face, and instantly it started and cried.

"Thank God!" the man panted, trembling with excitement.

Across the hall, in the workshop, a woman knelt in front of the desk where lay his letter. It was Sibyl. He remembered with a start that he had left the unfolded sheet containing his message to the sea-green lady. What had he written? Why did he feel so differently about what he had written now that he had seen his son? As if to prevent his wife from reading it at any cost, he crossed the hall swiftly and stood behind her. As she did not hear him, she made no movement, and he saw that she had read the greater part of it and that concealment was impossible. *What* had he written? What would she do? Would the strange new light fade from her eyes, leaving her plain-looking again?

Presently she amazed him by raising the paper to her lips, kissing it fervently again and again. She was beautiful in her innocent rapture. When she spread it out once more for a second perusal, he read it over her shoulder, trying to imagine why she kissed it.

It was not addressed to any particular person, and it ran thus:

"My dear:

"When this scrap meets your eyes I shall be far away. Even Christmas means nothing to me this year but severe work and preparation for the great day that is to follow. Do not think too harshly of me because I have shut myself away alone. It is the only way to prepare for the triumph. That I intend you shall share with me.

"I am going to give you a Christmas gift. I know that I cannot buy you a present which your wealth has not already supplied; therefore my Christmas offering shall be unique this year. I have decided that my pet, my sea-bird, shall bear your name. When the eyes of the multitude first rest upon it they shall read those mystic letters which in my mind mean *you*. It is a fanciful name, and the public will not know why it was given. But you and I, who have waited so long for the day of crowning, will know, and we will rejoice together."

Here his pen had dropped, making a blot. There was absolutely nothing to indicate for whom the letter was intended. It was evident the kneeling woman considered it her own. Who had waited so long for his day of crowning? Or contributed so much to it?

Then she turned and saw him standing behind her, as pale and unnerved as she was herself. Slowly the flush came back to her face, and she shrank as though apprehensive of his censure, but he only said in his absent-minded fashion, albeit more kindly than usual:

"It's all right, my girl!"

Their conversation could not go much further unless he chose to write his thoughts on paper; but Sibyl Lett was an adept at reading faces, and she knew from his look that something had touched him very deeply. For some reason he was pleased with her.

"Your gift—I take it with me," she said, her tone almost a question. And when he nodded, she put it inside her dress and went away.

Sinking into the chair before the desk, Dr. Lett stared absently before him, fumbling among the papers as though he would write. Then he gave up the pretence and sat still. Hobson came and switched on a light, which he was instantly commanded to turn out again. When he inquired if there was anything else for him to do before retiring, his master said "No!" in a tone that caused him to shrink through the crack of the door and lose himself in the darkness.

"My gift—my sea-bird's name!" the doctor murmured. "I have given it away twice. Can my Lady-bird have two names?"

The hours of the night went by, and the battle continued in the soul of the man. Finally he gathered up some scraps of writing, old envelopes and a picture, carried them to the grate, tore them into shreds and watched them burn.

"So help me, heaven! My sea-bird shall have but one name!"

Christmas week Dr. Lett sent his wife a wire urging her presence in the city. When she came to him he saw that the glory in her eyes had become a habitual expression. He wondered if she observed at least a more contented and less irritable expression on his face. Wrapped in her impenetrable reserve, Sibyl stood among the notables who surrounded him on the day of his triumph, and though she was stared at curiously by all, he felt satisfied that she saw very few faces except his own.

"Your gift!" she murmured, and again, "Your gift! I have the writing here on my heart."

The sea-green woman was in the crowd, a gay chatterer, a woman of many graces, where Sibyl Lett possessed only one or two. At times the doctor's eyes followed her, but Sibyl did not know she was there. He recollected that he had promised her long ago—long before the writing of the letter that fell into the hands of his wife—that he would give his pet invention her name. He wondered if she remembered.

The shouting of the multitude came up to the doctor like the incense of praise; and when the sea-bird rose and began a series of speed manœuvres under the control of her skilful young pilot, the people went mad with enthusiasm.

Dr. Lett had often wondered what his feelings would be in that supreme moment. Now he was conscious of this alone—that he watched the expression on the faces of two women as the sea-bird cleared the earth for the first time. One stood by his side, her cold, timid fingers seeking his own; the other sat at some distance, an assured, satisfied smile on her beautiful countenance. The man between them stood unmoved. He had made his choice. Frankly he looked into the eyes of the sea-green lady as the splendid machine rose to air. Confidently she smiled back—then the laugh on her rich red lips died away. For the sea-bird's name was "*Sibyl.*"

An Ideal and Pleasing Christmas Gift

Moir's Chocolates are simply irresistible.

A varied assortment of deliciously flavored creams, nuts, fruits, jellies and many other exquisite centres temptingly hidden away beneath a coating of smooth, rich chocolate.

Put up in packages varying in weight and in a variety of designs.

Moirs Limited
Halifax, N. S.

My Best Idea

(*Continued from page* 31.)

Keep a little tin of coal oil in the bottom of the kitchen clock. The works will absorb the oil and thus keep the clock in good running condition.

E. J. P.,
Eramosa, Ont.

To Join Yarn.

When using several colors in a knitted garment or sock, I have found that running two threads together or even splicing is not always satisfactory. By joining in the following manner the colors can be kept entirely separate, and the threads will not pull apart. Knit up to within eight stitches of the joining place, and double the yarn back so that you have a loop about two and one-half inches long. The length of this loop can be judged almost exactly after a little experience. Now knit with this loop until the end is reached, then slip the second color through the loop and carry along double for five or six stitches to make secure. I find this especially convenient in making fancy sock tops.

Recipes on Rings.

Recipes are so numerous that they have overflowed my card-index. Consequently I have pasted each recipe on a 3 x 5 card having a hole punched at the top. I then strung them on flexible key-rings, cake recipes on one, casserole recipes on another, and so forth, and these rings are all conveniently hung on hooks in my pantry. Each set has a stiff cardboard at the front and back, appropriately inscribed so that the recipes are as perfectly protected as in a card index. The flexible rings also make it as capable of expansion as the card-index system.

Common Cord for Darning.

I discovered through an emergency a substitute for darning. I was mending some blankets for a friend, and being short of darning wool, I unravelled some soft white string, which is used for tying parcels, and used it double. It looked quite as well as wool and costs nothing but the trouble of untwisting.

As woollen goods are getting so scarce and dear one has to make them last as long as possible.

The Best Books of The Year

Selected by
PETER O'DONOVAN.

When the weary reviewer—reviewers are something like Ireland in being chronically "disthressful"—well, when the reviewer swings around in his office-chair and takes a look back over the books of the past twelvemonth, it is curious how the same familiar names always leap up before his memory. Wells, Bennett—there is no getting away from them. It is rather too bad, too, for one would like to get some new names to head the list. But what is one to do? If Mr.

H. G. Wells.

Wells and Mr. Bennett will persist in writing the most widely read and discussed books in the language, there is nothing for it but to give them the place of distinction at the head of the board. Fortunately, there are lots of other names—some of them quite new, like that of Mary Webb—which deserve a place only a little lower down on the roster of honor.

The extraordinary thing about H. G. Wells is that he can write so much, and yet write with such vitality and absorbing interest. It is a poor year which doesn't see at least two books from him, usually a book of essays as well as a novel. And this year shows no let-up in his extraordinary productivity. His volume, "In the Fourth Year," presents his most recent reflections on the Great War and the lessons we must draw from it. That it is very interesting goes without saying. It is also daring as well as wise, for Mr. Wells points out that it is not only Germany which must learn from the war to change her ways, but that there are weak spots even in the great and beneficent system of the British Empire—small spots in comparison, of course, but matters that must be remedied if the Empire is to go on being the world's leader in civilizing influence.

"Joan and Peter," the new Wells novel, is a treatise as well as a work of fiction. Wells, the novelist, is always chiefly concerned with ideas, but he sees them dramatically in the lives of his characters. That is how his books are so fascinating in spite of his preachments—one might almost say, because of his preachments. The story of "Joan and Peter" is in a sense an attack on the existing systems of English education, as shown in their effect on the minds and lives of a charming English girl and her foster brother. It is also a story of the war, for it is the war that finally awakens Peter to the weakness and folly of the life he was leading, and brings him and Joan together in final happiness for both of them.

If Mr. Wells is always looking to the future, Mr. Bennett is satisfied to turn his gaze with cool omniscience on the present. He has no theories of life—at least none that get into his fiction. The world to him is a supremely interesting show, which with scientific detachment he studies in all its phases. Thus his novel, "The Pretty Lady," is an analysis of the life of London as affected by the war. He shows this in the careers of one man and the three women he is in love with at different times. One of these, the "pretty lady" herself, is a Frenchwoman. Christine is a member of the most ancient and unorthodox of professions. She has the weaknesses and wickedness of her class, but Bennett shows that even that is not incompatible with the possession of some excellent qualities, kindness, unselfishness, and devotion. Mr. Bennett, being hardly less industrious than Mr. Wells, also published during the year an excellent volume of literary criticism and reminiscence, "Books and Persons."

For the sake of variety, before calling attention to any further works of fiction, I must take up two war-books which are classics in their kind. Curiously enough, both are by doctors. One is "The New Book of Martyrs," translated from the French of Georges Duhamel, and the other is "Marching on Tanga," by Brett Young. The first is a series of hospital sketches, in which a French physician has drawn unforgettable portraits of the men who have passed through his hands, describing them with a charm and vivacity, a wistful humor and a graphic power, that are not to be surpassed in war-literature.

Dr. Brett Young accompanied the British expedition to German East Africa, and tells of the sufferings and heroic achievements of the column that pressed down the Pangani River and forced the Germans to retire into the terrible jungles and fever-ridden swamps of the southern wilderness. It is a beautiful book, as well as a most dramatic one. Dr. Young tells of being chased through the bush by German Askaris, bloodthirsty native troops. But he also gives descriptions of African scenery which linger in the memory like a strain of music. It is a book which will be read with as much interest years from now as to-day.

Having given the place of honor to two English novelists, it is only fair that we should turn now to the United States, where the year witnessed the publication of some very notable novels. "His Second Wife," by Ernest Poole, who won the Pulitzer Prize, given by the founder of the New York

Booth Tarkington.

"World," for the best novel of the previous year, is an admirable piece of work, almost as good as its prize-winning predecessor. Like the other, it is a study of social conditions, and tells how a brilliant young architect, whose career had almost been ruined by the social ambitions of his first wife, was saved by the devotion and idealism of his second. It is a serious and skilful novel, but it would have benefited greatly from a touch of humor here and there.

An American novelist who has humor and charm, and who is none the less sincere and thorough in his study of the life he depicts, is Booth Tarkington. Time was when Mr. Tarkington was generally regarded

Make Your Christmas Book Selections From These:

The author's names alone are an assurance of excellence and acceptability

The Young Diana

Marie Corelli.

An amazing story told with all Miss Corelli's charm and interest, in which a maiden-growing-old is, through the wonders of modern science, rejuvenated into a youthful beauty with all the world before her. $1.35.

The Crack in the Bell

Peter Clark Macfarlane.

An unusual story of love and politics in a big American city, with a most delightful hero and heroine, and just enough modern business introduced to give the whole matter a most interesting tang. $1.35.

Our Admirable Betty

Jeffery Farnol.

Back to the days of "The Broad Highway," to the times of fluffs and ruffles and pampered aristocracy, goes this newest Farnol book, with a delightful heroine, as well as an old-style, true-blue hero. Everybody will be talking about it shortly. $1.75.

Canada's Day of Glory

F. A. McKenzie.

Thrilling stories of the exploits of the Canadian Corps in France—told "differently"—by a trained war correspondent whose despatches in Canadian newspapers for the last three years have gained him Dominion-wide fame. $1.50.

The Magnificent Ambersons

Booth Tarkington.

The author of "The Gentleman from Indiana" comes back with another strong novel which will appeal to the human in all of us. This is said to be one of the best Tarkington has done. $1.50.

Dere Mable

Lieut. E. Streeter.

Positively the funniest, as well as the biggest-selling book of the year. Half a million copies already sold. Presumes to be letters from a rookie at a United States Training Camp to his sweetheart at home. It is chock full of unintentional and rollicking humor. "The book of a thousand laughs." The illustrations are funny also. 75c.

Josselyn's Wife

Kathleen Norris.

Mrs. Norris surely has the faculty of analyzing a woman's heart. This is another of her strong social-analytical novels, centering around the life of sweet Ellen Latimer, transported by a whirlwind marriage from a small country town to the luxuries of wealthy social life in New York. $1.35.

In the Day of Battle

The Best Poets.

This compilation of the best verse inspired by the war from the pens of such writers as Rupert Brooke, Kipling, Service, Allen Seeger, Tagore, Marjorie Pickthall, and a score of others, appealed so strongly to the United States authorities that even though it was a Canadian production, a copy was placed in every training-camp library. This is the third, revised, and enlarged edition—a book which will be enjoyed now, and will fill a big place in your library for years to come. $1.25.

Your Bookseller can supply any of these.

POSTPONED ONTARIO CONVENTIONS

Will Probably Be Held In February 1919

UPON advice received from the leaders in Institute work in various sections of the whole Province, it was decided, on account of the influenza epidemic, to postpone all three Women's Institute conventions, and it was almost unanimously advised by these correspondents to hold the conventions after the new year. Since Peace has been declared the programmes for the conventions will be planned in accordance with the new responsibilities which will come to the Institute as a result of changed conditions. Red Cross work and other patriotic endeavor will call for the best efforts of the Institute for some time to come, but we must make our plans in co-operation with other organizations and officers of Government Commissions and public service organizations to take part in the reconstruction period.

The advice of the Institute officers and members in the three Convention districts will be followed in completing plans for the conventions. The Department is open for suggestions from all members of the Institute as to subjects to be brought to the attention of the delegates. Suggestions along this line should be addressed to the Institute Branch, Department of Agriculture, at an early date.

Resolutions to be brought before the Conventions should be sent, at an early date, to Mrs. R. V. Fowler, of Perth, for the Eastern District; Mrs. Wm. Todd, of Orillia, for the Central District; Mrs. W. T. Mead, R.R. No. 3, Blenheim, for the Western District.

No doubt, a feature at each of the conventions will be the presentation of plans by the various commissions for re-establishment work; outlines of the assistance which the Institute, as a body, can render along educational lines and in health problems.

Report for 1917 and Bulletins.

The report for 1917 is about ready for distribution and the Branch officers are urged to send lists of members for 1918-19 to the district secretary, to be forwarded by her to the Department.

Two copies of Bulletin 259, "Books on Agriculture and Household Science"; 263, "Mushrooms"; 265, "Bacteria—Friends and Foes," will be sent to the secretary of each Branch. The members will have an opportunity at one of their early meetings to examine these Bulletins, and those who wish copies may write to the Ontario Department of Agriculture, Toronto, for same.

Winter Meetings and Other Matters.

The Board of Agriculture and Women's Institute meetings, planned for late November or December, were postponed on account of the influenza epidemic. Provisional lists for these, as well as other meetings asked for by the Board of Agriculture and Agricultural Representatives will be submitted to the Board of Agriculture, Women's Institutes, and others concerned, at an early date. Only about 175 Institutes are concerned in these, and we beg to announce that other Institutes which are desirous of having a special speaker on Health Problems, the general work of the Institute, opportunities and responsibilities of the Institute under Peace conditions, etc., may arrange for the same by making application to the Department in November or early December. Speakers will be sent to these special meetings upon condition that a suitable hall is provided in which to hold the meeting, the advertising thoroughly done in the community and the speaker entertained while at the place of meeting.

Demonstration Lecture Courses.

While a few applications have been received for instructors in two-weeks' courses in "Home Nursing and First Aid," "Sewing" and "Domestic Science," no doubt many additional branches will wish to take advantage of this splendid service during the coming winter and spring. The charge is only 25c for each member of the class who belongs to the Institute, and 50c to those who are not members, except for the sewing course, for which an *additional* $1.00 is charged to each member of the class.

Full particulars will be furnished by writing to the Institutes Branch of the Department of Agriculture, Toronto.

All these courses have been very much appreciated in localities which have taken advantage of them, and it is because of a lack of knowledge as to the real benefit to be derived that many more branches have not formed classes. The members who wish such instruction should request the officers to form classes.

Since war work will not require the undivided attention of the members, some time can very well be devoted to this splendid work.

The Women's Institutes and War Work.

The members of the Institutes have "stuck to their guns" nobly during the more than four years of war. Their record of contributing in both money and work is most gratifying, and we hear many words of appreciation on the part of those who have been identified with war-time activities—both government officials and the officers of Red Cross and other patriotic organizations. Their givings in cash and goods during the past year have been at least $675,000, or more than $20 per member, and when we remember that the largest portion of this means extra work on the part of the women who have not been able to get domestic help and have had to give more than usual assistance in farm work, the record is all the more worthy.

The advice and co-operation of the Women's Institutes in community effort and national undertakings will be sought. No body of women has made greater sacrifice or shown keener judgment, or greater resourcefulness than the women of the rural districts.

County Medical Inspection of Schools.

Peel County is justly proud of having every rural school medically inspected, being one of the first two to have this systematically done throughout the county. The expense incurred in furnishing an Inspector was borne by the Department of Agriculture, through the Women's Institute Branch. The mothers were brought into direct touch with the school work, and at least two of the members helped the doctor in making out the reports. The school boards were also invited to see the inspection, and many doubting fathers were made enthusiasts in the work.

Mr. Stark, the Peel agricultural representative, in co-operation with the Women's Institute, rendered valuable assistance in planning for and carrying on the work. Dr. Mackenzie Smith was the Inspector. On one of her inspection trips, when the President was driving her on the homeward trip, they made a wrong turn, and inquiring at a farm house for the proper road, they happened to be speaking to the mother of one of the children who had just been inspected. This little one had said that she was going to bite the doctor's finger, instead of which, on her return home, she said "the doctor is just lovely and there is nothing to be afraid of."

One of the secrets of Dr. Mackenzie Smith's great success is that she gets the confidence of both children and parents, and makes them realize the vital importance of insuring proper health for their children through early treatment of the throat, nose and teeth, where necessary.

The eyes are also tested, many cases being found defective, where a defect had not before been even suspected, sometimes averting most serious consequences.

As these operations need a specialist, and so entail a big expense, as well as the difficulty of the parents getting the children to a hospital, they are very often neglected, and the doctor's report not followed by proper action. To meet this condition, the Institute has conducted school clinics, bringing a throat specialist and nurses to the district. So far, three of these clinics have been held in Peel—at Alton, where 28 children were operated on; at Port Credit, where there were 39 done in two days, and Streetsville, also two days and 44 operations. A two-day dental clinic had also been arranged by Streetsville, but was postponed on account of the epidemic. The following letter from the promoter of the Alton clinic gives a comprehensive description of the manner of conducting a clinic:

"Alton, Ont.

"Received your request on December 18th, and though rushed for time, I'll try and give you a short account of our work.

"As you are already aware, we had the medical inspection. Well, in discussing the advisability of a clinic with our local doctor, he promised us his help and advice in securing the specialist, etc. We could not get definite answers from any as to whether they would come, or as to prices. Our doctor met Dr. ——, of ———, on Friday, November 30, and he was willing to come if we could rush it on before the roads would break up, so that he could motor; also, that there would be at least 25 patients, to make it worth while. Before this, in view of the probability of having the clinic, I had spoken to Mr. Amos Mason and secured the use of three bedrooms and bathroom of his home. His home is steam-heated and electric-lighted, so we were very fortunate in that respect.

"When our doctor notified me at noon, December 1st, of the result of his conference with Dr. ——, I thought at first it was impossible. (He wished to come the following Wednesday, December 5th.) However, Mrs. Dorrington and I dropped our Saturday work and interviewed enough parents to make the 25 patients, and found no trouble at all in getting their children to be operated on. So it was decided to hold the clinic on Wednesday, December 5th. Remember, we had no prices, but told the people we thought it could be done for not more than $15 and not less than $10 per patient.

"On Monday, Mrs. Dorrington and I went to these same homes and told each parent what preparation was necessary. Each patient was to bring two sheets, two towels, one pillowcase and nightdress.

"We secured camp cots and made up 12 beds. We had two operating tables. Mrs. Dorrington and I provided 12 sheets for use there, and we used a shipment of Red Cross towels (55) for the operations.

"We got a web of cheesecloth. A trained nurse, who was visiting in the village, cut this all up into necessary condition, and sterilized that and all sheets, towels, etc., used in the operating room. Word was sent, warning patients to be on hand at 9.30 a.m. We had the specialist, our own doctor for the anæsthetics, and three nurses, and Mrs. Dorrington, Miss Dowswell and myself furnished whatever other help was needed.

"At one o'clock, Mr. Everton Barker was on hand with his closed car, and as fast as the patients could be removed, they were taken to their homes and put to bed. We had 26 anæsthetic cases and two local cases, all of which were highly successful.

"*Re the Paying.*—Dr. —— would not make a definite charge. If we could get him $10 per patient, he said he would be satisfied. Our own doctor charged $3 per patient and supplied the ether. Our nurses were $5 each, and $10 for the nurse who prepared the supplies. So we formed this scale of charges:

1 patient in family.....$15
2 patients in family..... 25
3 patients in family..... 30

Statement of Expense and Receipts.

Doctor $200
Doctor (anæsthetics) 60
Three nurses 20
Cheesecloth and meals for nurses 10

$290

22 paying patients, whose fees amount to about....$300

"If this can all be collected, we'll have plenty to meet our expenses without drawing on our Institute, which is none too flush of cash just now. Of course, there are some who would like to have had it done for less, but that is the best we could do in such a short time to work. One man wanted to know how much I was getting out of it, and I told him: 'So far, nothing but abuse, and a few two-cent stamps I had to put on cheques.' But, oh, there is such a satisfaction in having accomplished something worth while. The receipts are not all in yet, but I don't think there will be any trouble.

"Hoping these scattered thoughts will be of some use, I am,

"Yours truly,

"(Signed) Mrs. Thos. Meek.

"P.S.—I took my own daughter to Guelph in October for a similar operation, and my expenses were: Doctor, $25; doctor, $10 (anæsthetic and mileage); hospital bed and expenses, $5.50; total, $40.50."

The improvement in the children's work, as a result of their better health, derived from the clinics, has more than justified the effort the Institute has made in this direction, and should be an inspiration to other districts to take up the children's welfare work.

Women's Institutes in England.

Miss Beardmore, of Port Credit, has contributed the following interesting item from the London, England, "Evening Standard":

"We shall hear less about the soul-destroying dullness of village life when Women's Institutes are even more widely spread. There are now over 800 in England and Wales, although the movement was only introduced here from Canada three years ago.

"Members of the Institutes meet to exchange ideas and produce, and to learn domestic arts and crafts, which are too numerous to describe here, but which have provided most interesting exhibits for the Women's Institute Exhibition which Lady Denman opened at the Caxton Hall this morning.

"Fruits and vegetables, jams, cheeses, home-made toys, baskets and garments are all to be seen, and many of the stalls are adorned with a banner worked to represent the county or district from which the exhibits have come.

"The list of Institutes exhibiting is as suggestive of country depths as a folk ballad, for it is made up of names like Barrow Gurney, Hinton St. George, Chew Magna, Howden-le-Wear, and Temple Cloud.

"Miss Mowbray Laming, one of the organizers of the exhibition, told me that in pre-Institute days the village housewife kept all her good ideas and recipes to herself, but where there is

(*Continued on following page.*)

Canadian Women's Institutes

(Continued from preceding page.)

an Institute established the women become at once keen on sharing or exchanging their good things. Queen Mary is going to visit the exhibition to-morrow."

Peel Women's Work.

Peel County Institute has always been progressive, but this year has outdone all its previous records, and has forged well to the front of Ontario Institutes.

Peel women, in their spring convention, decided to work this year for the Navy, at the suggestion of the County President, Miss Helen Beardmore, of Port Credit. Sir William Hearst, the principal speaker of the afternoon, congratulated the Institute on its choice of work, as there had been so little done for the sailor, who keeps open the high seas and makes it possible to have Canadian produce exported.

The direct result of this resolution was the mammoth fete, which has been already described, with some views, in the October issue. We regret that the report was rather inadequate, not having come from Institute headquarters, as it lacked detail of the splendid results for the sailor, and how and where the money was raised, which will be interesting to our many readers throughout the country.

County unity of work was established by an inaugural meeting, in the form of a district officers' luncheon, given by Mr. and Mrs. A. M. Hobberlin at "Ben Machree," their home in Port Credit. This opportunity was taken to permit the ladies interested to acquaint themselves with the extensive and beautiful grounds on the Lake Shore, which had been offered for the fete.

Col. Cecil G. Williams, Field Secretary of the Navy League, spoke to the women present and convinced them of the need for their work. The highest enthusiasm was generated, which made possible the wonderful result of $3.001.80 clear.

Emphasis was laid on the necessity of selling the admission tickets in advance, as it gave everyone the opportunity of giving their twenty-five cents to the Navy. Disappointment was felt that some of the Branches didn't realize their possibilities in this regard, as the following statement shows:

Port Credit	$466.65
Clarkson	88.75
Alton	25.15
Erindale	24.50
Snelgrove	23.05
Meadowvale	13.30
Brampton	11.75
Malton	7.90
Streetsville	7.35
Castlemore	4.50
Cheltenham	3.65
Caledon	1.50
	$678.05

The Branches lowest in the list are a considerable distance from Port Credit, and could not, of course, be expected to sell many tickets.

The most profitable individual item of revenue, $507.65, was realized from the sale of tickets for a little pig, donated by the Malton Branch. This little pig was made famous and historic in the county under the name of "Malte."

One of the duties undertaken by the energetic secretary, Mrs. A. M. Hobberlin, was the securing of the handsome sum of $388.00 net from the sale of advertising space in the programme.

The officers of the Ontario branch of the Navy League of Canada were a tower of strength in the practical help they gave. They realized in advance that an important result was to be obtained, both financially and educationally, by rallying to the support of Mr. Hobberlin, whose generous supervision of detail was untiring.

Mrs. Avery Brayley and the Clarkson Branch made a wonderful success of the Midway, making it both entertaining and profitable. The Erindale ladies handled a Fish Pond of 2,000 articles; Mrs. A. R. Clark, of Lorne Park, arranged a delicious cafeteria supper, which pleased the many guests and added substantially to the fete funds. Mrs. Percy Hodgetts, of Clarkson, the County First Vice-President, was everywhere, supplying help when it was needed with her usual quiet efficiency. Mrs. Dorington, of Alton, the Past County President, and Mrs. Meek, of Alton, the Second County Vice-President, were most energetic in enthusing the north end of the county, and were successful in securing a fine donation for Mrs. Graham's home cooking booths. Mrs. Fairbairn, of Clarkson, did all the newspaper publicity work, and did it well. Mrs. John M. Godfrey, of Port Credit, who was made Treasurer of the Fete, took charge of the funds, and handled receipts and disbursements most accurately, having her books audited by Mr. Jno. E. Hall.

Peel County is justly proud of the magnitude of the result of the Fete, $3,001.80 clear, a result which has not been equalled by any other organization in the Province. In addition to the financial benefit to the sailor, the county, as a whole, is now educated to the importance of the Navy to the farmer, a band of sympathy which should grow as a result of the inspiration given through the Institute by this Fete.

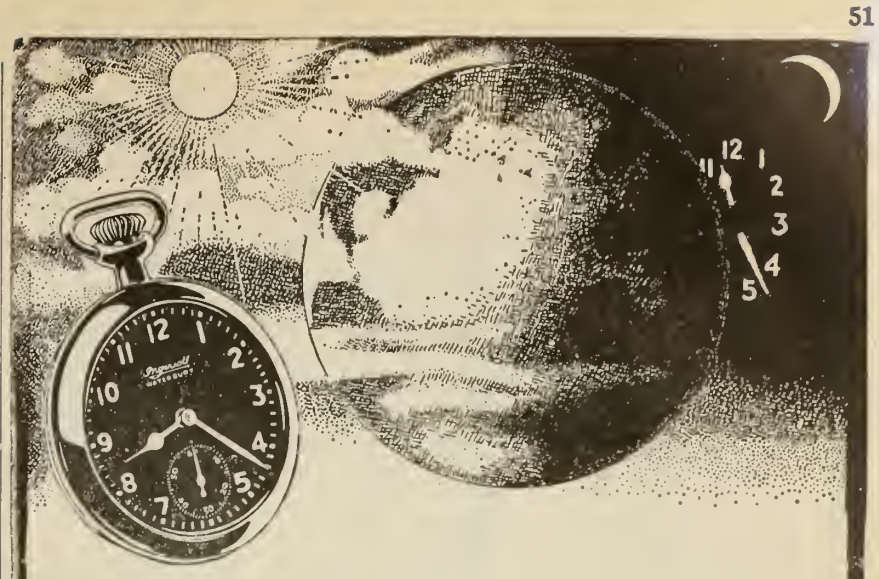
Report of West Lorne Branch.

For the year ending May 31st, 1918, our receipts amounted to $1,861.65. This money was procured in the greater part by monthly collections. After testing various ways of raising funds, such as teas, concerts, food sales, thimble parties and so forth, we decided that most of these were wasteful, and used up too much of the energy that would be employed to better advantage in other ways, to help our boys, for our work has been almost wholly devoted to our heroes in France, West Lorne being very proud of the fact that nearly ten per cent. of her 700 population enlisted for service. We divided the village into districts, and volunteer collectors called on the homes, asking for a sum to be given every month till the war ended, and we have met with splendid results. Recently the township council agreed to grant us an amount in proportion to our number of country members. We immediately got busy, and have now a membership that is half resident in the country around us. Since then our collections have fallen off to some extent. It is a good plan for collectors to set a certain day in the month for collecting, and people are then ready with their money on that day. We have found that of all plans for raising funds this has proven the best.

Another source of much money is the privilege accorded us by the Driving Club of having a booth free of charge at their race meets on Labor Day and 24th of May. At these booths the candy is all donated and is pure profit, and all goods are given to us at cost by our merchants, who have shown themselves always ready to help.

Tags sold on these days brought in a good sum, and this department was handled by the High School girls, under the direction of one of our ladies. A baseball game brought us $19.50 clear.

Concerts, too, were given by our Dramatic Club, which, I sincerely regret to say, is now obsolete, owing to the fact that so many of our brightest and cleverest actors are now on the fighting line or serving their country in some other capacity.



Sales of old papers, rubbers and tea lead also bring in money. We have a committee to look after this as a rule, and find it a fruitful source of revenue.

At our Winter Fair, or, as we call it, the Chicken and Corn Show, we have various devices for catching stray dimes. There has always been some kindly disposed farmer or merchant who has donated thoroughbred chickens, seed grain or something of value—one time it was a horse—with the request that we use it to gain money for "our boys in France."

By putting a glass jar tied with red, white and blue in each of the schoolrooms, and asking the children to deny themselves candy, peanuts and ice cream and give the pennies to the soldiers of Canada, we gained $20.61, and I might mention that the continuation class had the smallest amount, even the baby room beating them in self-sacrifice.

Besides raising money, we raised "eggs" for the Sanatorium, naming a certain place for the reception of gifts of fresh eggs. We invited all and sundry to donate these much-desired articles of food, and the reply to the first request was 60 dozen. The next reply was not so loud, it was but 22

(Continued on following page.)

Ingersoll Service

Night and Day—The World Round

QUARTER of a century ago many a watch pocket had to go empty—watches were expensive. Then Robt. H. Ingersoll made and sold the first Ingersoll watch—the Maple Leaf model, and reliable time pieces came within the reach of everyone. Fifty million Ingersoll watches produced since then have furnished a good time-keeping service to the people of every nation, the world around. With the introduction of the Radiolite—the watch that tells time in the dark—this service is available both day and night.

The Ingersoll idea was not only to design a reliable watch but to develop a factory system that produces thousands of watches in the shortest time and the fewest machine operations. In spite of advancing costs of material and labor and strenuous war conditions the democratic Ingersoll still sells for a price that puts it within the reach of every inhabitant of the Dominion.

Each part is inspected many times and every finished movement is thoroughly tested before leaving the factory—for the Ingersoll standard of quality is inflexible and every Ingersoll is guaranteed.

Buy a watch with the name INGERSOLL on the dial and you are guaranteed a good time-keeping service.

This is the *Ingersollite*

The little spark you see in the dark.

Real radium makes the Ingersol-lite glow in the dark and guide you to your electric or gas fixture. You walk straight to the chain or switch and turn on the light. No groping—no colliding with furniture, etc.

Easy to attach—No tools needed. Can be used on chains, key switches, gas jets or oil lamps. If your dealer doesn't sell them yet, write us.

Price throughout Canada—
35 cts.

Canadian Women's Institutes

(Continued from preceding page.)

dozen, the Institute supplying the eight dozen required to fill the crate.

From the funds acquired, we spent over $900.00 in supplies forwarded to the C.W.C.A. at St. Thomas, sent comfort boxes at Christmas and Easter to our home boys overseas, extra boxes at different times to those in hospitals; British Red Cross, $50.00; Belgian Relief, $10.00; Italian Red Cross, $50.00; Byron Sanitorium, $25.37; Prisoners' Bread Fund, $175.00; Returned Soldiers' Fund, $20.00; Y.M.C.A., $25.00, and parting gifts of fountain pens to our lads who leave for the front.

Besides this, we have a flower fund, kept separate from our Institute fund. A permanent committee, consisting of one lady from each church, keeps track of all the sick people, and this fund, obtained by a contribution of one penny, or as much more as one cares to give, each month, procures flowers during the winter months for the sick. We are at present working on the medical inspection for schools.

Having asked Miss Coutts to come and address us, we invited all the rural school boards to be present, but, sad to say, they were all conspicuous by their absence except the Rodney board, who were with us in full force. Two of our own trustees also put in appearance, and seemed very favorably impressed. We have a committee to interview the boards of the rural schools, and hope for some development soon; in the meantime we conduct a "talking campaign," and hope for good results. In closing, I would like to say, near the end of last year we were $200 in debt, but suddenly out of a clear sky rained dollars; a donation of $50.00 from a citizen who never before gave us a cent; $10.00 from a friend who comes to West Lorne occasionally; $10.00 from a nurse whose home is with us; $5.00 from a former resident, now in California, and our collections were especially good, so that when all was counted we were $35.00 to the good, and we ended the year with $274.30 on hand.

So to the sister societies I would say: Never despair; resolute energy and a great faith will see you safely through.

Report of Seymour West Women's Institute.

Our work has been of a two-fold nature—patriotic and educational.

Our patriotic work has been confined to work at home, making comforts for soldiers and hospital supplies.

One particular feature of our work has been the regular packing of boxes for our boys overseas, containing socks, sugar, candy, candles, Oxo, cakes, fruit cake, apples, stationery, peanuts, tobacco etc.; in fact, everything that boys could wish for. These things are collected monthly.

The main feature of our Institute is the splendid organization for work. We have, besides the regular officers, an addition of district officers on each telephone line, whose duty is to call each member on her line and give any information which the President and Secretary may wish passed on. They also distribute Red Cross supplies in their district, collect contributions for boxes, etc. We have never neglected our regular Institute work. That has been carried on principally by our young girls through the yearly programmes.

Our young girls have charge of each meeting, with the privilege of calling on one woman to assist. Our programme is divided into three parts:

1. Paper—subject selected at a special meeting in the year.

2. A paper—some standard author to be studied for a month.

This was to be a special feature of our work, and has been partly affected by our patriotic work. The young girls are much interested, and the educational benefit is very marked. These papers would compare with any I have ever read.

3. Social or musical part.

This is supposed to be the best we can provide, and, if possible, have some connection with the paper or author which we selected for study.

This means that our regular work has not been interrupted by patriotic work, of which we have tried to do as much as possible.

We have knit thousands of pairs of socks, made quilts, mufflers, etc.

Our Institute is trying to educate its members. Our young girls are showing the benefit of this in the result of the papers given at our meetings. No member wishes to miss the programme because of this benefit.

We sing our "Ode" and make it the law of our work.

J. CLARK, Sec.

Provinces Co-operate Through Institutes.

The Women's Institute of Summerland, B.C., has inaugurated a very unique enterprise. The society is made up largely of women living on fruit farms and keenly interested in the fruit-growing industry. For the past two years its members have undertaken the very practical scheme of disposing of the products of their orchards through the medium of the Institute to women on the prairie, the latter, in their turn, making their purchases through the agency of the Institutes to which they belong.

Through this system all commissions and middlemen's profits have been eliminated, and what is of still greater importance, the women claim that by selling in this way they can ship fruit of better quality. For when it goes direct from the grower to the consumer without having to pass through commission houses and retail stores it can be allowed to ripen on the trees instead of having to be picked green, as is necessary in the ordinary method of marketing, and is consequently of superior quality.

Last year, in this way, the West Summerland Institute sold $4,500 worth of fruit, the sales of one woman alone amounting to $300.

Another practical line of activity taken up by this Institute is the production of seeds, a really commercial enterprise, for a well-known seed house has agreed to take all the seeds the women can sell them.

Conservation of Food.

When, in 1918, one attempts to write a paper on "Conservation of Food," it is like attempting to show Lake Erie in a dipper.

The preserving of food from decay, loss or injury and getting it to our boys has become not only a national problem, but an internationai problem, almost world wide.

The word "conserve" meets us everywhere. It is like a great sign-post with just two fingers; one finger pointing to every individual in our nation, the other finger pointing overseas.

One cannot read a newspaper or a magazine, or even glance over an advertisement thrown at the door, without being confronted by it in the largest type and in the most prominent place. Sometimes it seems like a rarebit dream, to be growing so unduly large and fearsome that one has to shake one's self to be sure we are all wide awake and that it is a reality.

Yes, a reality it is, and one to which we are so unaccustomed that we must rouse ourselves and grapple with it, for upon our handling of this problem of conservation depends the very life of our nation, our homes and our loved ones.

The problem for us is a national one, and every citizen who does not "put the shoulder to the wheel" and do his or her best is a slacker, and does not deserve to share the benefits and the protection of our national life.

The problem of conservation for our government is tremendously complex, including as it does transportation, the handling of large business corporations, retailers, producers and even the inspection of every cellar, pantry and cupboard in the nation.

And it is just here in the little pantry and cupboard at home that the humble housewife bears so vital a share in winning the war.

An over-supply here; a lack over there; one household sacrificing something here helps one over there; a hundred here, helps a hundred there; a thousand here, helps a thousand there; and so on until it reaches the millions.

This opportunity to help is a great privilege and consolation, to everyone who has a father, a husband, a sweetheart, a brother or a son over there. And even to those who have no kin it is a comfort that the ordinary stay-at-home housewife who washes and irons, sweeps and makes beds, gets meals and washes dishes, can actually help to win this war for humanity and civilization.

I am not attempting to cover this

(Continued on following page.)

You May Have a Skin as Smooth and White as a Lily Petal

A woman's happiness, her success in a profession or in her social ambitions are often made or marred by her looks. A woman does not need to be *pretty*, but if she has an attractive skin and a clear and radiant complexion, she is called *beautiful*. Nearly all skin blemishes are the result of abuse of some kind or of mere neglect. In either case, the defects in the complexion may be entirely removed or greatly lessened by proper treatments, such as this Institution has perfected in 26 years of practical work. We treat all kinds of non-infectious skin troubles, such as Eczema, Pimples, Blackheads, Blotches, Crowsfeet, Wrinkles, Undue Redness, Roughness, etc. Treatments at the Institute must be arranged for in advance, but we can send our preparations, the same as we use, with full instructions for home use, in plain wrapper, on receipt of price, to any address in Canada.

Princess Complexion Purifier	$1.50
Princess Skin Food	1.50
Princess Hair Rejuvenator	1.50
Princess Cinderella Cold Cream	.50

Send for FREE Sample of this delicious Cold Cream.

Any reader of the Home Journal is requested to correspond with us in perfect confidence as to any skin troubles she wishes to have removed. Consultation by letter or at the Institute is FREE.

How We Get Our Raisins

(Continued from page 15.)

cultural Bureau. It will be readily seen that sugar predominates, and this is invert sugar, practically predigested and ready for immediate assimilation. A table giving the minera elements in the raisin is also append ed, which shows that the raisin is rich in the principal mineral element necessary to normal well-being.

Raisin grapes are picked when they are fully ripe, laid upon wooden tray in the open vineyard and dried in th sun. The curing process takes abou three weeks, and when the raisins ar half cured they are turned over so th sun can strike the under side of th bunches. When the sun-curing ha been completed, the raisin trays ar stacked in piles for a time, then th cured fruit is put into "sweat-boxes, where the moisture in the berries i equalized. The sweating completed the raisins are delivered at the pack ing plant, where the stems are re moved and the raisins graded as t size. The raisins to be seeded ar then shipped to the seeding plan where the raisins are steamed unt soft, sterilized, then passed through machine which flattens the berrie between rubber rolls, forcing the seed to the surface, whence they are cu out by a device much like a circula saw, operating against a rubber rol The raisins go immediately to th packing tables, and are packed whil hot. All the sweetness of the raisin natural. Nothing is added to the pro duct of Nature.

Suggestions for the use of raisin are numerous. The old-fashione rice pudding is incomplete witho them; Indian pudding, made wit cornmeal, is a delightful dish wit plenty of raisins; breakfast foods o all kinds may be bettered with handful of raisins, and of cours

(Continued on page 58.)

Canadian Women's Institutes

(Continued from preceding page.)

subject of conservation of food. It would take several volumes to do that, but if I can make a little clearer the fact that your bit and mine, in this handling of food, is as necessary as your boy's bit and my boy's bit in the handling of guns and ammunition, that is my aim.

Where shall we begin to conserve, and in what way and how can we help our boys thereby?

That would be a hard problem for us individually, if our government had not solved it for us. We should be thankful for that. Perhaps they have not worked it out wholly to our satisfaction, but the problem is so great and so complex that if their solution will help to any extent towards getting supplies to our boys we are surely glad to comply with every request and co-operate with every plan heart and soul.

Sugar, meat, flour, cereals, tea, coffee and so on. How easy for us to have our allotment, even to have cards assigned us for our groceries, knowing that what we sacrifice is being cared for and transported to our boys by the government. This is the thought that makes us more than willing.

One thing I have questioned, however, is the matter of substitutes. If I am buying wheat flour, I like to know it is 100 per cent. wheat. If it is rye or corn or oatmeal or rice or potato flour, I like to know it and do my own mixing. However, if it is necessary to mix with substitutes so the wheat and other good things can be shared with our boys, so be it, and never a word or a thought of complaint from me. And the decision of our government at present is that the mixing of substitutes is necessary.

And the eating of veal and lamb. Should this not be avoided by the housewife, and allow these animals to mature before killing them for meat? This seems to me very necessary in the conservation of meat.

Then the question of canning and preserving fruit and vegetables. And here the cry for more sugar has been raised. There are many ways of preserving these without sugar. Jellies from the pure juices of fruit, the drying of fruit instead of canning, drying of corn, etc. But these problems are a field by itself, and it behooves all of us at this time to make a scientific study of this important matter, namely, the canning and preserving of fruits and vegetables.

Another matter for daily thought is the preparation of well-balanced meals. This care given to variety of food is really an act of conservation, for if the food contains the variety to nourish all parts of the body, the health is preserved, and the stomach is not overloaded with food that does not satisfy; so the quantity consumed is really less than where too much of one kind of food is used.

But these are individual problems, and we housewives are doubtless all working them out to the best of our ability.

For the *larger things* we are looking anxiously to our leaders. We are saying, "Tell us what to do, so it will count for the most in this great struggle. We are standing shoulder to shoulder."

We are the ranks behind the boys, and we will not break, nor complain, so long as there is a boy between us and the enemy.

Only give us wise men at the head of affairs. And if the men are not wise enough, let us have a few wise women to lead, and we are with them every one.

While the problems of the housewife are perplexing in this matter of conservation, they are far simpler and freer from responsibility than those of the people higher up.

To this group of friends here assembled I would say. "Let us be loyal to our government and let us not complain, and let us cease talking so much about the high cost of this and that."

We are still clothed and fed, and sheltered. Things can become much more scarce, and higher in price, and we shall still go comfortably clothed, sheltered and fed, while the nations overseas are suffering for the barest necessaries.

We have been so accustomed to luxuries, that it takes time for us to realize that we can really get along very comfortably without many of them, and the sacrifice will do us good as individuals and as a nation.

How it unites our sympathies to deprive ourselves for a great common cause.

It makes our hearts beat together until we feel the throb of the great national heart.

And how we pride ourselves in our own beloved Canada, now as never before.

The Passing of Miss Susie Campbell

There are not many Women's Institutes throughout Ontario that have not been touched by the kindly influence of Miss Susie Campbell, of Toronto (formerly of Brampton), and her "passing away" will be regretted.

For a number of years Miss Campbell was on the regular staff of Institute lecturers for the Ontario Department of Agriculture, and was truly the friend of the Institutes. Her high ideals, her sincere friendliness, her cheery companionship, and her homely counsel will still be felt, even though she will not again visit the Institutes.

After a number of months of ill-health, Miss Campbell passed away in Toronto on November 12, 1918.

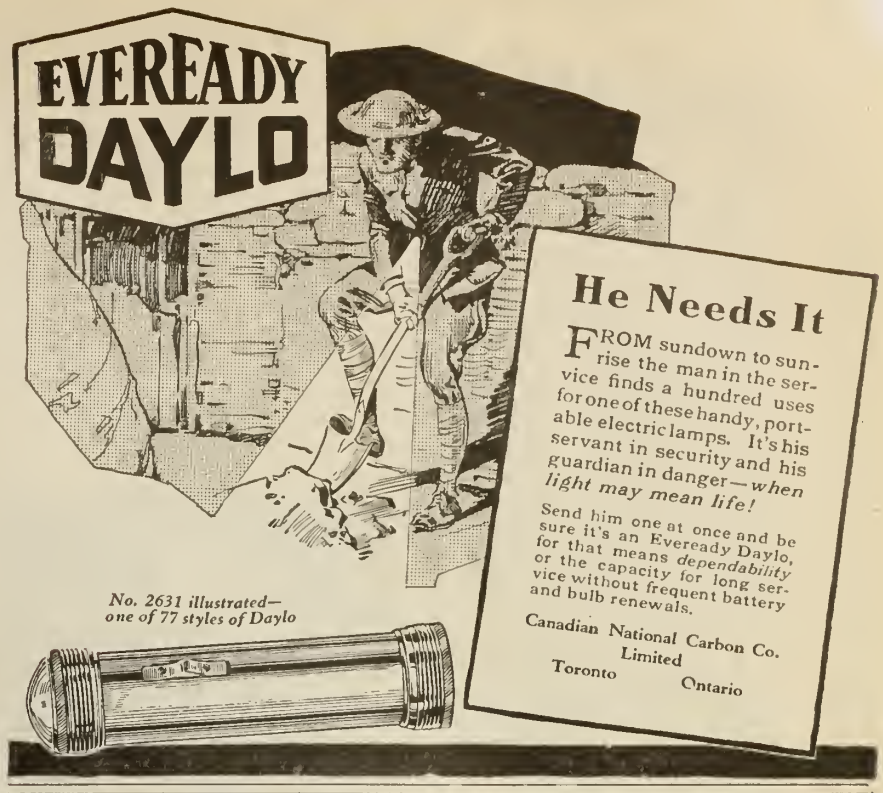
Dr. Fotheringham Dies In India

From India a cable has just arrived telling of the death of Dr. Susan Fotheringham, so well known in Ontario as a Government lecturer to the Institutes, and a physician of exceptional promise. Dr. Fotheringham graduated from the University of Toronto in 1911, and took post-graduate courses in Philadelphia, London and Vienna. Just a year ago she left for the Women's Medical College of Ludhiana, where she became professor of obstetrics. The principal of this college wrote of her work as follows:

"We feel specially fortunate in the new member of our staff. Dr. Fotheringham is fitting in to the life and work quickly, and the women and children are already devoted to her."

Influenza, followed by pneumonia, was the cause of the doctor's death.

"Germs"



(*Continued from page* 18.)

exercise, fresh air and sunshine are needed. To cleanse the third, water, exercise and rest are needed. To cleanse the fourth, water, exercise and rest are needed.

To supply the machine of the body with fuel for the working out of its varied functions, requires water, sunshine, good food, in proper proportions, and sleep in proper proportions also.

Perhaps all this appears a childishly, simply repetition, but if the last two paragraphs could only be "read, marked, learned and inwardly digested," as the English Church service so finely puts it, the germ of influenza, as well as a large number of other noxious germs would make small headway.

When illness comes, the very best advice that can be followed is that of one of our wearied medical health officers, "Take a laxative, go to bed and send for the doctor." If the latter is not to be had, as is the case in some of those distant parts of the country, where brave men, and braver women, are meeting and fighting things out as best they may, then keep the patient in bed, feed on fluids, till all fever indicated by headache and flushed face has disappeared. Then keep in bed still for a few days longer till strength returns, keep the bowels well relaxed, and remember that "above the clouds the sun is shining," and above the sun is—God, "Who knows and loves and cares, Nothing this truth can dim, He gives the very best to those who leave the choice to Him."

Time and Money

We want and we will liberally pay one energetic lady in each community to represent the "Canadian Home Journal."

We already have scores of local representatives in our big Home Journal Club, and some are making as high as $100.00 per month.

There are still many towns and villages in Canada in which we have not a representative and if you have any spare time that you desire to turn into money, write us to-day.

The remuneration of a "Canadian Home Journal" representative is according to the time and activity devoted to the work.

If you have plenty of time and energy there is practically no limit to your income or territory, for we make special provision for the live ones.

The women of Canada require more money to-day than at any time in the history of the nation. The "Home Journal" will supply that money in exchange for your time.

Write us to-day.

SUGGESTED GIFT BOOKS

THE CLASH. By W. H. Moore. Second and Popular Edition. $1.75.
In this volume Mr. Moore has endeavored to analyze, for the first time, the relations which the two nationalities in Canada bear, and ought to bear, to each other. The book is written for the average citizen, and though the questions involved are intricate, the author has succeeded in finding language wherewith to interpret them.

SPUNYARN AND SPINORIFT. By Norah M. Holland. $1.50.
A book of lyrics by a well-known Canadian author. Readers who never fail to go through the daily papers in the hope of discovering a new singer of new songs have met from time to time the fugitive verse of Norah M. Holland. Now these verses have been garnered into a single volume—seventy songs in all.

THE BUSINESS OF WAR. By Isaac F. Marcosson. $1.50.
One of the notable and outstanding books of the war, and the first to tell the facts that every man wants to know. These include the feeding, transporting and supplying of the British armies; the production and distribution of shells; the miracle of the motor in war.

THE POETS OF MODERN FRANCE. By Ludwig Lewisohn. $1.50.
This volume deals descriptively and critically with the modern French Poets, and includes examples by thirty outstanding lyrists. It has also a bibliography of each of the poets represented. The poems are adequately and gracefully translated and a slight biographical sketch is given of the various authors.

THE PATHETIC SNOBS. By Golf Wyllarde. $1.50.
In this tale, Miss Wyllarde brings out in an interesting and entertaining way the change that is taking place among women, both as regards character and vocation, during the present war.

THE FOUR HORSEMEN. By Vicente Blasco Ibonez. $1.90.
Translated by Charlotte Brewster Jordan.
A superb drama of modern life, leading up to and describing the first stage of the great war in France. The "Four Horsemen" are Pestilence, War, Famine and Death, who precede the Great Beast of the Book of Revelations.

GONE ASTRAY. Leaves from an Emperor's Diary. $1.50.
Whilst not purporting to be an actual transcription of the Kaiser's diary, this volume sufficiently reveals his extraordinary character to render it a valuable psychological study.

GENERAL FOCH AT THE MARNE. By Charles Le Goffic. $1.50.
M. Le Goffic's book deals with the six days' fighting which immediately succeeded the arrest of the French retreat, when the French soldiers at last turned round and fought the all-conquering Germans. An outstanding feature of the Battle of the Marne was General Foch's masterly handling of the Ninth Army. It is with this part of the battle that M. Le Goffic deals in the present volume.

THE EDUCATION OF THE NEW CANADIAN. By J. T. M. Anderson. $2.50.
An intensely interesting discussion of the dangers and advantages of the foreign element that is entering our national life. The writer has spent over ten years among the foreign settlers of the Prairie Provinces.

ILLUSIONS AND REALITIES OF THE WAR. By Francis Grierson. $1.25.
In this volume Mr. Grierson strongly advocates the necessity of Anglo-American unity, saying: "We are about to enter a phase of existence so new, so fantastically paradoxical, that it is hardly possible to bring home to the minds of the people anything like an adequate sense of the situation.

WOMEN AND SOLDIERS. By Mrs. Alec-Tweedie. $1.00.
Mrs. Alec-Tweedie is well known as traveller, author, journalist. Her social relations are wide and deep. In this volume she has brought together sketches on various phases of womanhood and essays on the problems of women, during and after the war.

LIGHTED WINDOWS. By Dr. Frank Crane. $1.25.
One of the series of short essay volumes for which Dr. Crane has become so justly famous. The title promises good cheer and comfort and the book in its contents lives up to that promise.

BEFORE THE WIND. By Janet Laing. $1.50.
A story of the present day, full of young life and vigor, romance and reality, humor and tenderness, with a strong detective interest.

UNDER FIRE. By Henri Barbusse.
Translated from the French by Fitzwater Wray.
A vivid description of life and battle in the trenches that in grip, and calm, remorseless presentation of fact reminds one strongly of Zola's best work. It is not a chronicle, still less a diary, but combines pictures of men in masses and of individual types into a sort of epic of army life.

NEW JUVENILES.

IN THE DAYS OF THE GUILD. By L. Lamprey. $1.50.
Colored Illustrations.
Tales of the little apprentices, merchants' children and country boys and girls who flourished and lived adventurous lives in the days when there were no huge factories and everything had to be made by hand.

SHOE AND STOCKING STORIES. By Elinor Mordaunt. $1.50.
Colored and black and white illustrations.
Tales told to a small boy of five, while he put on his shoes and stockings every day. Charming fantasies for childish minds, with appropriate illustrations.

THE LITTLE HOUSE IN THE FAIRY WOOD. By Ethel Cook Eliot. $1.00.
Colored Illustrations.
The charm and imagination of this story should make it into a children's classic.

HOW TO BE GOOD STORIES. By Edith Cushing Derbyshire. $1.50.
Colored and black and white illustrations.
Amusing tales of childish faults and how the fairies intervened to cure them. For all their riot of laughter and thrills, they demonstrate the dire results of misbehavior.

Special Catalogue of (1) Juveniles; (2) Poetry, sent post free upon application.

The Best Books of The Year

(*Continued from page 49.*)

as merely a purveyor of very light fiction. But such books as "The Turmoil," and now "The Magnificent Ambersons," show him to be a very thoughtful observer of social conditions. His story of the Amberson family, their rise to wealth and social pre-eminence in the Middle Western city which they helped to build, and then their gradual decline as the town developed into a great modern city, is admirably conceived and done. The book is also an excellent study of a spoiled young pup of a boy, who manages to wreck the lives of two or three

Arnold Bennett.

people, including his devoted but rather silly mother. In the end Mr. Tarkington gives us to understand that he is brought to his senses, and a happy marriage with a girl far too good for him. But I have my doubts. Boys like George Amberson Minafer always remain graceless pups, no matter how long they live or how much they go through—money or suffering. Mr. Tarkington would perhaps have done better to make the ending of his book less sweetly optimistic. But it is none the less a very good story.

Another story of the Middle West and of the decline of a prominent family in a small town as conditions changed around them is told by Mrs. Mary Watts in "The Boardman Family." She has less humor and narrative skill than Mr. Tarkington, but she is far superior to him in breadth of view, in artistic sincerity, and the possession of a large and tolerant philosophy of life.

But we must not forget our own Canadian writers. The past year has seen the publication of some very important books by Canadian authors, books that compare quite favorably with the current literature of other lands. For instance, "Drums Afar," by John Murray Gibbon, is a novel of cosmopolitan life and of the war, which displays unusual knowledge of life in the capitals of Europe, no less than in Canada and the United States. It is also an admirable study of a man's gradual awakening to the more serious meaning of life—a lesson which is brought home to him, as to so many others by the war. As Mr. Gibbon is himself the product of Scottish and English universities, studied art in London and Paris, followed Eden Phillpotts in the editorship of "Black and White," and is at present the publicity agent of the Canadian Pacific Railway, it can easily be imagined how rich is the personal experience on which he can draw for local color.

A book that isn't fiction, but which is far more interesting than most novels, is Florence Macleod Harper's "Runaway Russia." This Canadian woman was in Russia all through the terrible days following the Czar's deposition, the break-up of discipline in the army, and the rise of the Bolsheviki. She took active part in Red Cross work, and witnessed the battles in the streets of Petrograd. And she describes it all with really extraordinary vigor and dramatic interest.

Two other Canadian books that call for notice in such a summary as this are the two last volumes of Norman Duncan's stories of Newfoundland. The early death of this gifted writer was a heavy blow to Canadian literature. His sincerity, his skill as a teller of tales, and his passionate appreciation of the beauty and heroism of life on the Newfoundland coast, gave him a position that was almost unique among contemporary writers. No less an authority than Honore Willsie, herself a distinguished novelist and editor, has said that by Norman Duncan's death "we lost the best short-story writer in the country"—meaning the United States, where Duncan spent all his later years.

Here am I almost at the end of my space, and no room to do more than mention William J. Locke's story of a human lap-dog whom the war made into a man, "The Rough Road"; Sir Arthur Quiller-Couch's brilliant study of hatred, "Foe-Farrell"; May Sinclair's "Tree of Heaven," the story of what the war did to a whole family; Frank Swinnerton's exquisitely beautiful study of one night in the life of two girls and their invalid father, "Nocturne"; Simeon Strunsky's "Professor Latimer's Progress," the wise

John Murray Gibbon.

and amusing account of a middle-aged professor's adventures while wandering about New England trying to forget the war, by his doctor's orders; Joseph Hergesheimer's remarkable study of three generations of a family of Pennsylvania iron makers, "Three Black Pennys"; our own Stephen Leacock's "Frenzied Fiction," a delightful burlesque in the true Leacockian style; and Mary Webb's beautiful but intensely tragic "Gone to Earth."

Every one of these books deserves an extended notice, but after all there is a limit to the amount one can put on a page, and editors are very ruthless persons. But before I get to "yours very sincerely," let me say that these are the books which remain uppermost in my memory after a year of reviewing. There may be others equally worth while—naturally opinions will differ on such a matter—but at least these are eminently worth reading. And the list contains something to suit every taste.

Music and Christmas

(*Continued from page 23.*)

days the mission of bringing music to the individual and into the home is more highly organized than it ever was in the past, and though the traditional customs of older lands have not taken a very deep root on this continent, music is still a great factor, not merely in the religious, but in the general observance of the day. For instance, it is probable that music enters more fully into the practice of gift-giving than ever in the past. This, indeed, is one of its happiest manifestations, for nothing in the way of a musical gift is wasted. It represents something added to the sum total of human enjoyment. Thus, music renders an inestimable service in keeping the spirit of Christmas alive, and Christmas annually reinforces the glad, spiritual appeal of music.

The Joy of Christmas Giving is measured largely by the pleasure-yielding qualities of the Gift.

Real Help for Tired Feet

A busy day and on your feet most of the time—a long, tiresome trip or a hike in the country—new shoes to break in—all these mean tired feet. Soothe and rest them by applying a few drops of

Absorbine, Jr.
THE ANTISEPTIC LINIMENT

Or, if you are very tired and your feet burn, ache, or swell, soak them in a solution of Absorbine, Jr., and water. Relief will be prompt and lasting.

You will like the "feel" of this clean, fragrant and antiseptic liniment. It penetrates quickly, leaves no greasy residue and is intensely refreshing. Only a few drops needed to do the work, as Absorbine, Jr., is highly concentrated.

Keep a bottle handy at home, at the office, or in your grip when traveling.

Beautiful Vancouver

(*Continued from page* 16.)

the city and of bush life near by. It must be admitted, however, that by far the best thing about the book are two little verses which appear as a foreword:

"To mortals blest with seer's eyes,
The fairies walk in Arden still;
The magic light of Elfland lies
On grassy glades, on dale and hill;
While Philomel's sweet love-notes fill
The leafy bowers, where gay appear
Titania's court in costume chill—
To such as have the vision clear.

"Far out beneath the Western skies
We, too, may conjure up at will
These sylph-like forms — perchance surprise
Some Naiad mirrored in the rill;
Or through the pine-trees, sweet but shrill
Pan's plaintive pipes enchanted hear;
E'en fairies dance and roundels trill—
For such as have the vision clear."

The Fall lists also show a book of poems called the "Between the Gates," by Charlotte Grant MacIntyre, an Indian poem by Lionel Haweis, some time a planter in Ceylon and now on the Library staff of the University of British Columbia, and it is asserted that an all-Vancouver "Christmas Book of Prose and Poetry" is under way.

A young Vancouver writer, Elspath Honeyman, seems to have won a certain distinction quite early in her career, as one of her war poems has been used by the United States Government in the recent Liberty Loan Campaign, another has been translated into French for Government uses, and others have appeared in the London "Spectator," New York "Times," etc. Miss Honeyman was born in Ladnor, B.C., and educated at Yale and the University of British Columbia.

Mrs. Holt Murlson, an English woman who is now in Vancouver, has done some really good verse, bearing a strong Canadian flavor Bernard MacEvoy is a writer rich in experience with a beautiful style.

The poems and stories of Mrs. Isabel Ecclestone MacKay are well known, but can hardly be spoken of as products of Vancouver. The stories are Eastern in atmosphere, but Mrs. MacKay, who has been living in Vancouver for years, may some day fall under the spell of her adopted land sufficiently to bend her undoubted talent upon some phase of the interpretation of Western life.

When I think of Vancouver, I remember a beautiful old garden and its charming owner, a writer of the old school, Mrs. Lefevre, who is the author of some delightful lyrics, and who has done much to help and encourage the spirit of letters in her adopted city. I think, too, of a well-known figure in the literature of Canadian journalism — for there is undoubtedly a literature of journalism —who has, for long lived on the Pacific Coast, a gracious figure who, wherever she is, must create about her a feeling for literature as unpretentious as it is sincere. I mean Mrs. Clare Fitz-Gibbon, who, as Lally Bernard of the Toronto Globe, was one of the best-known of Canadian journalists. It was some years ago that Lally Bernard was sent to the Northwest by the "Globe" to inquire into Doukhabor affairs, with the result that she originated Doukhabor Home Industries under the National Council of Women. Since then Mrs. Fitz-Gibbon has been vitally interested in many Canadian problems, labor, educational and social problems, none of which appeal to her more deeply than those connected with emigration in British Columbia.

Mrs. Fitz-Gibbon is another of our strong writers who could an' she would speak for the beautiful coast-land that lies, as yet, under a mysterious spell, unbroken by the word of any really great artist.

LITERATURE AND JOURNALISM.

A correspondent asks the following questions:

(a) "Is it possible for a beginner in journalism to get book-reviewing to do when one lives in a country town?"

(b) "What do you think of the possibilities of essay-writing on subjects for women? Short articles such as Frank Crane writes."

(c) "Must a writer have a 'name' before he or she can be admitted to the literary fold?"

(d) "Is it possible to sell plots for stories to successful story writers?"

To which I would answer:

(a) In this question lies one of the deep-rooted and most mistaken suppositions that ever entered the mind of a beginner in journalism. Why should the person whose art is still so formless that he or she, by their own confession, can not construct a short story or article that would be accepted even by second-class magazines, imagine that they are qualified to deal critically with the work of professional writers? Book-reviewing is, or should be, a fine art, the result of knowledge and experience of life as well as literature. It is too often the playground of the amateur, which fact is exceedingly bad for the amateur and very hard on the public. That the "beginner" lives in a small town would be an added drawback, as he or she has need of all the contact with education and with life that is possible, whereas the residence of a critic of mature judgment would probably be by his or her own choice in a small place where there is leisure to sift one's ideas and obtain the necessary time for careful work.

(b) Essay-writing has largely gone out of fashion. But if attempted, why "in the manner of Frank Crane?" Admiration is a great incentive but imitation is fatal.

(c) It is another of the delusions of young writers that there is something magical or uncanny about a "name." Yet, contradictory as it may seem, the making of your name lies at the root of your whole career. A "name" only signifies the ideas which come to be associated about a certain personality shown through work of a distinctive quality, and the first time that an editor, or a magazine reader, or a reviewer, if he has ordinary intelligence, comes upon an arresting piece of work, the author of it becomes to him a "name," a name to be watched for and to be welcomed should a second MSS. prove to be as good as the first. No one is more open to conviction than the editor who, toiling through masses of ordinary, unoriginal, amateurish work comes upon something fresh, clear-cut and sincere; something that pleases him so emphatically that he knows, without any peradventure, that his readers, for the most part ordinary people like himself, will also be seized and carried away on the wings of that writer's imagination. A "name" is literally made very often in a day. But it rests with the author as to whether the name shall live. The so-called critics have much less to do with the making or marring of reputations than most people seem to believe. They cannot "write up" a poor book, and they cannot "write down" a good one. The final test lies with that dim, mysterious but altogether human force—the people. The editors and their readers, the publishers and their readers, can unlock or withhold the first door to the public, and so the fate of the beginner. But once through this door and before the public the ultimate appeal is really the human appeal of the work itself. The critics can help or hinder the rapid vogue of a writer, but they are powerless before the writer's real gift. No, you will not enter the literary "fold" nameless, be sure of that.

(d) The last question is perhaps the most interesting of all: "Is it possible to sell plots to successful story writers?"

Perhaps not to successful writers, for success in story-writing usually infers the ability to "plot" which lies at the heart of the short story. At the same time there is many an embryo writer whose success lags because he cannot as yet invent "plot." To such an one the person whose brain is fertile in the contrivance of incident, the formation of the "working plan" out of which a short story is based, should be a most valuable find, and such ingenuity of brain ought to profit the plotter very materially. In all the literary market

Bring the Junkers to Judgment!

"IF William Hohenzollern and the German butchers who engineered the war are not brought to trial and the lesson driven home that the world brooks no license in the name of Kultur, then our Canadian soldiers have died in vain. No peace," declares "MACLEAN'S MAGAZINE," "will be satisfactory to Canada that leaves them at large."

Read this powerful article in the December issue of "MACLEAN'S," in which it is declared that Canada is a unit in demanding stern measures. "There is no mawkish sympathy here, no tendency to grant dangerous favors to a foul-fighting opponent who has taken the count."

It is asserted that Canadians as a whole want:

1. No softening of armistice terms.
2. Canadian representation at the Peace Conference.
3. Banishment of all Hohenzollerns from Germany, that the seeds of autocracy may be uprooted.
4. The punishment of the criminals who started the war and conducted it so ruthlessly.
5. The payment of an indemnity to Canada to cover our war bill.

It is an unsparing, outspoken expression of Canadian opinion —an article that deals hammer-blows at the tendency abroad to shield Germany.

An All-Star Line Up This Month

Other features in this issue are as follows:

Maxwell
"Home" Washer

—the washer that not only washes the clothes mechanically, but does it better than they can be washed by hand. There's no "skimping" by the "Home" Washer—light or heavy articles are cleaned with equal thoroughness. There's no tearing of delicate fabrics, either. And it does the work in half the time! No more long-drawn-out, backbreaking washdays anywhere there's a Maxwell "Home" Washer; Just put the clothes in, and the rest is hardly work at all—because the "Home" Washer is so light, noiseless, and easy-running. Enclosed gears make it absolutely safe: "springs" make cover lift easily. Made of best quality cypress, handsomely finished. Runs by hand-power or water-motor. See it at your dealer's.

"ROSE IN THE BUD" by Muriel Jocelyn, and illustrated by E. J. Dinsmore, is one of the January short stories

Why We Should Bathe Internally

ADDS MANY YEARS TO AVERAGE LIFE

By R. W. Beal

Much has been said and volumes have been written describing at length the many kinds of baths civilized man has indulged in from time to time. Every possible resource of the human mind has been brought into play to fashion the new methods of bathing, but strange as it may seem, the most important as well as the most beneficial of all baths, the "Internal Bath," has been given little thought. The reason for this is probably due to the fact that few people seem to realize the tremendous part that internal bathing plays in the acquiring and maintaining of health.

If you were to ask a dozen people to define an internal bath, you would have as many different definitions, and the probability is that not one of them would be correct. To avoid any misconception as to what constitutes an internal bath, let it be said that a hot water enema is no more an internal bath than a bill of fare is a dinner.

If it were possible and agreeable to take the great mass of thinking people to witness an average post-mortem, the sights they would see and the things they would learn would prove of such lasting benefit, and impress them so profoundly, that further argument in favor of internal bathing would be unnecessary to convince them. Unfortunately, however, it is not possible to do this, profitable as such an experience would doubtless prove to be. There is, then, only one other way to get this information into their hands, and that is by acquainting them with such knowledge as will enable them to appreciate the value of this long-sought-for health-producing necessity.

Few people realize what a very little thing is necessary sometimes to improve their physical condition. Also they have almost no conception of how little carelessness, indifference or neglect can be the fundamental cause of the most virulent disease. For instance, that universal disorder from which all humanity is suffering, known as "constipation," "auto-intoxication," "auto-infection," and a multitude of other terms, is not only curable, but preventable, through the consistent practice of internal bathing.

How many people realize that normal functioning of the bowels and a clean intestinal tract make it impossible to become sick? "Man of to-day is only fifty per cent. efficient." Reduced to simple English this means that most men are trying to do a man's portion of work on half a man's power. This applies equally to women.

That it is impossible to continue to do this indefinitely must be apparent to all. Nature never intended the delicate human organism to be operated on a hundred per cent. overload. A machine could not stand this and not break down, and the body certainly cannot do more than a machine. There is entirely too much unnecessary and avoidable sickness in the world.

How many people can you name, including yourself, who are physically vigorous, healthy and strong? The number is appallingly small.

It is not a complex matter to keep in condition, but it takes a little time, and in these strenuous days people have time to do everything else necessary for the attainment of happiness, but the most essential thing of all, that of giving their bodies their proper care.

Would you believe that five or ten minutes of time devoted to systematic internal bathing can make you healthy and maintain your physical efficiency indefinitely? Granting that such a simple procedure as this will do what is claimed for it, is it not worth while to learn more about that which will accomplish this end? Internal bathing will do this, and it will do it for people of all ages and in all conditions of health and disease.

People don't seem to realize, strange to say, how important it is to keep the body free from accumulated body-waste (poisons). Their doing so would prevent the absorption into the blood of the poisonous excretions of the body, and health would be the inevitable result.

If you would keep your blood pure, your heart normal, your eyes clear, your complexion clean, your head keen, your blood pressure normal, your nerves relaxed, and be able to enjoy the vigor of youth in your declining years, practise internal bathing, and begin to-day.

Now that your attention has been called to the importance of internal bathing, it may be that a number of questions will suggest themselves to your mind. You will probably want to know WHAT an Internal Bath is, WHY people should take them, and the WAY to take them. These and countless other questions are all answered in a booklet entitled "The WHAT, THE WHY and THE WAY OF INTERNAL BATHING," written by Doctor Charles A. Tyrrell, the inventor of the "J.B.L. Cascade," whose life-long study and research along this line make him the pre-eminent authority on this subject. Not only has internal bathing saved and prolonged Dr. Tyrrell's own life, but the lives of multitudes of individuals have been equally spared and prolonged. No other book has ever been written containing such a vast amount of practical information to the business man, the worker and the housewife. All that is necessary to secure this book is to write to Dr. Tyrrell at Room 232, 163 College Street, Toronto, and mention having read this article in the "Canadian Home Journal," and same will be immediately mailed to you free of all cost or obligation.

Perhaps you realize now, more than ever, the truth of these statements, and if the reading of this article will result in a proper appreciation on your part of the value of internal bathing, it will have served its purpose. What you will want to do now is to avail yourself of the opportunity for learning more about the subject, and your writing for this book will give you that information. Do not put off doing this, but *send for the book now*, while the matter is fresh in your mind.

"Procrastination is the thief of time." A thief is one who steals something. Don't allow procrastination to cheat you out of your opportunity to get this valuable information, which is free for the asking. If you would be natural, be healthy. It is unnatural to be sick. Why be unnatural, when it is such a simple thing to be well?

In the January Number

The Return of Peter Piper

(Continued from page 7.)

now, but what have you to do with the rebuilding—the remaking that has taken me every day of the two years of your absence? What did you ever do,—you laggart, good-for-nothing, you despicable wretch, but curse everything that God meant to be beautiful. Then you come back and ask me to welcome you home" she ended breathless.

"I know—I know, Sarah Ann" he said brokenly, "I know, I know, but can't you forget and forgive?"

"Forget and forgive" she flung back at him passionately—"Forget and forgive indeed. Isn't that what I have been doing ever since the glitter of those first days with you had dulled, until now I can never forget the wrong you have done me and those helpless little souls that bear your hated name. Forgive you—didn't I forgive you that awful night you stumbled in here drunk and strove to strangle your month old child? Forgive you—didn't I forgive you the time you took Jimmy away? But when you *stole—stole* to buy poison for your body and soul, what did I care if they shut you up in a prison? You belonged there. How they could release you to don the uniform of a soldier I have never understood. Nights I have prayed with all my soul that you would never, never return to us. Days I have lived to teach my children to forget their father—a father who left the country a thief—a thief—a thief."

Trembling with agitation she sank into a chair and shook with sobs.

The man, slinking close to the wall, groaned.

Suddenly from the adjoining room came the shrill terrified baby cry of Buddy.

"Mummie, Mummie."

The woman heard not, nor heeded.

"Mummie, Mummie."

The man started vehemently, stole noiselessly across the room to the door, opened it and went into the dark bed room.

Sarah Ann Piper was conscious of his movements, but she was too spent to voice a command.

Dazedly she sat on and on, waiting for any sound that should warn her. A deadly hush pervaded the little house. Presently she arose, crossed to the bedroom and at the threshold paused—petrified.

The gas was burning low, giving the room an almost uncanny aspect. On the one low rocker the man in khaki sat with Buddy asleep in his arms. One baby hand rested upon the father's cheek down which the tears were coursing unrestrained.

The movement startled him. He looked up quickly, then down at the sleeping child. Brushing the damp hair from the little white forehead, he rose, laid the baby carefully in the crib, covered him gently with the red and white checkered quilt, then turned to the light.

The waiting woman marvelled. What was that vague something that had chiselled upon the face of this man a portence of power, and given to his hand the touch of tenderness? Meekly he followed Sarah Ann back into the sitting room.

"The poor little chap was scared, I guess," he stammered by way of explanation, "Poor little chap. Where are the others?"

It was not in her mind to reply. Why should she tell him the truth and possibly spoil their Christmas, the one day they had looked forward to for so many weeks?

"We are here, Dad," Sarah Ann Junior called timidly from the kitchen threshold, pulling off her red mittens, "We've been to the store."

"I saw you down town, Dad," Jimmy confided, bravely pointing a condemning finger at the man in khaki, "But you didn't see me."

"No" Peter Piper replied slowly, "I didn't see you Jimmy. Won't you come over and speak to me now." He held out his arms imploringly.

The children turned to their mother. Surely she would tell them what to do or say. Her eyes were upon the intruder; she did not see their enquiring glances.

"And you won't spoil our Christmas, please, Dad," Sarah Ann Junior begged taking a short step forward.

"Spoil your Christmas" he repeated, a note of pity in his voice—"Why you poor little kid you, I won't touch your Christmas."

The girl comprehended his sincerity immediately. The consternation vanished; she went towards him joyfully.

"Oh I am so glad, Dad" she whispered in his ear, "Jimmy said you might, but now I know you just won't."

Automatically Jimmy crossed the room to his father's side. Being an outsider was not altogether in his line.

"Say, Dad, what's wrong with your face?" he puzzled—"'Tain't like it used to be anyhow."

The man smiled wanly.

"Guess the bullets scared it different Jimmy" he suggested.

Jimmy gasped; so did Sarah Ann Junior.

"Well" she protested, "If we can have our Christmas—it's to-morow."

"Why sure thing it is" he agreed with a touch of enthusiasm in his voice, "And I saw Old St. Nick down street this afternoon—told him not to forget us either."

Sarah Ann Junior skipped across to her mother.

"It's just great, isn't it, mother?" she cried catching one of the woman's cold trembling hands, "It is just great. What do we do next?"

"Go to bed, I suppose," Sarah Ann Piper replied, realizing her inability to cope with the situation.

The child's smile vanished, a look of dismay crossed her uplifted face.

"Why, mother, we didn't even make our candy, and mother, don't forget the stockings. You said we could hang them ourselves. *Why, you promised!*"

Fearing further calamities Jimmy manfully brought to light a pair of long black stockings from within his pockets.

"Here they are, mother" he conceded triumphantly, "I was almost plumb sure you'd forget, so I didn't."

To Sarah Ann Piper the next half hour came back daily in memories during the weeks that followed. She could never fully understand what magical spell it was that bound them all together, regardless of the past and the doubtful future. A clemency at once sweet and potential possessed her as they laughed and hung the stockings together, speculating in excited whispers.

"Perhaps a lady doll," Peter Piper suggested.

Sarah Ann Junior contemplated a moment.

"Mebbe Dad, but shoes anyway, ones with buttons; mother said she would."

"Me for a bat," Jimmy flouted scornfully, "A sure enough baseball one, I've saved some every week since last September, so mother said she'd get one sure, didn't you mother?"

"Sh-sh" his mother replied smilingly, shaking her head and laying her finger suggestively upon her lips, "Ask me no questions and I'll tell no lies."

Then the children had left them alone in the little sitting room with a world of doubt between them. It was the man who broke the silence.

"I'm not asking to stay now, Sarah Ann, but what's to be done for those kids to-night you can't do alone. There's a tree out there in the yard to be brought in, and set up with the fixins'. I bought a few things at the shops before I came. They're out in the wood shed, come let's get them."

It was more an entreaty than a command, but Sarah Ann obeyed. Together they dragged in the little Christmas tree and made it secure in a far corner of the sitting room. Her fingers trembled with exultation as she touched the numerous things he had bought for them.

"It's a dreadful extravagance," she once hinted, tying a doll upon a lower branch that would send Sarah Ann Junior into screams of ecstasy.

"Oh, no it isn't" Peter assured her thoughtfully,—"Why the poor kids never had a Christmas before."

The task finished at length, a sudden langour seized the man. Sarah Ann Piper was not aware that only a few hours previous he had left the military hospital in a distant city to return to them for the festive season.

Wearied, she, too, sat down and stared stupidly at the tree.

Presently Peter began to talk in an absent low tone, voicing for himself those inmost thoughts that possessed him.

"It's me to blame,—only me" he muttered, "Only me, I don't blame Sarah. She is right, right. Wonder why I had to be there suffering so many weeks fancying how glad she and the kids would be when I came back, made over body and soul. Wonder why,—wonder why it had to be like this. Maybe the Lord hasn't finished making a man of me yet, maybe not—maybe—"

The thought seemed to hold him. A long silence prevailed. Dumbly Sarah

FASHIONS

(*Continued from page* 47.)

7606—Ladies' One-piece Dress. Nine sizes, 34 to 50 bust. Size 36 requires 5⅜ yards 36-inch gingham—⅜ yard 27-inch white pique. Lower edge width 2 yards.

7937—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 2⅛ yards 36-inch white wash satin—⅜ yard 36-inch contrasting satin.

6904—Ladies' Dress. Six sizes, 34 to 44 bust. Size 36 requires 5½ yards 36-inch check gingham—¾ yard 36-inch white voile. Width at lower edge, 2⅝ yards.

7436—Ladies' Pantalet or Work Dress. Five sizes, 34 to 42 bust. Size 36 requires without skirt—7⅜ yards 27-inch chambray. Practically every woman is in a uniform nowadays, and this is one of the most convenient imaginable. Width at lower edge about 2⅜ yards.

7928—Ladies' Two-piece Gathered Skirt. Seven sizes, 22 to 34 waist. Size 26 requires 3 yards 40-inch satin. Width at lower edge 1⅜ yard.

7830—Ladies' Two-piece Gathered Skirt. Seven sizes, 24 to 36 waist. Size 26 requires 3 yards 44-inch check cloth. Width at lower edge 1½ yard.

7911—Ladies' Morning Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4⅝ yards 36-inch check gingham—½ yard plain gingham. Width at lower edge 1⅝ yard.

7907—Ladies' Morning Dress. Nine sizes, 34 to 50 bust. Size 36 requires 6½ yards 27-inch rep—⅜ yard 36-inch plaid gingham. Width at lower edge 1⅝ yard. Embroidery No. 12184, blue or yellow transfer pattern.

8034—Ladies' Two-piece Gathered Skirt. Eight sizes, 24 to 38 waist. Size 26 requires 2½ yards 44-inch gabardine. Width at lower edge 1½ yard.

(*Continued from page* 36.)

8013—Girls' and Juniors' Pajamas. Six sizes, 6 to 16 years. Size 12 requires 3½ yards 36-inch flesh-color batiste—⅜ yard blue batiste for trimming. These cunning pajamas are in two parts, the short coat cut in one with the sleeves and drawn in at the waist-line by ribbon or elastic run through a casing.

7496—Child's and Girls' Nightdrawers or Pajamas. Six sizes, 1 to 10 years. Size 6 requires 3½ yards 27-inch madras or outing flannel. These are in one in front, but at the back the drawer section buttons onto the waist.

8019—Girls' and Juniors' One-piece Pajamas. Five sizes, 4 to 12 years. Size 8 requires 3⅜ yards 36-inch batiste. The sleeves are cut in one with the front and back of the pajamas.

7656—Misses' and Girls' Nightgown. Eight sizes, 6 to 20 years. Size 8 requires 2⅜ yards 36-inch nainsook—1¾ yard insertion—2½ yards edging. The front and back of this nightgown are cut in one with the short sleeves.

7530—Girls' and Juniors' One-piece Dress. Six sizes, 6 to 16 years. Size 10 requires 3¼ yards 36-inch check gingham—⅜ yard 27-inch white lawn for collar. The yoke, which is a smart feature of this school frock, has extension tabs that cross in surplice style.

7846—Boys' Suit. Three sizes, 2 to 6 years. Size 6 requires 1½ yard 36-inch tan linen for trousers and trimming—1¼ yard 32-inch white dimity for blouse.

8052—Child's Dress. Three sizes, 2 to 6 years. Size 6 requires 2¼ yards 36-inch handkerchief linen—¼ yard 36-inch dotted organdy for collar, cuffs and pockets—2 yards lace edging. Handkerchief linen in white and pastel colors makes very dainty frocks for the small girl.

7866—Girls' and Juniors' Dress. Five sizes, 6 to 14 years. Size 10 requires 3⅝ yards 32-inch check gingham—⅜ yard 27-inch white linen for collar and cuffs.

7196—Child's One-piece Dress. Three sizes, 2 to 6 years. Size 4 requires 2¾ yards 27-inch cotton crepe—½ yard 27-inch blue linen for collar, cuffs, and pockets.

7724—Child's Dress. Three sizes, 2 to 6 years. Size 4 requires 3¼ yards 27-inch cotton poplin—⅜ yard 36-inch pink linen.

The Master Mind of the Movies

(*Continued from page* 9.)

Edwards. On his return, Mr. Edwards whipped his organization into shape, and the first picture made under his supervision, but not direction, was "Life's Shop Window." Following this, Mr. Edwards supervised the production and the assembling of the casts of numerous other photoplays, but steadfastly refused to personally direct a picture. Although urged by Mr. Fox to try his hand at it, Mr. Edwards, who for so many years had rehearsed stage successes in an entirely different manner, shied at this new art of producing. How he came to produce his first picture was purely an accident, and Mr. Edwards tells the story in his own way.

"Betty Nansen, the great Danish tragedienne, had been signed up by Mr. Fox for a series of great dramatic photoplays, and on her arrival in the United States, a director was engaged to be responsible for her filming. I was to act in an advisory capacity. The first picture decided upon was Tolstoy's "Resurrection," a play entirely familiar to me, having produced it several times on the legitimate stage.

"The indoor scenes of the play were made in New York, and then the entire company left for Quebec to get the necessary snow atmosphere. I went along with them. During one of the scenes a matter came up for discussion between the star and the director. Soon they were at loggerheads, and the work came to a standstill. Using the prerogatives of a star, Miss Nansen declared that she would not finish the picture with the director. They both individually appealed to me to finish the picture. Realizing the expense we were

Beautiful Vancouver

(*Continued from page* 55.)

there is no more successful merchant than the short story writer, and next to writing a short story it should be profitable to help write it. "The Editor," of Ridgewood, N.J., a small monthly magazine, is a wide guide for beginners. Here one may find ways and means of advertising a new line of work or of obtaining information as to markets. That the way is not well trod makes its possibilities greater. To my correspondent I should say, "exercise the faculty of which you write, invent many plots, for the exercise of ideas invariably brings more ideas, and submit the best to such a magazine as 'The Editor,' where you will receive sound advice as to the marketing of your product."

Instead of Messy Plasters—

Apply Thermogene to that pain!

SIMPLY place a piece of Thermogene, just as it comes from the box, over the affected part. It is a quick and certain remedy for Backache, Lumbago, Grippe, and all ailments caused by cold and damp.

THERMOGENE

CURATIVE WADDING

(Vandenbroeck's Process)

This medicated wool gives warmth and acts upon the blood-vessels through the skin. Works until removed—never grows cold and clammy, like the messy-old-fashioned poultice. Quickly dispels all soreness and inflammation. Full directions in every box.

At All Druggists—50 Cents.

Invented by Vandenbroeck, the famous Belgian Chemist. British-made by the Thermogene Co., Ltd., Heyward's Heath, England.

Sales Agents for Canada:

Germans Commandeer All Belgian Produce

"However regrettable the situation of the Belgian civil population may be as regards food, our troops fighting hard in the first line must be the first consideration. Hence the last draught horse and vehicle must be requisitioned. Unit commanders must remember that the attitude of the population towards us has completely altered since the turn of the situation. They must see in them the population of an enemy state with which we are at war.

"It is, therefore, strictly forbidden to give the slightest help to the civil population. Military interests must alone be considered. The country's produce must be used in our interests alone and not for the population."

So runs the text of an army order from Bavarian Divisional Headquarters, dated October 5, and which was taken by the Belgians from a German prisoner. Bad as the condition of the civil population of Belgium must have been during the German occupation, it is a thousandfold worse to-day with the German hordes over-running the country in their retreat before the oncoming Allied forces. Talk of victory must be somewhat of a mockery to the starving people of Belgium. Deliverance is at hand, but what are they to do till that liberation comes? The country's produce must be used for the use of the German army alone, not for the population, says the German order. Shall these people starve to death in the meantime? Their own meagre supplies have been commandeered and they are without food or the means, from within at least, of obtaining it.

"The condition of the Belgian people in the reclaimed areas is most pitiful," writes a correspondent with the Allied armies in Belgium. "Devastation and ruin have been left behind by the Germans and whole families have been left with no roof over their heads and most of them with no food and no clothing.

"I came across a woman and two small children by the wayside the other day, the flimsy dress the mother wore, the only one she had, was next to no protection against the weather, and the two little ones were no better off; they were without shoes or stockings and their emaciated little bodies were covered only with patched cotton dresses. The mother told me sobbingly that the Germans had taken all the food from the village before they left, and that she and her children had not eaten for two whole days. I gave her what I had and directed her to the nearest army kitchen I knew, a mile or so down the road."

They have been deprived of what little they obtained under the German occupation, the advancing armies can care for them only in the most superficial manner, so that the only source from which they can hope to obtain relief and help is through the Commission for the Relief of the Belgians.

The cry goes out from the women and children of Belgium to-day as it has never done before. They have lost all they ever possessed through the ruthless invasion of their homes, and from now until such time as they can again make a home and take up a regulated and industrious life they need help to assist them in gathering together the threads of their shattered lives. Among the many organizations devoted to the conservation of child life in Belgium that which has to do with the provision of extra rations for the children ranks high in importance and in achievement. Its principal activity is the conduct of canteens or dining-rooms for children and nursing mothers. For these it provides a nourishing meal each morning. The canteens are established in any available place, in schools, shops, private houses, even in cellars. The cuisine of each canteen is directed by a food expert and from the few foodstuffs available are concocted a variety of dishes that cannot but fail to appeal to the palate of even the most sickly child.

"Among the civilian population of Belgium hiding in the cellars there have been a great many deaths, either from wounds inflicted by the Germans or from the effects of gas the enemy has let loose into each town and village as it was evacuated. There were twenty-seven deaths in the Village of Hansbeke alone," says a cabled despatch from an eye-witness attached to the Belgian Armies in the field. The cable goes on to draw a picture of the utter desolation that the enemy has left behind him.

"A portion of the population who had fled from their homes during the bombardment of Hansbeke, found on their return more ruins and debris—trees had been cut down, houses ransacked, furniture smashed to pieces and fields devastated."

Such is but a mere glimpse of the terrible havoc the Germans left behind them in Belgium. Families who have lived as peacefully as was possible under German domination for the past four years, and for many weary months had been looking forward to the day of their liberation, and possibly a happy reunion with their loved ones in the trenches, have been purposely and wantonly murdered or driven from their homes.

No neighbors are there to take the people in and give them food and warm clothing until they can re-make their home; whole communities have been similarly affected. Amid the wreck and ruin of their former homes these people are obliged to live, some huddled together where a portion of a roof is still left holding, while others have to seek what shelter they can find in the woods or, worse still, to sleep in the open with insufficient food and clothing. Little is it that the Belgians are able to salvage from devastated villages and many must go hungry and cold till aid is sent to them.

Contributions may be sent to the nearest relief committee, or direct to the Central Committee of the Belgian Relief Fund, 59 St. Peter Street, Montreal, Quebec.

How We Get Our Raisins

(*Continued from page* 52.)

raisin pie has become a standard dessert throughout the land. Raisins increase the food value of every dish in which they are used, and make the use of sugar practically unnecessary. Two or three raisins, broken open and put in a cup of tea, sweeten it sufficiently; raisins in bread increase the food value of the bread and make it keep better, as they retain the moisture. Raisins are delicious stewed with apples, prunes or other dried fruits, and their use means a great saving of sugar.

Raisins are plentiful, so there's no need to stint. Their generous use in these war times means true conservation, for raisins save wheat, save lard, save sugar—and they do it while making all foods more acceptable to the palate and richer in food value.

BELGIUM NEEDS YOUR HELP MORE THAN EVER!

As Homes are Freed from Grasp of Germans New Horrors Revealed.

Belgium! Belgium! Belgium!—the papers are full of heart-rending news-items from Belgium. Delirious with joy at being rescued from the hellish tyranny of the Germans, yet the poor Belgians are in large measure in the last stages of want.

Every cent you can send to them NOW will help to feed a famished patriot or clothe one whose meagre rags will never keep out this winter's cold.

Raise Your Fund and Send It In!

Perhaps you cannot spare as much as you would wish, but go around among your friends, plead Belgium's cause, collect all you can in every possible way, and turn it in QUICKLY to your local Committee or to Headquarters.

Picture these hungry and stricken people, of whom the Master said, "Inasmuch as ye have done it unto the least of these . . . . ".

This is an imperative call for HELP!

Make cheques payable and send contributions to

THE RETURN OF PETER PIPER

(*Continued from page* 56.)

nn strained every listening faculty to atch his next words, if words there ight be.

"Honours—honours won't make any ifference here" he continued. "Seems s though now everything is dead. I ot to live the man until she knows it, hen maybe I'll come back—got to live nd fight all over again, then maybe—aybe."

Abstractedly he felt within his pocket nd drew forth a small leather case. eaning forward he laid it on the floor lose to the tree. Simultaneously Sarah nn started forward and caught it up.

"What does it mean, Peter?" she sked numbly, slowly lifting the lid to aze upon the little bronzed cross.

He gazed at her yearningly.

"Do you want me to tell you, Sarah nn?"

Some mysterious force stirred her ery being. She longed to understand is man, this stranger; to peer with im into the past; to give him all of er sympathy.

"Yes" she whispered, "Yes, Peter, I ant to know it all, *all*."

He smiled faintly.

"One doesn't know where to begin, arah Ann, the 'all' of it is so big. I uess maybe it started during those ree days that I sat in my cell cursing e Fate my fingers had beckoned to e. I hated the place. I hated the afety of it. I wanted to get out and ing defiance at the law for putting e there. I wanted,—wanted with ll my soul to kill someone. It matered not who might be my victim.

"And then Barnes came. I think you an remember Jim Barnes, the steady ber little fellow who worked with me t the shop whenever I worked. Yes. e came to my cell holding his battered rby in one hand and a big bag of anges in the other for me, when his ockinged feet hit the pavement here he walked through the soles of is boots. But that was Barnes.

"'Peter,' he said, sitting down on e camp bed beside me, 'Peter, why d you do it?'

"'Do it,' I snarled. 'Do it, well nce you believe I did it, what blamed usiness is it of yours.'

"For answer he opened the bag and fered me an orange. I took it greedy and began to peel it.

"'Take one yourself,' I said tersely.

"'No,' he lied, 'I don't like them eter, you can have them all.'

"And thereupon he dumped the reaining eleven upon my bed. So we st sat there in silence, me eating his anges while he twirled his hat in his nds.

"'Say, would you like to get out of ere?' he asked presently.

"I turned on him.

"'Do you think I'm such a fool, Jim' sneered, 'that I want to stay.'

"'You see, Peter,' he went on in that me even tone of his, 'I signed up toy—the war you know, and I've been thinkin' they might let you out if u'd come too.'

"Then we talked of ways and means. e thought it could be done. He would y, and when he left me we shook nds. Alone I ate a second orange, eling within me a deep admiration for e silent companion of my working ys.

"Well, you know the result. They let e out, and for six months, I lived, I arched, practised, ate, slept with Jim arnes, and if God ever made a saint man, it's him. He kept me from the vil and in the army. And when we ent into the Valley of the Shadow, we ent together."

Peter paused; Sarah Ann looked up to his face, livid with memory.

"It was a night still as a dream" he ntinued, "Over in the enemy trench me few yards away, we could hear itz singin' and laughin'. Then down r line came the word from headquarrs to advance. Jim Barnes gripped e by the arm and drew me up the rapet.

"'Oh, Peter — fight,' he whispered— 's our chance —stick to me if you n—and fight.'

"In an instant the silent night woke a frenzy of shot and smoke—cries of ony and command were mingled toether. Darkness was banished in the llish red of flame—as back and forth and back and forth—we stumbled—awled—ran—a mass of moving apparon in a world of fury. The enemy, oppose our onslaught, issued fire and me, urging us forward by their deiving cries of agony, driving us back th wild shrieks of triumph. In the ld glare we sweat and cursed and ught, straining like mad men at evything within our grasp, struggling at times with our friends, only to discover our mistakes, laugh hoarsely and strain on again. And then it came....

"'Peter' Jim groaned, clutching at my breast—and falling—'Peter.'

"I fell, too, fell flat on my face beside him.

"'Jim—Jim,' I said softly, clutching at his coat and frightened by the agony that looked at me from his eyes—'Jim don't let them hear us.'

"And there with his gasping breath smiting my face, we talked. The tumult raged above and around us. Somewhere near by we heard the rattling of a machine gun—rattling over the dead and the living. What they were striving to do we could not tell—we could only guess.

"'God' Jim writhed—'Oh God'—then turning suddenly upon me—'Peter, did your woman ever talk to you—tell you about God—and pray sometimes—pray.'

"And I remembered, Sarah Ann, there in the hell of the fight — the heaven we had in those first great days together—

"I may have scorned and mocked at Mary Barnes, but until that hour I never knew the woman soul—never knew a woman's power over her own. I raised his head so he could better see the little picture in his hand—the picture of simple Mary Barnes and the three youngsters. The glare leaped and darted in ruddy lights upon it, but Jim never looked away from that square of cardboard. He breathed easier—his eyes had lost their terror—a tenderness lit up his face, and I wondered if I might—might save him yet.

"And then, like the teeth of the devil biting into the night, came the shell fire, tearing the uplifted hand from the arm and hurling the little picture into the furnace of fury.

"Jim never knew—never realized just what happened. Something mightier than shell shattered me—Jim rolled from my grasp and I rolled over and smothered my face in the dirt of the battlefield. I didn't cry; I couldn't, my body was numb—quivering with an agony. Seeing Jim's *all* snatched away from him like that, made me realize you—want you—call for you. It's coming face to face with Death that makes you realize Life. It's Death that chokes you—sears you—taunts you—until you strain and call for Life—Life. And if it comes," he smiled sadly—"If it comes after that—it's God-bound."

"Life came to me, Sarah Ann, in the realization of others—other fellows like Jim about me—with folks somewhere caring. I left Jim, crawled away from the glory of his face—for glory it was—and somewhere—somehow—I found another—and another—and another. There was straining and grasping and praying to get them to safety—and then victory.

"One of those Jims--for they were all like Jim to me—one of them was our Colonel. It sometimes happens in Life—why we can never know—but the weakest can aid the strong. It was that way with me—and him.

"The rest—I guess you know—the wound in my shoulder—but the eternal hours on the field till dawn—no one can understand but myself and the Almighty."

Peter paused—his eyes closed. A tremor passed through him, shaking him bodily in a storm of silent emotion.

"One can't go through a hell like that" he told her presently, "and not come out hating it. It's coming face to face with Death that makes you realize Life. I guess I know now why, the night Maggie's boy died, you came home and cried all night with the wee Buddy in your arms—rocking—rocking him until dawn. He wasn't sick—he was *yours and well.* I guess I know now, Sarah Ann, why you kissed the others asleep in bed—and they never knew. Life is indeed the revealer of a Divine—the assurance of the Eternal. It's coming face to face with Death——" His voice drifted off into silence.

Sarah Ann stumbled back to her chair—her riven mind repeating over and over again—"It's coming face to face with Death that makes you realize Life." Was it not true—true of her working and living in her sheltered home, bitterness and avarice and greed for her children were clutching and tearing away all those ideals of her youth and her motherhood—killing her heart to its birthright of love and happiness—crushing her God-given soul.

"It's coming face to face with Death that makes you realize Life."

Was it true—true that out of the horror of war—the years of bitterness and remorse—her very soul—her *all* was coming back to her.

Presently Peter arose.

"I'm going now, Sarah Ann. I see how it is with you. I can't stay. But someday I'm coming back when you'll know it's all right—all right."

She followed him through the little front parlour into the cold dark hall. He paused a minute his hand upon the bolt.

"Sarah Ann" he whispered "Will you kiss me once before I go?"

Blindly she stared into space, every muscle of her body numb.

The man waited, and waiting, groaned.

"I see you can't, Sarah Ann—can't yet—but someday—maybe."

He wrenched open the door, a blast of the cold December air smote full upon her face. There was an instant rallying of her senses to a realization.

"Peter—Peter" she whispered stretching out her arms in the dark until her hands rested upon his shoulders. "Oh, Peter—don't go—don't go—it's so cold. I'll make cocoa—in the kitchen," her voice trailed off into long, glad sobs as a something strong and tender drew her close and closer.

Then across the starriness of the night came the joyous ringing of many bells.

It was the Christmas Day!

When cloud-banks blot the sky dull grey, or whistling winds make outdoors disagreeable, how cheery and exhilarating are bright lights and sparkling fires!

And in these soul-trying days, how welcome is the cheery brightness—the soothing caress—the soul-satisfying message—of the music you love.

So this Christmas you need music more than ever—good music, that brings the spirit of Christmas to everyone, young and old. Such is the music of

The NEW EDISON

"The Phonograph with a Soul"

This wonderful instrument brings the beautiful world of music into your home—RE-CREATIONS of the art of the world's greatest artists. The New Edison does not merely imitate—it actually RE-CREATES with such utter fidelity that the human ear cannot distinguish between the living artist and the New Edison.

The true spirit of Christmas lies in the soul of the New Edison. Let it sing its message of hope and faith and love in your home this year.

May we send you a complimentary copy of our musical magazine, "Along Broadway"?

BOVRILISE Your Cookery

That's the secret of keeping well when epidemics are so prevalent. Every time you put a spoonful of Bovril into a dish you are adding enormously to the nourishing value. You are ensuring the health of everyone in the home.

The body-building powers of Bovril have been proved by independent scientific experiments to be actually 10 to 20 times the amount of Bovril taken.

Gillette Safety Razor

THE USEFUL GIFT

Ten million men have adopted the Gillette Safety Razor in preference to any other razor in the world.

Men buy the Gillette because they can get a cleaner shave with it, because it gives them a more comfortable shave, and because it ensures a quicker shave.

Any one of these would make success certain for the Gillette, but that this famous razor can claim all three advantages explains why ten million of them have been sold.

The shaving edge is absolutely rigid and free from vibration—hence the velvet smoothness of the Gillette shave.

The thin blade of finest steel permits perfect hardening and sharpening—there is no finer cutting edge made.

The No Honing—No Stropping feature is achieved by simply changing a blade that has become slightly dulled for a new one.

With a Gillette, shaving becomes a joy instead of a job; a man prefers to shave every day and he looks the better for it.

Every man prefers a gift that is really useful to some pretty but purposeless novelty. Particularly in these days, you should confine yourself to Useful Gifts.

There can be no question, then, that the gift for a man is a Gillette Safety Razor, if he doesn't already own one, and a Carton of Gillette Blades, if he has the razor.

Sold by jewelers, druggists and hardware dealers everywhere, at five dollars.

GILLETTE SAFETY RAZOR CO. OF CANADA, LIMITED, MONTREAL.

Are You Reading "WHO GOES THERE"

The Master Mind of The Movies

(*Continued from page 57.*)

under, I promised to do so, although I had never directed a picture in my life.

"Well, sir, after I had made that rash promise, I went back to the hotel and all that night studied the script, planning out the various scenes, and when I finally went to bed had visualized the scenes for the day's work. That morning when the company assembled I was as nervous as if appearing before a first night audience. I talked the scenes over with Miss Nansen and her support, and after we got into the action of the scene, they were developed in an entirely different manner than I had outlined the night before. I let Miss Nansen have her own way, with just a few dramatic suggestions from myself, and the result was that I finished that day's work in good shape. It came so easy and natural to me that I lost my stage fright and went to it with a vim. From that time on, in addition to supervising pictures, I started in making them for Mr. Fox."

And it may be added that, up to the present time, J. Gordon Edwards has made for the Fox Film Corporation thirty-two feature productions, including the super-features, "Cleopatra" and "Salome." Twenty of these photoplays were with Theda Bara as the star.

A reference was made to Mr. Edwards' modesty in regard to publicity in another part of this article, and to aptly illustrate this phase of his nature it is apropos at this time to give the just credit due this master mind for his share in saving for the world the great spectacular William Fox million-dollar production of the "Daughter of the Gods." When it seemed that the project was doomed to failure, the timely arrival of Mr. Edwards started the wheels going again. It is interesting to note that the star of this picture was Annette Kellerman, an Australian; the director, Herbert Brenon, an Englishman, and the saviour of the picture, J. Gordon Edwards, a Canadian.

Brenon had been sent down to the Island of Jamaica with Miss Kellerman and a company of several thousand to start the filming of this greatest of all sea fantasies. When about halfway through the filming of it, the director got into many difficulties, and it looked as if the great project would be a failure. Several S.O.S.'s were sent to New York, and Mr. Fox sent Mr. Edwards to Jamaica to straighten out the snarl, or, if that was impossible, to disband the company, send them back to New York and call the incident closed, with the possible loss of more than a half million dollars.

On his arrival on the Island, Mr. Edwards found things in a rather chaotic condition. After an investigation, he found that things could perhaps be straightened out, and loath to send the director back to New York with the stigma of a colossal failure on his record, he called a meeting and outlined a plan of action. He bluntly told the director that he had been empowered by Mr. Fox to close up the affairs of the company, and he thought he could devise a way out of the dilemma. In sole charge of the production, Mr. Edwards brought to a successful conclusion what might have been a costly failure. The finished picture was shipped to New York, and subsequent events have proved that Mr. Edwards' foresight and diplomacy saved a great film masterpiece for the world.

A remarkable factor in this great director's work is the fact that he can figure to a day when a picture will be completed; the business office can absolutely rely upon his work, unless, of course, something unforeseen upsets his schedule. There are seldom any costly "re-takes" of scenes, and when there are scenes in which hundreds and at times thousands of people are used, he can handle them all in one day, thereby saving thousands of dollars. It is a known fact that some directors will use tremendous mobs for days at a time, which involves huge expense.

When Mr. Edwards was given the order to film "Cleopatra" he realized at once that he had been given a big contract. Several unsuccessful attempts had been made by independent companies to film some of the great historical masterpieces; they seemed to lack either dramatic force or the spectacular. This Mr. Edwards determined to correct. He spent days and weeks in delving into various historical records, and soon had visualized his conception of the Siren of the Nile and her amours. He had in mind, also, that the public wants, in addition to a great star, a good dramatic story, with a wealth of spectacular effects, and on this theory he proceeded to film the story. It is history now how well he succeeded.

In "Salome" Mr. Edwards had an even more dramatic spectacle to film, and since its showing all over the United States, the master mind and craft of the director who conceived this greatest of all stories has come into his own. In addition to the intensely dramatic episodes with which it abounds he conceived and had embodied in it some of the greatest spectacular lighting effects and ensembles ever filmed.

Months before the actual filming of "Salome" began, and the story had been discussed with Mr. Fox, Mr. Edwards gave his version of the picture and the theme of the entire photoplay to the scenario writer. The director realized in filming the incidents of the Scriptural siren, that he had an entirely different story to deal with to that of "Cleopatra." He also had to keep uppermost in his mind the religious element that entered into this photo

The Master Mind of The Movies

(*Continued from page 60.*)

drama, and he had to be more than careful, in working out his story, not to offend the various religions involved in the intrigues of King Herod's Court.

"First of all, there must be a reason for everything you do," said Mr. Edwards, in answer to a question as to how he plans the making of his pictures. "There must be a purpose for every bit of action one sees on the screen, and superfluous bits must be eliminated, for virile action is the life of a film. When one realizes that at times perhaps the last scene of a picture will be taken during the middle of the course of production, and that the director must keep in mind the action of the characters in the preceding scene, so that the action will dovetail, one can see the mental strain involved. A slip in either direction would ruin an entire sequence and make the picture ridiculous.

"In addition, the director must keep in mind the various exits and entrances, so that when the characters appear in the following scenes, the action must be continuous. He must study his sets and see that all these details are attended to. If a character should leave a room from the left side and appear coming out on the right, the audience would immediately recognize the error and comment on it. In 'Salome,' when Miss Bara leaves Herod's palace to meet John the Baptist in the desert, she is seen seating herself comfortably (if that is possible) on the back of a camel, and is next seen dismounting in the wilderness. The first action was taken in the Fox lot in Hollywood, Cal., and the continuation filmed a week later at Palm Springs, two hundred miles distant.

"This meant keeping the costumes intact, the same people in the scene, the same camels, for more than a week, so that the continuation of the action shown on the screen is unbroken. A lapse of memory or any of the details would have cost thousands of dollars and would have necessitated the refilming of the entire sequence."

Mr. Edwards was asked how he maps out the handling of the huge mobs of soldiers and "atmosphere" as revealed both in "Cleopatra" and "Salome," when more than five thousand people are flashed on the screen.

"The day before, or rather the night before," answered Mr. Edwards, "I map out the entire play of action, from the work of the star to the minutest details. In many instances I use the great mass of people in three different episodes, which are scattered, perhaps, in the beginning, in the middle and at the end of the picture. Here is where I find that my early military training stands me in good stead. Of course, any mob of untrained people is difficult to handle, but that is easily overcome if your ideas are clearly outlined before starting to film. It is almost an impossibility to rehearse a great mob over and over again, so I do the next best thing—select captains for each division. I take them aside, explain the action wanted and make them responsible for the success of that particular scene. This system has always worked out well."

"How did you stage that great naval battle of Actium in 'Cleopatra'?" Mr. Edwards was asked.

"I mapped it out with the same principle involved in handling the mobs, taking the additional precaution of minimizing the danger of accidents, such as drowning or being burned. Each ship was manned by expert swimmers, and I had weeded out those who were too old. I then put a man in charge, to whom I had given instructions as to the various signals arranged for the action. Certain ships were to be burned, while others were to remain intact, so that those on the burning ships would have a means of escape. When my signals were given, everything went off with clock-like precision. But it took me the best part of one day to work out all the details, for if anything had gone wrong and the ships had been burned without getting the desired effect, it would have meant a big loss in money and time."

This brought the conversation around to the wonderful lighting and the storm effects used in "Salome"—especially the "miracle" scene, in which a bolt of lightning descends, presumably from the heavens, and smashes the Herodian god, "Jove"—one of the most spectacular scenes ever produced for the screen.

"Of course that was a difficult technical problem to solve," said Mr. Edwards, "but nothing is too difficult for the technical men attached to the William Fox staff. After I explained the effect desired, one of the men evolved a plan so simple in its method that one wondered why it had not been thought of before. I would like to explain the simple mechanism of this contrivance, but it is a secret I cannot divulge. When the 'miracle' was to be performed I had to arrange a set of signals with the men in charge of its workings. A slip meant the nullification of the entire scene—but several rehearsals made it perfect, and the result was most gratifying."

Mr. Edwards also tells how he evolved the great wind storm effects and the flashes of lightning in the scene where "Salome" receives the head of John the Baptist, after her dance of the Seven Veils.

"I always had in mind a terrific, hair-raising finish to the picture, and wanted to get an effect that was seldom, if ever, equalled in a picture production. I ordered the propellers of ten airplanes; they were placed in advantageous positions, and were to begin revolving at a given signal. In addition, huge carbons capable of receiving more than 2,600 volts were placed in the rear and the side of the stage. The result, as shown on the screen, justified all expectations."

In addition to being a director who really "directs," he is a real human being, as many of the thousands of "extras" who have been in Mr. Edwards' pictures can testify to. Always uppermost in his mind is the comfort and well-being of the men and women who are in his big scenes. He always sees to it that they are given every comfort possible, and always insists that the food served them on "location" is as wholesome as that provided for the principals. In big scenes he sees to it that a staff of doctors and nurses are in attendance to give first aid in case of emergency.

Mr. Edwards never uses a manuscript when directing a picture, as he is thoroughly familiar with the story before he starts filming it—something very few directors can boast of.

And just one more sidelight on J. Gordon Edwards. He is not ashamed to acknowledge that he finds his charming little wife a great source of inspiration and a real helpmate. Mrs. Edwards, before her marriage, was Angela McCaull, a well-known *ingenue*, and the daughter of Col. John A. McCaull, who was a famous theatrical manager. She has studied the intricacies of motion picture production in conjunction with her justly famous husband, and during the filming of "Cleopatra" and "Salome" was an ever-present source of inspiration.

JAEGER

Should Be Worn By Ladies

Constitutionally women are much more delicately constructed than men, and their bodies being of a much finer texture, are more susceptible to weather changes. Jaeger Pure Wool Underwear affords complete protection in all weather and at all seasons.

A fully illustrated catalogue free on application.

For sale at Jaeger Stores and Agencies throughout Canada.

Vaccine In The Influenza Epidemic

Our representative spent one of the most interesting hours ever devoted to an interview for many years at the Nicholson laboratories, Toronto, where the different organisms causing the present influenza epidemic were shown to the writer both while growing in the incubator and under the microscope.

The Bacteriologist is firmly of the opinion that the short gram negative bacillus which he isolated from the blood of the patient and cultured in the incubator is the one causing the present epidemic. Millions of them were shown to the writer under the microscope. It was also learned that this blood bacillus differs from the Influenza Bacillus found in the sputum inasmuch that it is shorter and of a more fatty appearance.

In the advanced stages of the disease other organisms—in addition to the Influenza Bacillus—were found, all of which differ in appearance, as shown under the microscope. These are known to the profession as Pneumococcus, Streptococcus and Micrococcus Catarrhalis, all of which organisms have to be overcome in the system befor the patient is pronounced cured.

In making the vaccine to counteract the organisms, all were included in the vaccine, which, from the first of the epidemic produced remarkable results, and from enquiries from the scores of physicians using vaccine it has been learned that not a single case proved at all serious where vaccine was administered in the early stages.

It was also ascertained that where factory employees, hospital nurses and families had been inoculated previous to contracting the disease very rarely was the disease contracted at all, and in the few cases reported to have symptoms of the influenza it only appeared in a very slight form.

The color that "comes and goes"

WHAT KEEPS YOU FROM HAVING ITS CHARM

HOW many girls despair of ever rousing a sallow, sluggish skin! How hard it seems *not* to have the clear skin and radiant color that is every young girl's right.

Have you ever thought that your skin *can* be changed? Every day your skin changes *of itself*. Old skin dies, and new forms to take its place. It depends on you to keep this new skin clear and colorful.

Just so long as you neglect your skin, it will continue to be dull and colorless. If it is sallow, sluggish, inactive, it needs *stimulating every day*. Free it every night of the tiny dead particles that develop daily. Cleanse the pores thoroughly, bring the blood to the surface, stimulate the tiny muscular fibers. You can do this every night by using the following treatment:

How to rouse a sluggish skin

Just before retiring, wash your face and neck with plenty of Woodbury's Facial Soap and hot water. If your skin has been badly neglected, rub a generous lather thoroughly into the pores, using an upward and outward motion, until the skin feels somewhat sensitive. After this, rinse well in warm, then in cold water. Then rub your skin for thirty seconds with a lump of ice, and dry carefully.

The very first time you use this treatment, your skin will feel fresher and invigorated. Woodbury's Facial Soap was made especially to meet the needs of the skin. It was formulated by John H. Woodbury after years of experience in treating the skin. Its pure, cleansing, antiseptic lather is just what the skin needs to keep it clear and healthy.

Within a week or ten days, you will notice an improvement in your skin. But do not keep up the treatment for a time and then neglect it. Only the *steady* use of Woodbury's will give you the clear, radiant skin you long for.

Perhaps your skin needs a stronger treatment than the one given here. Then write us for the new steam treatment for pale, sallow skins. You will find the other famous treatments in the booklet wrapped around every cake of Woodbury's Facial Soap. Get your cake today, and begin at once the treatment your skin needs.

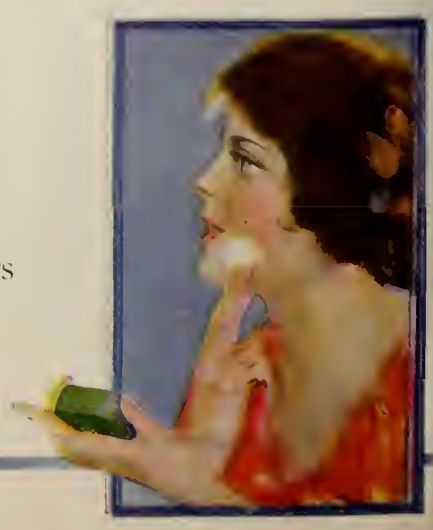
You will find that the 25c cake of Woodbury's lasts for a month or six weeks of any Woodbury treatment as well as for general cleansing use for that time. It is for sale at drug stores and toilet goods counters throughout the United States and Canada.

Send for sample cake of soap

WITH BOOKLET OF FAMOUS TREATMENTS AND SAMPLE OF WOODBURY'S FACIAL POWDER

Send 6c for a trial size sample cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet of treatments, "A Skin You Love to Touch". Or for 12c we will send you the treatment booklet and samples of Woodbury's Facial Soap and Facial Powder. Address The Andrew Jergens Co., 112 Spring Grove Ave., Cincinnati, Ohio.

If you live in Canada, address The Andrew Jergens Co., Limited, 5212 Sherbrooke Street, Perth, Ontario.



IF YOUR SKIN IS VERY TENDER

there is a special Woodbury treatment for the care of it. You will find it in the booklet wrapped around your cake of Woodbury's Facial Soap

Copyright, January, 1919, in Canada, by The Canadian Women's Magazine Company, Limited, Toronto.

What You Will Find As You Turn The Pages of The February Number

MABEL BURKHOLDER is the writer of an excellent short story,

"THE PERPETUAL ADORATION,"

in the February number. The setting is in the Chapel of the Franciscan Sisters at Quebec, and the story reveals the human element which lingers amid the mystery and prayers of perpetual adoration.

† †

"FATE CHAPERONES ELEANOR,"

by Georgene H. Wilder. A humorous story of the unexpected doings of a High School girl. Call it luck, fate, or plain persistence, eventually Eleanor won out.

† †

"OTHER MEN'S LUCK"

will be illustrated by Mary Essex of Montreal and published next month.

In addition to these the serial, "Who Goes There" grows in interest and thrills. Pictures showing the code of the Germans will be reproduced, and the plot of the story becomes more interesting in every paragraph.

WOMEN'S INSTITUTE SECTION,

with reports from all parts of Canada.

ANNOUNCEMENT

Owing to labor conditions, the Picture (or Rotogravure) Section announced to begin in the January number, has to be held for the following issue of "Canadian Home Journal." This is as great a disappointment to the Publishers and Editors as to the readers, but we can with assurance look forward to the splendid Picture Section of eight additional pages, printed in a rich sepia tone, appearing in the February number. In this section will be shown pictures of special interest to Canadians, overseas pictures, photographs of homes, and reproductions of famous Canadian paintings.

Children's Shoes *Will* Wear Longer

"Why do the children need so many shoes?" The question looms larger every year in the mind of every mother. If you could cut out one pair of shoes a year for each of the kiddies, what a saving it would mean.

After all, children's shoe-wear is largely a question of sole-wear. If the soles would wear longer and hold the uppers in shape, shoe-bills would come down.

Neolin Soles do these things.

Every day thousands of mothers are proving it. Millions of grown-ups have proved it on their own shoes.

Neolin was produced by science expressly for shoe-soles. Long-wear was the first quality aimed at and attained. And in children's shoes Neolin gives a greater margin of wear over old-style soles.

Other qualities there are that win mothers to Neolin.

Neolin Soles are flexible and help little feet to grow naturally.

Neolin Soles are waterproof, protecting health on wet days.

Neolin Soles are quiet and will not scratch floors or furniture.

For long wear; for the comfort of the kiddies and for the sake of your fine furniture, buy shoes with Neolin Soles. You can get them in many styles at your regular shoe-store. The repair-man has full-soles and half-soles of Neolin for the children's worn shoes.

Just to protect yourself, see that the name "Neolin" is on the bottom of the sole.

EDITORIAL

By JEAN GRAHAM.

OUR AIM

TO publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome, and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

It may be said for most of us that this is the very newest year we have known. Not since the autumn of 1914, have we felt anything but hesitation over the time-worn salutation, "A Happy New Year!" To-day, in spite of all the havoc and horror of the last four years, the world faces the next twelve months with the confidence sprung from a hard-won peace. Belgium has arisen, to build her waste places; France faces the future with a spirit of gallantry which outdoes the courage of her own Bayard, the knight without fear and without reproach.

In Britain, there is the calm fortitude of a race which has stood firm in the day of sternest test and has come out of the conflict scarred, but undaunted. In our Dominion, mingled with profound gratitude for peace, is the pride in what our own men have done to overthrow a brutal tyranny. Canada has proved equal to the hardest task which could confront a young nation, and looks forward, having seen the worst, yet hoping for the best.

"Their name liveth for evermore," the memorial line suggested by Mr. Kipling for the "unreturning brave" who rest in Britain's military cemeteries, is a sentiment in every true Canadian heart as 1919 dawns. Those soldiers of our land, who have given their all for freedom, would have us remember them in deeds that will mean rebuilding a Canada nobly worthy of the spirit which animated the men who laid down their lives for her.

† † † †

THE STRANGER WITHIN OUR GATES. There is a work in which we all (especially the women of the land) should be sincerely interested—and that is the welcoming of the alien.

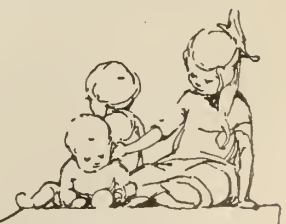
Do not let us have any misunderstanding concerning this question. There has been too much "easiness" in the matter of admitting immigrants. It has been stated more than once that certain would-be settlers, who have been rejected at United States ports, have managed to slip past the Canadian authorities and have ultimately proved a menace and a burden in our cities. The necessity for keeping out the mentally defective is not realized unless the public is made acquainted with the facts, as they are now known to the officials of the Social Service and other authorities in our large centres. The unfit should be turned back from our ports, and the mentally defective, already in our country, should be so protected and guarded that the affliction shall not be laid upon another generation.

When the newcomer, however poor he may be, is considered worthy of citizenship in this new land, which should have a home for every worker, the duty of those who are the native-born is to see that, with thoroughness but without officiousness, the Italian, the Roumanian, the Swede or the Dane is made at home in his adopted country. A teacher from the West told an Eastern audience last year that her first class consisted of thirteen pupils—with seven languages to the baker's dozen of young scholars! With characteristic buoyancy, the teacher proceeded to show what an advantage it was to teach English to such a class and make its use the bi-lingual bond of union. Lucky thirteen, to have such an instructor, who rejoiced in her cosmopolitan pupils and the opportunity for helpful citizen-making they afforded her! She was a genuine moulder of Canada—quite the reverse of the interfering, condescending "Government Lady," who was calmly murdered by Anna Maria Sophia Jones.

THE GIFTS OF THE NEWCOMER. We are unconsciously given to consider the newcomer as an intruder, forgetting that our own pioneer forefathers were immigrants, since the word really means all who come into this country as settlers from another land. The strength of Britain has been her kindness to the other races, though she has often been accused of an insular attitude. For that matter, the population of the British Isles has been a curious blending:

"Saxon or Dane or Norman we,
Teuton or Celt, or whatever we be."

Canada already sees a great mixture in her Provinces, and the problem of turning the "foreigner" into the Canadian citizen is one which will absorb the best energies of those whose grandparents from the British countries found a home here long ago.



There have been several protests recently from prominent Canadians, against the general use of such terms as "Dago," "Sheeny," "Chink," all of which have more than a flavor of contempt. If we will only see what the children are doing in our schools of the Italian and Hebrew quarters, the cruel folly of disrespect or rudeness will be plain to us. Look at the audiences at our best concerts in Montreal, Toronto or Winnipeg, and you will see hundreds of the most attentive listeners, who are plainly of Southern European ancestry. They show a devotion to art and music of which the British or American "tired business man" is seldom capable. The contribution which these newcomers can make to our country's artistic and musical life is a notable one, and let us not forget the Hebrew instinct for the drama which may yet enrich Canadian productions. Resources of wheat and coal are always enthusiastically described when the orator is descanting upon our national wealth. Let us remember, also, the genius for literary, artistic or dramatic expression, which means the blossoming of a community's life.

† † † †

THE DOMINION OF TO-MORROW. It is not the intention of the writer to try to play the ungrateful role of prophetess, for a dire fate usually befalls the one who attempts to foretell events. Years ago, a clerical speaker of Scottish birth, delivering an address in Toronto, said that, while he hoped war would never touch this young country—yet, if such should come, Canada might find in it her unity and strength. The speaker was abused in newspapers from Halifax to Vancouver, by obtuse writers who thought he was preaching militarism—and the Scottish minister left our land, very much bewildered by its ways and manners. Well, the war has come—infinitely more scathing than any of us could have imagined—and the Dominion is free to-day, because her men have fought and died to maintain that heritage.

The women of Canada have not been called upon to endure such harrowing scenes as Belgium has known, but there is hardly a household in our land untouched by war's bereavement. The Dominion of to-morrow will not forget the sacrifice made by the men and women who unselfishly put aside all thought of ease and safety that this country of ours might be preserved from the curse of tyranny. Whatever the Canada to come may be, we are sure that there will be the larger heart and kindlier hand because we have known of Serbia's sacrifice and Belgium's desolation.

The perfect bloom
of a skin so fine, so soft in texture that it seems the outward sign of an exquisite personal fineness —Read below how by proper treatment you can gain this most appealing of all charms

The Magic of a fine, soft skin

ONLY BY THE PROPER CARE CAN YOU GAIN THIS CHARM

IT DOES not "just happen" that some girls retain the loveliness of a fine, soft complexion. Only by really caring, by finding out and faithfully using the right treatment for the skin, have the famous beauties kept this charm.

You, too, when you were a baby had a fresh, fair skin. Gradually, your skin has lost this magic beauty which rightly belongs to it.

It is exposure to cold winds and, most of all, to dust and dirt that makes the skin coarsen. By proper treatment you can offset these harmful influences; you can bring new life to your skin.

Your skin is changing every day. As old skin dies, new forms to take its place. You can make this new skin what you will.

Examine your skin closely. Its pores should be hardly noticeable. If they already begin to show conspicuously, it is a sign that you have not been giving your skin the proper care for its needs.

Begin tonight this treatment for reducing enlarged pores and making the skin fine in texture. Use it persistently. Remember, only by faithfully taking care of your skin can you correct a condition which is the result of years of neglect.

To make your skin fine in texture

Dip your wash cloth in very warm water and hold it to your face. Now take a cake of Woodbury's Facial Soap, dip it in water and rub the cake itself over your skin. Leave the slight coating of soap on for a few minutes until the skin feels drawn and dry. Then dampen the skin and rub the soap in gently with an upward and outward motion. Rinse the face thoroughly, first in tepid water, then in cold. Whenever possible, finish by rubbing the face with *a piece of ice*. Always dry carefully.

You can feel the difference the very first time you use this treatment. Within ten days your skin will show a marked improvement—a promise of that greater smoothness that the steady use of Woodbury's always brings.

For a month or six weeks of any Woodbury Facial treatment and for general cleansing use for that time a 25c cake is sufficient. Woodbury's is on sale at drug stores and toilet goods counters throughout the United States and Canada.

For pale sallow skins

Do you lack the exquisite color that comes and goes? Write us for directions for the new steam treatment for pale, sallow skins. It will bring to your skin the fresh, glowing color for which you have longed

Conspicuous nose pores

You need not let the attractiveness of your face be marred by conspicuous nose pores. If this is your trouble, start at once the special treatment for it given in the booklet wrapped around each cake of Woodbury's Facial Soap

Send for sample cake of soap with booklet of special treatments and sample of Woodbury's Facial Powder

Send 6c for a trial-size cake (enough for a week or ten days of any Woodbury treatment), together with the booklet of famous treatments, "A Skin You Love to Touch." Or for 12c we will send you the treatment booklet and samples of Woodbury's Facial Soap and Facial Powder

MADE IN CANADA

"It was a strange scene McAra's eyes rested on."

The Madness of McAra

By EDITH G. BAYNE.
Illustrated by Mary Essex.

What would you do if you returned from the war and found your wife merrily entertaining in this manner?

ALL through that long journey over sea and land, Captain John McAra had held but one picture in his mind. It was the picture that had been more or less with him, sleeping and waking, during the whole of the past two and a half years and now under the spell of anticipation, when each flashing mile-post diminished the distance between him and the realization, the picture seemed to acquire more definite lines, a fresher charm and a keener attraction. He saw nothing else, had seen nothing else for days. The fields and woods and streams of his native county flitted by and McAra scarcely noticed. His eyes were fixed upon the soft low-lying clouds along the horizon back of which lay—the picture.

He was not the first nor will he be the last to cherish such a vision. For the picture was—Home. To be exact it was the heart of his home, a corner of the old living-room with southern windows that looked out upon an old garden. It was the brightest spot in all the dear old house, the corner he and Kathie loved best. It was there on the broad window seat his fair young wife liked to sit and the sun would turn her hair into a golden halo so that sometimes the eyes were dazzled with the glory of it; and on moonlight evenings the two made of the old corner a dreaming place. It had heard many secrets, that old corner, seen many changes. There had sat in her time his mother while she awaited his father. There his own basket-cradle had rocked and later on that very window-seat he had played with his tin soldiers and dreamed dreams of a glorious future when he should be a captain of real soldiers, and do great deeds and win high honors. At a still later period he had read Stevenson there, and looking out, between chapters, at the old-fashioned flower-garden had made of it a desert island with buried treasure hidden somewhere along the trim gravel-paths or under the great maple in the corner. Of all the well-loved corners in that well-loved old home this held first place in his affections. It had the most memories wrapped up in it, had caught and held captive the greatest number of sunbeams and seemed to have mellowed with the years as great old paintings are said to mellow. To McAra it was a semi-sacred spot and he called it Heart o' Home.

He thought of Kathie there as she would be awaiting him, her bright head bent over a bit of sewing or her slim white fingers busy among the blue willow cups on the little teakwood table. For it would be nearly tea time when he arrived.

He could see her talking to the love-birds in their wicker cage or stroking the rich fur of the big Maltese asleep in the depths of one of the old chintz-covered chairs, and trying the while to pretend she wasn't all a-tremble with excitement. He could see her running to the door every two or three minutes and then returning to kneel on the old window-seat and look down the garden to the cross-roads to watch for him turning the corner. There would be sweetheart roses in his favorite silver vase. The single pot of geranium would be a-bloom, its scarlet flowers making a vivid touch against the cool cream of the plain scrim curtains. Everything would look as he had last seen it. Kathie would make a point of that! She had exquisite taste and a great deal of tact and also a strong sense of dramatic values. She was an "understanding" little person. She wouldn't harass or hurry him but would be content to waive questions till he was rested, to let the gentle and benign influence of Heart o' Home do its healing work first.

"If a man hadn't *this* to come back to," he muttered as the train-whistle sounded for his home town, "what could homecoming mean!"

And he actually began to pity, in a subconscious way, two or three returning men who were getting off at Willowvale too. Their welcome would be vociferous, exclamatory, and genuine, of course, but not like unto that awaiting *him*.

In his telegram—he hadn't had time before sailing for a letter, for his leave had been unexpected—he had told his wife he preferred to have her meet him at home. He had rather regretted that bit of sentiment, for his impatience now almost overwhelmed him. He wished a dozen times in the last half-hour that he had asked her to come with the car. He was hungry for her with an actual physical hunger that gnawed. How could he wait, after all, to come upon her in the Heart o' Home environment, dear as it was?

The faint, unnameable scent from her hair, her warm lips, her voice, the look in her eyes when she was especially proud of him (as in this instance he knew she would be)—the thrill of anticipation was mounting like wine to his head!

And then—he realized that Barron hadn't come with the car! Nobody seemed to recognize or expect him! Ridiculous! What could be wrong? Could his telegram have been delayed?

Then very suddenly a dozen people recognized him at once and when the boisterous and hearty greetings were over he found himself in Dave Warkworth's car proceeding in an all too leisurely fashion up the town's principal street. Warkworth, intensely proud of the honor of driving Willowvale's D.S.O. to his home, stopped the car half a dozen times to enable old friends to shake the hero's hand.

"The place doesn't seem changed in the least," observed McAra, vastly content.

"Maybe not. Still—we *are* a bit tonier I think," said Warkworth, judicially.

"Tonier?"

"Livelier, I should say. More cars. Some new houses. More social life. More git-up-an'-git to the people. We needed it," he added. "Such a bunch of glooms you never saw till Mrs. De Witt Broune and a few others decided to smarten us up! Some people's idea of helping on the war is to go about with a face like a hired mourner."

They turned a corner—the last one—and with a quickened heart-beat McAra saw the dear old home nestling among its maples.

"I was at Mrs. Broune's last dance," Warkworth went on. "Thursday night it was. War economy was strictly observed, of course, in the eatables line, but we had a splendid time. The dresses of the ladies—Oh boy!"

"You always *did* like the ladies," commented McAra, smiling, his hand ready on the catch of the door.

"Always will, too. Do you know that the Willowvale women head the list in this county for Red Cross donations? Yes, it's a fact. We made ninety dollars Thursday night. Some of the men knitted socks between games, and most of the ladies smoked. Talk about the turning of tables, eh?"

"Ladies?" queried McAra, pointedly, a shade of disgust in his tone.

"That's what I said. Well, here we are. What's your hurry?" the other asked, banteringly, as McAra fairly dashed through the little gate and up the walk, hardly remembering to thank his friend for the lift.

About to burst in the same fashion into the house he stopped himself, just in time. He would enter as noiselessly as possible, he decided, partly to avoid startling Kathie, but mainly that he might give himself the pleasure of seeing her before she saw him. He had always loved that quaint little way of hers when surprised, her hand on her heart and her eyes widening, her red lips slightly apart! Other people did these things when surprised, of course, but Kathie's manner of registering astonishment was—just Kathie-like, and therefore entirely charming.

* * * * * * * * *

It was a strange scene McAra's eyes rested upon. Ten or a dozen women occupied the old living-room. Some were knitting more or less industriously, some were frankly idle and gossiping and the remainder played bridge feverishly. All were smoking. Gay knitting-bags hung about on chair-backs and tea apparently had been served. The players, amongst whom was Kathie, were alternately tensely silent and excitedly clamorous. There were no flowers and the great Maltese was nowhere to be seen. Over all hung a wavering blue-grey haze.

And then one of the women looked up and seeing the tall khaki figure framed in the doorway gave a slight scream.

Kathie turned. She had just taken a puff from

(*Continued on page 43.*)

The Story of the Khaki University

By W. S. WALLACE,
Professor of English, Toronto University.

How the Canadian Universities Have Made It Possible for Our Boys Overseas To Continue Their Studies, Even at The Front Line

A class in wireless telegraphy in progress at the Witley Khaki University.

THE announcement recently made by the authorities at Ottawa that the Khaki University of Canada has at last been placed on an official and permanent basis, has called attention anew to what is one of the most interesting and remarkable developments of the Great War. Never before, so far as is known, has an attempt been made to provide for soldiers on active service an education in the arts of peace. Even in wars like the American Civil War, which lasted for five years, no move has ever been made to give the soldiers training along any but purely military lines. Now, however, we have come to a recognition of the principle that the soldier who is giving up the best years of his life to the service of his country is entitled to an opportunity to acquire during those years an education which will fit him to pick up again the threads of civilian life when the war is over.

In this new departure, Canada has led the way. With whom the idea of the Khaki University originated might be a difficult and invidious point to determine. The truth probably is that the idea sprang up independently and spontaneously in several different quarters. But it was among the Canadian troops at Witley Camp in Surrey that the project first took actual shape in the summer of 1917. The ill-fated fifth Canadian Division, which had been mobilized at Witley in the beginning of 1917, had completed its training, and was waiting with impatience for orders to proceed to the front. Most of the units composing the division had been in England for more than a year; and the monotony of life in a reserve camp had staled them. Many who had lived a full and busy life before enlisting found their existence empty and their minds starved. Under these conditions, some of the officers hit upon the device of opening classes for those who wished to attend, in which a variety of subjects, from Greek to mechanical drawing, were taught. In this movement the leading spirit was Capt. Clarence MacKinnon, a chaplain who is in peace time Principal of Pine Hill College, Nova Scotia; but he was heartily supported by other officers, including Lt.-Col. John A. Cooper, formerly editor of the Canadian Courier, and Lt.-Col. F. P. Day, a former Rhodes Scholar, and Professor of English in the University of New Brunswick. The Divisional Commander, Major-Gen. Garnet Hughes, D.S.O., C.M.G., became greatly interested in the movement, and forwarded it in all ways in his power. Through the generous co-operation of the Canadian Y.M.C.A., a library was formed; huts were set aside as class-rooms; and in a short time hundreds of men were enrolled in the classes of what came to be known as the "Khaki College." Conditions at Witley were of course very favourable to the carrying on of educational work among the troops. There was little change in the personnel of the camp, either as regards teachers or pupils; and the men's minds were particularly ripe for the sort of instruction the classes offered. But when all such deductions were made, it was clear that the college was filling a long-felt want in the army, and that the idea on which it was based was capable of development and expansion.

At the same time events were moving in the same direction in another quarter. Some time in 1916, President H. M. Tory, of the University of Alberta, conceived the idea of carrying on educational work among the troops, especially during the period of demobilization. For a civilian, unconnected with the army, to have foreseen the need of such work, amounted to an inspiration. President Tory took up the idea with the other heads of educational institutions in Canada; he got them to make him their accredited representative; and he persuaded the Canadian government to send him over to Great Britain and France to investigate the situation. He reached England in the summer of 1917, and found at Witley the classes of the Khaki College already in operation. He made a thorough survey of the situation, which convinced him of the great opportunities latent in the movement; and in the the autumn of 1917 he returned to Canada to place his proposals before the Canadian government and the Canadian universities.

Meanwhile the success of the Khaki College at Witley had attracted the attention of the General Officer Commanding the Canadians in England, Lieut.-Gen. Sir R. E. W. Turner, V.C., and his General Staff Officer, Brig.-Gen. H. F. McDonald, D.S.O. In November, 1917, General Turner appointed a committee, composed of Lt.-Col. Gerald Birks, of the Canadian Y.M.C.A., Capt. Clarence MacKinnon, and Capt. George MacDonald, of the General Staff, to report upon the extension of the educational work to all Canadian camps in England. This oommittee laid the foundation of the Khaki College in all the larger Canadian centres in Shorncliffe, in Seaford, in Bramshott, in Epsom, in Bexhill, and elsewhere. The general procedure was that the Canadian Y.M.C.A. assumed the financial responsibility; the Chaplains Service co-operated in supplying help in other ways; the General Staff assumed direction so far as the inter-relation of the movement with the army was concerned; and the general educational control was placed temporarily in the hands of a Senate composed mainly of the heads and secretaries of the local colleges.

The King visits Khaki University of Canada at Witley Camp, England.

As soon as the educational committee appointed by General Turner had made its report, it obtained authority to proceed to France, to take up the question of the establishment of educational work in the Canadian Corps. It found the Canadian Corps Commander, Lieut.-Gen. Sir Arthur Currie, cordially in favor of this idea. Capt. E. H. Oliver, a chaplain who before the war was on the staff of the University of Saskatchewan, was appointed to direct the work; and in a very short time the "University of Vimy Ridge" was in operation. Within range of the German guns, Canadian soldiers were studying such things as the French verb, the chemistry of the soil, and commercial law. It was not of course possible to conduct classes in the front line; but classes were found feasible in the back areas, in rest billets and in schools of instruction.

In January, 1918, President Tory returned to England, and by virtue of the authority with which he was invested by the Dominion government and the Canadian universities, he immediately took over the direction of the work of the Khaki University as a sort of civilian adviser to the General Staff. It was expected that soon after his arrival the Khaki University would be placed on a definite official basis; but a variety of events, the nature of which it is not necessary to describe here delayed the complete authorization

McKenzie, Lieut. Harold T. I. Lee, Capt. H. S. Patton, Lieut. G. H. Cole.

Black Blood and Blue Blood

By F. ARTHUR JACOBSON

Illustrated by Norman Price.

A Story of The Unalterable Barrier

CHARLEY BLAKELEY had been at college for three years before he formed what might be termed a friendship with any of his fellow-students.

It seemed strange for a young and active man to keep aloof from his companions, but an unusually sensitive nature made much of a disfigurement which would have meant little or nothing to a differently constituted person.

He was a tall, muscular, well set up fellow, with a fine head set firmly upon his thick neck, but his features were not prepossessing to the casual observer.

An unfortunate accident in his early youth had inflicted a deep, ugly scar which ran diagonally across his left cheek and his mouth, and had broken his nose leaving it deeply dented in the middle.

But the fine blue eyes, set wide apart under a high forehead beamed good nature and entirely redeemed the twisted smile.

His family was wealthy and Charley felt his disfigurement keenly.

His sister Helen, a budding beauty of nineteen tried with her parents to make him forget the injury and its consequences and by the time his college days started he had begun to outgrow his sensitiveness in the matter.

He could never bring himself, however to seek or accept the society of women.

Their presence always reminded him forcibly of his unlikeness to other men and he devoted most of his time to study.

Among his classmates he soon earned the nickname "Hermit Blakeley."

Up to the time of his meeting with Daniel Bond he had no intimates of either sex, not because he was naturally unsociable, but on account of a gradually formed habit of keeping pretty much to himself.

On one of the first days of his sophomore year he was strolling down the main street of the little college town when a hubbub of voices assailed his ears and an instant later a crowd of his classmen burst around a corner and surrounded him.

A man whose accent proclaimed him to be a Southerner made his way with some difficulty to Blakeley's side.

"See here, Charley, what do you think of this? A nigger Freshie. What shall we do with him?"

The crowd parted for him to see and Blakeley beheld a figure which might have stepped out of the Arabian Nights, except that it was garbed in twentieth century apparel. Standing well up to Blakeley's six foot two, straight as the proverbial ramrod and slender and agile as a panther, Daniel Bond stood and eyed the hazers.

His color was a rich copper hue, his hair was jet black and curled without being kinky.

Not a trace of the negro showed in the perfect profile that he displayed to Blakeley as he slowly turned his head.

Bond's black eyes, like two deep pools, caught Blakeley's blue ones and held them for an instant.

Then a magnificent set of white teeth flashed in a smile that was almost one of recognition.

Blakeley addressed the crowd, "Better let him alone boys, you are too many to one."

The Southerner spoke again at Charley's elbow, "I'll take him alone then. Keep away, fellows."

He seized the unresisting Bond by the arm and dragged him across the street to a boot-black's stand.

"Now Mose," he said, "I want a nice shine. Tony will lend us his stand. Get to work," and he climbed into the chair.

Bond fished out a dime and handed it to the Italian proprietor of the stand, "Give the gentleman a good shine," he said and started away.

In the centre of a gale of laughter the Southerner called him back.

"I said you shine them, Freshie."

"I heard you," Bond was patient.

"Go ahead and do it then, and say 'sir' when you answer a sophomore."

The black eyes flashed another smile at Blakeley, who stood a little apart from the crowd watching.

Then Bond handed another dime to the astonished Tony.

"Give the gentleman two shines," he directed as he started away again.

The Southerner sprang to the ground.

"I won't fight a nigger," he panted, "but I will whip one."

He seized a buggy whip which stood at the curb and slashed the astonished negro across the face with it.

The ring of students widened suddenly and Blakeley started forward.

Bond stopped him with a gesture and turned to

Wrapping Helen in a blanket, he carried her to where the cold air blew directly upon her.

the man who had struck him, wiping a dull red weal on his cheek with a white silk handkerchief..

"You whip me because I am a Freshman who will not obey you?" he queried softly.

The Southerner's temper had quite gotten the best of him and he raised the whip again.

"No," he growled, "because you're a darned, educated nigger."

"I guessed as much," said Daniel Bond without a trace of anger or resentment, "and this is how the *educated* nigger accepts such attentions."

He took a sudden step forward and grasped both of his assailant's wrists, bending them backward and upward as he kicked both feet out from under him.

Then as his victim sat on the ground, Bond pinioned both wrists behind his back in a powerful right hand and with the thumb and middle finger of his left hand pressed on the back of his neck below the ears.

The crowd surged forward. Daniel Bond lifted the man to his feet without a perceptible effort and released him.

"I assure you, gentlemen," he remarked quietly, "I have no desire to injure anyone, but I will not be so easy with the next man who assaults me."

He turned on his heel and disappeared down the street. Blakeley watched the magnificent figure until it turned a corner.

Then he addressed the man who had started the hazing. "Better let him alone, Butler. He is no ordinary negro."

"Every black hide covers a nigger. I'll get him yet for this."

"Well, you are raising a pretty fine point. You started the muss, you know."

With which the meeting broke up without further discussion.

Blakeley was very busy with his work, for the week which followed and the Bond incident had been forgotten.

One very warm Fall evening he had been working late over some difficult problems, and having mastered them he started out for a walk before going to bed.

The night was dark and the streets of the town were deserted. He left his lodgings and strolled, pipe in mouth, along the quiet street and out toward the open country.

It was very peaceful and soothing and he instinctively shortened his usual swinging stride to a gait more in keeping with his mood, and the surroundings.

As he passed the edge of the town, he saw indistinctly in the gloom, a tall figure coming toward him. He was peering at it in an effort to see if it was anyone he knew when he heard an ear-shattering crash and saw a blinding flash of light.

His next sensation was one of intense surprise. Opening his eyes with a painful effort, he discovered himself in a richly furnished room, dimly lighted by a huge, shaded lamp.

Bond was standing beside him with a bowl of cracked ice which he was applying to Blakeley's temples.

"Lie still," said Bond.

His voice was soft and deep. "Lie quiet a bit, you're all right."

Blakeley's head ached fearfully and he was very glad to keep it on the pillow.

"Lightning strike me?" he murmured.

Bond's mouth smiled, but his dark eyes glittered strangely.

"No, a thug struck you with a stick. I saw him step out from behind a tree and hit you across the back of the head. I was coming the other way.

"He knocked you clean out, and it's lucky you haven't a fractured skull.

"Better stay here tonight, there's plenty of room and I'll help you undress."

Within five minutes Charley Blakeley was incased in silken pyjamas and sunk in a profound slumber.

He awoke refreshed and normal except for a very sore spot on the back of his head and for a long time lay taking stock of his surroundings.

The room was evidently a combination of bedroom and study. It was furnished with oriental taste, and glowed with color rich but subdued.

Rugs, hangings and upholstery all fitted into a perfectly planned color scheme which was at once restful to the eye and pleasing to his jarred nerves.

There were no pictures on the walls which were covered with tapestries.

The huge lamp that he had observed the night before, stood on a large study table which was littered with a medley of books, papers and surgical and scientific instruments of various kinds.

While these details still absorbed his attention, a door opened noiselessly and Bond entered.

Blakeley suppressed an ejaculation of surprise at his host's costume, for Bond wore a magnificent silk dressing gown of peacock blue brocaded with heavy designs in green and yellow. He was a regal figure done in bronze, as he stood in the doorway and greeted Blakeley.

"Good morning. How do you feel?"

"Fine as silk," was the prompt answer, "thanks to you. I am rather curious about this room. I thought—"

"Yes," laughed Bond, "I know what you thought. I could not find a place that would board me when I came to town, so I had to rent a house. Breakfast will be ready in a few minutes. You will find razors and hot water in here."

He threw open a door leading into a white tiled bath-room and silently disappeared through the door by which he had entered.

Blakeley found a complete outfit of clean linen laid out for him, and he was ready and refreshed when a Japanese valet knocked at his door and announced breakfast.

Bond was waiting at the door of the breakfast room and stepped aside to allow his guest to enter first.

They sat down at opposite sides of a small table and the thought flashed through Blakeley's mind that the situation might occasion some remark if his family ever heard of it.

He smiled at the thought and Bond paused in the act of breaking his egg.

"You are not a Southerner?" he asked. "No? I thought not! But you are thinking how strange it is for you to be breakfasting with a negro. It is stranger than you can imagine."

Blakeley nodded. "It is a bit odd, but I am not worried at this moment over a mere trifle of color."

His fine eyes smiled and Bond who had been sitting a little tensely in his chair, relaxed with a slight sigh of relief.

"How far did you have to carry me last night?" continued Blakeley, "I am not exactly a lightweight."

Bond's smile vanished and an ugly frown gathered and knotted on his brow.

"Oh, not far, half a mile or so. Can you guess who assaulted you?"

"Haven't the faintest idea."

(Continued on following page.)

Black Blood and Blue Blood

(Continued from preceding page.)

Bond called the valet. "Bring me the stick I brought in last night," he ordered.

When the heavy oak stick had been brought, he handed it across the table.

"Did you ever see that before?"

Blakeley weighed it in his hand; "No, I don't think so."

Bond leaned over and placed his finger on a small silver band around the top of the stick. On it was engraved in thin script, "John T. Butler."

"I took it away from him for a keepsake," said Bond in a hard voice, "he recognized me "

Blakeley interrupted him. "But why on earth did he try to kill me with his club?"

"He didn't. He thought he was hitting me." Bond's lip curled, "and Mr. Butler has a broken right arm to remember me by, so I think our score is even."

Blakeley sat spellbound, regarding his handsome host rather doubtfully.

Bond noticed the look, and his frown relaxed into a smile.

"I think," he continued, "that unless you care to carry the matter further, Butler will not do anything foolish in future. I have been studying medicine for some time, and I can assure you that he did not injure you permanently."

Blakeley rubbed the back of his head, "Well he is pald off, I guess. I warned him to let you alone. Let's forget it. Tell me something about yourself. I am very curious, if you don't mind my saying so."

"That's natural enough," replied Bond, "most people seem afraid to remind me that I am black. I like your being frank about it.

"You could not pronounce the name in English, so I am called Daniel Bond, after the good man who took me out of Africa to be educated.

"My father is King Kasongo in the Congo Free State. He is a very brainy man for an African negro, and he sent me out with the missionary to be educated when I was only ten years old."

"Then you are a negro?" interjected Blakeley.

"I am, but you must remember that there is as much difference between me and the American negroes as there is between you and the poor white who does your housework. My position is a most peculiar one. My color is a definite bar to the society of the whites, and I have yet to find, in this country, any negroes who are my equals in intelligence or education.

"You will have to pardon this long speech, but it is a great relief to talk to a sympathetic listener. I hope you will come again, if I do not bore you to death."

Blakeley laughed. "I certainly will. I can hardly eat a man's salt, sleep in his bed and borrow his clothes, to say nothing of letting him carry me half a mile, without showing some sign of appreciation."

"You don't know what that means to me," said Bond sadly. "This is a peculiar country. Color is a line which none can cross. Education, achievement, may carry one a certain distance in business circles, but the bars are up to the negro. Only last month I was refused service in a New York restaurant where I had no redress."

Blakeley remained silent. He did not feel sure of his own opinion on the subject.

Bond continued in his mellow voice, "My own people are now separated from me by an impassable barrier, civilization. My own father whom I see every summer is an untutored savage. I cannot associate with American negroes without losing all the benefits of these years of study. Man to man, Mr. Blakeley, I wish I could change my skin."

"Well," responded Blakeley cheerfully, "since you can't, we will forget the color of it so long as that is the only drawback."

All through the first half of the college year this strange friendship grew and strengthened.

The two men studied together in Bond's luxurious rooms and frequently dined there, attended by the valet San who always addressed Bond as "your highness" and served him with all the ceremony befitting a king's son.

Just before the Christmas holidays Blakeley made a resolve and put it into instant execution.

"Dear Mother," he wrote, "I am bringing my best friend in college, home for the holidays.

"His name is Daniel Bond, but he is a royal prince in his own country.

"Tell father gently but firmly that Dan is an African and rather 'dark complected,' and try to get him used to the idea. Otherwise he might be shocked into hurting Dan's feelings and I do not want that done.

"He is a splendid fellow. I will tell you all about him later on."

Blakeley had been freely and roughly criticised in college for taking Bond up.

Butler never dared to come into the open, but he did his best to force the feeling against the two men.

Blakeley however, stoutly stood up for the man whose only drawback was the color of his skin, and the other men as they came gradually to know Bond better, liked him immensely, but his social circle was very small.

He demurred at Blakeley's cordial invitation for the holidays and at first refused point-blank. He was extremely sensitive and dreaded courting the possibility of a rebuff at the hands of the Blakeley's or their friends.

"Thanks just the same, old man," he said, "let me stay quietly here. I have a lot of work to do anyway."

Blakeley insisted and finally won his point.

They arrived at the Blakeley mansion with San at their heels just before Christmas, and the family had been so thoroughly prepared that the dreaded introductions were gone through quite as though negroes were frequent and welcome guests at the house.

Helen Blakeley hesitated just an instant before putting out her small white hand to clasp the big brown one.

Then she shook hands impulsively and thanked him for entertaining her big brother so royally.

Later she confided to her mother that Bond was the handsomest man she had ever seen.

He certainly looked every inch a royal prince in his well-fitting evening clothes, and before dinner was over even brusque Mr. Blakeley had thawed before his wonderful smile and engaging manners.

The younger members of the party went off to the theatre, and Mr. and Mrs. Blakeley spent the evening at home.

Mr. Blakeley was plainly worried.

He nervously turned his paper for a few moments and then addressed his wife, "Nellie I am afraid this Bond is a dangerous man. I do not like the idea of having him here."

Mrs. Blakeley was as plump and placid as rich men's wives are apt to be.

She turned a mildly surprised eye on her husband, "Why Will, I think he is charming. Of course his being so dark is a little disconcerting at first, but I am sure Charley would not make the mistake of bringing an ordinary negro home."

"That's just the trouble, he is *not* an ordinary negro, and that very point is what bothers me. I wish you would speak to Helen. It is very difficult for me to make myself clear, but you must warn her to be extremely careful in her treatment of this handsome African."

"Oh, that is absurd," cried Mrs. Blakeley, "Helen is not a child, but I will speak to her tonight if you wish it."

The theatre-goers came home in fine spirits.

Bond had been introduced to several friends of the family and had made a decided impression.

The cordiality of his reception had affected him like a stimulant and he had entirely forgotten his color in the pleasure and excitement of the occasion.

He was chatting and laughing as merrily as any member of the party as the motor stopped at the door.

Helen said good night and went directly to her room. Her mother followed and approached the subject in hand as gently as possible.

Helen was inclined to be indignant, "Papa must be crazy," she pouted. "Mr. Bond is delightful, and Charley is very fond of him, but that is no reason for your worrying about me."

"Well, I told your father that Charley knew what he was about, but I promised him I would speak to you."

Helen laughed and kissed her mother, "Don't fuss, old dear, and tell Papa not to be silly."

The Blakeley home was the regulation city house with bedrooms at either end of a narrow hall on each of the upper floors.

Helen's rooms were at the front of the second floor and Bond shared Charley's quarters at the other end of the same floor.

The two men sat until late, smoking and discussing the play, and when they finally did turn in, both fell soundly and almost instantly asleep.

Several hours later Bond suddenly awoke.

His hearing, keener by birth than any white man's, had caught a sound scarcely loud enough to be called a sound, and the dormant instincts of the born "tracker" instantly sprang into play.

He rose from his bed without making a sound and, clad in his pyjamas, went unerringly in the darkness to the door and out into the hall.

It was even darker there than in the room, but a slight current of cold air bearing an unmistakable odor, made him glance quickly toward Helen's room at the far end of the floor.

A tiny glimmer of light showed the door to be ajar.

Bond took several noiseless strides and peeped cautiously through the opening.

Helen Blakeley was lying across her disordered bed, in her white night-robe.

A folded handkerchief lay across her face, and as Bond looked he caught again the familiar, sweetish odor of chloroform borne on the draught from the room.

A man was leaning over the bed trying to remove a pearl necklace which she wore.

His profile showed, a clear silhouette, against the light of an electric bulls-eye which stood on the bed.

Daniel Bond had metamorphosed into a fighting savage.

He calculated his distance to a nicety and suddenly hurled himself bodily through the doorway, landing beside the burglar.

The intruder turned with a smothered oath as Bond seized both his wrists and bent them upward behind his back. The man struggled desperately and silently as Bond forced him to his knees beside the bed and mercilessly twisted his wrists in an iron grip.

Inside of thirty seconds the man suddenly relaxed in his grasp and sagged heavily forward.

He had fainted from pain.

Bond tore off his victim's belt, and with it tied his hands securely behind his back.

Then lifting him as though he was a child he carried him through the hall and locked him in the bathroom.

Charley's door opened as Bond turned the key on his prisoner and Charley appeared in the opening.

"What's up?" he demanded, "I heard a door slam somewhere."

Bond did not answer. His blood-lust was gone, but he panted like a man spent from running.

He beckoned silently and plunged into Helen's room with Charley at his heels.

Throwing the windows wide open, he dropped the saturated cloth out of one of them, and wrapping Helen in a blanket carried her to where the cool air blew directly upon her.

Charley stood for a moment in open-eyed astonishment. Then he sniffed and a light broke upon him.

"Chloroform! Shall I call a doctor?"

Bond shook his head, "No, I can bring her around. Telephone the police. I locked the fellow in the bathroom."

"Burglar?"

"Yes, he's tied up. Hurry along now before she comes to. Don't alarm your mother."

He busied himself with restoring the unconscious girl.

"Thank heaven the devil knew how to use the stuff! He might easily have killed her. There, she is coming around."

He rapidly and gently replaced her in bed and smoothed the rumpled covers.

His first impulse was to fly to his own room, but the instinct of the physician compelled him to remain.

He suddenly realized that he was clad in his pyjamas and as he turned to leave the room she slowly opened her eyes and stared at him.

Bond hastily leaned over and whispered, "Do not be alarmed. He has gone away. I am Bond "

The mists of unconsciousness still enveloped her, but she heard and smiled faintly.

Charley entered the room, "Is she all right, Dan?"

Bond nodded, "I think so," he said in a low voice, "get me some cold cream. The chloroform has burned her lips."

He applied the cream to the burned face and slipped into the dressing gown that Charley brought.

"Now I will get that devil out of the bathroom." he announced. "Is the officer coming?"

Charley nodded assent and took his place by the bedside.

"I'll sit with her. I told the sergeant to send two men."

The front door bell sounded, muffled in the depths of the basement, and Bond released the now conscious and bewildered prisoner and dragged him down stairs.

Two very much astonished officers of the law received him at the front door.

"Would one of you mind going through the basement?" asked Bond, "I'd like to know how he got in so I can lock up again."

"Don't bother to hunt around," said the prisoner, sullenly, "I got in the basement door. The gate was open."

"Thanks," replied Bond. "We will be around in the morning to make a charge. Good night gentlemen."

A Winter Evening

By Louise May Gridley.

Soft bands of white across a sunny sky—
And then the low-toned twilight creeping on.
A neighboring roof deep etched with burdening snow;
Hill, field, and tree beyond
Blending in one wide, gentle blur of gray;
Brown shrubs and withered grasses wave aloft
Their invitation to a passing feathered guest;
While here, and there, and here again
Faint wisps of smoke curl upward,
Telling once more the tale of little homes,
Whither the toil-worn hasten, to sit them down and rest.

So I will spread a table, here beside our hearth;
A joyful feast, for Love broods over it,
Lending the snow-white lustre of his wings.
And now, all things made ready, I will wait,
And listen for the voice I know so well.

—"Good Housekeeping."

The Second Instalment of The New War Romance

WHO GOES THERE

By ROBERT W. CHAMBERS

Illustrated by Dan Sayre Groesbeck.

Synopsis of first instalment will be found on following page.

CHAPTER VI
(*Continued*).

THE man who had thrown his arm around Guild's throat from behind, flung his handcuffed victim aside and whipped out a revolver, but the chauffeur knocked it out of his fist and hit him in the face two heavy, merciless blows, hurling him senseless across the stairs. And all the while the blond young chauffeur was smiling his fixed and murderous smile. And he was like a tiger now in every movement as he knelt, rummaged in the fallen men's pockets, found the key to the handcuffs, leaned over and unlocked them as Guild held out his manacled hands.

"Please watch them, sir," he said cheerfully. "I must find a curtain or something—"

He ran into the living-room, ripped off a long blue curtain, tore it into strips with his powerful blond hands, grinning cheerfully all the while.

"Best to tie them up, sir—this way—allow me, sir—this is the better way—the surer—"

Guild, working hard, he scarcely knew why, felt a touch on his arm.

"Are they dead?" whispered Karen Girard unsteadily.

"No—stunned."

"Are they robbers?"

"I'm not entirely sure what they are," said Guild. "I'll tell you what I think when we're in the car."

The chauffeur completed his work, looked over the results of his efforts critically, rose to his feet, still smiling.

"Now, sir, if you please—and madam—" And he possessed himself of the luggage.

"Take the door-key, if you please, sir. Lock it on the outside. Thank you. This way, if you please, sir. I took it upon myself to bring the car up to the kitchen entrance."

"Kervyn!" she cried, "think what you are doing."

The car stood there; the bags were flung in; Karen Girard stepped into the tonneau; Guild followed. At the same moment a woman appeared, coming along the brick walk.

"My maid of all work," exclaimed Karen. "What shall I say to her?"

"Anything, madam, but send her home," whispered Bush.

The girl leaned from the car and called out: "I have locked the house and am going away for the day, Mrs. Bulger. Please come to-morrow, as usual."

The woman thanked her, turned and went away again down the brick walk. They watched her out of sight.

"Now," said Guild to the chauffeur, "drive to the Holland steamship wharf at——"

"I know, sir," smiled the blond chauffeur.

Which reply troubled the young man exceedingly, for it was evident to him now, if not her-

"I know, sir," smiled the blond chauffeur.

surrounded and protected by German agents of a sinister sort—agents known to her father, in evident communication with him, and thoroughly informed of the fact that he wanted his daughter to leave England at once and under the particular escort of Guild.

Nor had Guild the slightest doubt that the two men who had followed and handcuffed him were British Government agents, and that if this young girl's maid had really been arrested for espionage, and if the Edmeston people, too, were suspected, then suspicion had also been directed toward Miss Girard and naturally also to him, who was her visitor.

Guild's troubled gaze rested once more upon the young girl beside him. At the same moment, as though he had spoken to her she turned and looked at him out of eyes so honest, so fearless that he had responded aloud before he realized it: "It's all right. I know *you* are not deceiving me."

"No," she said, "I am not. But could you tell me what all this means—all this that has happened so swiftly, so terribly——"

"I have a pretty clear idea what it means. . . . It's just as well that those detectives did not arrest me. . . . Tell me, did you ever before see this chauffeur, Bush?"

"Never, Mr. Guild."

He nodded; he was slowly coming to a definite conclusion concerning the episode, but he kept his own counsel. She said in a low, embarrassed voice: "You think me cowardly. I know it. But I really didn't know what to do."

She was very much in earnest, very intent on his expression, and he did not dare smile.

"What *could* you have done, Miss Girard?" he asked, pleasantly.

"I don't know. I—I felt as though we—you and I—were allies—and that I ought to help you. But it all passed too quickly——"

"There was nothing you could have done for me," he smiled.

She said reflectively: "I myself don't quite see how I could have helped matters. But I didn't wish you to believe me afraid to help you."

He looked into her wistful eyes smilingly: "Somehow," he said, "I don't believe you are really very much afraid of anything."

A slight shudder passed over her. "Violence is new to me. I am not very experienced—not very old you know. And I never saw men fight. And when"—she lowered her voice—"when that chauffeur struck them so heavily—so dreadfully—I—I have never seen men fight like that—strike each other in the face as though they—they meant murder——"

"Don't think of it now, Miss Girard. You must keep your nerve." He forced a laugh; "you'll need all your composure, too, because I've got something to tell you which you won't like. Shall I tell you now?"

"Yes, please."

"Then—the man, Gratz, says that you must go aboard that steamer as my wife."

The girl looked at him bewildered. "Somebody," continued Guild, "has taken passage for us as Mr. and Mrs. Kervyn Guild. Gratz warned me. My name is Kervyn. Yours is Karen. Our initials are alike. If there is any suspicion directed towards us there are the initials on your satchel and suit-case—and presumably on your clothing. Do you understand?"

"Yes."

"Do you mind?"

"I mind a little—yes. But I'll do what is necessary," she said, confused.

"I think it is necessary. This man Gratz who seems to know more about my business than I do, tells me so. I believe he is right."

She raised her tragic eyes to his but said nothing.

He leaned nearer to her and spoke in a low voice: "I've been trying to reason it out," he said, "and

(*Continued on following page.*)

WHO GOES THERE

(*Continued from preceding page.*)

I'll tell you what my conclusion is: A German automobile took me to the British lines under a white flag. No doubt Government agents had been informed by telegraph and they followed me as soon as I landed on English soil.

"At the Berkeley Hotel I felt very sure that I was being watched. Now, it appears that this maid of yours has been arrested, and, from what I suspect in regard to the Edmeston Agency—the agency to which your father directed me—I feel very certain that somehow your maid has been involved in the espionage maintained here by the German Government.

"That chauffeur in front of us is from the Edmeston garage; you see what he did to those two detectives! It's very plain to me now that, innocent as you are, you never will be permitted to leave England, even if they don't arrest you, unless you can get out to-day with me.

"And if you don't leave England it means for me something very serious. It means that I shall have to keep my word and go back alone."

"I know," she nodded, looking up at him very earnestly.

He said without the slightest dramatic emphasis: "It really does mean my death, Miss Girard. I think, knowing your father, that there could be no possible hope for me if I go back there without you. . . . And so, knowing that, I am naturally most anxious to clear out of England while I can do so—get away from here with you—if I can take you with a clear conscience. And"—he looked at her, "I feel that I can do that because you have told me that you have gathered no information for the enemies of England. And"—he smiled—"to look into your face, Miss Girard, is to believe you."

Some of the pretty color faded from her cheeks: she said: "You asked me if I were a spy. I am not. You asked me if, knowingly, I carry any military information which might aid the enemies of England. And I answered you that, knowingly, I do not carry any such information."

"That is sufficient," he concluded, smilingly.

"No, it is not sufficient," she said. "I wish to say a little more. Let me go to Trois Fontaines alone. I am accustomed to travel. There is no need to involve you. As long as I arrive there what difference does it make whether or not you accompany me?"

"I promised to accompany you."

"You promised that I should arrive safely at Trois Fontaines. It doesn't matter whether you accompany me. Please—please don't. I had rather you did not go."

He said, gravely: "I know how you must feel about travelling as my wife—"

"It isn't that."

"What is it then?" he asked, surprised.

"I don't wish you to take the risk of travelling with me."

"What risk? The worst that could happen to you would be your arrest and detention. If you are not a spy, you can not be proven one."

Her blue eyes gazed absently out across the sunny landscape through which they were speeding.

"You are not a spy," he replied; "what risk do you run—or I?"

She said, still gazing into the sunlit distance: "What is done to spies—if they are caught?"

"It usually means death, Miss Girard."

"I have—" she swallowed, caught her breath, breathed deeply; then—"I have heard so. . . . It is possible that I might be suspected and detained. . . . I had rather you did not attempt to go with me. . . . Because—I do not wish you to get into any difficulty—on my—account."

"Nothing serious could happen to either you or me through anything that you have done."

"I am not sure."

"I am," he said. And added in a lower voice: "It is very generous of you—very kind."

Her own voice was lower still: "Please don't go with me, Mr. Guild. Let me go to the wharf alone. Let me take my chances alone. If there is any difficulty they will arrest you, too. And if I—were convicted——"

"You could not be. That is utterly impossible. Don't think of such things, Miss Girard."

"I *must* think of them. Will you tell me something?" She turned and looked at him curiously, almost wistfully.

"I want to ask you something. You—you said to me that if you thought me a spy, you would not help me to escape from England. You said so, didn't you?"

"Yes."

"You mean it, don't you?"

"I am afraid I do."

"*Are* you an enemy to Germany?"

"Yes—a bitter one."

"And if I were a spy, trying to escape from England—trying to escape death—you would refuse to help me?"

She had turned entirely toward him on the seat beside him; her child-like hands clasped on the robe over her knees, her child-like face, pale, sweet, wistful, turned to his.

"Would you abandon me?" she asked.

"The situation is impossible——"

"Yes, but tell me."

"I can't tell you," he said, perplexed and impatient. "I can't tell now what I might do."

"Would you feel—sorry?"

"Sorry!" He looked at her; "I should think I would!"

"Sorry enough for me to help me get away?"

"Yes."

"Even if I carried military information to Germany?"

He looked into her eyes searchingly for a moment. "Yes," he said; "I'd do what I could for you to get you out of England."

"Even if I had lied to you?"

"You couldn't lie to anybody."

"But if I could? If I have lied and you found it out, would you still try to help me to get away?"

"You are asking something that——"

"Yes, you can answer it. You can think a while first and then answer. I want you to answer. I want to know what you'd do with me."

"Why do you ask all this? You are over-wrought, unstrung——"

"No."

"You'd help me to leave England?"

"Yes."

"Why?"

There fell a silence between them, and his face slowly reddened.

"I am not sure why," he said slowly.

"I am. Shall I tell you?"

"Yes, tell me," he said, forcing himself to meet her clear gaze.

"Very well. I'll tell you. It is because we are friends. And that is the real truth. I realize it. From the very beginning it was a friendship, without effort, instantly and mutually understood. Is it not true?"

"Yes."

"And that—the instant liking—was the basis for our confidence in each other. Was it not?"

"It must have been. I trusted you without hesitation."

"And I you. . . . And I did tell you the truth. . . . But not all of it."

"What have you left untold?" he asked.

"Enough to—to frighten me—a little. I am beginning to be afraid—just enough afraid to feel troubled—rather deeply troubled about—you."

"About *me!*"

"Because—we are friends. I don't understand how it has happened so quickly. But it has happened to us—hasn't it?"

"Yes," he said, "it has. I—I am already—devoted to—our friendship."

"I am, too. It seems odd, doesn't it. I have had no friends among men. This is new to me. I don't know what to do about it. I want to be so loyal about it—I wish to be what a man—such a man as you—desires of a friend—what he requires of friendship. . . . Do you understand? I am really a trifle bewildered—with the surprise and pleasure of friendship—and with its obligations. . . . But I am very sure that unselfishness is one of its obligations and that truth is another."

"Both are part of you."

"They seem to be now. And so—because we are friends—don't go to the wharf with me. Because I think I may be—arrested. And if I am—it may go hard with me."

She said it so gently, and her eyes were so clear and sweet that for a moment he did not grasp the subtler significance of her appeal.

"You *can't* be involved seriously," he insisted.

"I'm afraid it is possible."

"How?"

"I can only guess how. I may be wrong. But I dare not risk involving you."

"Can't you tell me a little more?"

"Please don't ask."

"Very well. But I shall not leave you."

"Please."

"No. You ask too little of friendship."

"I do not wish to ask too much. Let me get clear of this affair if I can. If I can't—let me at least remember that I have not involved you in my—ruin."

'Your ruin?"

"Yes. It may come to that. I don't know. I don't know exactly what all this tangle means—what really threatens me, what I have to dread. But I am afraid—afraid!" Her voice became unsteady for a moment and she stared straight ahead of her at the yellow haze which loomed nearer and nearer above the suburbs of London.

He slipped one arm under hers, quietly, and his hand fell over both of hers, where they rested clasped tightly on her lap.

"This won't do," he said coolly. "You are not to be frightened, whatever happens. We must go through with this affair, you and I. I know you have plenty of courage.

"Within the next few minutes you must regain your composure and self-command. Will you?"

"Yes."

"Because our safety may depend on your coolness."

"I know it."

"Will you remember that we are married?"

"Yes."

"Will it be difficult for you to carry out that role?"

"I—don't know what to do. Could you tell me?"

"Yes. If you speak to me, call me by my first name. Do you remember it?"

"Kervyn," she said.

"You won't forget?"

"No."

"I think you had better say 'no, dear.' Try it."

"No—dear."

"Try it again."

"No, dear."

"Letter perfect," he said, trying to speak lightly. "You see you look about seventeen, and it's plain we couldn't have been married very long. So it's safer to say 'yes, dear,' and 'no, dear,' every time. You won't forget, Karen, will you?"

She flushed a trifle when her name fell from his lips. "No, dear," she said in a low voice.

"And if anybody addresses you as Mrs. Guild—will you try to be prepared?"

"Yes—dear. Yes, I will—Kervyn."

He laughed a trifle excitedly. "You are perfect—and really adorable in the part," he said. And his nervous excitement in the imminence of mutual danger subtly excited her.

"I ought to do it well," she said; "I have studied dramatic art and I have had some stage experience. It's a part, and I *must* do it well. I shall, really—Kervyn, dear."

He laughed; the dangerous game was beginning to exhilarate them both, and a vivid color began to burn in her delicate cheeks.

Suddenly the blond chauffeur pulled the car up along the curb in a crowded street and stopped.

"It is better, sir, to have a hansom from here to the wharf."

"Do you think so?"

"Yes, sir. . . . Pardon, sir, here are passports for madam and yourself." And he handed the papers very coolly to Guild.

The young man changed color, realizing instantly that the papers were forged.

"Had I better take these?" he asked under his breath.

"Yes, sir," said Bush, smiling his eternal smile and opening the car door for them.

Guild descended. Bush set the

Who Goes There

SYNOPSIS OF FIRST INSTALMENT

Applauded by men, admired by women is Kervyn Guild—the hero Robert W. Chambers has chosen for his graphic romance of the war, "Who Goes there!"

Guild is an American, but of Belgian ancestry, and is in Belgium when the horde of Huns overruns and devastates that country. With all the chivalry of a typical, clean, high-minded young man, he immediately gets involved in the Belgian resistance and quickly finds himself the centre of a group being backed up against a wall to be shot—but he isn't shot—and how he escapes forms the brilliant opening chapters of the story.

While Guild's life is spared he is not given his freedom because he frankly refuses to equivocate, and proves to the German general who cross-questions him, that honor is not a lost attribute of some nations even in war.

The German general says he has a daughter in England, and whom he is anxious to have returned in safety to his estate in a Rhine province of Germany. Guild, being a neutral, is offered his freedom and safe conduct out of the German line if he succeeds in getting the girl to the safe haven of the general's German home. He undertakes the mission.

While there has been plenty of action up to this point, the moment Guild starts for England things begin to happen with such rapidity that one is tempted to compare the quick succession of events with volleys from a machine gun. Just about this time the English officials, and even the ordinary citizens, are much concerned about all aliens going to and from their country, and Guild discovers that while he has no trouble to get into England and locate the girl, getting out is quite a different matter.

Here comes a contest of wits between the secret services of Great Britain and an amazing light is thrown on the efficiency of the German spy system.

The moment Guild lands in England he becomes aware that the general has paved the way for him; in fact a complete chain of spies connects London with the general's Rhenish home, to aid Guild in his journey. The British secret service gets on the job almost as quickly and the fight between these two forces, both of which are frequently outwitted by the greatest of all factors—chance—forms an absorbing part of the story.

In the background always looms large the great war, but it looms only as a tremendous overpowering shadow—there is nothing horrible or harrowing.

WHO GOES THERE

(*Continued from preceding page.*)

luggage on the curb, touched his cap, and said: "Walk south, sir, until a cabby hails you. Good-bye, sir. A pleasant trip, madam." And he sprang back into the car, started it, and rolled away, grinning from ear to ear.

Guild took the luggage in both hands; Karen walked beside him. At the end of the square the driver of a hansom held up one hand inquiringly, then smiled and drew in to the curb.

"Fresh Wharf, sir?" asked the cabby.

"Yes," said Guild, calmly, red with surprise.

"Thanks, sir. I understand all about it."

CHAPTER VII.

IT was only a short drive to Fresh Wharf by London Bridge. A marching column of kilted Territorials checked them for a while, and they looked on while the advanced guard of civilians surged by, followed by pipers and then by the long leaf-brown column at a smart swinging stride.

When the troops had passed, the hansom moved on very slowly through the human flotsam still eddying in the wake of the regiment; and after a few more minutes it pulled up again and Guild sprang out, lifted the young girl to the sidewalk, and handed the fare to the driver.

The latter leaned over and as he took the coins he thrust a parcel into Guild's hands. "Your change, sir," he said genially, touched his top hat and drove off, looking right and left for another fare.

Guild's surprised eyes fell on the packet. It contained two steamer tickets strapped together by a rubber band.

Pushing through the throng where policemen, wharf officials and soldiers in khaki were as numerous as civilians, Guild finally signalled a porter to take the luggage aboard. Karen retained her satchel. A brief scrutiny of his tickets detained them for a moment, then the porter led them up the gang-plank and aboard and a steward directed them to their stateroom. At the same moment a uniformed official stepped up to Guild.

"Sorry to trouble you, sir," he said politely, "but may I have your name?"

"My name is Kervyn Guild."

The official glanced over the steamer list. "You have papers of identification, Mr. Guild?"

Guild handed him his forged passports. The official took them, glanced at Karen, at the luggage which the porter bore.

"Where do you go from Amsterdam, Mr. Guild?"

"Through Holland."

"Naturally. And then?"

"To the Grand Duchy."

"Luxembourg?"

"Yes."

"Where in Luxembourg?"

"I have been invited to visit friends."

"Where?"

"At Lesse Forest."

"Where is that?"

"Partly in the Duchy, partly in Belgium."

"Who are your friends?"

"Mrs. and Miss Courland, of New York, and a Mr. Darrel."

"Madam goes with you?"

"Yes."

The official began to unfold the passports, while he looked sideways at the luggage. Holding the passports partly open in one hand, he pointed to Karen's satchel with the other.

"Please open that," he said, and began to examine the passports. A deadly pallor came over the girl's face; she did not stir. Guild turned to glance at her and was stricken dumb. But she found her speech. "Dear," she said, with white lips, "would you mind stepping ashore and getting me something at a chemist's?" And under her breath, pressing close to him: "Go, for God's sake. I am afraid I shall be arrested." A terrible fear struck through him.

"The satchel!" he motioned with his lips.

"Yes. Go while you can. Go—go—dear."

"I'll be back in a moment, Karen," he said, coolly took the satchel from the porter, turned with it toward the gang-plank.

The official raised his eyes from the passport he was scanning.

"One moment, sir," he said.

"I'll be back directly," returned Guild, continuing on his way.

"Where are you going, Mr. Guild?"

"To a chemist's."

"Be kind enough to leave that satchel and remain here until I have finished," said the official coldly. And to Karen: "Mrs. Guild, will you kindly open that bag?"

"Certainly. I have the key somewhere"—searching in her reticule. And as she searched she lifted her eyes to Guild. Her face was dead white.

"Dearest," she said in a steady voice, "will you go to the chemist's while I am opening my bag. I *must* have something for this headache."

Her agonized eyes said: "Save yourself while you can; I am caught!"

But Guild turned and came back to her, close, standing beside her.

"I'll open the luggage," he said quietly. "You had better step ashore and get what you need." And, in a whisper: "Go straight to the American Ambassador and tell him everything."

She whispered: "No; I beg of you go. I beg of you Kervyn."

He shook his head and they stood there together; he grave and silent, assailed by a terrible premonition; she white as death, mechanically fumbling in her reticule with slim, childish fingers.

The official was deeply immersed in the passports and continued so even when Karen's tremulous fingers held the key. "Give it to me," whispered Guild.

"No—" She beckoned the porter, took the satchel, and at the same moment the official looked up at her, then holding both passports, came over to where they were standing.

"Your papers are in order, Mr. Guild," he said. "Now Mrs. Guild, if you will open your satchel——"

"I'll attend to that, Holden," broke in a careless voice, and the satchel was taken out of Karen's hands by a short, dark young man in uniform. "I want you to go forward and look at a gentleman for The Hague who has no papers. He's listed as Begley. Do you mind?"

"Right," said Holden. "Here Mitchell, these papers are satisfactory. Look over Mr. Guild's luggage and come forward when you're finished. What's his name? Begley?"

"Yes, American. I'll be with you in a moment."

Holden hastened forward; Mitchell looked after him for a moment, then calmly handed back the unopened satchel to Karen and while she held it he made a mark on it with a bit of chalk.

"I pass your luggage," he said in a low voice, stooping and marking the suitcase and Guild's sack. "You have nothing to fear at Amsterdam, but there are spies on this steamer. Best go to your cabin and stay there until the boat docks."

The girl bent her little head in silence; the porter resumed the luggage and piloted them aft through an ill-lighted corridor. When he came to the door of their cabin he called a steward, took his tip from Guild, touched his cap and went away.

The steward opened the stateroom door for them, set the luggage on the lounge, asked if there was anything more he could do, was told that there was not, and took himself off.

Guild locked the door after him, turned and looked down at the girl, who had sunk trembling upon the lounge.

"What is there in that satchel?" he asked coldly.

"I don't know."

"*What!*" he said in a contemptuous voice.

"Kervyn—my friend—I do not know," she stammered.

"You *must* know! You packed it!"

"Yes. But I do not know. Can't you believe me?"

"How can I? You know what you put into that satchel, don't you?"

"I—put in toilet articles—night clothes—money."

"What else? You put in something else, didn't you? Something that has made you horribly afraid!"

"Yes."

"What is it?"

"Kervyn—I don't *know* what it is. I must not know. It is a matter of honor."

"If you don't know what it is you carry in that satchel you evidently suspect what it might prove to be."

"Yes."

"You have very strong suspicions?"

"Yes, I have."

"Why did you take such a thing?"

"I promised."

"Whom?"

"I can't tell you. It is a matter of honor.I—I didn't want to involve you if things turned badly. I asked you to leave me....Even at the last moment I tried to give you a chance to go ashore and escape. Kervyn, I've tried to be honorable and to be loyal to you at the same time. I've tried—I've tried—" Her childish voice faltered, almost broke, and she turned her head sharply away from him.

He dropped onto the lounge beside her, sick with anxiety, and laid his hand over hers where it lay in her lap.

"I'm afraid that you have papers in that satchel which might mean the end of the world for you." he said under his breath. "God alone knows why you carry them if you suspect their contents.... Well, I won't ask you anything more at present ....if your conscience acquits you, I do. I do anyway. You have given me plenty of chances to escape. You have been very plucky, very generous to me Karen."

"I've tried to be," she said unsteadily. "You have been far too kind to me, Kervyn. I—I don't mean to tremble so. I think I am feeling the reaction."

"Lie down. I am afraid I'll have to stay here——"

"Yes; don't go out on deck. Don't take any more risks....I'll lie down if I may." She rose, looked around with eyes still darkly dilated by fear:

"Oh!" she breathed—"if we were only out of British waters!"

He looked at his watch, and at the same moment a deep blast from the steamer vibrated through the cabin.

"They've cast off," he said calmly.

The girl had flung herself on the bed and buried her face in the pillow. Her brown velvet hat had fallen to the floor, her thick brown hair clustered in glossy disorder over neck and cheek. One slim hand clutched convulsively a tiny handkerchief crushed into a ball.

"We have every chance now," he said gently, bending over the pillow—"barring a wireless to some British guard-ship. "Don't give way yet Karen." He laid a cool, firm hand over hers and tried to speak jestingly. "Wait until there's no danger at all before you go all to pieces," he whispered.

As he bent over her, he became conscious of the warm fragrance of tears. But no sound came, not even a quiver. And after a while he went over to the sofa and sat down, staring at the locked satchel on the floor, vaguely aware that the boat was in steady motion.

"Karen," he said after a moment.

"Yes, dear."

"You know," he said, forcing a laugh, "you needn't say it when we're alone—except for practice."

"Yes, dear, I know."

"May I ask you something?"

"Yes, please."

"Did you know that official named Mitchell?"

"Yes."

"Who was he?"

"Mr. Gratz."

CHAPTER VIII.

THE funnel smoke blew low, burying the after-decks and a hurricane of scud and spindrift swept everything forward, drenching the plunging steamer to the bridge. Stanchions, davits, hatches were all a-dip, decks a-wash, and the Dutch ensign whipping aloft in a thick grey sky that seemed to speed astern as though in chase of the heaving grey waste of waters that fled away beneath.

Here and there a trawler tossed and rocked; lean, melancholy wanderers on the face of the waters; twice the raking stacks of destroyers, smothered in foam, dashed eastward running full speed on some occult trail twixt sky and sea.

The grey world grew duller, duller; one by one the blinding searchlights on coast-guard ships broke out, sweeping sky and ocean as though in desperate appeal to the God above and in menacing warning to the devils that lurked below.

For they said the North Sea was full of them; legions of them tossed broadcast from the black hell of some human mind. And beneath them, deeper, lying as still as death on the Channel's floor, waited the human submarines in unseen watery depths—motionless, patient, awaiting the moment to strike.

Night came; the white level glare of searchlights flooded the steamer, lingered, shifted, tossed their dazzling arms heavenward as though imploring the

BEAUTY PLEADS THE CAUSE OF BELGIUM.

Mademoiselle Suzanne Silvercruys, the daughter of a Judge of the Supreme Court of Belgium. She lived for many months close to the heart of war. She is wearing the scarlet and gold costume of the Belgian peasant girl.

Who Goes There

(Continued from preceding page.)

Meet High, then swept unseen horizons where the outermost waters curve with the curving globe.

Only one light burned in the stateroom, but the port was not covered.

Karen lay on the bed, unstirring save for a slight tremor of her shoulders now and then. Her brown hair, half loosened, had fallen in thick burnished curls on the pillow; one hand covered her eyes, palm outward. Under it the vivid lips, scarcely parted rested on each other in a troubled curve.

Guild brooded silently on the lounge under the port. Sometimes his sombre gaze rested on her, sometimes on the locked satchel which had rolled to the side of the bed.

Every time the arrowy beam of light from a warship flooded the cabin with swift white splendor his heart seemed to stop, for the menace of the wireless was always a living dread; and the stopping of a neutral ship and the taking from it of suspects had become a practice too common even to excite comment, let alone protest.

Twice they were stopped; twice Ardoise signals twinkled; but no cutter came alongside, and no officer boarded them. It was an eternity of suspense to Guild, and he stood by the open port, listening, the satchel in his hand ready to fling it out into the turmoil of heaving waters.

The steward came, and Guild ordered something served for them both in the stateroom. Karen had not awakened, but her hand had slipped from her eyes and it lay across the edge of the bed.

On the bridal finger glimmered the plain gold band—his credentials to her from her father.

He went over and looked down into the white, childish face. Faultless, serene, wonderful as a flower it seemed to him. Where the black lashes rested, the curve of the cheek was faintly tinted with color. All else was snowy save for the vivid rose of the scarcely parted lips.

As he stood there he tried to realize that she was German—this young girl with her low and charming English voice and her accentless English speech.

He had listened in vain for any flaw, any indication of her alien birth. Nothing betrayed her as a foreigner, except, possibly, a delightfully quaint formality in accepting any service offered. For when he asked her whether she desired this or that, or if he might do this or that for her, always her answer in the affirmative was "Yes, please," like a little girl who had been carefully taught to respect age. It amused him; for modern English young women are less punctilious with modern youth.

There came a dull clatter of crockery from the passageway: Guild turned and opened the door. The waiter produced a folding table, spread it, and arranged the dishes.

"That will be all," whispered Guild. Don't knock again: I'll set the tray outside."

So the waiter went away and Guild closed the door again and turned back to the bed where Karen lay. Her delicate brows were now slightly knitted and the troubled curve of her lips hinted again of a slumber not wholly undisturbed by subconscious apprehension.

"Karen," he said in a low voice.

The girl opened her eyes. They had that starry freshness that one sees in the eyes of waking children.

"I can't eat," she said.

"Do you feel the sea?"

"No,"—she smiled faintly—"but the excitement of the day—the anxiety——"

"We'll have some tea, anyway," he said.

They ate a little after all, and the hot and rather vile tea stimulated her. Presently he set tray and table outside in the corridor and came slowly back to where she had gathered herself in a corner of the sofa.

"The sea is rather rough," he said. "You seem to be a good sailor."

"Yes, I am. My father had a yacht and my mother and I always went when he cruised."

This slightest glimpse of personal history—the first she had vouchsafed—the first slight lifting of the curtain which had hung between them, aroused his latent curiosity.

What else lay behind that delicate, opaque veil which covered the nineteen years of her? What had been the childhood, the earlier life of this young girl whom he had found living alone with a maid and a single servant at an obscure heath outside of London?

Gently born, gently bred young girls of aristocratic precedents, don't do that sort of thing. Even if they desire to try it, they are not permitted. Also they don't go on the stage, as a rule.

Neither the sign manual, the sign visible of the theatre, nor yet that occult indefinable something characteristic of the footlights appeared to taint her personality.

Talented as she was undoubtedly, cultured and gently nurtured, the sum total of all her experience, her schooling, her development, and her art had resulted only in a charming harmony, not a personality aggressively accented in any single particular. Any drawing-room in any country might have contained this young girl. Homes which possess drawing-rooms breed the self-possession, the serenity, the soft voice, the winsome candor and directness of such girls as she.

She was curled up in the corner of the sofa where he had placed behind her the two pillows from the bed, and her winning blue eyes rested every few minutes upon this young man whom she had known only for a few hours and whom she already, in her heart and in her mind, was calling a friend.

She had never had any among young men—never even among older men had she experienced the quiet security, the untroubled certainty of such a friendship as had begun now—as had suddenly stepped into her life, new, yet strangely familiar—a friendship that seemed instantly fully developed and satisfactory.

There appeared to be no room for doubt about it, no occasion for waiting, no uncertainty in her mind, no inclination and no thought of the lesser conventionalities which must strew elaborately the path of the first acquaintance with the old, old-fashioned garlands—those prim, stiff blossoms of discretion, of propriety, of self-conscious concession to formula and tradition.

No; when her eyes first fell on him her mind and heart seemed to recognize what neither had ever before beheld—a friend. And from that moment the girl had accepted the matter as settled, as far as she herself was concerned. And she had lost very little time in acquainting herself with his views upon the subject.

That he had responded to the friendship she had so naively offered did not surprise her. She seemed to have expected it—perhaps in the peril of the moments when they were nearing London, and doubt and suspicion in her mind concerning the contents of her satchel were becoming an agony to her as they grew more definite—perhaps even then the sudden and deep sense of gratitude for his response had made courage a new necessity and had armored her against panic—for friendship's sake.

All she realized in that moment was that this friendship, so sudden, so vital, was already so strong in her, so real, that even in the terror of that instant she thought of the danger to him, and asked him to let her go on alone.

Perhaps they were both thinking of these things—she curled up in her corner, looking thoughtfully at him; he, knees crossed, gazing restlessly from object to object in the unsteady stateroom, but his eyes always reverting to her.

Then the duet of silence ended for a while. He said: "You must not suppose that I am not keenly alive to the kindness, the fearless generosity you have shown me all through this affair. What you suffered is lodged forever in my mind—and in my heart."

"What you have done for me is in my—heart," she said in her sweetly modulated voice.

"I have done very little——"

"You would not leave me!"

"My own life was forfeit if I did——"

"No! You did not reason that way! Besides, had I managed to get through alone, you should have had your life back again to do as you pleased. No; you did not reason that way. You stood by a friend in peril—at your own peril."

She drew a deep, tremulous breath. "More than that," she said, "you stood by me when you almost believed I had lied to you—lied shamefully."

"I had my plans ready in that event," he said, forcing a laugh.

"You *did* doubt me?"

"Yes."

She bent her head, looking thoughtfully at her hands, which clasped one knee, then, lifting her eyes: "I forgive you," she said gravely.

He flushed: "I did not know you—did not realize—what you are——"

"You were slower than I."

"What?"

"I trusted *you* from the first."

He was silent; she watched him for a few moments, then:

"When you concluded that I had lied to you, what plans had you ready?"

"I had rather not say——"

"Please do."

He bit his lip: "I had decided to take your satchel from you."

"Against my wishes?" she asked, amazed.

"Yes."

There was no resentment, only childish surprise; "Why?"

"I told you that I am an enemy to your country."

"Yes, I know——"

"I told you that I would not knowingly permit you to take out of England anything which might be detrimental to England's interests. And I made up my mind that if you had deceived me—and although I stood by you—because you are only a young girl—and were in danger from those who make no allowance for your youth and sex—nevertheless, as soon as you were in personal safety, I meant to take from you whatever you had concealed from me and which might have been of service to England's enemies."

"Would you have done that?"

"Yes, if you had been untruthful to me."

She bent her head, thoughtfully; then looking up at him: "Yes; that would have been just....But I have not been untruthful."

His perplexed and slightly careworn eyes met hers.

"I can't doubt you," he said. "I know you have been truthful. But—what *is* in that satchel? Forgive me, I *must* ask you. Because there is evidently enough there to terrify you at the thought of British eyes inspecting it."

"Kervyn—can't you believe me when I tell you that I don't *know* what is in that satchel?"

"Are there papers in that satchel?"

"Yes."

"Where did you get them?"

"From—Mr. Gratz."

"You were accustomed to receive papers from Mr. Gratz?"

"Sometimes."

"At certain intervals?"

"I don't know. Whenever Mr. Gratz telephoned, Anna, my maid, went to London and usually brought back the—the plans."

"Plans!"

"Yes. I understood that they were plans of a new automobile which was being designed by the Edmeston Agency for their Berlin branch. Mr.

LITERATURE AND JOURNALISM

By KATHERINE HALE.

So many letters are coming into this department each week that it is only possible to give correspondents the benefit of answers by generalizing as much as possible on a few letters in particular. Private replies are sent as often as possible, but they are necessarily brief. Certain questions are always invariably asked, and they are totally different inquiries from those that the editor expected on opening this little bureau of information. One rather looked for questions about the fundamentals of literature and journalism, questions on foundation-laying, and technique, and poetic metre and the plot of the short story. And letters regarding these somewhat vital points have undoubtedly been received. But—is it characteristic of the time?—the first, the last, the imperative question is: "How soon can I make money out of my writing?"

I hate to answer all this with a quotation. I dislike people who quote. I consider them, with the punsters, as the lowest form of wits. But often I do feel like replying: "In truth, sir, when thou hast the power."

It is an illuminating question this: "How soon can I make money out of my writing?" Illuminating as to the writer's own power of discernment, for the moment must come when the sheer strength that is in us asserts itself, and says: "Now have I come to the place where this thing that I have written *must* be of value—not because it is mine, but because it so obviously belongs to everybody."

And so to answer the exact questions of a correspondent, who voices many similar inquiries.

(1) "Where can I get the kindly criticism necessary to become a successful writer?"

Send your manuscript to the best magazines. Criticism is kindest which is disinterested. If you realize that your material is probably not yet suitable for the magazines, ask the services of a professional reader, which you can obtain for a comparatively small amount by applying to "The Editor," Ridgewood, N.J.

(2) "It is absolutely necessary that I am financially successful from the beginning, as, until then, it is possible for me to devote only a portion of my time to the work. Under these circumstances, what would you advise for a beginning?"

I would advise you to begin by an application for work to the newspaper or magazine nearest you. This letter is dated from a small town in the far West. There must be some way by means of which you can interest an editor in your special point of view as to affairs near you. It is not necessary that a successful writer should devote every moment of his or her time to the work of writing. And no young writer can expect to obtain a position in the world of journalism that is nearly as lucrative as that of an ordinarily accurate stenographer, for instance, unless he or she has had as much practical study and experience in journalism as the stenographer has had in his or her line of business. That is why I am suggesting that you obtain a practical journalistic experience in the first place. A young writer known to me, who is becoming widely recognized, realized the wisdom of this course, and has been content to accept a position as stenographer in a newspaper office, where she edits only one column a week. She is earning her living, getting experience, and in her spare time writing short stories that are becoming popular with the editors. The trouble is that we have schools for every kind of study except important ones. Hundreds of young

"Her fresh young voice sang on until almost the end, when she faltered, and lost her words."

Rose In The Bud

By MURIEL JOCELYN.

Illustrated by E. J. Dinsmore.

"Love comes but once---and then, perhaps, too late."

THERE were chestnut trees on each side of the long avenue; trees that were tender green in May, fragrant with blossom in June; trees that in early August formed a leafy canopy overhead.

Dick Delamere hastened his steps. It was still a long way to the house at the end of the avenue. Where would he find her? What would she say? It was five years since he had seen her —five years, three months, and seventeen days. He had counted it that morning on the train, and he laughed a little as his memory swung back into the past.

They had grown up together, Katharine Sheldon and himself, and she had always been the lady of his dreams. He had told her so when they were aged ten and seven respectively, and her acceptance of his heart and hand (there had been toffee in the hand, he remembered), had been gratifyingly prompt. At twenty he had proposed again. That time she had flung her long black braid over her shoulder and told him not to be "silly." "Law students can't marry," she said, "until they're grown up, and you're very far from that," and had turned her attention to a certain youth of brawn and muscle who wore the uniform of a famous Military College. He had never been really able to bear that uniform since. Not long after she had been sent abroad to a finishing school in Paris. During her absence he had taken his degree and hung out his shingle in Duke Street, but briefs had come in slowly. Two old, well-established firms had most of the business of the town, and success looked very far away. Just about that time she returned, and in honor of her coming of age her Aunt had given a large dance.

That night the old grey house had been ablaze with light. The chestnuts and roses were in full bloom. From the garden there had drifted the faint perfume of lilacs. He could see her still standing by her Aunt in the hallway, a slender, radiant figure in gleaming white, her arms full of roses. "Ah, Dick," she had said, "You? How nice," and turned to the next guest with the same careless charm of manner. Later, when the rooms were full and the tide of incoming guests slackening, he had gone back and asked her for a dance. "I'm not dancing to-night," she had answered, "at least not until later. I am going to sing for you, you see." He had murmured something about not knowing she sang. "Then listen to me later," she cried and turned to give a smiling greeting to a newcomer. He had danced a good deal that night, but ever with his eyes on the tall figure in gleaming white. She had all the poise, the charm of manner, the brilliance of an accomplished woman of the world. Europe had done much for her he thought, but would she ever settle down here in this sleepy town again? Could she? His heart had burned at the question.

And then the orchestra had ceased playing, and a couple of men crossed the room together, one of them carrying a violin. They had played a weird, exotic, haunting melody with a tragic note running through it like a thread of silver. Slender, erect, Katharine stood there at the piano. The silver cords swept on; then, leaning forward a little, from her smiling lips had fallen the notes of Butterfly: "One fine day he'll come a-sailing," she sang on through the great love song till at its triumphant cry: "He will come, I know it," her glorious voice broke in a golden flood of ecstasy. He could hear the applause now, and see them crowding about her, eager, praising, questioning. "Yes, she'd been singing for some time, but she and Auntie had not been sure as to whether she would be a success, and so they had kept quiet about it. No, she was not going on the stage. She had promised her Aunt not to." Then she had sung again—"Depuis le Jour," Mimi's Song, and brilliant glittering things chosen to show the beauty of her voice, and at last, stepping back under the light, a simple ballad "Rose in the Bud."

Rose in the bud,
The June air's warm and tender,
Why do you shrink your petals to display?
Are you afraid to bloom in crimson splendor
Lest someone come and steal your heart away?
Rose in the bud,
The evening sun is sinking,
Wait not too long and trifle not with fate;
Life is so short and love is all, I'm thinking,
Love comes but once, and then, perhaps, too late.

She had been like a rose herself that night, a triumphant, glowing rose. Not for her would "love come too late," thought he. Surely her path would be rose-strewn, love garlanded.

In saying good-night, he had added his meed of praise and thanks for the pleasure her music had given him. "But," he added, "it was your last song, the one about the rose, I loved the most."

"Oh, Dickie," she said, "what reprehensible taste. Fancy your liking that sentimental ballad." Glancing down at her flowers, she pulled a loose bud towards her and handed it to him.

"Mr. Delamere is to be congratulated" broke in a smooth voice at his side. "La belle Katharine has given no one else a rose to-night." Turning, he noticed the distinguished foreigner, who had been at her side all evening. "Miss Sheldon does me much honor," he said stifly, and bending kissed Katharine's hand.

The following two years had passed like a dream, but a dream in which Katharine was always the centre. Vivid, beautiful, and brilliant, she flashed in and out of his life, sometimes away for weeks at a time, or entertaining a houseful of guests, brilliant, distinguished people that she had met abroad. Always it was the same. She charmed them, every one. Many men had come often for a time and then had not returned. That foreign chap had been the most persistent, but he too had gone, and, when he had asked about him, she had answered, "I sent him away, Dickie. I don't know why, except that he got on my nerves. At any rate, I couldn't bear the thought of a century of domesticity with him."

And the sweet days sped. They rode, golfed, danced, and laughed together until one night when early spring was stealing across the world, she told him that she was going to London again for the season, that she was to be presented at court, and of the invitations she had already received. The thought of losing her had been too much for him then, and he had pleaded with her to marry him. "Don't be sentimental, Dickie," she had said sharply. "Of course I won't marry you. You've nothing to marry on. Bread and cheese in a cottage isn't in my line and you ought to know that." He had broken in with eager words. His practice was growing; with her at his side, he could achieve anything. But she shook her head. "No, Dick. I'm young, and I'll only be young once. I want something more than mere domesticity. I want travel, opportunity, all the things you can't give me. It is so stupid to talk of marrying yet awhile. Later, perhaps. . . . . ."

"I shall not bother you again," he broke in hotly.

Well he hadn't bothered her. In a week he had been on his way to the Yukon and he had not seen her since.

When her Aunt had died, he had written to her and she had replied immediately. An Uncle had been left The Hall, and she was moving over to the little grey house behind the trees; he would remember it, a house full of old oak and low rooms. "And I've broken loose into the role of Mother," she finished, "a new role for me, but one that serves to pass the time. An orphan niece, aged thirteen, is here and I'm going to bring her up by hand, or whatever one does to infants of that age. At the present moment she is hanging over the cistern in such a suicidal position that I must leave you to effect a rescue."

That had been a year ago. The work in Dawson had been grinding, the remuneration poor, but his brilliant defence in an important law suit had brought him into prominence, and the wealthiest firm in the old town had offered him a partnership with a big salary. The papers were drawn up already. That afternoon he had

Four Footed Monarchs

Yesterday and To-day In The Ranks of The Buffalo

By ETHEL CODY STODDART.

Buffalo in the Wainwright Park.

"Speaking of valuables, just let me show you something," and the Bright Lady disappeared with a gold-glint in her eye.

"There! Isn't that some coat?" as she reappeared a few minutes later. "When I was a girl, I loathed the thing, but Mother made me wear it, and I did so with the worst grace in the world, and because I had nothing else to wear on a cold Manitoba day. But now, even though I still would not prefer to wear it, I have a vast respect for it. A real buffalo coat is worth some money, I'm telling you; can't get them nowadays."

We looked askance at the shaggy thing, but believed all that she said. It was a reminder that with many other wonders, gone are the great buffalo herds of this continent, and of which we have heard and read since we advanced beyond the first primer stage.

To look back on the history of these one-time monarchs of America, it does not seem possible that animals whose number has been estimated from 50,000,000 at the lowest, to 125,000,000 at the highest, could be as extinct as they are to-day. But man seems always to bring destruction as well as creation with him, and the buffaloes have had to go.

A Group of Buffalo in their natural yet protected environment at Wainwright Park.

As far back as 1612 the Spanish explorers reported buffalo in America. Again in 1678, Father Hennepin saw large herds of them in the northern part of Illinois. In 1729 they were reported as being very numerous in Virginia and North Carolina.

We are so accustomed to connecting the buffalo entirely with the western prairies, that to some of us at least it comes as a surprise to know that at one time they ranged this continent from the Nevada deserts to the Atlantic coast, and from Texas and the Gulf States to as far north as they could find food.

Along with man and his firearms, and his transportation facilities, especially in the railroad, came greater opportunities for depletion of the herds than had been made through disease, famine and Indian slaughter. Buffalo hides were called for and markets being easy of access, the immense hordes of wonder-animals became less and less, till in 1886 but a few stragglers were left.

Wholesale slaughter and nothing less was responsible for the passing of the buffalo, and a great deal of it was unjustifiable. Hide hunters left a trail of rotting buffalo carcasses and bleaching bones in their wake. Then, too, the popular sport of those days of the early 60's was buffalo hunting. Again, passengers on trains with any knowledge of firearms, took guns along, and for sheer love of slaughter shot these noble animals from the train. With every hand against them it is no wonder that the 20th century children see the buffalo as a curiosity behind wire fences.

Some conception of the enormous buffalo herds as found by the early travellers, is found in the statement that in 1868 a Kansas Pacific train travelled for 120 miles through a practically solid herd of buffalo which was so densely packed that the train was several times compelled to stop.

The following year a train on the same road travelling between Fort Hay and Fort Harker was delayed for eight hours while a herd of these wonderful animals crossed the track. One traveller in speaking of it said that as far as the eye could see the plains were black with a vast surging mass of frightened buffaloes.

On another occasion a party of travellers in Iowa who were going down the Missouri river, came across a herd of buffaloes that were crossing the river at that point. It took the herd three days to cross and the travellers were compelled to wait that length of time before continuing their journey.

This was all in the 60's and south of the boundary line between Canada and the United States, though north of that, similar conditions prevailed. Yet in the 70's these marvellous herds had practically disappeared from the southern region, and from the north in the early 80's.

The reason for it all? Hide hunters.

In 1850, and from that to 1860, it is estimated that the Indians alone killed 3,500,000 buffalo each year. In 1871 there were about 3,000,000 of these animals ranging from Kansas south. And it was estimated that some 1,780,000 of them were killed during 1872 and 1874. The Santa Fe railroad alone shipped 3,158,780 buffalo hides east in 1871. It is small wonder then that by 1875 the southern herds were practically extinct. It is reported, however, that as late as 1886 some 200 buffalo were seen in Texas.

The herds of the north lasted longer, probably due chiefly to the fact that transportation facilities were more difficult. It was estimated that about a million of this herd were in existence in 1882. But there were at the same time some 5,000 hunters in the field, and the Indians alone were represented to be killing 375,000 a year. The doom of the buffalo was indeed sealed.

Following the hide hunters were the bone collectors. Every valley was a biblical representation of "dry bones" and every hillock had its pathetic pile of bleaching skeletons, all of which were young gold mines for the collectors, who shipped them in enormous quantities to carbon works. A ton weight was made up of one hundred buffalo skeletons, and the price averaged eight dollars.

In Kansas alone during a period of thirteen years, the sum of $2,500,000 was paid out for skeletons, which represented more than 31,000,000 buffaloes. Stacked in huge piles along the railroad tracks, and waiting to be shipped as convenient, the bones of the finest native animals were mute evidence of what man with powder and shot at his command, and the love of gold in his heart can accomplish, no matter who suffers.

Buffalo and calves.

A Cree Indian tale relates how somewhere in the 60's, there came to the Peace River country, a particularly severe winter which left the buffalo practically without food. Starvation came surely, and the noble animals succumbed to it, dropping in ones and twos at first, then in whole groups. When spring came the silent piles of buffaloes told their own tale.

One herd, perhaps more sturdy than the rest, found its way to the Peace river, where apparently more food was to be found. At any rate they were the only survivors in that district. They followed the river into the Cariboo mountains, where even yet it is reported a remnant of them may be found.

So goes the history of one of America's most interesting animals. To-day, the buffalo of practically all America, are to be found in a government-made home in Wainwright, Alberta, where though free, an efficient wire fence secures the last of a great race from—the hunter.

Splendid results have been achieved at this buffalo park, in augmenting the herd and bringing the animals up to a perfect condition.

Back to 1873 goes the history of this park. It was then that one of the Pend d'Orielle Indians captured two bull and two heifer buffalo calves, when a herd stampeded on the Flathead reservation in Montana. True to a peculiarity of their breed, these little animals followed obediently the horses of the men who had killed or driven away their mothers.

The Indians presented the calves to the St. Ignatius Mission where they were treated as pets and became real "family" animals like the cattle. At the age of four years, each of the heifers had a calf. After that the buffalo family gradually increased until there were thirteen in all. This was in 1884. The Indian owner then decided to sell them as they were becoming too many for him.

C. A. Allard and Michel Pablo who were ranching on the reservation bought ten head for $250 apiece. There is, too, no doubt but that a method lurked in their madness since they must have foreseen that such animals, being even then very rare, would eventually become very valuable.

Under their wise care, the buffalo herd increased steadily. Some idea of this increase may be had from the fact that half the cows give birth to calves every year, while twin bisons are not at all uncommon. These little creatures are very hardy too. In many instances they have been known to find their feet in less than a minute after birth, and be ready for fight within half an hour.

The Hon. Frank Oliver, Minister of the Interior, for Canada, in 1906, with a brilliant idea in his head, obtained an option on the Allard-Pablo herd of 600 buffalo, and finally purchased them for $200,000. Thus did a $250 each purchase grow with satisfying results.

Some seventy-five picked cowboys and horsemen from every part of the great Montana ranges, assisted in the "round-up" which lasted two months. They successfully landed the animals after the long railroad journey of 1200 miles to Alberta, with a loss of less than one per cent.

Canada, has to-day, as a result of all this, the only real buffalo park in the world.

In April, 1909, the herd at

(*Continued on page* 44.)

The Khaki University

(*Continued from page* 8.)

of the movement. Among these events was the German offensive of March, 1918, which caused the temporary suspension of work in the University of Vimy Ridge, and which made conditions very difficult in the English camps, where drafts were coming in and going out at a unprecedented rate. The fact is that the Canadian authorities in England were too busy to deal with the question of the establishment of the Khaki University.

The first half of 1918 was, therefore, a trying time for those who had charge of the work of the movement in England. The chief trouble arose from the semi-official basis on which the work was placed. The organization of the army is so rigid that it is difficult to fit into it a new and half-authorized institution such as the Khaki University was at that time. Not only was there a constant shifting of the students in the classes (something which was inevitable, and which was partially met by a system of registration cards that enabled students to transfer from the classes in one camp to the classes in another), but there was not even any permanency in the teaching staff. A teacher, whether his rank was that of lieutenant-colonel or private, was liable to be transferred or drafted elsewhere overnight. There were hardly any teachers who could be regarded as fixtures, since there was no establishment. All teachers were voluntary, and it was a constant struggle to keep the teaching staff up to strength. A similar difficulty was experienced with regard to accommodation. Huts for the library and for classrooms were essential to the satisfactory conduct of the work of the university; yet, in the absence of any official authorization, these were liable to be taken away at a moment's notice, on the arrival of a new draft, or even to suit the whim of the local quartermaster. The mere question of coal was a difficulty. The issue of coal in the army is according to a well-defined schedule. The Khaki University was not contemplated when that schedule was drawn up, and it was only by various subterranean and diverse means that coal could be obtained. Yet coal was an essential, for classes even in the most interesting subjects cannot be conducted in a freezing hut.

Despite these drawbacks, however, the work was carried on, and carried on not unsuccessfully. It was pathetic to see the eagerness with which many of the men availed themselves of the opportunity of attending the classes. The usual procedure was to find out what the men wanted, and then to find teachers who could teach them what they wanted. Business subjects and agriculture were the subjects most frequently asked for, but classes were established in the most unexpected subjects, such as Greek, Spanish, accountancy, gas engines, music, railroading, comparative government. There were classes for men who could neither read nor write, and classes for men who wished to study Elizabethan literature. If there was a demand for a subject, and a teacher could be found, a class was formed; if a teacher could not be found, the class was not formed. But, on the whole, the wealth of qualified teachers in the Canadian army was surprising. Without it, indeed, it would not have been possible to carry on.

An interesting feature of the work was the library. In each teaching centre a hut or room was set aside, and in it was installed a standardized portable library of from 500 to 1,000 volumes, covering a wide range of subjects. These books were supplied by the Y.M.C.A. An attempt was always made, by means of a fire and comfortable seats, to make the library as cosy and attractive as possible; and every night, no matter what the attractions elsewhere, the room was filled with readers. As a sergeant who wore blue shoulder straps once said to the writer in the library in the Garrison Schools at Shorncliffe, "This is just what the boys need; after several years in the army, what your mind wants is something to chew on." I can remember being in the library at Shorncliffe one night in the spring of 1918, when the Gothas were humming overhead and the anti-aircraft guns were thumping away at them. One or two of the men in the library went out to watch the shells bursting, but behind the well-shaded windows the rest went on reading the books they had taken down from the shelves.

The actual proportion of men who have availed themselves of the classes in the Khaki University has not perhaps been large. Five to ten per cent. is all that can be expected in the case of most camps. But even this is not a negligible result in the aggregate. The official figures show that over 8,000 men have paid their registration fee of one shilling in England alone. Of these, 2,350 have registered in commercial subjects, 1,360 in agricultural subjects, 1,500 in engineering subjects, and the remainder in subjects of a general educational character. In addition to this, many hundred lectures have been given in the Y.M.C.A. huts on popular subjects with an educational value, such as Canadian government and history, the practical value of education, popular science, and travel. These lectures have reached literally tens of thousands of men, the approximate total attendance having been 170,000. Even when the conduct of teaching classes has proved impracticable, great results have been achieved merely by these general lectures and by the opportunities of study afforded by the libraries.

The success which, even under the difficult conditions outlined above, has attended the work of the Khaki University of Canada has attracted the attention of the authorities in other countries. The British War Office took early cognizance of the movement, and only a few months after the initiation of the Canadian experiment it encouraged the organization of similar work in the Imperial camps in England. Several months ago, too, Sir Henry Hadow, a prominent British educationist, was appointed Director of Education on the lines of communication in France. The American, Australian and New Zealand authorities have taken up the idea, and it is understood that educational work is now being organized by them in their respective armies. Reports have even reached us that the idea has been put into practice in some form on the German side of No Man's Land, but evidence is lacking to substantiate fully these reports. In any case, it is clear that the idea of the Khaki University has touched the imagination of the peoples at war, and that the possibilities latent in it are being widely recognized.

It is, of course, now that the demobilization period is upon us, that the Khaki University will prove of the greatest value. With the present shortage of shipping, the work of demobilization may well last for years. In the case of Canada, it may be two years before all the Canadian troops can be repatriated and demobilized. During this period it is unthinkable that the soldiers should be kept doing foot-drill on the barrack square. Some comprehensive attempt must be made during this time to re-educate the soldiers, so that they will be better able to pick up again the threads of civilian life, and the Khaki University offers a basis for such an attempt that could hardly be improved on. In view of the fact that it has been placed on a definite establishment, with a Director and Deputy Director of Educational Services, and a permanent teaching staff, it provides ready-made an organization capable of indefinite expansion now that the new conditions created by the armistice are upon us.

One of the lessons that the war has brought home to the people of Europe and America is the value of education. What could be more fitting than that we should inaugurate a new era in education by offering its advantages first to the soldiers who have spent themselves in the defence of the Empire?

Thankful For Little.

"When you gets as old as yo' old auntie" said Aunt Chloe. You is thankful for mighty little. I'se thankful that I ain't got a harelip or one eye, or a floating kidney and thet I has a taste for good tobacco in a corncob pipe. And I'se thankful I'se had the nerve to git married three times. Talk about the boys volunteerin' to go into dem trenches! Tain't nothing on a woman who tries marrying a second and third time. Yes'm, honey, when you'se old as me you'se grateful for little t'ings."

Victoria as Canada's Winter Resort

By
ROLAND HILL.

Bright Winter Days at the Pacific Coast

WITH triple ranges of mountains standing barrier to the East, and with the warm currents which cross the calm Pacific from the Equator and Japan, Vancouver and Victoria are blessed with a winter climate that knows no zero.

The snow storm is a novelty.

It was the Prairie farmer who really discovered the British Columbia Coast as a winter resort. About ten years ago he began his winter pilgrimages to Vancouver and Victoria. Hard at work from early Spring to late Autumn, he sought some congenial place in which to spend his months of leisure. He searched for a spot where he and his family could enjoy a beautiful balmy climate, where flowers grew in the open air all winter, and he found these wants at the two delightful cities along the shores of the Strait of Georgia. Life was very comfortable there, and the hotels of the coast city were good, even in those days, and every winter they were full of these established pioneers from the Middle West, and who also built themselves houses until their sojourn by the Pacific grew in length so that finally, comfortably fixed by their well-won fight for fortune from the rich lands of the Middle West, they settled in Vancouver and Victoria, to enjoy the "evening of their lives."

And not only the farmer, but the business man from the East, too, found a winter holiday at the coast, just the contrast that was needed. Three or four days of luxurious train travel through the Rockies and the Selkirks viewing nature in her riotous wildness from the comfort of an observation car, until the limit of the Western slope was reached for the run down through the mild temperature of the Fraser Valley was a tonic in itself, and brought him into a land where the sun was shining on wintry green snowless meadows and the tang of the air had a different feeling. The temperate wind that swept through the valley from the mountains brought the bracing smell of fresh pines. There were flowers blooming at Christmastide. Season by season the number of these migratory comfort seekers has increased, and the winter colony from the East has grown to be such a feature that in the great Canadian Pacific hotels at Vancouver and Victoria one meets scores of families from Ontario, Manitoba and Alberta.

Vancouver is an all-the-year round city, unique alike in its beautiful scenic setting and its stragetic commercial situation. It is described as living face to face with the sea, back to back with the hills, and eyes front towards progress. The world traveller stays his trip out of sheer admiration. From the roof garden of the magnificent Vancouver hotel he can gaze at mountain and sea. In the harbor there are the great liners coming and going from the Orient, the Southern trades and Australasia. There are the smart miniature liners of the C.P.R. that ply the inland passage among the green islands of the Archipelago to the ports of Victoria, Seattle and Alaska.

Summer and winter alike Vancouver is the rendevous of sportsmen, motorists and lovers of the open air. For motoring and driving there is Stanley Park right within the city limits, a great natural area left untouched since the days of the pioneer, encircled by perfect roads, with wonderful big trees through which one can glance the stretches of English Bay, and see in the distance the majestic snow-clad peaks of the Lions made famous by Pauline Johnston, the Indian Princess poet. There is the long, well-macadamized Marine Drive, and the fine residential districts of the Shaughnessy Heights and Point Grey. In the long winter evenings of the Coast one can see across the Strait of Georgia, the white tipped mountains of Vancouver Island standing out against the most wonderful sunsets of the continent. Southward the Pacific Highway connects with the main roads of the American Northwest, while across Burrard Inlet there are drives to Capilano Canyon and on to the foothills, through canyons and past dashing mountain streams.

There is variety of winter hunting and fishing for the sporting visitors, and cabined launches can take them Northward among the many islands and salt-water bays that fringe the coast. For the golfer there are three fine courses, and visitors of the hotel have the privileges of Shaughnessy Heights Club with its vistas of seas and mountains. For the visitor's family, Vancouver has the attractive theatres and stores of a metropolis.

Across the Strait of Georgia, a few hours run through unrivalled island scenery, is Victoria, the

Hot Cakes For Frosty Mornings

Tried And Tested Recipes

By MARION HARRIS NEIL,
Author of "How to Cook in Casserole Dishes."

"Do you ask what I love best of all things to eat?
Let them come every day, or come without warning—
There is nothing in all the wide world so sweet
As sausage and cakes on a cold, frosty morning."

NOTHING is more tempting for breakfast on a cold, wintry morning than hot griddle cakes. When we speak of griddle cakes, we do not mean the heavy, indigestible cakes often found on breakfast tables; but the light, porous kind that melt in one's mouth, and which always create a demand for more.

To bake hot cakes with comfort and success, use a soapstone or aluminum griddle; these will not need greasing, which does away with the disagreeable odor and smoke of burning fat. If an iron griddle is kept clean and smooth, and rubbed with a raw cut turnip or potato between each griddleful of cakes, it will require very little if any grease; but the soapstone needs nothing but heating, and for this reason is the most satisfactory. No matter what kind of a griddle is used, it is necessary that it be smoking hot before beginning to bake the cakes. Have the batter in a pitcher, and pour it out upon the hot griddle, being careful not to get the cakes too large or they will be difficult to turn. As soon as the cakes are full of holes or bubbles, and dry around the edges, turn carefully with a pancake turner or broad-bladed knife. The cakes should be a golden brown on both sides, and served hot. Griddle cakes made of rice, hominy or potatoes are delicious sprinkled with grated maple sugar.

HEALTH GRIDDLE CAKES.—Dissolve one-half of a cake of compressed yeast in one cupful of lukewarm water. Sift together one-third of a cupful each of barley flour, graham flour and corn meal, adding one-half teaspoonful of salt. Mix into this the yeast mixture, cover lightly and allow to stand over-night. In the morning, add sufficient milk to make of the right consistency for frying, and fry. Serve hot with the following molasses spread: Boil together for fifteen minutes two cupfuls of molasses, two tablespoonfuls of butter substitute, two tablespoonfuls of vinegar and a pinch of salt.

CORN CRISPS.—Mix together two cupfuls of corn meal, one-half teaspoonful of salt, four teaspoonfuls of baking powder, one cupful of milk and two tablespoonfuls of melted butter substitute. Divide into well greased molds and bake in a hot oven for fifteen minutes. Serve hot or cold.

DATE MUFFINS.—Sift into a bowl one-half cupful of barley flour, one-half teaspoonful of salt, one cupful of cornmeal and three teaspoonfuls of baking powder, then cut and rub in two tablespoonfuls of butter substitute, add one cupful of milk, one beaten egg and one cupful of stoned and chopped dates. Beat well and divide into greased and floured muffin pans, and bake in a moderate oven for thirty minutes.

POTATO BAKING POWDER BISCUITS.—Sift together twice one cupful each of barley flour and corn flour, one teaspoonful of salt and four tablespoonfuls of baking powder. Cut and rub in three tablespoonfuls of butter substitute, then add one cupful of mashed potatoes and just enough milk or water to make the mass cling together. Do not knead. Turn out on to a floured baking board, roll out until one-half inch thick, and cut into small biscuits. Place on greased baking tins and bake in a moderate oven for twenty minutes. Bake all potato breads more slowly than those made with flour alone.

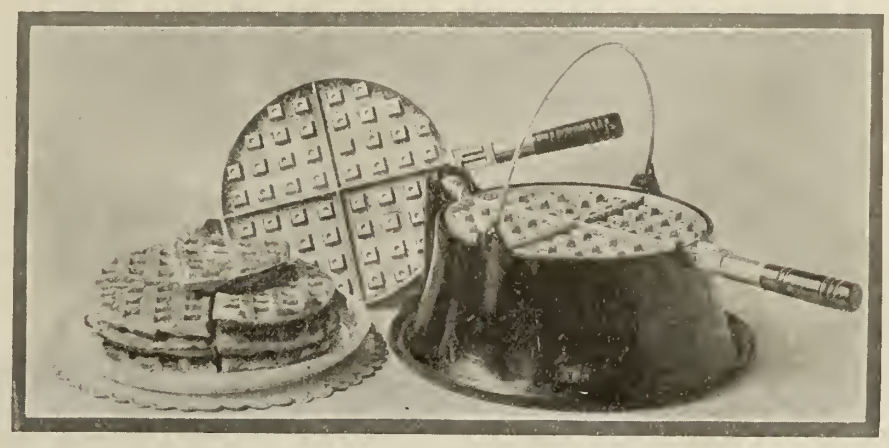
WAR TIME WAFFLES.—Mix and sift one cupful of corn flour, one cupful of oat flour, one teaspoonful of salt and three teaspoonfuls of baking powder. Beat two yolks of eggs with one and one-half cupfuls of milk or water, and mix gradually with flour mixture. Add four tablespoonfuls of melted butter substitute, and fold in the stiffly beaten whites of eggs. Pour into the centre of a hot, well-greased waffle iron. Serve hot with the following chocolate spread: Melt one tablespoonful of butter substitute in a saucepan over the fire, add one and one-half squares of unsweetened chocolate, stir until the chocolate is melted, then add one cupful of honey or corn syrup, a pinch of salt and one-third cupful of boiling water. Boil until thick like syrup, then remove from the fire and flavor with one-half teaspoonful of vanilla extract. Or serve with grated maple sugar or maple syrup.

RICE PANCAKES.—Put into a bowl two cupfuls of boiled rice, add two cupfuls of milk, one cupful of water, the beaten yolks of two eggs, one cupful of corn flour and one cupful of flour sifted with three teaspoonfuls of baking powder, then fold in the stiffly beaten whites of eggs. Bake slowly, and serve with fruit sauce. About now it is time to commence to use up the preserves and jams, for it will be soon time to start a new lot. The pancakes may be buttered in the kitchen as they come from the griddle and a light layer of jam spread between; then when ten are thus prepared send to table and serve by cutting in wedges like pie. Or butter, spread with preserves and roll up as fast as cooked, this giving a very fair form of French pancakes. The preserves may be thinned with a little warm water and rubbed through a sieve to remove any seeds, then thickened with a little cornstarch and served. Quince, apple, peach or pear preserve may be served as it is, and no one will raise any objections.

RAISIN GRIDDLE CAKES—Sift one cupful each of corn flour and barley flour and one-half teaspoonful of salt into a bowl, add one teaspoonful of baking soda and sift again, then add two cupfuls of sour cream or milk, two well-beaten eggs and one cupful of seeded raisins. Beat well, and bake in small cakes.

GRAHAM SCONES.—Mix and sift one and one-half cupfuls of graham flour, one-half teaspoonful of salt, one cupful each of oat flour and flour, and three teaspoonfuls of baking powder, cut and rub in one-half cupful of butter substitute, then add one-fourth cupful of maple or corn syrup, one beaten egg and three-fourths cupful of milk or water. Knead the dough lightly on a floured baking board and divide it into two pieces. Make each piece into a smooth round, roll out and cut into six pieces. Lay on greased tins, and bake in a moderate oven for twenty minutes.

BRAN MUFFINS.—Mix and sift one cupful of bran, one teaspoonful of salt, three teaspoonfuls of baking powder and one-half cupful of corn flour, add one cupful of milk, three tablespoonfuls of chopped nuts or raisins, one tablespoonful of melted butter substitute and three-fourths cupful of milk or water. Divide into greased and floured muffin pans, and bake for thirty minutes in a moderate oven.



BREAKFAST ROLLS.—Mix and sift one-half cupful of rice flour, one and one-half cupfuls of barley flour, one teaspoonful of salt and four teaspoonfuls of baking powder, then add one-fourth cupful of corn syrup, two tablespoonfuls of melted butter substitute and three-fourths cupful of milk or water. Roll out to one-half inch thick, cut with a round cutter, brush over with melted butter substitute, turn over one-half, making a roll, let rise for fifteen minutes and bake in a hot oven. Brush over with a little hot milk when nearly baked.

SYRUP PUFFS.—Mix one-half cupful of corn or maple syrup with one-fourth cupful of boiling water, stir well, then add two tablespoonfuls of melted butter substitute, and one cupful of barley flour, one-half cupful of oat flour sifted with one-half teaspoonful of baking soda, one-fourth teaspoonful each of powdered nutmeg and ginger and salt. Beat well and add one-fourth cupful of seedless raisins. Bake in small, well greased tins in a hot oven. Serve hot.

BUCKWHEAT CAKES.—Dissolve two tablespoonfuls of brown or grated maple sugar and one-half yeast cake in two cupfuls of lukewarm water, then add two teaspoonfuls of salt and one cupful of scalded milk which should be cooled to lukewarm. Mix one cupful each of buckwheat flour, one cupful of corn meal and one cupful of oat flour together and stir in gradually the yeast mixture. Beat until very smooth, cover and allow to rise over-night. Then bake. If liked, one and one-half cupfuls of buckwheat flour may be used and only one-half cupful of corn meal.

QUICK SALLY LUNN.—Beat up one egg, add one tablespoonful of melted butter substitute, then sift in one cupful each of corn flour and barley flour, one-fourth teaspoonful salt, four teaspoonfuls of baking powder, and one-fourth teaspoonful of powdered nutmeg. Add two cupfuls of milk and mix well together. Divide into two greased and floured rings and bake in a moderate oven for fifteen minutes. Serve hot with the following sauce: Make a syrup of two cupfuls of grated maple sugar and one-half cupful of water, cooking until the desired consistency which should be about the same as maple syrup, then add two teaspoonfuls of butter substitute, and flavor with maple, lemon or vanilla extracts. If chocolate or cocoa is liked, one tablespoonful will give the desired flavor, or the addition of left-over half-glasses of currant, grape, apple or quince jam will make the sauce novel and delicious.

OATMEAL GEMS.—Sift into a bowl one cupful of corn flour, one teaspoonful of salt, one-half cupful of barley flour and four teaspoonfuls of baking powder. Cut and rub in two tablespoonfuls of butter substitute, add one cupful of cooked oatmeal, two tablespoonfuls of syrup or honey, one-half cupful of milk and one well-beaten egg. Beat thoroughly and divide into greased and floured gem pans and bake in a hot oven. Sufficient to make twelve gems.

Do You Know How To Use Oatmeal

By MARION HARRIS NEIL,
Author of "Salads, Sandwiches and Chafing Dish Recipes."

Oats Contain All The Constituents Necessary For The Maintenance of High Bodily Vigor

Oatmeal is one of the foods, especially with the addition of milk, capable of supporting life for an indefinite period. The cooking and manner of eating make a difference in its digestibility. Good oatmeal is a highly nutritious food, and its assimilating properties are unsurpassed. Oatmeal should be taken often in place of meat and potatoes at breakfast.

Oatmeal Soup. Put four cupfuls of water or stock into a large saucepan and bring it to the boil. Sprinkle in one-half cupful of oatmeal, in the same way as for porridge, and simmer for thirty minutes, stirring occasionally. Now add one onion sliced or three leeks cut in small lengths, one diced stalk of celery and one tablespoonful of butter substitute. Allow the soup to simmer for one hour longer, then add one teaspoonful of salt, one-half teaspoonful of pepper and one cupful of milk. Serve hot.

Another Method.—Melt two tablespoonfuls of butter substitute in a saucepan over the fire, then add one chopped onion and let it cook slowly for five minutes without browning, add two cupfuls of cooked oatmeal porridge, four cupfuls of milk or water, one teaspoonful of salt and one-half teaspoonful of pepper, and stir occasionally until boiling. Simmer for thirty minutes and then rub through a sieve. Reheat the soup and pour into a hot soup tureen over the beaten yolk of one egg. Serve hot. Or, boil two and one-half quarts of water, add one and one-half cupfuls of rolled oats, six potatoes cut in dice, one carrot sliced, one onion sliced, one turnip sliced, two teaspoonfuls of salt and one-half teaspoonful of pepper and cook for forty minutes. Brown three tablespoonfuls of corn flour in two tablespoonfuls of butter substitute and add to the soup and cook until thick and serve. One cupful of tomato adds to the flavor.

Oatmeal Griddle Cakes.—Add one cupful of milk to two cupfuls of cooked oatmeal and beat well, then add one-half teasponful of salt, one cupful of boiling water, one beaten egg, one cupful each of barley flour and flour sifted with two teaspoonfuls of baking powder, mix well and bake on a griddle. Serve hot with maple syrup.

Oatmeal Cookies.—Cream together one cupful of butter substitute with one and one-fourth cupfuls of grated maple sugar, add two well beaten eggs, three cupfuls of uncooked oatmeal, one cupful of seeded raisins or stoned and chopped dates, one teaspoonful of salt, one teaspoonful each of powdered ginger and nutmeg, one teaspoonful of baking soda, one cupful each of barley flour and flour and one-half cupful of sour milk. Mix and drop from spoon on to a greased tin and bake for twelve minutes in a moderate oven. This makes four dozen cookies, which keep well in a jar, and are excellent for luncheon.

Oatmeal Bread.—Add two cupfuls of boiling water to one cupful of rolled oats and allow to stand for one hour, then add one cupful of molasses, two teaspoonfuls of salt, three tablespoonfuls of butter substitute melted, one yeast cake dissolved in one-half cupful of lukewarm water and enough flour to make a stiff dough. Knead well, allow to rise, then knead a little and divide into two greased tins, let rise again and bake for one hour in a moderate oven. Or form into long rolls and bake for twenty-five minutes.

Oatmeal Jelly.—Cover five tablespoonfuls of oatmeal with cold water. Let it soak for forty minutes, then add one cupful of lukewarm water. Stir and let it settle for five minutes; then stir again and strain into a clean saucepan. Put on the fire and stir briskly until it boils. Lift to the side of the fire and allow to simmer for half an hour. Add salt to taste and one tablespoonful of cream and a pinch of sugar, and serve.

Baked Oatmeal.—Mix two cupfuls of cooked oatmeal with one-half cupful milk, add one cupful of chopped nut meats or peanuts, two teaspoonfuls of salt, one-fourth teaspoonful of pepper and one teaspoonful of vinegar. Bake in a greased pan for twenty minutes. Use in place of meat.

Oatmeal Crisps.—Pour one cupful of boiling water over one cupful of oatmeal and allow to stand until cool. Then add one-fourth teaspoonful of salt and knead in one cupful of Graham flour thoroughly. Roll thin, cut into strips and bake in a moderate oven. These will keep well for some time. They are liked especially by children for their lunches.

Make Housekeeping A Profession

By KATHLEEN DESMOND.

Demobilization is in the air. Is it not the psychological moment to provide one ready-made line of business for our girls to step into if they feel so disposed—a line where the demand is widely over the mark of the supply?

Is it not a reasonable supposition that our girls would be glad to find provided for them a place where a training awaited them along old familiar lines leading to a dignified profession, either inside a permanent home, or the surroundings of a home for so many hours a day?

"Over there" they have become accustomed to a uniform, to discipline, to order—as far as possible and cannot these splendid qualities be used at home? To a thinking mind, these three questions are very significant. There are two words very much misunderstood, and they are "Domestic Science." National Service is dignified, so it ought to be. Red Cross service is on its own pinnacle—whoever thought that attending to the wounded no matter under what conditions, was anything else but honorable? Army, Navy, Air Service posts filled by men, have now the accompanying service of women, and apparently many of these people in these services are about to be demobilized, as well as the great army of munitions workers. What are the women going to take up as a life work?

Some who went to serve the Nation in the war work went in high hope that perchance their hands in the Hospital ward or guiding the Red Cross ambulance would succor the beloved ones they were following should they need it, who doing their bit fell near the front lines, and needed no more the willing help; and now having gone on with a dimmed eye and heavier tread but still ministering, the time is coming for the return, but not to the expected Home. Where then shall these women take their places in the scheme of reconstruction?

"Who will up and with us ride"? to have a clearing house, a bureau, a hostel, what you will, where mothers of families who are driven to distraction and nervous prostration for want of real help can meet the women who need a home?

The "flu" and the Victory Loan are done with, demobilization is the next big job. Who will offer a house to start our hostel? Who will come along and offer to be the first house orderly?

The name of "orderly" has been objected to because a soldier who is an orderly is supposed to do a great deal of serving. Now when are we going to get the right angle to look at this serving question?

There was One who was amongst us as He who serves. This point is almost obliterated when the angle of house serving is approached. Let a cultured woman go into the home of another cultured woman, and take some of the burden from the oppressed and overworked mother, and "do" for her, in fact be a great deal more than the "Daily Delight who does the dishes," being a lady of quality she is entitled to capitals. Can this cultured woman be a pioneer of a great army of intelligent women who are going to take up this question of "Service" and place it in its own high order before the public eye?

We have used the word "discipline" in connection with uniform and order, all military terms, and perhaps the only one that might be a difficulty is the word discipline. Immediately there is antagonism. "I would not be ordered about by any woman who thought she could lord it over me"! Why this totally wrong conception of the word?

Discipline was found to be absolutely necessary to success in the various armies of the world from pre-historic days. It is not fundamentallly an ordering or lording over any particular person—it is meant to create and keep order paramount.

Men who apparently were "ne'er do wells" have become splendid soldiers in this war by wise discipline; it drew out the dormant good in them, the highest order of discipline is not a suppression, but a leading forth into a larger expression, and when we get this true idea of discipline perhaps we will come to a clearer understanding of the dignity of service, and those we serve will have a lesson impressed upon them by our bearing in service that causes them to recognize its nobility, and regulate themselves accordingly. Thus we may be able to start our Hostels for House Orderlies, and our Hostel subscribers as regular supporters.

Eat Oranges If You Would Be Healthy

By MARION HARRIS NEIL,
Author of "Economical Cookery."

"Oranges and Lemons, Say the Bells of St. Clemens."

Orange Holiday Punches.

The Orange is one of the best liver stimulants we have. It is also gently laxative and contains a goodly supply of phosphates, which are splendid nerve foods. So you see its value and importance as a food can scarcely be overestimated.

An orange always quenches the thirst and is a boon to every traveller. The juice of an orange is a wonderful tonic, beneficial in many ways; it promotes digestion and is a counter-irritant to acidity of the stomach. If the stomach be weak, the juice of an orange before breakfast will nourish and stimulate. Squeeze the juice of a large orange into a glass and add a tablespoonful of finely shaved ice. Then shake it well, and drink it without the addition of water or sugar.

As a breakfast fruit, cut the orange in half crosswise and loosen the pulp around the edge and the membrane between the sections, using a thin, sharp knife for the purpose. Sometimes one may serve the fruit for breakfast by cutting the skin like a band round the entire fruit. Then remove the skin above and below the band, cut through the band and open it so that the sections are spread out in a straight line.

Plain sliced oranges are nice for luncheon, if sugared and served with the juice from canned pineapple poured over them.

Try serving oranges in sections that are free from any trace of white membrane. This is done by paring the orange with a sharp knife as if it were an apple, removing the white membrane with the yellow rind, thus leaving the juicy pulp exposed. With a small sharp knife cut close to the membrane on both sides of a section and and remove it, leaving the membrane clean and attached to the core. Repeat this process until each section is free, when the membrane will be left with the core of the orange. Oranges separated in this way are especially attractive in jellies, puddings, salads, etc.

A hot orangeade, taken at bedtime, warms the entire body, soothes the nervous system, and may break up a cold, if taken in time.

Many dishes may be made with these "golden balls of health" to tempt the appetite.

Orange salads are refreshing and delicious, especially for a dinner where game or heavy roasts are served. Walnuts and celery combined with sliced oranges and served with a French dressing make a very unusual and tasty salad.

To serve with roast lamb, try a salad of oranges, celery and mint with French dressing. Oranges, apples and cress make another good combination. Oranges, with celery and grapes are also very good as a salad.

Orange Jellies.

HOLIDAY ORANGE PUNCH.—Pour one cupful of fresh hot tea over one cupful of grated maple sugar and allow to stand until the sugar is dissolved and the syrup cold. Pour into a punch bowl together with two cupfuls of strained orange juice, one-half cupful of strained lemon juice and one cupful of ginger ale. Chill, and just before serving add thin slices of oranges. If liked, a few slices of bananas may be added.

ORANGE COCKTAIL SAUCE.—For each oyster cocktail take two tablespoonfuls of the diced pulp of one orange, one tablespoonful of tomato catsup, one teaspoonful of grated horseradish, one saltspoonful of salt, one teaspoonful of grated orange peel, and a few drops of lemon juice. Serve very cold in cups made of the peel of one orange.

ORANGE CAKE.—Beat two eggs with three-fourths cupful of maple syrup, add one-half cupful of milk or water, one cupful of flour, one-half cupful of corn flour sifted with three teaspoonfuls of baking powder; beat until smooth, then add the grated rind of one orange, the strained juice of one orange and two tablespoonfuls of melted butter substitute. Bake in a greased tin in a moderate oven.

ORANGE PIE.—Line a pie tin with plain pastry. Beat the yolks of two eggs with one cupful of grated maple sugar, add one cupful of milk with two tablespoonfuls of cornstarch stirred smooth into it, the grated rind and strained juice of one orange and two teaspoonfuls of butter substitute. When smooth, add the stiffly beaten whites of eggs and pour into the prepared tin. Bake in a moderate oven for forty-five minutes. Serve hot or cold.

ORANGE JELLY.—Place one cupful of hot water in a clean saucepan, add one envelope or three-fourths of an ounce of gelatine and one cupful of grated maple sugar. Dissolve over the fire, then add two cupfuls of strained orange juice and the strained juice of half a lemon. Pour through cheesecloth into a wet mold. When cool place in the refrigerator, and when firm turn out and decorate with orange slices. Or pour into wet individual molds and when firm turn out, and fill the centres with whipped evaporated milk or whipped cream, and decorate with nut meats.

ORANGE OMELETTE.—Beat the yolks of three eggs until light, add two tablespoonfuls of milk, and fold in the stiffly beaten whites of eggs. Melt one tablespoonful of butter substitute in an omelette pan or small frying pan, pour in the mixture and cook until firm, then brown in the oven. Spread one-half of the omelette with orange marmalade, fold over the other half, and serve hot.

ORANGE DAINTY.—Put one and one-half tablespoonfuls of gelatine into a clean saucepan, add one-half cupful of water, one-fourth cupful of grated maple sugar, and thinly pared rinds of two oranges, and stir them over a slow fire until the gelatine and sugar is dissolved. Whisk the white of one egg until it is frothy, then strain on to it the gelatine and water, also the juice of four oranges and one lemon. Then whisk it until it is very thick. Pile roughly in the centre of a serving dish, and decorate with small pieces of orange.

ORANGE BISCUITS.—Put four tablespoonfuls of grated maple sugar into a bowl, add to it the grated rind of one orange and mix well together, then add one-half cupful each of barley flour and flour, and cut and rub in eight tablespoonfuls of butter substitute, add one tablespoonful of orange juice and enough beaten egg to bind all together. Roll out rather thinly and cut out in rounds or fancy shapes. Place on greased tins, brush over with milk, sprinkle over with chopped nut meats, and bake in a moderate oven from fifteen to twenty minutes, or until nicely browned and firm to the touch.

ORANGE AND CHOCOLATE CUSTARD.—Put two cupfuls of milk into a saucepan and bring to boiling point, add three tablespoonfuls of cornstarch mixed smoothly with one-half cupful of cold milk, and stir and cook for fifteen minutes. Grate or shred two squares of chocolate, and dissolve it in a small saucepan with one-half cupful of milk. Add this to the cornstarch mixture and mix until smooth. Then remove the saucepan from the fire, add the yolks of two eggs, two tablespoonfuls of grated maple sugar, and let the mixture cool. Remove the skin from four oranges, also the white pith. Slice them thinly, removing any seeds, and lay them in a glass dish. Pour the chocolate mixture over. Whip up the whites of eggs to a stiff froth, add one tablespoonful of sugar and whip again and pile on the top of the custard. Serve as cold as possible. Sufficient for five persons.

ORANGE SAUCE, SAVORY.—Into a saucepan put one cupful of water or stock, add the grated rinds of two oranges, and three tablespoonfuls of chopped celery, and if procurable, add one bay leaf and one blade of mace. Bring to the boil, and then simmer for twenty minutes and strain. Return to the saucepan and add the strained juice of the oranges, bring to the boil again, then draw the saucepan to the side of the range and add the beaten yolks of two eggs and one tablespoonful of milk or cream. Make hot, but do not boil again, and stir in one teaspoonful of butter substitute just before serving.

ORANGE SAUCE, SWEET.—Grate the rind off one large orange. Melt two tablespoonfuls of butter substitute in a saucepan, mix in two tablespoonfuls of cornstarch, add one-half cupful of water and stir until boiling. Then add one tablespoonful of maple syrup and the strained juice of the orange, and cook for five minutes, stirring all the time. Now remove the saucepan from the fire, and when the sauce is off the boil stir in the yolks of two eggs quickly, and pour at once into a hot sauceboat or tureen.

ORANGE SOUFFLES.—Cut circular slice off the top of six oranges, scoop out the pulp carefully, so as not to break the skins, rub the pulp through a sieve, add one cupful of orange juice to it. Melt four tablespoonfuls of butter in a saucepan, add six tablespoonfuls of cornstarch, stir in the orange pulp and juice, boil until thick, stirring all the time; then remove from the fire, and let the mixture cool. Add one-half cupful of grated maple sugar and the yolks of three eggs, one at a time; then add the stiffly beaten whites of eggs. Fill the orange skins with this preparation, place them on a baking tin, and bake in a moderate oven for twenty minutes. Serve hot.

ORANGE AND BANANA SALAD.—Peel four oranges, carefully removing all the white pith, and cut them in very thin slices with a sharp knife. Remove the skin from three bananas and cut them also in slices, using a silver knife to prevent discoloration. Arrange the fruit in a salad dish, sprinkle over each layer a little chopped cocoanut. Put one cupful of water and one cupful of maple or corn syrup into a saucepan, and boil them for fifteen minutes, then allow to cool, and pour over the fruit, and place in a very cool place until wanted. Other kinds of nuts, finely chopped, may be used instead of the cocoanut, or they may be omitted altogether.

Another Method.—Arrange thinly sliced oranges on crisp lettuce leaves, sprinkle over a few chopped nut meats, and serve with mayonnaise dressing made without mustard, or with French dressing made with lemon juice. A little finely chopped celery may be added.

ORANGE PUDDING.—Grate finely one cupful of stale bread and soak in one-half cupful of water or milk until soft, then beat lightly with a fork and add the grated rinds and strained juice of two oranges. Sweeten to taste (as the acidity of the fruit may vary), add a pinch of salt, one-half cupful of boiling milk and two beaten eggs, and pour into greased custard cups. Be careful that the cups are not filled too full. Set them in a pan of hot water, and bake in a moderate oven for thirty minutes. Serve hot.

Another Method.—Line a pudding dish with plain pastry, and then prepare the following mixture: Wipe three oranges with a damp cloth, and grate off the yellow rinds. Mix the rinds with one-fourth cupful of corn syrup or honey, add one-half cupful of bread or cake crumbs, two tablespoonfuls of melted butter substitute, one-half cupful of scalded milk, the beaten yolks of two eggs, the strained

For Table Use For Baking

KLIM

THOSE war-time foods which you take so much patriotic pride in making can be greatly improved in flavor and food value by the addition of milk. And milk adds little to the cost if you use it in its most economical form—KLIM.

KLIM is simply pasteurized, separated milk with the water removed. It is a soluble powder that you can mix dry with such ingredients as flour and sugar. KLIM makes breads, cakes and pastry a trifle shorter and very much richer and more nutritious.

Try KLIM next baking day and you'll decide to use it regularly in place of liquid milk. Use it on the table regularly for drinking, because it is pure, good, and nutritious. KLIM is cheaper and more convenient, and means no waste—you use it as needed until the last bit is gone. Your grocer has KLIM in 1 lb. and 10 lb. tins.

KLIM is genuine—the flavor proves it—Drink it.

The Girls' "Carry-On" Column

By BETTY O'HARA.

Although the armistice has been signed, Canada will have more women workers in her military hospitals in two months than she has had in the history of the war.

AT last those great and glorious days have come, the days of "Peace." At three o'clock on the eleventh of November we were awakened from our slumbers by the wild, glad ringing of bells and the sirens screaming in their excited haste to tell the world peace had come at last. Then the newsboys chimed in with "Armistice signed! Extry! War'sover!" and all, with happy smile, rose and dressed with never a murmur, regardless of the fact that the hour was much too early for a celebration under any other conditions. We who had the good fortune to be in the centre of activities, took no rest until the "wee sma' hours" of the next morning, when from sheer exhaustion we somehow dragged ourselves to bed, with a happy feeling that the black cloud which had for so long hung over civilization had at last been lifted almost as suddenly as it had come upon us. It was on that day that we cast off all our troubles, and we have kept them far from us ever since.

The boys are coming home, and this has entailed a tremendous amount of speculation and wonder, and even now we are not much wiser than we were before. But still they will come; it may be a month earlier or a month later than we had calculated, but they will be our most honored guests whenever they return.

I wonder how many girls had planned to do this or that war work, to visit the hospitals or invite some of the returned soldiers to their homes, or enter a military hospital in some capacity, but now are folding their hands, and sitting back with complacent ease and a clear conscience, and telling themselves that now the war is over there is no more work to be done. If these girls could only have a glimpse of the military hospitals or any of the other institutions which in one way or another look after the interests of returned soldiers, they would realize, as do all of us who are in the army, that Canada's work for returned soldiers is not much beyond the starting point. Hospitals are being erected with lightning-like rapidity, and the girls are being trained in curative work, to take their places in them, as fast as is humanly possible. The Army Medical Corps was never as busy in the history of its existence.

When you think that there are 48,000 wounded Canadian soldiers overseas, who are to be sent home as soon as accommodation can be procured for them, while at present there are only 7,000 wounded soldiers in Canada who are receiving treatment, you will have some idea of the gigantic task before us. Three months', six months' or twelve months' medical treatment will not cure these men, whose hospital life, from the time they are wounded until they are discharged, often extends over a period of a year or a year and a half, that is, not taking into consideration the fact that if their ailment returns they must still have more treatment. This has occurred before, and will occur again, and we must be prepared for it. Although after discharge these men are treated and their welfare looked after by the Invalided Soldiers' Commission, and although they have put aside their khaki, it does not alter the fact that they are returned soldiers and have fought the same battle as the khaki-clad hero who limps on his crutches.

Already the Invalided Soldiers' Commission are preparing to take over various large public buildings throughout this country and equip them as hospitals. One in Guelph, containing 750 beds, is just a start of the tremendous activity that is now beginning to stir in the interests of our returned heroes. Their methods and means of treatment are along the same lines as that being employed by the Army Medical Corps, and these hospitals must also be equipped as skilfully and thoroughly as any military hospital.

Up to date, this war has cost Canada $1,046,844,000 in money, and in lives, 55,000 men, with a list of wounded that reaches 154,361, making all casualties a total, including prisoners of war, of 213,268. This is what the men of Canada has done to save their country from disaster. It is true we have given our brothers and sweethearts, and often I think those days of anxious waiting were even more laden with sacrifice than the days of fighting and weary marching which our boys have endured. But be that as it may, in the face of facts and figures, we should not now sit back with hands folded and fool ourselves that war work is over, and there is nothing more to accomplish.

Just to show you the importance some people give to sentiment, I must tell you of an incident which occurred in a hospital which has charge of the treatment of many soldiers. Many of these men are driven to the hospital by ladies who have much spare time and a motor at their disposal, but the day after the armistice was signed a couple of motors failed to appear. Consequently the crippled patients attempted to walk. As a result, they arrived fifteen minutes late for their treatment, and so absolutely tired out that the treatment had to be cancelled for that day. Strange, one day's hilarity should so change the attitude of some of us toward what we should consider to be our duty. As a consequence of this falling off of so-called patriotism, the authorities themselves have taken up the question and will be compelled to provide transportation for the crippled patients to and from their treatments. Truly our "patriotism" has taken some sudden twists and curves since the armistice was signed.

From now on it is upon the women of Canada that the future of our country depends. The encouragement we give our boys to override their disabilities and strive to reach a higher plane in all their walks of life. A bodily injury is a drawback insomuch as the person who possesses it allows it to become so, and when we read of blind millionaire editors and a legless financier of international fame, we are forced to believe it. This is the spirit we must try to encourage in our boys. Although they do not talk much about their disabilities, they feel them keenly, and if we as girls pledge ourselves to encourage and help in any possible way the soldiers with whom we come in personal contact, we can have no idea of the difference in outlook it will give them. When a girl believes in a man, well, he won't disappoint her if he can help it; and girls, believe me when I tell you that they think more about what a girl's idea on a subject is than we give them credit for.

Anyhow, we are going to "carry on" and do war work just as long as there is any to do, and that is going to be for a long, long time yet, I am thinking. And we are going to keep on with the work our boys have so bravely sacrificed so much for, and make this grand, wonderful country so they will know the sacrifice has not been in vain.

QUESTIONS AND ANSWERS.

I wish to take the course in Occupational Therapy. Could you tell me if there would be any use to apply, as I have been in doubt about the training classes being continued since the armistice was signed?

Doubtful.

To be sure, all the classes for hospital work are being continued, and with renewed vigor, as there are more patients now returning than they have workers to handle them. I am sending you the address in the stamped and addressed envelope you sent.

We are a club of girls who have been studying art. We would like to entertain some returned soldiers as a club, but are not sure as to the way we should go about it. We would like very much if you could give us the information.

Super Six.

I am sending you the address of some Y.M.C.A. men whose work is with the returned soldiers. I am sure they will be only too glad to give some soldiers your invitation. Sunday evening always seems the most dull and lonesome of the whole week, and I think if you asked them for tea on a Sunday afternoon, they would appreciate it more than you can guess.

Would you please send me the names of a few good hospitals where girls are trained for nurses? Do you know of any that give a two years' course? Do you think it would be foolish of me to go in training now, as there will be so many nurses released now the war is over?

R. T., St. Thomas.

I am sending you by mail the names of a few of the best hospitals for training. You may be able to take a two years' course in a small hospital or a private one, but the graduates of these cannot in any way compete with those of the three years' course in a good hospital. I certainly do not think it would be foolish for you to take the course, as there is always lots of work to do for the girl who is determined to get to the top.

Could you tell me about the War Saving Stamps which are being issued to the public? What is the rate of interest?

B. D. Thrift.

I could not do better than to quote from the Bureau of Public Information, which says:—

"The Stamps are to be redeemable in 1924. They are to be sold by the Government at a price which works out to an interest rate somewhat better than four and a half per cent. compounded semi-annually, or five per cent. simple interest if computed at the end of the period. Thus in December, 1918, or January, 1919, a five-dollar War Savings Stamp may be bought for four dollars. After January the purchase price of a War Savings Stamp will be increased at the rate of a cent a month. At the end of five years from December, 1918, all Stamps will be redeemed at $5.00 cash. In order that people may accumulate the sum in small amounts, the Government has issued Thrift Stamps, which are sold at twenty-five cents each. Sixteen of these redeem a War Savings Stamp. The Thrift Stamps themselves bear no interest, but are only the means towards purchasing War Savings Stamps."

My brother, who is a returned soldier, has had a recurrence of trouble with his wound. Is it necessary for him to have attendance of our own doctor, or what method would you suggest?

Mary B.

I am sending you the address of the Invalid Soldiers' Commission, which has charge of returned discharged soldiers. Soldiers do not pay for illness as the result of war injuries.

We are having an entertainment for returned soldiers, but we are at a loss as to how we could best give the boys a good time. We are having a musical programme.

Stratford.

The other day a soldier was telling me of a party given for the soldiers. Everyone had a good time, "for everyone had a girl." Nice girls and good eats form a basis for a soldier's good time. The better way to obtain partners for the men would be for each man to be given a card with a number on it and give the girls corresponding numbers; these should be matched. In this way everyone becomes acquainted with everybody else, and there is an atmosphere of freedom created, which is enviable for public entertainments.

Was He Really Stupid?

A young foreigner was being tried in court and the questioning by the lawyers on the opposite side began.

"Now, Laszky, what do you do?"

"Ven?" asked Laszky.

"When you work, of course," said the lawyer.

"Vy, work——"

"I know," said the lawyer, "but what at?"

"At a bench."

"Oh!" groaned the lawyer. "Where do you work at a bench?"

"In a factory."

"What kind of a factory?"

"Brick."

"You make bricks?"

"No, de factory is made of bricks."

"Now, Laszky, listen. What do you make in that factory?"

"Eight dollars a week."

"No, no! What does the factory make?"

"I dunno; a lot of money, I think."

"Now listen! What kind of goods does the factory produce?"

"Oh," said Laszky, "good goods."

"I know, but what kind of good goods?"

"The best."

"The best of what?"

"The best there is."

"Of what?"

"Of dose goods."

"Your honor," said the lawyer, "I give up."

AROUND THE HEARTH

By JENNIE ALLEN MOORE.

Sound the loud timbrel o'er Egypt's dark sea;
Jehovah has triumphed—His people are free!
Sing, for the pride of the tyrant is broken,
His chariots, his horsemen, all splendid and brave—
How vain was their boast; for the Lord hath but spoken,
And chariots and horsemen are sunk in the wave.
Sound the loud timbrel o'er Egypt's dark sea!
Jehovah has triumphed—His people are free.

THE WAR IS OVER.

With gladdening peals the bells ring in a bright New Year—a year abounding with possibilities and opportunities such as the world has never known—this year of our Lord 1919. Greetings to you all, readers of "Around the Hearth"!

The herald of this wonderful year rang in with wild acclaim on that never-to-be-forgotten November day when the nations were aroused to music that thrilled to the innermost soul.

Slowly our senses awoke to the unusual sounds that, at an early hour, insistently penetrated through the walls of our homes, and our eyes and ears were quickly alert to perceive that there must be a particular cause for so much tumult.

News! It *must* be news—war news! Yes, the early stir and the excitement abroad must betoken good tidings. Nothing else could cause such a commotion. It must mean the signing of the armistice. Sleep vanished when that thought took definite form.

It was as an awakening from a hideous nightmare that had lasted for four years and more—a dark, gruesome dream of tragedy and murder that had haunted the mind until it was paralyzed with the misery and wretchedness of it.

As the relief one experiences from the nightmare of a few seconds' duration when we realize that it was only a dream, so accordingly did the release from the shadow of that long-prevailing cloud of war activities overwhelm us with its magnitude.

The truth seemed too massive to grasp at once. The fact had been so appalling, so far-reaching, so subduing—had left us so "all broken, and heaten, and scarred," that we could not with one effort shake off the ghastly grip of a merciless depression.

We lay back upon our pillow and tried to take in the meaning that echoed from the jubilant voices on the street. What mattered that our slumbers had been disturbed by the incessant clanging of bells and raucous blowing of whistles? Who would begrudge the boys the tin horn procession and hilarious shouting, or cared to dampen the delirious joy that found vent in mad capers and licentious fun?

* * * * *

The war is over—words fraught with intense rapture, with joyful anticipation, with apprehensive misgiving, with deep humiliation.

They arouse gratitude from thankful hearts, hope of reunion with loved ones, the fear that something may yet intervene to blight the fond expectations, and the mortification of defeat.

Who can estimate the weight of those four words? In every hamlet and village, town and city, they are being announced, weighed in the balance, and found bubbling over with exuberant joyfulness that had a contagion equal to nothing ever known before.

Our thoughts flew to the battle-fields, and in imagination we heard the news rippling along the serried lines of marching soldiers, or carried through the trenches, shouted into the dugouts, or hailed to the sentry or sniper at his lone post of duty.

We heard the last boom of cannon, the guns become silent, the rifles laid down, the tense look in the set faces relax, and a great relief take its place.

"Is it all over?" timidly asked a mud-bespattered man of an officer in his automobile, who had brought the glad message.

"All over, my man!" and the tiredness dropped from him as he sped to tell his comrades.

Then on the wings of thought I was with the interned men, some of them prisoners since the earliest days of the war. Can anyone doubt how the news would affect them as they quit the hated task of working for the enemy, and faced freedom? How the prospect of leaving behind the servile bondage of an overbearing autocrat lent strength to the half-clad, poorly-fed captives as they hastened to their release! With faces toward their own lines, they knew that "home" would be their objective ere long—home, and friends, and comforts.

That brought my mind back with a thrill. Coming home! The boys coming back to us from overseas! Our bonny, brave lads who left us such mere striplings in their 'teens returning to us with a manliness that only cold, cruel war could inspire, for

"They have lived in the pit of hell—
They have looked in the face of God."

These are the boys who have stood between us and the enemy, who have helped in the deliverance that enables us to sing "Jehovah has triumphed, His people are free!"

These are the boys who left home, sacrificed financial advantages and scholastic attainments, who let nothing interfere in what looked to be a straight path of duty. They have served their country; they have won laurels of fame as noble defenders; they have preserved civilization for future generations; and now their faces are turning homeward to gather up the scattered threads of a half-learned trade, an incipient training, or an interrupted educational course.

* * * * *

Suddenly the scene was changed, and there passed before my vision a great army of weak, maimed and disabled men, numbers of whom will never again take the place they held in the old life. Some of them will come home to be dependent upon the parents they had hoped to support in their declining years. Some will be helpless charges upon long-suffering friends for the remainder of their lives, and some will be able to eke out a living in a small way.

And these boys and men had bright prospects ahead, boys of brain and muscle, whose future before 1914 had loomed up fair and promising, who had hoped to do great things, but the clever mind and strength of body had been offered in service to the Empire, and only the broken, battered ghost of a man will return.

For the rest of our days we will constantly encounter these veterans of this great war now ended; our hearts will be moved to compassion as we witness the lame, and halt, and blind, who went forth strong of limb and able-bodied and came back mutilated with the scars of great battle.

And yet another multitude arise before me—over fifty thousand strong. These will not return in body, for they have paid the supreme sacrifice.

Think of *fifty thousand* Canadian soldiers, our very own flesh and blood, going to their death in that struggle for freedom which has lost to the world many of its noblest and best.

They have given their lives. We shall see them no more; but they will live in our memories, and in that of ages to come—heroes who offered themselves a living sacrifice even as the Divine Christ who thought not of Himself.

These are the men whose message was wafted to us in those imperishable lines by one of our own Ontario boys, Captain McRae, who gave his life after rousing the world's patriotism with his challenge:

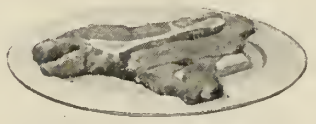
"Take up our quarrel with the foe;
To you, from falling hands, we throw
The Torch—be yours to hold it high;
If ye break faith with us who die,
We shall not sleep, though poppies grow
In Flanders field."

* * * * *

Another innumerable throng now appears, and they are not marching past, but standing still with earnest, yearning faces. These are the wives and mothers, sisters and sweethearts of all the men in all the warring countries—the women who have served in unwavering patience ever since the outbreak of the war.

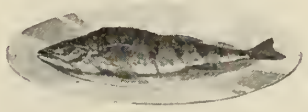
While they dumbly awaited the outcome, they were busy knitting and sewing, baking and packing boxes, writing letters and nursing the wounded, suffering agonies of heart meanwhile.

These are they who have given their loved ones, who have "Kept the home fires burning," who have longed, yet



(Continued on page 42.)

Don't Buy Food Blindly



This Costs 5½c Per 1000 Calories

This Costs 57c Per 1000 Calories

This Costs 54c Per 1000 Calories

This Costs 60c Per 1000 Calories

Know What Energy You Get

The Government standard for measuring foods is the calory.

We measure food needs by calories. The average man needs 3,000 calories daily. The average woman needs 2,500.

This is what some common foods yield in calories per pound.

Calories Per Pound	
Quaker Oats	1810
Round Steak	890
Leg of Lamb	860
Salt Codfish	325
Perch	275
Oysters	225
Canned Peas	235
Potatoes	295

Comparing cost on the calory basis you find this:

The average cost of meats and fish at this writing is ten times Quaker Oats.

The average mixed diet costs five times Quaker Oats.

Yet Quaker Oats is much the greatest of these foods. It is almost a complete food—almost the ideal diet. Foods which cost ten times as much cannot compare with oats.

Quaker Oats

Flaked from Queen Grains Only

Without extra price, you get super-flavor when you ask for Quaker Oats. This brand is flaked from queen grains only—just the richest, plumpest oats. We get but ten pounds from a bushel. No puny and insipid oats are ever mixed in this grade.

Two Sizes: 35c and 15c Per Package, Except in Far West

Peterborough, Canada. **The Quaker Oats Company** Saskatoon, Canada.

Quaker Oats Bread.

1½ cups Quaker Oats (uncooked),
2 teaspoons salt,
½ cup sugar,
2 cups boiling water,
1 cake yeast,
¼ cup lukewarm water,
5 cups flour.

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water. Let stand until lukewarm. Then add yeast which has been dissolved in ¼ cup lukewarm water, then add 5 cups of flour.

Knead slightly, set in a warm place, let rise until light (about 2 hours). Knead thoroughly, form into two loaves and put in pans. Let rise again and bake about 50 minutes. If dry yeast is used, a sponge should be made at night with the liquid, the yeast, and a part of the white flour.

This recipe makes two loaves.

Quaker Oats Muffins.

⅔ cup Quaker Oats (uncooked), 1½ cups flour, 1 cup scalded milk, 1 egg, 4 level teaspoons baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.

Turn scalded milk on Quaker Oats, let stand five minutes; add sugar, salt and melted butter; sift in flour and baking powder; mix thoroughly and add egg well beaten. Bake in buttered gem pans.

Quaker Oats Cookies.

Mix dry 2 cups Quaker Oats (uncooked), 3 cups flour, 1 teaspoon cinnamon, 1 teaspoon salt.

Mix 1 cup sugar, 1 cup lard.

Put 1 level teaspoon soda in a small cup of sour milk. Add this to sugar and lard, then add dry ingredients, roll thin, cut in squares and bake. Raisins—2 cups—make an excellent addition.

Gray Hair Restored

In From 4 to 8 Days

A Great Discovery

GRAY haired women need not be handicapped by their whitening locks, either in business or socially. The natural color can be restored in from 4 to 8 days with a clear, colorless liquid applied by combing through the hair

This great discovery is of vital importance now, when so many home women must become bread winners. Now, today, before you start on your new work, bring back the natural color of your hair with

Mary T. Goldman's
Hair Color Restorer

Not a crude dye, naturally repulsive to fastidious women, but a pure, clean preparation which doesn't interfere with shampooing or curling. Its use is as permissible as that of the powder which every woman knows she needs.

But—no one need know you use it—even your best friends. When the first gray threads appear it is time to get your first bottle.

Then no one will suspect that your hair even started to turn gray.

Go To Your Dealer

Ask him for Mary T. Goldman's—be sure you see the name on the bottle. Don't accept a substitute. If he can't supply you write direct to us and we will supply you by return mail. Price $1.25 a bottle, sent duty free.

MARY T. GOLDMAN, 983 Goldman Bldg., St. Paul, Minn.

Samples to Canada Prohibited by Canadian Government

(199)

Good-bye, Cold on the Chest! Here's Thermogene!!

QUICKLY come—quickly gone! That's the Thermogene principle. With the aid of this wonderful curative wadding you can rout a cold just as suddenly as it attacks.

SIMPLY apply Thermogene to the affected part to-night, for instance. By morning the trouble has vanished!

THERMOGENE
CURATIVE WADDING
(Vandenbroeck's Process)

Its potential heat in dry, convenient form. The moment it is applied, chemical action turns this into active energy—a soothing, comforting warmth that goes straight to the source of the pain—gives instant relief—and continues its good work till a cure is complete. It's a wonderful advance over the old-fashioned, messy, uncomfortable poultice or plaster. Ready as it comes from the box—full directions enclosed. Used by British Red Cross, Royal Navy, Army and Hospitals.

At All Druggists'—50 Cents per Box

Invented by Vandenbroeck, the famous Belgian Chemist. British-made by the Thermogene Co., Ltd., Hayward's Heath, England. 48

My Best Idea

Contributed by Our Readers.

In this Department we will publish the best original items of general interest to housekeepers which are sent in by our readers. For each of the accepted items we shall pay the one sending it fifty cents.

If the description is not clear, we would suggest that the contributor send a rough sketch, making the idea plain, which can be used as a guide to the artist who will illustrate this page.

The CANADIAN HOME JOURNAL *cannot return the items submitted, therefore it is advisable to keep copies of matter sent for consideration.*

Address "My Best Idea," care of CANADIAN HOME JOURNAL. *Give your name and address.*

Keeping Hubby's Dinner Warm.

Putting a person's dinner in the oven to keep it warm, generally dries it up, if it does not actually burn it, in addition to consuming a great deal of gas.

To obviate these drawbacks, almost fill the frying-pan with boiling water. Cover the dinner plate with a pie plate and place it on the frying-pan over a small jet of gas. This method serves just as well to heat up a meal that has become cold. It is economical, because it wastes neither food nor gas. It is effective, because the frying-pan offers a large heating surface that is entirely covered by the dinner plate.

MRS. J. L. LOVE,
15 Charles St., W.,
Toronto.

When Cooling Pies.

When cooling pies, place two small strips of lath on the table or shelf and set the plate upon them so the air can get under. The result being no more soggy crusts on the bottom.

A READER.

Removing Gum Spots.

A short time ago a silk dress I had became ruined (as I thought), when a large piece of gum got on it while I was on a train. All my efforts to remove it proved futile, till at a neighbor's suggestion I tried the following, which was quite successful:

I placed the silk on a clean, white cloth and covered the damaged part thickly with powdered French chalk. On this I placed a sheet of blotting paper, and over all a hot iron. The gum disappeared almost at once.

SUGGESTION.

Salt Extracted.

It is an easy matter to put too much salt in potatoes, peas, etc. To remove salt, place a clean cloth over vessel and sprinkle a tablespoonful or two of flour on it and allow contents to steam. The flour will absorb some of the salt in a short time.

AUNTIE.

No Odor From Cabbage.

If a crust slice of bread is placed on top of cabbage when put in to cook, there will be no odor. This can easily be removed when cabbage is done.

P., Toronto.

Best Idea.

When using only the white or a part of the white of an egg, pour the part to be used from a small opening made in the end; cover the hole with a bit of white paper moistened with the egg and it will keep fresh in a cool place for days.

N. L. MCKNIGHT,
215 Central Ave.,
London, Ont.

A Gift Box.

It saves many an hour and some worry, especially to people in rural districts, to keep a gift box. It may contain inexpensive but dainty articles that do not go out of style, such as collars, pins, cushion-covers, handkerchiefs, doylies, small towels, etc., made in spare moment from left-overs, or picked up at bazaars or when on shopping tours. Little birthday gifts, tokens of esteem for kind friends, contributions for "showers" are always ready upon short notice, and the time spent in collecting them is never missed.

N. L. MCKNIGHT,
215 Central Ave.,
London, Ont.

A Cent Birthday Present.

On each of my children's birthdays I bank for them $3.65—a cent for each day in the year. Who of us would miss this cent each day, and yet by the time the child is eighteen, this one cent a day, each year, will amount to over sixty-five dollars, with interest besides.

THRIFT.

To Clean Crepe Blouses.

Put the blouse in a basin of gasoline. Squeeze it gently (never rub) until all the dirt has been removed. Take it out and sprinkle blouse thoroughly with cornstarch. Squeeze the blouse in your hands until the starch has all been taken into the material. Then shake out blouse and dip it up and down in clean gasoline until all traces of starch have disappeared. I have seen the finest crepe blouses cleaned beautifully this way.

A SUBSCRIBER.

Any Shade of Slipper.

To color soiled white satin slippers any shade to match your evening dress, take ordinary water-colors used in the public school. Choose the desired shade or combine several to get the exact shade (i.e., blue and red to get violet), and make a paste of them. Have a bowl of clean gasoline at hand. Dip a cloth first into the gasoline, then into the color, and apply to the slippers as you would ordinary shoe polish. This has been done with perfect success.

A SUBSCRIBER.

Brass Tacks.

On the place where your dishpan sits, hammer in a few brass tacks, and you always have a place to set your dishpan or any other hot pan, without bothering to get a pad each time. These are scarcely noticed, and are always there to save your oilcloth. This same thing can be done if you have linoleum on your floor. Put a row or two just in front of the door, just where you must step always and just where the wear is greatest.

THRIFT.

Handy Baby Box.

A pretty and handy baby box can be made by getting a cheese-box from your grocer, making four legs (two old broom handles cut in two will make just the right-sized legs). These can be fastened on by an amateur carpenter with small shingle nails driven in from the box side. Then paint it white. The box is then covered with sateen, any shade desired. Small pockets and pin cushions should be sewn in the lining before it is tacked in. This box will stand in a corner or under the table when not in use, and will hold all baby's toilet articles and any articles of clothing to be kept at hand. After it has served its use for baby, it may be covered with cretonne, and makes an admirable sewing box.

MRS. J. N. C.

Baby's Sweater Suits.

To make warm and pretty little sweater suits for wee boys from one to three years of age, take old wool toques or buy new for 75c. or $1.00—the kind which are double and lining is woven like the outside. First, cut off a piece the length of a sleeve, divide it and cut slightly, tapering from elbow to wrist: either face or crochet around the wrist. For body, cut two slits four inches long for armholes; sew shoulder seams, each two and one-half inches; cut very narrow crescent for neck, and cut slit three inches from neck down front; face opening and fasten with loops and buttons or dome fasteners. Two pairs of pants may be made from a toque matching sweater. Take a piece 12 inches long, cut up centre six inches for the legs, and put in a gusset three inches by three inches. Face around waist and legs and run elastic through. One can also make the little pants from stocking-tops or partly-worn jerseys or boys' sweaters. One can also make little silk sweaters from gentlemen's (or ladies', too) silk scarfs.

M. K., Alberta.

How He Would Improve It

"What do you think of the scheme for the Christmas decorations?" she inquired. "It is holly over laurel leaves."

"Very good," he replied, "but personally I should prefer mistletoe over yew."

The Journal Puzzle For January

By TOM WOOD.

Each of the following eight squares represents a well-known Proverb. In the first four, each word of the proverb is illustrated, but in numbers 5, 6, 7 and 8 the one picture represents the proverb.

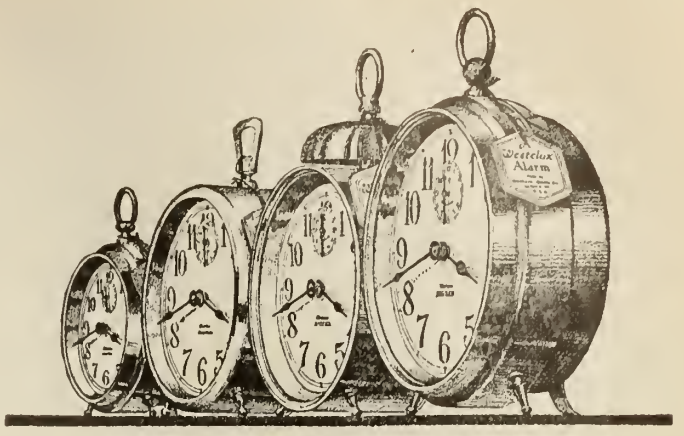
Can you guess them?

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete. Answers must be received by January 26th to be included.

CORRECT SOLUTION OF NOVEMBER PUZZLE.

1. "Many hands make light work."
2. "It's a long lane that has no turning."
3. "First catch your hare, then cook it."
4. "Walls have ears."
5. "Love laughs at locksmiths."
6. "A burnt child dreads the fire."
7. "It's an ill wind that blows nobody good."
8. "All's well that ends well."



The first prize is won by Miss J. E. Gordon, Newton, Ont., and the second by Miss Jean Laurie, Box 85, St. Mary's, Ont.

☆ ☆ ☆ ☆

Away from India comes the following puzzle:

Two British soldiers went into a restaurant in Salonica and asked for (1)———— with (2)————. "I am sorry, sirs," said the waiter, "but I can't (3)————." "Then," said the soldiers, "bring the (4)————." When he (the manager) came, he said "I'm sorry, sirs, I don't want to (5)————, but you can't (6)————." So they had to go away (7)————.

Fill in names of (the late) belligerent countries. One name only —No. 4—is the name of a place, not a country.

Take good care of your
Westclox alarm

GOOD alarm clocks are not as easy to get as they used to be. The war has made them scarce. Yet they are more in demand today, as household timekeepers, than ever before.

Careful treatment will make your Westclox alarm last longer.

We have prepared a booklet that tells you more about your clock. Since July, 1918 this booklet has been packed with every Westclox alarm. If you bought your clock before that time you may have one of these booklets by mail. A postal card from you will bring it.

The Journal Juniors' Club

A Story for the Twilight Hour—A Family of Carpenters

By ETHEL BAIN.

My Dear Home Journal Children:—

Such excellent letters, stories and photographs were sent in that it has been difficult to award the prizes.

Several competitors were disqualified as they forgot to state their age. Always write your name, age and address on every contribution, as this is very important.

In the Nature story contest for children of twelve years and under, no prize was awarded, because the stories sent in were not suitable. However, if the younger members will read the prize story for the twelve to sixteen girls and boys, I think that they will do better next time.

When space permits, the second best letters will be printed. These will be marked "Honorable Mention." The girl or boy winning this title highest number of times, during twelve months, dating from November, 1918, contests, will be awarded a special prize.

Your sincere friend,
ETHEL BAIN.

A FAMILY OF CARPENTERS.

Down through the snow-muffled silence of the forest came the harsh scream of a brilliant-coated Blue Jay as he flashed hither and thither teasing the sparkling frost fairies. His cousin, Black Crow, laughed as he watched the tormenter being snowballed by the sprites, whilst from afar came the constant hammering of a busy Woodpecker, securing for himself a meal of larvae from out of the crevices of the bark.

A Northern Shrike passed through the merry party and headed for the hammering. "Hello Downy," he called.

"Hello Butcher Bird," replied Downy, between hard knocks with his beak which served him both for hammer and chisel.

"Say Downy," went on the Northern Shrike. "Do you know what I think you are?"

"No."

"Well, I think you are the best insurance policy a farmer can take out."

"I don't know anything about insurance policies," replied the Woodpecker. "But, I do know this, that if the fruit farmer will protect me and be my friend, I'll clear his trees of boring beetles, timber ants, moth eggs and every insect that other birds cannot find."

"Well, that's as good as any insurance, for don't you see that the farmer doesn't lose anything in the end."

"Too deep for me," replied Downy. "Go away, I'm busy. You made me lose that borer." He bent his head to listen, then lightly tapping the tree, listened again. Suddenly he began to drill a hole. His head moved so quickly, that it looked but a blur above his shoulders. Quicker and quicker he went and, as he had reckoned, headed off the boring beetle. The next moment the tree pest was speared by the worker's tongue and swallowed. Round and round the tree went Downy, working upwards, for he always started at the bottom of the trunk and besides holding on to the bark with his strong toes, his stiff tail feathers helped to support him.

The Northern Shrike spoke the truth when he called the Woodpecker a good insurance policy, for his valuable work cannot be talked about too much and those people who boast of having shot this bird, will certainly suffer by the loss of fruit in their orchards.

The grubs and larvae had thought themselves safe from any enemy, but they had reckoned without their hosts, the hardy winter birds, whose strong sharp beaks dug deep into every tiny crack of the silent sentinels of the woodlands and orchards. Of course all the insects that died when the frost came, had made sure that next spring their children would be ready to take their places. Carefully and tirelessly had they laid their eggs in the darkest corners of the scaly bark, even boring holes into the trees and at the end of the wonderful little tunnels, they had deposited their eggs, leaving them as they thought, in perfect safety. They knew no better. They had only instinctively obeyed the great Mother, for Nature gave them but one idea, to produce life, and then die at the close of the summer months.

But their chief enemies, the Woodpeckers were also taught by the great Mother that their work was to keep down the number of these same insects, so she gave them the strong beak that would not break, however hard they knocked at the trees. Keen eyes were also given them and keen hearing, so that they might not miss the faintest sound made by a borer under the bark. Again Mother Nature gave the Woodpecker family a curious foot, for their toes are arranged in a strange manner—two in front and two behind. Now this is very useful, indeed, for the birds can hold on to the bark in somewhat the same fashion that the iceman grapples a block of ice with his iron tongs. Last of all, Nature gave the Woodpeckers a very strange tongue. Such a tongue, equalled only by that of the humming-birds, and like nothing else but a barbed spear. It is so long that when not in use it is coiled up under the head, and the tip of this spearlike tongue is covered with a sticky saliva, so that the insect cannot escape when caught by its enemy.

Prize Photograph taken by Gladys Shorey, Sudbury, Ont.

In Canada, we have nine different kinds of Woodpeckers. The "Cock of the Woods," whose real name is the Pileated Woodpecker, is a very beautiful bird, but you will rarely see him in your neighborhood. He lives in the woods, and wears a dull black coat with a white stripe down each side of his neck. It is his fine crested head that betrays him, for the top of his head is a brilliant scarlet. Look out for him when you go camping out in the woods during the summer months. You can't miss seeing him, for he is seventeen inches long from the tip of his tail to his beak.

The Arctic Three-toed and the American Three-toed Woodpeckers are also true birds of the forest. The first named wears a black and white coat, and a beautiful yellow cap on the top of his head. I think I'd rather call him Yellow Cap, for that would suit him better.

His cousin, the American Three-toed Woodpecker is very much like him; only the slightest difference in the markings of his coat tells us that he is not an Arctic Three-toed.

Then come the Hairy Woodpecker and the Downy Woodpecker. These two are very much alike, but the Hairy Woodpecker is nine inches in length, whilst Downy is only six inches.

Surely you know friend Downy. True, he loves to stay in the woodlands all summer, but the autumn, winter and spring seasons find him in the orchards, gardens and city parks. With his smart black and white striped coat and scarlet patch on the back of his neck, he is a familiar sight to all bird lovers, who welcome him and often provide him with a free lunch. He will come to your window-sill if you invite him, for in the hard weather it is difficult for Downy to find the food he likes the best, which, as you know, consists of grubs, insects and larvae.

Now comes the Yellow-bellied Woodpecker, or, as he is generally called, the Sapsucker. This poor Woodpecker, who is eight and one-half inches long, gets a bad name everywhere. Few people like him, because in the springtime he has a habit of boring small holes in the bark of various trees, just to obtain the sap, of which he is very fond. That a tree is ever killed by such a practice on the bird's part I do not believe, for we know that maple trees are tapped year after year for their sap, and the annual tapping never kills the trees. It is more likely that the insect pests that live on the tree enter the holes made by the Sapsucker and soon destroy the living parts laid bare by this unwise bird, for I think this Woodpecker must be extra fond of sweetstuffs, just like some children. Think of his good points. He is not a grain or fruit eater, but in the fall loves to feast on wild berries. If only one could count the number of ants this scarlet-throated and red-capped bird destroys, I am sure that the majority of people would protect it.

Next on our list must come the Flicker, who is really the Golden-winged Woodpecker. Very smart he looks in his black and white coat and gold inner wing feathers. He wears no kingly crown, but has a vivid scarlet band across the back of his neck, the top of his head being an ashy grey. He is not popular, for he loves cherries, and helps himself, thus turning the fruit farmer into an enemy instead of a friend. If he could only speak our language, he would tell us of the numberless ants he destroys, and besides ants he kills grasshoppers, moths and beetles. This Woodpecker is eleven inches in length, and does not have such a strong beak as the other members of his family, as he lives close to the ground like the Meadowlark.

Such a noisy, quarrelling lot are the handsome Red-head Woodpeckers. But handsome is as handsome does, for these birds are the ruffians or robbers of the family. One of their worst habits is eating the eggs and babies of other birds. They eat a good deal of fruit, and although they try to make up by eating insects and grubs, they should not be encouraged to your garden or orchard. It is better for them to remain in the forests.

Only the Pileated Woodpecker rivals the Red-head, whose underparts are white, tinged with red. His coat is mostly black, the tail and wing feathers touched with white, but it is his head that tells you his name, for the entire head, neck and upper breast are of a beautiful deep crimson color.

The last of our nine is the Red-bellied Woodpecker, who wears a neat black and white coat, with breast and front of neck white, and underparts white tinged with red. I think this bird should be called the Red-eyed Woodpecker, for both he and his mate have red eyes, and so differ from the rest of the family. The whole top of his head and back of neck is a bright red, whilst his wife wears a gray cap, but the back of her neck and forehead are red.

Now you know the nine carpenters in feathers that visit Canada. Out of these, the Hairy Woodpecker and his cousin Downy stay with us all the year round, and will welcome your invitation to live in nesting boxes.

The Woodpecker family are special enemies of all the boring insects that, in turn, are deadly pests of trees, and no other bird is more useful in protecting our forests than the Woodpecker.

Watch one in springtime when he sets to work to make a new home, then you'll understand why he is called a carpenter. He chooses the sunny side of a tree and builds his home looking towards the south. Draughts he does not like, so chisels his home deep enough. Can you draw a freehand circle better than Downy Woodpecker? Try, and see if you can make such a perfect ring as he does. When Downy has made his circle of dots, he starts to chisel out the opening, which need only be one and one-half inches across, whereas the Flicker must have a door four inches in width or he could never get into his home.

Mrs. Downy helps her husband, and takes her turn at chiselling out the chips, which fly in all directions. The house plans start with the entrance running straight in for a few inches, then Downy works downward and chisels out a quaint room, almost pear-shaped. This is the nursery, and the chips are left on the floor, for no Woodpeckers believe in spoiling their babies at all. When the five glossy white eggs are hatched, the baby Woodpeckers have a nice, healthy nursery to play in, and not at all stuffy, like some nests that are lined with bits of wool, feathers and fur.

Downy Woodpecker is living somewhere in your district. Won't you find him and tell him that you would like him to come and live in your garden, so that you can see him every day? There are plenty of Downy Woodpeckers in Canada. Do you know your own particular one?

CONTESTS FOR JANUARY, 1919.

1. Prize of two dollars for best letter on "My Work for the Red Cross." Children from twelve to sixteen years.

2. Prize for best letter on "My Christmas Treat for the Birds." All children under sixteen years.

3. Prize for best letter on "My Work for the Red Cross." This is for the youngest members, as it would not be fair to judge their efforts with the older boys and girls. We know full well that our younger readers have been doing their bit, so they must not be overlooked. Children under twelve years.

4. Prize for the best scrap book to be sent to a convalescing soldier. All children under sixteen years.

5. Prize for best photograph taken by any child under twelve years.

PRIZE LIST, NOVEMBER CONTESTS.

Letter Contest—"What I Am Doing to Help Win the War"—Awarded to Madeleine Taylor, age 14, R.R. No. 5, Rockwood, Ont.

Camera Contest—Awarded to Gladys Shorey, age 12, Box 1483, Sudbury, Ont.

Story Contest—Children of 12 years and under.—No award has been made in this contest, as the two stories entered were not suitable.

Story Contest—For girls and boys from 12 to 16 years—Awarded to Imogene Secord, age 15, Irfield, Alberta.

Prize for Scrap Book—Awarded to Alice Read, R.R. No. 2, Gormley, Ont., and Ethel McMullin, R.R. No. 3, Amherstburg, Ont.

Prize for Soldiers' Housewife—Awarded to Kathleen Wallace, Box 216, Oxbow, Sask.

Honorable Mention.

Letter Contest — William Goddard, Bradford, Ont.; Mary E. Jackson, Malton, Ont.

Camera Contest—Leslie McDonald, Brussels, Ont.; Kingsley Hughes, Paquette Sta., Ont.

Story Contest—Clara Findly, Welland, Ont.

PRIZE LETTER

What I Am Doing to Help Win the War.

By Madeleine Taylor.

As I am a girl and not old enough to be a nurse, I decided that I must do my "bit" at home. I live on a two-

Music After The War

By HECTOR CHARLESWORTH.

Its Important Place In Our Lives

Now that the war is to all intents and purposes over it scems apropos to discourse briefly on the status of music in relation to peace—to that peace which we hope will endure so long as anyone now alive on this earth shall survive. Assuredly music has "done its bit" in the war just ended. Those who have done any thinking on the psychological aspects of the war universally admit that music has not only played a tremendous part in stimulating patriotic emotion and martial effort, but has also been of incalculable value as a sedative to those whose minds have been overwrought by grief and anxiety. No longer will it be possible for those who have in the past affected an attitude of contempt toward music to dismiss it as a non-essential, and indeed, useless luxury. It is important to remember that music had to prove its case in the times of stress that we have come through. Though opposition to it never took the form of actual legislation, it is a fact, known to those interested in the art from either a business or professional standpoint, that there were times when proposals to restrict music and to place it in the same wasteful category as the liquor traffic, for instance, were seriously entertained in many quarters on this side of the Atlantic. Fortunately these efforts failed: and it is the sincere conviction of the writer that the community is the gainer in mental and moral health thereby. Its operations are, of course, subtle and unobtrusive, like the influence of fresh air and sunlight, but they are nevertheless positive.

During the controversies alluded to some very wise words were uttered by Thomas A. Edison, a man whom the most case-hardened utilitarian would hardly dismiss as an idle dreamer and dilettante. One of the sentences he coined—"The 'Marseillaise' is worth a million men to France"—impressed everyone with its truth. During the late war music was the finest recruiting officer; and Edison's view of its future function in times of peace was expressed in these words: "The time is not far distant when music will be known as a greater essential than books." During the latter stages of the war this assertion was in part applicable to the immediate present, for it is probable that music had a more potent though indirect influence in maintaining the public morale than all the countless written appeals for steadfastness, patience and optimism.

The truth is that those who profess that they are not musical seldom stop to think how great a part the art has played in their daily lives; or how great a deprivation is experienced by those entirely cut off from it. It would be but repeating what one has said many times in these columns to dilate on the social and intellectual poverty of the home which has no music in it. In reality few such homes exist, and where they do, gloom and unhappiness is the prevailing atmosphere, no matter how wealthy it may be in other creature comforts. Even the individual who thinks he would willingly part with music as an element in his daily life, would change his view if he were actually put to the test. If he is a churchgoer he would rebel at any proposal to banish music utterly from his conventicle. He would realize at once that it is an aid to religious devotion. If he is a politician he would denounce as tyranny any proposal to prohibit music in connection with political meetings and campaigns; for he would discern the value of melody as a promoter of enthusiasm.

In passing, let us note how marked a part music played in the recent Victory Loan campaign in Canada. It entered definitely into the calculations of the statesmen and financiers who proposed to raise by popular subscription an amount that seems incredible for so limited a population as that of Canada. These men gave music the greatest certificate of utility that it has ever had, when they correctly prognosticated that music could be a potential influence in raising millions for national effort. For this reason the largest and finest band that was ever heard in this country was brought to Toronto under John Philip Sousa, as one item in a very elaborate programme extending throughout Canada. Everywhere local committees were advised to use music to the limit of available material; and the suggestion yielded dividends incalculable. Without the aid of music the Victory Loan would have fallen short by many score millions of its actual subscriptions.

This fact is merely cited as an illustration of the tremendously important part music, the gentlest and most stimulating of arts, plays in the civic life of this country. Its full recognition as an essential would only come if there were a definite proposal to do without it. It plays a part in nearly everyone's existence, almost as certain as the seasons of the year.

The war brought a definite recognition of this in many quarters where the fact had gone unheeded before, and therefore one feels justified in thinking that it will hereafter play a more intimate part in education, and in all branches of that complex element we call civilization, than ever in the past. Of course, anything one may say as to the future is necessarily speculative. Prophets of ill-omen, who are sometimes right—as they were when they forecast the late world-war for instance—have for a year or more been predicting an extended period of social unrest before humanity gets back to its normal temperature. In assisting recovery music should continue to be a certain but pervading influence for good. In the home, and outside the home it operates for the promotion of social content, just as it has during the war, for heroic effort and moral strength.

One American statistician has even been at pains to gather figures to prove that the pursuit of music actually keeps people out of jail. It is the sociological fact that most of our criminals spring from surroundings where opportunities for decent enjoyment are nil. Many educationists are firmly convinced that by familiarity with music young people become better citizens, more sociable and kindly in temperament, and more efficient generally in meeting those problems of life which are distinct from the mere practice of money-getting. The statistician alluded to has been examining the records of the nine largest American penitentiaries and he finds that out of something like 150,000 professional musicians in the United States only 15 are in confinement. Of course it is a known fact that the vast majority of criminals are not merely illiterate, to all intents and purposes, but without practical callings of any kind. But among the modicum of educated law-breakers the musical community makes the best showing of all; for the investigator found 39 out of an estimated population of 57,000 bankers; 33 out of 115,000 lawyers; 22 out of 150,000 physicians; and 6 out of 35,000 painters and artists. The comment on these figures by one publication is that "it begins to look as if music keeps you out of jail or helps to."

Of course, one has no intention of drawing any serious deductions from these figures; but the idea that music does make for better living, because it makes life a richer thing for its votaries has an unquestionable basis in fact.

During the late war musicians as a class did not hesitate to offer their lives in the cause of liberty or to aid war effort in manifold ways, at personal sacrifice. One of them was Albert Spalding, one of the greatest of living violinists, who became a lieutenant in the American aviation service and was sent to the Piave front in Italy. The fact that he had to temporarily abandon his cherished art did not prevent him from thinking of it,—more perhaps than ever before, he said. In the face of the terrible disaster that lay all around men with actual experience in the fighting line, he came to the conclusion that music in the abstract was more than ever a necessity of humanity, if they were to be brought back to more spiritual planes of thought. Speaking particularly of his own country, he said:

"Even before the war there was an awakening throughout America to the great need for artistic expression by the artist himself and artistic experience by the layman. And now more than ever with the sacrifice and trials and with the purification that comes by fire, men and women will turn to

(*Continued on page* 40.)

The Brunswick
ALL PHONOGRAPHS IN ONE

Educate Your Children with the Music from ALL Records

In this final-type phonograph are expressed by master craftsmen all those features music lovers have wished for so long.

Because of the wonderful "Ultona," the Brunswick is able to play all records. It is not, as is often the case, restricted to one particular make. Then, because of its all-wood sound chamber—built like-a-violin—its tone is full and clear without the slightest trace of metallic or nasal sounds. It is the supreme achievement of a company famous for 76 years in the woodworking art. Only your own ears can prove to you the incomparable charm of the Brunswick and its noticeable superiority. Hear the Brunswick first—then judge for yourself.

BRUNSWICK SUPERIORITIES.

Ultona all-in-one reproducer.
Plays all records correctly, exact weight, correct needle.
All-wood tone chamber.
Better tone.
Automatic stop.
Throat-way volume control.
Finer cabinet work.
Costs less.

Prices from $62 to $350

Time and Money

We want and we will liberally pay one energetic lady in each community to represent the "Canadian Home Journal."

We already have scores of local representatives in our big Home Journal Club, and some are making as high as $100.00 per month.

There are still many towns and villages in Canada in which we have not a representative and if you have any spare time that you desire to turn into money, write us to-day.

The remuneration of a "Canadian Home Journal" representative is according to the time and activity devoted to the work.

If you have plenty of time and energy there is practically no limit to your income or territory, for we make special provision for the live ones.

The women of Canada require more money to-day than at any time in the history of the nation. The "Home Journal" will supply that money in exchange for your time.

Write us to-day.

INSTITUTE WORK FROM COAST TO COAST

Regarding the Postponed Convention.

The postponed Provincial Convention for the Ontario Women's Institutes has been set for February 4th, 5th and 6th, during the week set apart for a number of conventions in which farmers are interested. It is expected that the sessions will be held in the new Central Technical School, and the programme will be very much the same as outlined for the convention at first planned for November 19th, 20th and 21st, and announced in the November number of the HOME JOURNAL. Emphasis will, of course, be placed upon the work which may be undertaken when the call for patriotic work is not so insistent.

All Institutes will receive final announcements in due time.

WONDERFUL OUTPUT OF CANNING CENTRE.

The canning centres at Parkhill, Stratford, Guelph, Mapleton, Niagara-on-the-Lake and Barrie, which have rendered such splendid service in putting up fruits, pickles and canned chicken for the military hospitals overseas, have closed for the season. The total output will be something over sixty tons. Some of the canned chicken was sent with the first contingent to Siberia.

Several of the centres rendered a splendid service to their respective communities during the epidemic of influenza by furnishing broth, light desserts and also meals. Stratford canning centre sent out over 6,337 meals altogether.

LECTURES ON NEW LINES OF WORK FOR INSTITUTES.

The Ontario Department of Agriculture has received a large number of outline special features of work which the Institutes will take up during the coming season. Those Institutes which are anxious to have speakers to outline possible lines of work of interest and value to the women and girls in the rural districts should make application not later than the middle of January.

In this connection we quote from a correspondent:

"Respecting lines of help in reconstruction work, I would suggest more active interest in education, and in our schools, to arouse interest of teachers and pupils in the peace problems and true patriotism; also that our Institutes at meetings, and in the homes continue their interest in farm and garden; that we study and urge the promotion of better drainage, sheep-raising, better culture and economy of our orchards and fruit. We trust the work of our young women will continue to increase in efficiency, and that the pupils of our schools will be preparing to carry on for home and country."

THE STORY OF THE QUEENSTON BRANCH RETOLD.

Hot School Lunches to be a Feature of Their Work.

When our branch was first formed, several years ago, we met from home to home, but all longed for an Institute home; so we started collecting money, hoping to build a hall. Just at that time our school trustees decided to put up a new school building, and we asked to be allowed to have rooms in their building. This being finally allowed by the Government, we arranged to finish off space for a large hall for concerts, etc., also a room for Institute work with a kitchen adjoining. This school building being a memorial to Laura Secord, and is known as the Laura Secord Memorial School. This has all been accomplished, it costing our Institute three thousand dollars, besides much time and energy. The money was raised by solicitation among other schools, by subscription, holding concerts, teas, etc., a provincial grant of five hundred dollars, and a township grant of two hundred dollars.

Our kitchen is fully equipped with a four-burner Perfection oil stove, cooking utensils, and all necessary silver, dishes, and table linen to set tables for fifty people—this part all being donated by the merchants of our district upon the solicitation of one of the husbands, who constituted himself a "Begging Committee of One" to help us furnish our kitchen and dining tables. Later he also secured for us a sewing machine and two cutting tables for our Red Cross work.

As a house warming for our rooms we held a very successful bazaar and chicken supper, which netted us two hundred dollars. This building was completed just as the war began, so the furnishing of our Institute room has been delayed, and all our energy has been turned to Red Cross work.

We are not a large membership, only twenty-two members, but since our Institute took up the Red Cross work we have opened our Institute room every Thursday for an all-day meeting. Ours being a rural branch, most of our members live some distance; so our Thursday luncheons became something of a social affair, our teachers usually joining us for the luncheon hour. All of this has proven helpful in fostering the community spirit and interest in the Institute. Many times, only five or six would attend luncheon, others dropping in during the afternoon to leave finished work done at home and to take away garments to make.

Money for Red Cross work has been granted throughout Lincoln County by the County Council to all properly organized societies, so all our time and energy has been spent in sewing, rather than raising money. We purchased our materials and cut out all the garments ourselves. When completed all was sent to the Red Cross branch, St. Catharines.

Many of our Institute members are doing Red Cross work with their church units, consequently our sum total is not as large in comparison as some other Institutes; still we feel our few workers have done well.

During the past year we have sent to St. Catharines 146 suits of pyjamas, 162 pairs socks, 19 blue flannel dressing gowns, 234 miscellaneous articles, 64 wash cloths, 53 towels and 55 treasure bags. During September one of our members held a soldiers' shower, from which we were enabled to send to the Davisville Military Hospital 5 pairs of socks, 2 dozen handkerchiefs, a bandage roller and $70.00 in cash. Another member sold roses from her garden and realized $17.75 for the Red Cross work. We all contributed fruit for the canning kitchen at Niagara-on-the-Lake during the fruit season, and are now helping with the chicken campaign.

We have a girls' battalion, who meet in our Institute room one afternoon each week for work. They undertook the chicken collection for us. Also, they collected $90.75 in this district for the soldiers' Christmas boxes, one of which was sent to all the boys from our district. Just now we are making a collection for the Belgian relief. We usually make this collection each year at the Christmas season.

Our regular Institute work is conducted one afternoon each month, at which meeting we always try to have some interesting speaker, or a paper prepared and read by one of our members on some subject of particular interest. Whenever possible the girls furnish the music.

The Lincoln County District Institute has talked medical school inspection for several years, it being discussed at each meeting as to ways and means, and only last year succeeded in having it put through for this county. Our County Council first allowed a grant of $200.00 to cover expenses, and later gave us a further grant of $80.00. Dr. Culver, of Simcoe, came through this section, making a very thorough inspection. In our local school, at least, it produced some good results, several children having since had their adenoids and tonsils removed. During the inspection one bright little girl could hear perfectly with one ear, and not at all with the other, so Dr. Culver investigated more closely and discovered the obstruction. With what few instruments she had with her, she proceeded to hold a clinic, and finally removing what appeared to be a berry, black, round, filled with seeds, which had swollen to completely fill the passage. Just giving that child back her hearing amply repaid us for the work we put into medical inspection. We are hoping for further work along this line in the near future.

In October we had the good fortune to have with us Mr. Leake, chief inspector of Domestic Science for the Province. Niagara-on-the-Lake Institute had been invited for the meeting, and sent a goodly delegation. The teachers from Queenston and St. Davids were present, and Mr. Carefoot, our county school inspector, also came, and our work for this coming year will be in the interests of the school children, seeing if we cannot work out a scheme whereby they may have one hot dish for luncheon during the winter months. Mr. Leake was very patient in explaining just how it might be done, and we are hoping for very good results from his visit. We also have personal supervision at the noon hour.

In connection with our school we have a fair sized library, the books having been contributed by members of the Institute and the village people. This will be added to from time to time.

MRS. HUDSON USHER,
President.
MRS. HOWARD FISHER,
Secretary-Treasurer.
Queenston Branch,

GARDEN SEEDS AT SPECIAL RATE.

The Women's Institutes Branch of the Ontario Department of Agriculture has made arrangements for a supply of garden seeds at a special rate to Institute members. It would be well for the officers and members to decide at an early date as to the number of packages required. The collection includes: Onion seed, parsnips, beets, carrots, beans, corn, peas, cabbage, cucumber, Swiss chard, spinach, radish, lettuce, squash and field beans. The charge is $1.00 per package, with express or postage charges prepaid. The districts which took advantage of this offer last year were much pleased with the results.

THE PORT DOVER BRANCH APPRECIATES THE COURSE IN COOKING.

In replying to an enquiry as to the value of the lecture course in cooking, the secretary at Port Dover writes:

"Advertising was really the means of getting the class together. Announcements were made in our town paper asking all the ladies in the town and vicinity that were at all interested in domestic science, to meet in the Red Cross room on a certain afternoon, at the close of the Red Cross meeting, to meet Miss Gertrude Gray, the demonstrator, before the commencement of the course. In that manner a goodly number of the ladies became interested, and a class of about forty-four was organized.

"The morning lessons from ten until eleven were always very interesting, so much so that those who could not attend were always sorry, as each and every lesson and lecture given was so good.

" 'Conservation' and 'Economy' were the two lessons most strongly emphasized, and the uses of substitutes, which before the war were very seldom spoken of, only along the line of breakfast foods, were fully explained and demonstrated. Meat substitutes was one of the best lessons learned, whereby we could produce a very tasty and satisfying meal at reasonable cost, and yet have the strength-producing quality so very essential to us all, more especially the bread-winner.

"The meat lecture was one of great interest to all. How often we have heard it said: 'Oh! I don't know one thing about meats. I just have to take the butcher's word.' Miss Gray demonstrated fully, by chart, just where all different cuts of meat are; also gave instruction as to the color and care of meats; and I must say that, to my mind, the demonstrations and lectures were of the best.

"The young girls were always at the class, ever ready for every new idea or form of conserving or substituting. Simplicity and daintiness, yet appetizing, was the keynote of all food lectures and demonstrations.

"At the close of the short course our Women's Institute was organized, and since that time we have been trying to do "our bit" for home and country, and we feel that we were greatly benefited by the short course demonstrations and lectures in domestic science. As our Red Cross and I.O.D.E. were looking after the patriotic work, we as an Institute felt free to give our attention to what we considered the best interests of the community."

PRESENT PATRIOTIC NEEDS.

The recent Allied victories in all parts of the world have resulted in the return of hundreds of persons—women, children, old men and cripples—to their homes in countries recently occupied and devastated by the Germans, Austrians and Turks. These people are in great need of suitable clothing, and it is extremely difficult to secure it in Britain or France, because it is both scarce and expensive, and for that reason it is very essential that we assist the various organizations in supplying clothing to these people.

The department feels, that for the present at least, it would be well for the Institutes to send their shipments to the Belgian Relief or Secours National. These societies have been doing splendid work during the war, even under unfavorable conditions, owing to the fact that we all felt that the Canadian Red Cross Society should receive first consideration, but now, even the Red Cross Society has been turning its attention wholly to this feature of work for a certain period. We feel quite sure that the Red Cross Society will not feel in any way antagonistic to the Institutes for turning their interests at the present time to the Belgian Relief and Secours National.

Clothes for Belgium.

Urgent appeals have been received from Belgium, newly freed from the enemy, for supplies of all sorts. Will you help?

Everything is needed—this coming winter will be very hard.

For women and girls—Chemises, petticoats and drawers.

For children—Dresses and undergarments.

For men and boys—Shirts, socks and stockings.

Infants' layettes.

New garments should be made of strong, warm materials—factory cotton, flannel or flannelette, plain styles and cut more loosely than for Canadian wear. Worn garments, if clean and in good repair, will be accepted.

Quilts, blankets and shawls, towels and bed linen are much in demand.

Boots and shoes badly needed. Second-hand boots and coats may be sent if in good repair.

Enclose list of contents, with estimated value in each box.

Pack in strong cartons or wooden cases, and send by express, charges collect, to Belgian Relief Fund, 95 King Street West, Toronto.

(*Continued on following page.*)

Canadian Women's Institutes

(*Continued from preceding page.*)

For the Secours National.

The following list will give an idea of what is required: Pillow slips and sheets are in the greatest demand; also boots and shoes in good repair; nightgowns, women's dresses, sacques, aprons, bloomers and other garments for children.

Information regarding patterns to be used will be sent on application.

Shipment for Secours National should be sent to 14 King Street East, Toronto.

PRIZE-WINNING SUGGESTIONS FOR INSTITUTE WORKERS.

The following letters and articles were awarded prizes in recent contest:

The first prize, in Class one, goes to Mrs. Robert Flatt, R.R. No. 2, Hamilton, Ont.

The Way in Which Our Institute Raised Money Successfully.

Our institute has held many successful garden parties, lawn socials and bazaars for the purpose of raising money for patriotic purposes, but as there is always so much expense in connection with these, and a considerable amount of work, too, our ladies decided to try something new, when at the June meeting a discussion arose as to some method of raising money. Some one proposed holding an auction sale on the 12th of July.

We had all heard of rummage sales, where everybody brought some old article for which they had no longer any use, and which they were heartily glad to get rid of, and where everybody bought some old thing because they thought they were "getting a bargain," not because they had any real use for it. But now this was to be a real sale of real fresh goods. Perhaps this would meet with more favor. At any rate we decided to try it. Accordingly there were various committees appointed to prepare for the "sale."

The canvassers were to visit every home in the village and surrounding district asking for contributions.

Nothing was to be considered too small, and nothing too large. Anything from a pound of butter to a load of hay, as they said. Each lady was also to be asked to bake a cake, a couple of pies, or some sandwiches—which ever she liked.

A crowd was expected—and surely some would require a lunch. It was decided to hold a game of indoor ball between our home team and a neighboring one to help draw the crowd, especially the young people—so an ice-cream booth seemed a necessity. As a place for the sale a patriotic gentleman kindly loaned two tents, which were attractively decorated, and presided over by the "fair sex" members and friends of the Women's Institute.

Another attraction was an orchestra, which rendered several selections from time to time, aiding considerably in putting people in a happy mood. And now at 5 o'clock the sale began.

A couple of well-known and competent auctioneers had offered their services free, and as the sale had been well advertised, there was a good crowd assembled, and a jollier crowd it would be hard to find.

The sale was held in the school grounds, the entrance to the schoolhouse serving well as a stand for the auctioneer. The articles to be sold had been arranged around it, and the number and variety of these proved the generosity of the people around and the success that attended the canvassers.

There were bags of grain, bags of potatoes, baskets of vegetables, baskets of cherries, crates of berries, one calf, two or three pigs, several pair of fowls, one pair of rabbits—even one little white kitten with a red ribbon tied around its neck.

There were also baskets of good fresh butter, loaves of home-made bread, boxes of eggs, one hand-painted picture, one pair of vases, plain and fancy aprons, towels of every description, crocheted boudoir caps, yokes, collar and cuff sets, bags, etc., jars of fruit, bottles of pickles, empty jars, lanterns, etc. One local dealer had donated one ton of coal, another a couple of cords of good hardwood, and still another a couple of dozen of twelve-quart baskets. In fact, articles too numerous to mention, as all sale bills read.

The selling was brisk. The auctioneers were courteous, and in some cases explained who the donors were, as in butter or eggs, etc.

There were many little out-of-the-ordinary things said and done to keep the attention of the crowd and put them in an expectant mood. For instance, one man had given a one-dollar bill—in a few minutes the auctioneer raised two dollars on it.

Another novel feature was a number of young ladies, members of an organized S.S. class, putting their services on sale for one day, the president of the class explaining that they wanted to do something to help; and as many of the farmers and gardeners around needed help so badly they decided they would go in pairs for one day to whoever needed them the most, taking it for granted whoever needed them the most would be willing to give the highest wages.

The brothers, fathers and sweethearts of the young ladies soon made it apparent, that whoever succeeded in securing the services of such good-looking-help should pay well for the same.

It really seemed as if nothing sold as well as the service of the "willing young ladies." The selling was brisker than ever and many men went home happy in the thought of having procured "good labour" for at least one day, and not thinking $15 a day a bit too much. And now everything was sold excepting a few cakes. The ladies had responded so well to the request for baking that they were not all needed for the lunch, but in a few minutes they were disposed of, and at good prices too. After singing "God Save the King." everybody went home happy. The proceeds of the sale amounted to nearly $300.00, which we all considered a splendid return. The only expense was the sale bills. Every one voted the Auction Sale a very successful way of raising money.

The following suggestions in this class were so good that it was decided to extend the prize list and include them:

Lectures After Church.

Our Institute has raised money successfully by holding lectures, and having celebrated people speak in the church after the Sunday evening service. The hour is early, and interested people from all congregations gather in the church appointed, which is already lighted and heated.

Mrs. E. G. Graham, Brampton.

A Veteran Dress Social.

Each lady and gentleman wore the oldest garment he or she possessed, and each article whether, gloves, hat, ribbon or coat or dress bore a badge with a stripe for every year of its age.

The girls vied with each other in ransacking attics, drawers and closets, for antique ornaments, or trimmings, and renovated many cast off articles of apparel. The banner awarded to the highest number of veteran stripes went to the oldest lady, in whose home the gathering was held, and who surprised the company by telling them it was the sixtieth anniversary of her marriage, and she wore the beautiful well-preserved silk dress, that as a Glasgow bride she donned, so long past. Each gentleman paid into the funds as many cents as the number of stripes worn by his partner.

Mrs. M. Bolton, Wiarton.

Unique Methods of Raising Money.

In the above section, the first prize goes to Miss Lena Schrag of Brampton, Ont.

In a town where there is a newspaper, the members might get up the paper for one issue. There is always one literary woman available, and she could confer with the manager, and have him tell her what workers would be necessary.

Then they could appoint from among their number, an advertising manager, an advertising solicitor, a circulation manager, and so on, through the different departments of the paper. The editor would glady hand over the work to the ladies, on seeing that they would get out a big paper, full of advertisements, of which of course, he would get a percentage.

On the day of issue, which would follow about four weeks after the women had advertised their scheme, the ladies would take charge of the office, the manager, assisting in the actual work of getting out the paper.

Placards throughout the town would call attention to what was being done, and I will guarantee that there would be a large and interested crowd thronging the vicinity of the office.

When it came to the matter of getting the paper around, there are always lots of small boys who would undertake the work. They would wear distinctive bands on their caps. "Women's Paper," or something of the kind to draw attention.

The price of the paper could be doubled, and with the publicity given the venture, there should be a nice sum to put in the treasury. The ladies would have had a lot of fun out of it, and would have added the honor of being literary to their reputations—a thing every woman yearns for in her secret heart.

The village institute might run a shop for the supplies that cannot be purchased in the average village store. There is in most cities, a place where remnants may be purchased, all wholesale houses have odds and ends that they will sell at greatly reduced prices.

If a committee were appointed to visit such places and make certain purchases, they could open a room in the village, say on one afternoon a week. Women at a distance from the city would be glad to get a chance to pick up odds and ends of lace, bits of silk, pieces of cotton, that would help in these times of high prices, to piece out the income of the average village woman.

The members of the institute could take it in turn to attend the room, and could set such prices on the goods as would insure a profit for the treasurer.

Opening the salesroom on one afternoon a week would free the institute from any accusation that they were interfering with the local merchants.

An institute right in the open country could make money by inserting an advertisement in a city paper that the members would take children from the city and care for them. There are many women in the city who are engaged in business, who want their little one to have the best care and attention, getting their education, at the same time in the best surroundings.

The same thing would work out with regard to those women who would like to get to the country for a rest and change. I know what the average city woman expects when she goes to the country. But I have in mind another class, the class of women who work hard at their city businesses, and are willing to take their rest in the country by assisting with the work, as it comes to hand, and thus proving the old saying,—"That a change is as good as a rest."

Country women have a good opportunity for community canning, for there are always some surplus products on the farm. The members might make a frolic of gathering the apples, and spending an afternoon making some delicious apple relish, to be sold to a city grocer who finds most ready sale among his customers for something that has the tang of the country and the taste that can be given only by the hands of God's best economists, the women of Ontario.

All these methods of raising money call for ingenuity on the part of the institutes. The women must be willing to get out of a rut, and to do something that has the very evident stamp of "never having been done before."

Then there must be work, for nothing of any worth is accomplished by sitting and listening to someone talking.

The members must attack the different propositions with the idea of getting lots of fun out of the work. Nothing falls so flat as the scheme that is carried through as a duty. It must have the ginger of the sporting good time that flavors everything.

Back of all these schemes, I have tried to set the "other fellow." The world to-day is full of the idea of the "other fellow." When members of institutes get to work to make money, they should try to calculate how much the "other fellow" is going to get out of it. It is poor sport to take money for which you are not giving adequate value.

In every institute, I have found a woman who says, "Come on in, fellows, the water's fine!" And if her laugh rings heartily enough, and if she lets her associates see what a grand time she is having, soon she will be surrounded by a crowd, all having as good a time as she is. And the finale is that the treasurers will be busy counting the money.

The following contributions also receive secondary prizes:

Socks for Lumbermen.

An Institute could buy a knitting

FRANK S. QUICK, Manager.

The Inhalation Treatment for Whooping-Cough, Spasmodic Croup, Colds, Catarrh, Asthma, Bronchitis, Coughs.

Established 1879.

Simple, safe and effective, avoiding internal drugs.

Vaporized Cresolene relieves the paroxysms of Whooping-Cough and Spasmodic Croup at once; it nips the common cold before it has a chance of developing into something worse, and experience shows that a neglected cold is a dangerous cold.

Mrs. Ballington Booth says: "No family, where there are young children, should be without this lamp."

The air carrying the antiseptic vapor, inhaled with every breath, makes breathing easy and relieves the congestion, assuring restful nights.

It is called a boon by Asthma sufferers.

For the bronchial complications of Scarlet Fever and Measles, and as an aid in the treatment of Diphtheria, Cresolene is valuable on account of its powerful germicidal qualities.

It is a protection to those exposed.

Cresolene's best recommendation is its 38 years of successful use.

Sold by Druggists. Send for descriptive booklet.

Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist or from us, 10c in stamps.

THE VAPO-CRESOLENE CO., 62 Cortlandt St., N.Y. or Leeming-Miles Building, Montreal, Canada.

machine and local hand-spun wool, knit stockings (which could be guaranteed to keep the wet out) and sell to lumberjacks for $4 (four dollars) thus allowing a large margin of profits, and both salesman and purchaser would be equally pleased at the bargain.

This we hope to try in our Institute before long.

Mrs. H. Colhoun,
Tappen, B.C.

A Dress Parade.

"Make more money!" That is the slogan of every live organization of the present day. It is easy enough to say: "We must make more money," but then the question of how. Tea meetings and feeds will still draw their crowds in the rural districts. But in these times when the interests of our country are or should be uppermost in every true Canadians' mind, the ban is placed on all unnecessary use of foodstuffs. A concert does not now prove so remunerative as it did but three years ago. The local soprano, in the 'flapper' stage and the untrained elocutionist have not the attractions which they held for us before we could sit in our homes and listen to Caruso, Harry Lauder, Melba and many others. These forms of amusement 'have had their day.' Something new and, as yet untried must take their places.

What awakened interest there would be if, some evening there appeared in the evening paper, an advertisement to this effect:

A Dress Parade.

Will Be Held
In
WEST HALL,
On
Wednesday, Oct., 2nd, 1918.
8 *p.m. Admission* 30 *cents.*

What surmising, what running to the telephone there would be! Ha! I wonder if anything has ever given woman more worry, pride and pleasure than her gowns, since Eve fashioned her first one from fig leaves. Some women are just good advertisements for their husband's earning capacity. The first step in an undertaking of this kind would be to get together a class of fifteen girls or women or both who could meet at some place, preferably the concert hall of the village, ten afternoons, five each week for instruction in sewing.

Canadian Women's Institutes

(Continued from preceding page.)

Then the next step is to apply to Mr. Putnam for an Instructress. Each member is required to bring a table for cutting, a sewing machine, scissors, thread, thimble, needles and pins, and dress material. The instructress will cut a standard pattern for each member of the class. Then with the help of that pattern she cuts whatever dress the member may choose. An industrious worker can make one house dress, one fancy dress, and one tailored skirt, most only make two dresses. The hours of the class are from two till five p.m., although the instructress is generally so good-natured and so much interested in her class that she will often come early and stay late and even give three or four morning lessons extra and free of charge. The fees for this class are $1.50 for those who are not members of the Institute and $1.25 for those who are. Fifteen dollars is sent in to the department, and the balance, minus the price of the paper used in the patterns, is turned in to the Institute.

The Parade or Review should be held on the evening of the last day, while the instructress is still there. A dark, but not black screen should be placed across the back of the stage and a large spot light could be used to advantage. A piano in one corner of the stage, well and softly played and accompanied by a good violinist, would add much to the atmosphere of the performance. A Victrola would work in well too. Each member of the class should display her own handiwork. It would be well to show the house dresses first. The members should wear the dresses and should move across the stage easily and gracefully—if possible. A tea table and a few chairs would make things appear more natural. The girls might appear in groups or singly, moving about the stage for a few minutes. After showing the house dresses, have a five minute address by the President of the Institute or the instructress. Then should come the skirts, and then the climax of the evening, the fancy dresses. The girls should be careful to wear the correct details to go with these dresses. If it is an afternoon dress, hat and bag or parasol, and oxfords with hose to match the gown, would appear best. If it is an evening dress a scarf and fan with fine kid or satin pumps and hose to match the dress, would appear best. Then as a finale, all the girls should appear on the stage and give a new dance or a chorus. A few words of praise by some prominent citizen and God Save Our King and God Save Our Splendid Men, should wind up a very pleasant and instructive evening.

The sewing class will prove a boon to its members for the rest of life.

NOTE.—If the writer of this will send name and address we shall forward prize money.

How the Canadian Home Journal Could Still Further Help Institute Members.

The First Prize is Won by Mrs. H. Calhoun, Tappen, B.C.

1. By encouraging members to send more reports for publication—especially from the Western Provinces.

2. By devoting a corner of the magazine to Current Events. A brief summary each month would help to keep us "up-to-date" and broaden our sympathy, besides being of use in preparing papers on "Current Events."

3. By publishing still more articles of domestic interest, such as:

(a) Music.

(b) Cooking—especially by M. H. Neil who knows so well how to teach economy and eliminate waste in the kitchen.

(c) Fashions—giving hints on *renovating,* rather than enumerating the latest fancies.

(d) Knitting.

(e) Home gardening.

(f) Labor savers, such as those mentioned in the Women's Institute advt. in the Oct. No. "C.H.J."

(g) How to systematise house-work.

And lastly—*War-time Recipes* suitable for *use on the farm.* So many recipes published nowadays give menus containing articles of diet which would be most extravagant, if not impossible to procure, in the average farm home, that articles like "wholesome foods at reasonable cost" are very welcome.

4. Practical suggestions on methods of raising money would be very helpful.

5. By giving more sermonettes on how to be healthy, such as "The Care of the Eyes" which appeared in the Oct. number.

6. By continuing to interest readers in Child Welfare with:

(a) News of Baby Clinics.

(b) By continually emphasizing the importance of suitable diet, regular hours and fresh air for infants and children. It is the custom in a large majority of farm homes to give children (!) over six months of age a little of everything on the table, and to keep them up all hours of the night, while the parents frequent public dances, etc., in poorly ventilated surroundings.

(c) By conducting another baby contest.

(d) By discussing child training and its problems, how to develop character, with suggestions for work and play for everyday, the making of home-made toys, simple entertainments at home, and elementary education at home. All the above subjects are of live interest to Institute members who have the health and happiness of the home at heart and where no help can be had from lectures or public libraries, articles on such matters would fill a long felt want, and give us material for papers and discussions at our meetings.

Lastly. Encourage use of your splendid question department, possibly by publishing some of the questions and answers received. This would arouse interest and often answer questions of country readers who are diffident about writing themselves.

When the Journal Comes.

Mail-day away back here in New Brunswick woods, where daily mail, and free delivery are still unknown. And the Canadian Home Journal has come. Eager hands tear off the wrapper, and the family have a look all together, at the cover design. Mail generally arrives during the critical ten minutes before dinner is served, so the Institute Member is too busy to lay claims to her own property. Dad is searching the semi-weekly for the least ancient war news, and the competition is between Mothers' Girl, Big Boy and the Wee One. Mother's Girl wins out, and scans the Journal pages in frantic haste to see if "A King in Babylon" is finished, and what the short stories are. "I do love the stories," she says "but there are so few of them." Big Boy wants to get at the puzzle, having inherited perhaps, his Mother's love for getting to the bottom of anything that looks like a mystery, but dinner is getting cold. "Aw, nothin' but women's stuff;" he scoffs, but after dinner he enjoys quite evidently, "A Woodland Sketch" and looks the whole thing over carefully to be sure he has not missed "another like that."

Dad here reminds Big Boy of his unfinished chores, with an eye on the Journal as well, I'm afraid, for he wastes no time in getting at it. He reads the editorial, anything relating to the war, and every blessed advertisement from cover to cover. Too much else to read now-a-days to bother with stories, is Dad's verdict.

At bed-time the Wee One has his story about Bushy and his migrating friends, listening with big solemn eyes to the very last word. "Is that all?" "Yes dear, and a good share isn't it for one small boy to have all for himself in a book just so thick through?" "I s'pose so mummy, but I wish they could biggen it, and make room for one more."

The Institute member reads it all—Fairy Stories and Medical Advice. Institute Doings and China's Religion, all so interesting, amusing or instructive, and wondering how it could be made of more service to her, which after all means mostly of more good to the home, can only echo the Wee One's plaint. So please, please, just "biggen it" a little.

MRS. ALEX. OGILVY.
South Tilley, Victoria, N.B.

If each member of the Women's Institute would pay her dollar to get the Canadian Home Journal and read it during her idle moments it would be of more service to the Institute members. They would then understand what our Institute means.

ELVA HEIS,
Sheguiandah, Ontario.

This letter is by way of a suggestion which should prove of use not only to Institute members but to all readers who have young children to look after.

Most of the Women's magazines just now are specializing in advice re the care of babies. Then some of them publish stories, puzzles, etc., which interest children of about eight years of age. These things are excellent too, but there is a period between babyhood and school age when the little tots who haven't the privilege of going to kindergarten are quite a problem for the busy mother.

Don't you think it would be possible to feature a "kindergarten department," in your magazine? If every month you could publish a simple little story, the details of some kindergarten game and directions for making the little paper mats, etc., (also where materials for the same may be obtained) it would prove a boon to many. The winter in the country when the small children must do most of their playing indoors is a very difficult time. My own babies aged two, four and five years are a lively crew and I would like to be able to turn their activities into the right channels.

ELSIE M. CAMPBELL.
Willowmede Farm,
Delhi, R. R. No. 3. Ont.

BRIGHT SENTENCES FROM THE ONTARIO INSTITUTES.

Ontario.

Ancaster Inst., with Mrs. R. Stevenson as President, reports its workers are interested in medical inspection and betterment of schools, as well as Red Cross and work for the prisoners of war.

Miss Laelia Shaw, reports that Antrim Inst., is interested in raising money for Red Cross and Patriotic work by entertainments, tag days and house to house collections.

"Acton Inst. has packed 25 boxes for friendless soldiers in France, in addition to making soldiers' comforts and clothing for refugees," reports the President, Mrs. Geo. Havill.

The Summerstown Inst. is taking an active stand for temperance, and as a body expressing a wish that prohibition in its present form will be maintained.

Mrs. Robert Cronk, President of the Pickering Inst., reports a large amount of Red Cross work done. Interest is well sustained in the monthly meetings and program, and in addition to soldiers' work, the Institute has given support to Oshawa Children's Shelter.

Moira Inst., with Mrs. Herbert Trimble as President has sent a number of Christmas boxes to the soldiers, and its members are still knitting and sewing.

During the latter part of September the Parkhead Inst. had the school medi-

SWEET CAPORAL CIGARETTES

Canadian Women's Institutes

(Continued from preceding page.)

cally inspected. Their President, Mrs. S. Smith, reports also that they have donated $30 to Salvation Army War work and $30 to local Red Cross.

Mrs. W. L. Siebert of the Zurich Inst., reports that they have presented the school with a large flag, believing that the children have not been taught to reverence the flag as they should. This institute chooses for discussion educational topics of vital interest to women.

Fingal Inst. has been active in helping the Byron Sanitarium of London, and expect to send money and clothing to Belgian Relief Association. Twenty-two Christmas boxes were sent overseas by this active Institute, with Mrs. M. Anderson as President.

From the sale of a quilt at the Fall Fair, Silverwater Inst., was able to send eighteen boxes overseas. This institute with Mrs. O. M. Thomson as President, is also interested in the schools.

Smithville, with Mrs. E. V. Armstrong as President, discussed the following subject at the November meeting, "A Square Deal for the Boys and Girls," from a physical, mental, spiritual and social standpoint. Prizes were given to the school children having the best gardens.

Mrs. John Tann, President of Carnarvon Inst., reports that the members are busy with knitting, packing boxes and writing letters to the soldiers.

Sparrow Lake has sent 88 pounds of huckleberries, $60 in cash and 52 chickens to the canning centre at Barrie, in addition to their war work and knitting, and efforts in school improvements. Mrs. William Clipsham is the President of this splendid institute.

Mrs. D. Marshall, President of the Agincourt Inst., reports that they have been supporting two prisoners of war. At a recent meeting the program was provided by the teacher of a rural school, and some of her pupils. Papers were given by the teacher and one pupil, and musical selections by the others.

Belwood Inst., is making a special point of visting the sick, and calling on all soldiers' wives, and all who are not actively engaged in church work. Mrs. James Bellamy, the President, reports that they are already studying the question of reconstruction.

Mrs. Weatherell, President of the Seymour Inst., reports the society in a thriving condition, each member doing her bit, in Red Cross and patriotic work.

Picnic Grove Inst., with Miss Isabel McIntosh as President, has been helping neighboring hospitals by sending vegetables, fruit and old cotton. They served meals at the school fair, and at a ploughing match, and expect to hold a sewing class early in the year.

Mrs. J. M. Real, President of the Greenbank Inst., reports that they are busily engaged in doing knitting and Red Cross work.

Varency Inst., with Mrs. Parkinson as President, has raised $300 since May, and sent 48 boxes overseas, also flowers to the sick and bereaved of the community.

Better methods of house work and better health were the chief topics of discussion at the Narva Inst., with Miss Florence Webb, as President. Though not large, this Institute is an enthusiastic band of workers.

Helping in the erection of a hospital in the town of Picton is the excellent aim of the Women's Institute of East and West Lake. With a membership of 105, they have been able to keep three prisoners of war in Germany, in addition to their work for Red Cross and Belgian Relief. Mrs. William Jackson is the President of this Institute.

Already the Spry Institute led by the President, Mrs. William Walpole. is considering changes, which will be necessary when the boys come home. School matters are also receiving their attention and a prize given to the child writing the best essay on "How I Can Best Help Win the War."

Mrs. C. Macoun, President of the Seymour West Inst., reports that they are conducting a regular study of standard authors, and live topics of the day, especially of schools, and are striving to interest the community in school and institute work.

The town of Norwich is supplied with a ladies' rest room by the Women's Inst., with Mrs. J. P. Stephens as President, who expresses a wish that throughout the coming year all Women's Institutes will have plenty of money to carry on their work.

The Colbeck and Monticelli Inst., has a membership of 40, all actively engaged in Red Cross and Patriotic work. Mrs. W. B. Brown is President.

Miss Mary Turnbull of Glen Morris reports a progressive Institute, busy with community work and plans to improve the village. Medical inspection of the school has already taken place.

Mrs. R. Thompson, President of the St. Augustine Inst., reports that the members of that society have made eight quilts and sent them to the Children's Aid in Goderich. They are also providing a washing machine for this Institution.

Mrs. Clement Haight, President of the Melrose Inst., reports that they are holding interesting meetings and doing Red Cross work.

Bonne Chere Valley Inst., with Mrs. R. B. Leitch as President donates weekly to the Children's Shelter, also gives prizes to young girls for sewing and cooking, in order that they may become interested in Institute work.

"Red Cross Work is occupying all the time of the Minto Inst.," reports the President Mrs. Ernest Sarles.

Fifty boxes and a shipment of socks, for overseas and a barrel of fruit sent to the Byron Sanitarium is the splendid record of the Clinton Inst., with Mrs. E. C. Munro as President.

Mrs. Walford of the Locksley Inst., reports that they are principally doing Red Cross and Patriotic work.

In the Queen Mary Hospital, there is a cot supported by the Pine Orchard Inst., and over in Belgium and France several little children are made happy because of the clothing made and donated by this active institute, with Mrs. Walter Hall as President.

Mrs. Anthony Deans of the Paris Inst., reports that helping each other in good housekeeping is their aim at present. A shower of fruit, vegetables and clothing was sent to the Children's Aid of Brant county.

"Can anyone suggest how to impress upon the minds of women the necessity of becoming members of Institutes?" asks the President of Invermay, Mrs. F. S. Ferguson. This Institute is doing splendid Y.M.C.A. and Red Cross work.

Snelgrove Inst., with Mrs. W. J. Lowe as President, has been specializing on pyjamas and socks for the Red Cross.

The Castleton Inst., with Mrs. Geo. H. Campbell as President, put on an excellent concert, the main feature of which was a play, thereby realizing $289. So good was this considered that the Institute has been requested to repeat the concert at several other places.

Mrs. Wm. Kincaid, President of Roslin Institute, states that this Institute is at present busy with Red Cross knitting and sewing, and providing soldiers' comforts.

Barwick Inst., with Mrs. Wm. J. Westover as President, reports that the members are taking an interest in the children of the school and have held one clinic for throat diseases. They are also providing comforts for the soldiers and trying to interest the girls in the Institute.

Preparation for the home-coming of the soldiers has already been begun by the Shenstone branch with Mrs. M. A. Dolph as President. On Nov. 4, their school was medically inspected.

Mrs. J. D. Healey, President of the Powassan Inst., reports that in addition to their Red Cross work they are assisting the Public Library and Agricultural Society.

The Omagh Inst., with Mrs. Alexander Porter as President, has taken preliminary steps for medical inspection of schools.

With a membership of 41, the Delhi Inst., held a successful school fair, and had medical inspection in their schools. Miss Minnie Kent, President, reports that they are busily engaged in Red Cross work.

Mrs. Thos. W. Meek of the Alton Inst., reports that this Institute is particularly interested in the work of the navy.

Mrs. E. G. Graham, President of the Brampton Inst., reports that medical inspection of schools and relief for "Flu" sufferers have occupied the attention of this Institute recently, but they are "interested in everything under the sun that is good."

Mrs. John Ward, President of the Kemble Inst., reports that with the Bide-a-Wee Girls Club they have raised $1,700 in the past 4 years. The Owen Sound Hospital and the Children's Shelter have been helped in addition to Red Cross and Patriotic work.

Bobcaygeon Inst., is helping to support a Victorian Order nurse, and sending supplies to the Davisville Military Hospital. The President, Mrs. C. H. Thurston also reports interest in civic improvement and patriotic work.

Child Welfare is the principal interest of the Port Dover Institute with Mrs. Maud Bell as President. This Institute placed a first aid outfit in the school, and was able to help the Public Library from the funds received at a masquerade dance.

Mrs. W. Evans reports that the Nantichoke Inst., is starting a campaign for the medical inspection of schools.

The Damascus Inst., is introducing a new and excellent feature—music in their rural schools. "At the same time Red Cross and Patriotic work is not being neglected," reports their President, Mary Hummel.

Soldiers' Comforts have been given first place in the Attercliffe Station Inst., with Mrs. Wm. Troughton as President. Since June they have raised $133 for this purpose.

Claybank Inst., with Mrs. Wm. Young as President, has succeeded in addition to their regular Red Cross work, in conducting a most successful physical culture class. It was organized last year under the auspices of the Institute for the young people of the village. This year the class starts with a larger enrolment and even brighter prospects than before.

Mrs. Edw. Bearey, President of the Walsh Inst., reports that for two years they have been working only for the soldiers' comforts.

The Manilla Inst., with Mrs. J. R. Sonley as President, raised $223.75 from a garden party held in August. Rev. D. McQueen of New York gave a lecture on his work with the soldiers and sailors in Mexico.

On July 5th, the Wabash Inst., with Mrs. Fred Kelley as President succeeded in having school inspection.

Between 500 and 800 dollars a year has been raised for Red Cross and Patriotic work by the Norwood Inst., with Mrs. Robt. Fennell as President.

Niagara-on-the-Lake Inst., with Mrs. Chas. Brown as President, has been chiefly interested in Red Cross work and medical school inspection. During the summer a committee from the Institute was formed to provide hostesses for the Y.W.C.A. Hostess House, and the House proved itself invaluable in caring for friends of the soldiers.

Mrs. S. A. Bowman, President of the Palermo Inst., reports that her society is chiefly interested in sending boxes and socks to the soldiers and money to the Y.M.C.A. and sailors' fund.

Gravenhurst Inst., with Mrs. Abbey as President, succeeded in having a clinic a year ago for throat and eyes, 22 children being operated on. This year they are striving to have a dental clinic.

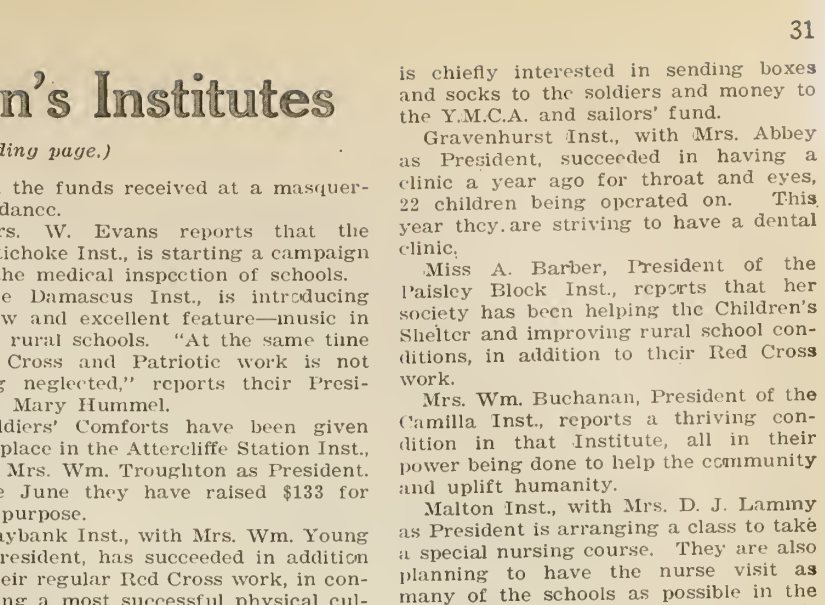
Miss A. Barber, President of the Paisley Block Inst., reports that her society has been helping the Children's Shelter and improving rural school conditions, in addition to their Red Cross work.

Mrs. Wm. Buchanan, President of the Camilla Inst., reports a thriving condition in that Institute, all in their power being done to help the community and uplift humanity.

Malton Inst., with Mrs. D. J. Lammy as President is arranging a class to take a special nursing course. They are also planning to have the nurse visit as many of the schools as possible in the mornings, the class meeting in the afternoon. This Institute is also busy raising money for Red Cross and prisoners of war.

Portland Inst., although newly organized, has already commenced work on village improvement, and a decision has been made to form a class to study home nursing and first aid.

Mrs. Frank E. Pond, President of the Jarvis Inst., reports that all their work is along Red Cross lines.



Mount Pleasant Inst., reports relief work for Belgians and French. The school fair work receives assistance from the Institute and they expect to take up medical inspection with rest of District. Mrs. James Eadie is President.

Very practical indeed is the praiseworthy work of the Chatsworth Inst., with Mrs. Thos. Collins as President. In addition to their war work, they have been helping two unfortunate families.

The canning centre at Stratford has received much assistance from the Sebringville Inst., with Mrs. P. L. Kastner as President. This wide-awake Institute gives a great deal of attention to the monthly programs, roll call often being answered to by a silver collection.

Mrs. Irvine Graves, President of Scarboro Junc. Inst., reports that as

(Continued on following page.)

What Everywoman Knows

Every year, dress fabrics are becoming sheerer and sheerer—the colors more dainty. The ordeal of trusting the delicate garments to "soap and water", however, is done away with by the use of Lux.

You may feel quite free to buy the daintiest blouse or underwear your purse can afford—without a bit of worry about the washing of them. You keep them fresh and new the Lux way—simply dipping them up and down in the creamy, copious Lux suds with never a bit of rubbing to injure them.

Lux won't hurt anything that pure water itself may touch.

LEVER BROTHERS LIMITED, TORONTO. 50

LUX

Canadian Women's Institutes

(Continued from preceding page.)

yet they have not decided on their future line of work. Up to the present it has been been entirely patriotic.

Singhampton Inst., led by the President, Mrs. G. G. Ewing, sends monthly 26 boxes overseas. This month 20 gallons of milk, 10 chickens and 10 dozen eggs were given to Collingwood "Flu" sufferers.

Tuteia Inst., held a vegetable and fruit shower for the Children's Shelter of Brantford. Mrs. A. Hird the President, also reports that they are aiding greater production and helping to care for the orphans as a result of the epidemic.

Mrs. W. J. Markham, President of the Dunchurch Inst., reports that her society is interested in Red Cross Overseas, Y.M.C.A., Sailors' Fund and Belgian Relief. Prizes were given at the fall fair, and needy families helped, by this Institute.

Weybridge Inst., led by the President, Mrs. Agnes Rankin, has been devoting its interests along the line of literature, in addition to Red Cross work.

Mrs. James Moorey, President of the Solina Inst., reports relief and Red Cross work in October $50 being collected for socks.

Kingsmill and Mapleton Inst., with Mrs. M. Dray as President has accomplished wonderful results during the past season. A canning centre for the Red Cross was established in which 4333 quarts of fruit, jelly, vegetables and pickles were canned.

Mrs. Harold Mann, President of the Westover Inst., reports that they are considering medical school inspection and continuing Red Cross and Patriotic work.

"We hope soon to resume our regular Institute work." writes Mrs. Martin McEachern, President of the Cotswold and Teviotdale Inst. "Up to the present time we have been devoting all our time to patriotic work."

Several changes in the village have already been decided upon after a discussion of the question of reconstruction in the Boston Inst., led by President Mrs. Snively.

Miss Jean McKnight, President of the Kirkwall and Valens Inst., reports that their work meetings during the year proved more interesting than formerly, when members contributed to a rather lengthy program.

To win the young women is the special aim of the Aylmer Inst., with Mrs A. S. Rogers as President. This Institute is keeping up its regular work and doubling shipments for field comforts.

Sunniedale Corners Inst., with Mrs. Peter Giffen as President, has been busy making quilts for the Barrie Children's Shelter. Coal was also donated for this Institution. The Barrie Canning Kitchen received 36 chickens from this Institute.

Sixty boxes of Christmas cheer went overseas from the Tiverton Institute, with Mrs. J. M. Bowie as President.

Mrs. W. H. Tuke, President of the Dundas Inst., reports as follows:—"We have run a Diet Kitchen to aid in fighting the epidemic. We supplied the hospital with all the cooked food used there by both nurses and patients, and 200 baskets containing broth, gruel, custards, jellies and fruit to private homes."

Red Cross and Patriotic work is being continued by the Orrville Inst., led by the President, Mrs. J. Nelson.

Eggs in answer to roll call was the practical experiment tried by the Woodhouse Inst., led by the President, Mrs. Ward. As a result, four crates were shipped away, one to Burlington Military Hospital, one to the Sick Children's Hospital, Toronto, and two to the Emergency Hospital, Simcoe. Medical Inspection of schools is being considered by this Institute.

Mrs. Fred Stafford, President of the Dornoch Inst., reports that they are doing principally patriotic work.

Dr. McKenzie Smith is inspecting the schools as a result of the interest and work of the Conmee Inst., led by the President, Mrs. Arnold.

Seventy dollars was raised at a Fall supper held by the Tehkummah and Sanfield Inst. The President, Mrs. James McCutcheon reports that this will be used for buying yarn and packing overseas boxes.

"We have been taking care of our cemetery,—cleaning and mending the broken tombstones," reports Miss Clara Anderson, President of the Rednersville Inst. "In addition to this, Red Cross and patriotic work has received much of our attention. One member has knit 240 pair of socks."

"The Wingham Inst.," reports the President, Priscilla Powell, "expects to meet the needs after the war as it has during the war. We are women of action."

Mrs. J. Shaffer, President of the Barnhart Inst., writes that they send 12 boxes overseas every month, beside helping to improve the school and repair the hall.

Emo Inst., is much interested in the welfare of the school and library. Last year, Dr. McKenzie Smith inspected the schools, and after an examination again this year, she reports a decided improvement in the children operated on last year. Mrs. John Durand is the President of this Institute.

The Milverton Inst., with Mrs. R. J. Tanner as President, is now discussing plans for work when Patriotic and Red Cross needs have been met.

Mrs. John Lothian, President of the Monteith Inst., writes that they are raising funds for building a town hall, which they expect to have for use by Christmas.

Victoria Harbor Inst., led by Mrs. T. Lumsden, the President, never scored a bigger success than in helping the school fair this fall. It was a community affair and every one far and near helped. The Barrie Canning centre was not forgotten by this Institute.

"Patriotic work is the chief interest of the Raymond Institute," writes the President, Mrs. D. Quinton.

Relieving the suffering of the little children as a result of the recent epidemic in Brantford, and the children of the shelter is the present work of the Alford Park and Governors Road Inst., with Mrs. Turnbull as President. Fifty dollars in money, clothes and bedding were given to meet this great need.

Berwick Inst., with Mrs. W. J. Stark as President is still continuing war work.

Mrs. H. McLaren, President of the Port Elgin Inst., reports as follows:—"The Red Cross Society under the auspices of the Women's Inst., in a contest of a month's duration knitted 737 pair of socks, the highest record for one individual was 20 pair."

A cot is being kept in the Queen Mary Hospital by the Aurora Women's Inst., with Mrs. Ongle as President.

Haliburton Inst., is interested in greater production and conservation of food, led by the President, Mrs. G. Potts, Sr. They have held demonstrations on war bread, biscuits and cakes.

Queensville Inst., led by the President, Mrs. W. G. Hill, is thoroughly alive and has taken a very advanced step in the way of community improvement. They are interested in a skating rink and socials for the young people, and are striving to get the town lighted with electricity and a Hall built.

The Millbrook Inst., with Miss E. F. Gillett as President, has been supporting a Belgian orphan for one year and sending boxes of clothing and quilts for Belgian Relief.

Mrs. A. J. Barrie, President of the Port Arthur Inst., reports that they are striving to have the government provide a place for the feeble minded and insane persons in the district, other than the county jail. They are also helping the Children's Shelter at Port Arthur.

At their November meeting the Ravenscliffe Inst., met at the home of the President, Mrs. James Richards, and put together a Patriotic quilt.

East Northumberland Inst., has conducted successively a concert and auction sale of donated goods, the money going to Belgian Relief. The President Miss M. Rogers reports splendid Red Cross and Patriotic work done during the year.

During the war Newtonville Inst., led by the President Mrs. R. Johnston, has donated $1329.20 for patriotic work.

A bazaar enabled the members of the Windermere Inst., with Mrs. F. Forge as President, to send 18 big Christmas boxes overseas.

Medical school inspection, the care of the cemetery and public library are the chief interest of the Rodney Inst. The President, Mrs. A. Bisnett, is striving to form a horticultural society.

Miss M. Elliott, President of the Woodbridge Inst., reports that they are assisting the Children's Shelter, Toronto.

St. Mary's Inst., had an interesting evening meeting recently when Dr. J. Mackay of Woodstock, gave an address on "Flowers from the Trenches."

The Dundalk Women's Inst., sent 75 boxes overseas, each valued at $5. This Institute held an interesting basket picnic last summer at the home of one of its country members. The ladies were taken to the picnic in autos and six new members joined the Institute that day.

Mrs. Geo. N. Olive, President of the Carp Inst., reports that her society keeps a vigilant eye on the rural schools in regard to light, ventilation and sanitary conditions. They are also interested in woman suffrage.

Mrs. T. Mann, President of the Sheffield Inst., reports that they are at present conducting a house to house canvas for the Red Cross. Their December meeting will be conducted by the young girls.

Thistletown Inst., led by the President Mrs. F. Cooke, is busy making a quilt for the Children's Shelter, and donating fruit, vegetables and clothing for this Institution.

A fruit shower was held recently in aid of the Hospital for Invalid soldiers by the Mt. Forest Inst., with Mrs. J. J. Cooke as President. In addition to Red Cross and Patriotic work, this Institute finds time to care for a small park in the town.

Child welfare work is the chief interest of the Charlton Inst., of which Mrs. Ennis is President.

Red Cross and Patriotic work are being continued in the Sandford Inst., whose President is Mrs. Wm. Killen; Cornwall Centre, led by the President, Mrs. L. A. Groves, Glen Brook Inst., of which Mrs. Wm. Kennedy is President, Bluevale Inst., President Mrs. Jos. Breckenridge; and Bala Inst., whose President is Mrs. J. W. Wilson.

Winona, led by the President, Mrs. E. E. Martin, Howland Inst., with Mrs. G. Collins, President; and Magnetewan Inst., with Mrs. J. S. Freeborn as President are doing principally Red Cross and Patriotic work.

PRINCE EDWARD ISLAND.

Seaview Inst., was organized in September 1917 with 15 members. Since that time, they have been interested in Red Cross and patriotic work, improvements were put in the school, and excellent work done. The President is Mrs. C. Donald.

Mrs. Wm. Robertson, President of Kingsborough Inst., reports that this society is steadily gaining favor, and the membership is larger than ever. They are concentrating at present on war work.

QUEBEC.

Mrs. John L. Robinson, President of the Ascot Homemakers Club, reports that they are co-operating with the Local Farmers Club, in whatever elevates and uplifts the community. They aid the needy in the community, and serve hot cocoa at the consolidated school No. 1, to the children to drink with lunches at noon hour. Mrs. Robinson expresses the hope that each club in this country will feel the responsibility of having one new club formed before the close of this club year.

Argenteuil Homemakers Club, with Mrs. David Todd as President, is interested in the children's school fair, and in all subjects that will help the farm work.

Clarendon Club with Mrs. Wilson as President, has raised money to buy organs for two schools, in addition to their Red Cross work.

The Dundee Club, with Miss Mary McGibbon as President is doing principally Red Cross work.

MANITOBA.

"Not to have one dull, uninteresting meeting in the coming year," is the ambition of the Fort River Society. Led by the President, Mrs. A. Rowe, they are studying community, housekeeping and school problems.

In addition to Red Cross work, the Roland Society, with Mrs. F. Reid, as President, has conducted demonstrations of millinery, cooking, canning and dressmaking.

Keen interest has been taken in the courses given by the Extension department in canning, dressmaking and millinery by the Eden Home Economic Society, with Mrs. T. F. Heeney as President. School gardens were encouraged and prizes for the best plots and samples of products raised.

Mrs. Paul Wood, President of the Sifton Society, reports that they are busy with patriotic work.

Mrs. John Hunter, President of the Moline Society reports that they have been busy raising money for Red Cross and Patriotic work. In September the members held a canning exhibit. Prizes were given for the best collection, and the event proved a decided success.

Town and home improvement is the aim of the Killarney Society, with Mrs. Howard Cross as President. They are erecting a rest room, which will prove of great value to the community.

A demonstration on home cheese-making was given at the Edwin Home Economic Society. Mrs. L. W. Crewson, the President reports they are very much interested in boys and girls club work.

SASKATCHEWAN.

The Mair Homemakers Club, led by Mrs. E. D. Hoff, the President, is particularly interested in social welfare, better babies, health contests and children's school fairs. Instead of sending Christmas boxes to the soldiers, $2.00 was sent to each.

"Red Cross work and assisting the returned soldiers are occupying the attention of the members of the Park Homemakers' Clubs," writes Mrs. A. G. Hawkes, the President.

BRITISH COLUMBIA.

The Silver Creek Inst., led by the President, Mrs. B. L. Brown, at the November meeting discussed the subject "Canadian Women of Note." Pretty and useful hand-made articles were on display as suggestion for Xmas gifts. This Institute in addition to Red Cross and Patriotic work is furnishing a community hall and improving the school grounds.

Red Cross and Navy League work, looking after local charities, and doing all in their power for the betterment of homes in the community is the praiseworthy object of the Strawberry Hill Inst., led by the President, Mrs. A. Jack.

Mrs. C. D. Ogilvie, President of the Harrop Inst., reports that they are interested in Red Cross work and better laws for women and children in the Province of British Columbia.

West Saanich Inst., with Mrs. J. Osborne as President has raised and disbursed during the year $1345.27, and is working energetically toward greater production and canning.

The Tillicum Inst., led by Mrs. Livingstone, President held a Home Exhibit at Victoria Fair, showing women's work, Red Cross work and pants and shirts "made from Daddy's," also a spinning wheel made in Victoria. This Institute has a Preventative Disease committee, Teachers and Parents committee, and hopes to form a canning committee.

Ought To Be Genuine.

Sam, the choreman, returned from the city with a scarfpin that contained a "diamond" of an unusual size. It was the pride of his heart and the envy of his village companions. He treated all inquiries from them as to its value and its authenticity with high scorn.

His employer, after a week of basking in its radiance, asked Sam about its history.

"Sam," he said, "is it a real diamond?"

"Well," said Sam, "if it ain't, I've been skun out of a half-dollar."—*Pittsburg Chronicle-Telegraph.*

The Poetry of Advertising.

An advertising man who has returned recently from the Orient says the Japanese merchants and manufacturers who have occasion to make use of printer's ink are not disposed to limit themselves to dull, prosaic statements concerning the excellence of their wares. Among the entertaining bits that the traveller noticed in his study of Japanese advertising are these:

"Goods dispatched expeditiously as a cannon-ball."

"Parcels done up with such loving care as a wife bestows upon her husband."

"The print of our books is clear as crystal; the matter charming as a singing girl."

"Customers are treated as politely as by rival steamship companies."

"Our silks and satins are as smooth as a lady's cheeks and colored like a rainbow."

It ought to be possible to get advertisements read in Japan without scattering them around next to "pure reading matter."—*Dayton News.*

Serious Predicament.

Eager Lady—"But what if your engine stops in the air—what happens? Can't you get down?"

Aviator—"That's just what 'appens, mum. There's two Germans up over in France now with their engines stopped. They can't get down, so they're starving to death."

Who Goes There

(Continued from page 14.)

Gratz mentioned it as the Bauer-Schroeder car."

"To whom were these plans to go, ultimately?"

"I sent them to New York."

"To whom?"

"To Schimmel and Company, Broadway."

"Have you any idea where Schimmel and Company sent those plans?"

"Yes. I never thought much about it then, but to-day I realized that sooner or later the plans were sent to General von Reiter—in Berlin."

"You are sure?"

"Yes. I saw them when I was there last April. He said that those were the plans which I had sent to Schimmel and Company."

"You *saw* the plans?"

"Yes."

"Were they plans of an automobile?"

"I thought so then. They were on very thin paper. I supposed them to be drawings of detached machinery in sections. They looked to me like fragments of something."

"And now—in the light of what happened to-day—what do you believe those drawings represented?"

"I have no idea—really I haven't. Only—" She hesitated, troubled, twisting her fingers on her knees.

"Only—" he prompted her.

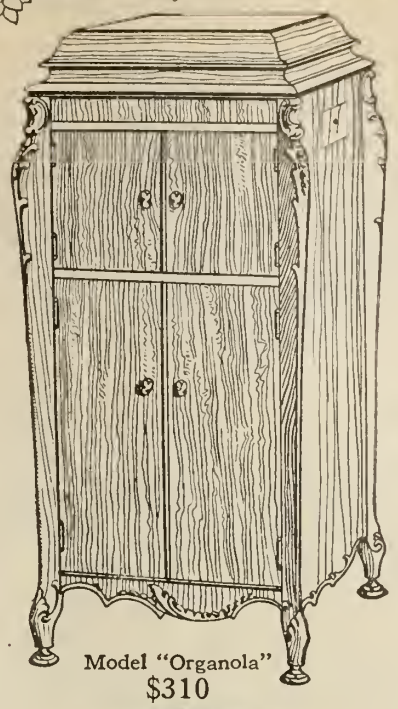
She said, with a tremulous intake of breath: "I think I had better tell you, Kervyn. This is what frightened me—what the experience of to-day seemed to suddenly make plain to me—I mean your coming to Westheath, Mr. Gratz telephoning about obeying you, and informing me of the arrest of my maid—these things, and the war, and what I have read about German spies in England—all this flashed up in my mind at the same time when you turned from the telephone and asked me such terrible questions.

"It made clear to me, or seemed to, something else that I had not understood at the time—" She hesitated, her gaze concentrated as though in an effort to recollect and visualize some scene—

"It was last April, in Berlin. . . . General Baron von Reiter said something to me as I was waiting for his car to take me to the station—I was departing for England again—and he said—he said——"

"Yes, Karen?"

"He said something about war—the possibility of it. And he said that in case war ever came while I was in England, and if, when it came, I had in my possession any automobile plans from the Edmeston Agency—from Mr. Gratz—that I was to bring them with me to Germany—not to show them to anybody, not to send them by mail, but to bring them back and deliver them to him."



"Yes, Karen."

"I promised. . . . He made me promise again. He was very serious. He said that on my obedience in this matter might depend the lives of many people. I had no idea what he meant by that—until to-day. . . . And what I fear has happened is that Anna, who went yesterday to London because Mr. Gratz telephoned, was arrested while in possession of papers delivered to her by Mr. Gratz. . . . And that these papers were *not* what I had always supposed. And that is why I was suddenly afraid—afraid—Oh, Kervyn!—I cannot describe the fear that leaped up and seized me when you asked me those dreadful questions! Suddenly everything, every detail in the entire matter seemed to grow clear and terrible to me. . . . I—I went into my dressing-room—and steadied myself against the wall—feeling faint for a moment.

"Then I took from my dressing-table the papers which I had from Anna's last visit to Mr. Gratz. They had remained there in the drawer because I had been told not to mail them, and no word had come for me to go back to Berlin. So I had them on my hands. But until you came I gave them no thought—merely conscious that I had promised to take them back with me.

"But—in that terrible moment when I stood there leaning against the wall, I remembered what was said to me about the lives of many people depending upon my keeping my promise. It was a hideous thing to remember at such a time. . . . But I could not break my word—for the sake of these imperilled people also—could I, Kervyn? . . . So I took the papers and locked them in my satchel. And afterward I—I *asked* you to leave—" Her voice quivered;

Model "Organola"
$310

Hear Them

There's a new list of selections each month. They are played with a sapphire point. No needles to change. Beautiful, clear, "Phonola" records that are practically indestructible.

The Only One With Organ Pipes

In all the wide world, there is only one make of phonograph that has taken advantage of the principle of the pipe organ and installed inside of its case a set of tone control pipes which include every note in the scale. That phonograph is the

"Phonola" REGISTERED

And the tone control pipes are used in our magnificent "Organola" model—the utmost that has so far been achieved in phonograph construction.

Records played on this "Organola" Model are given a really wonderful reproduction. Play a "sextette" record on the "Organola" Model, and you will have a real idea of the value of the tone control pipes. There is none of that confused blurring as when played on ordinary makes of phonograph, the tone control pipes of the "Organola" Model separating the different voices and notes, giving a pure, clear, lifelike rendition.

Try a record of a violin, a piano, a soprano, or anything else you know the ordinary phonograph does not quite reproduce faithfully, and you will find that the "Organola" Model renders the selection perfectly and with a surprising volume.

If you are going to invest upwards of $250 in a phonograph, you will, of course, want to procure the finest that is built. So, if you cannot see and hear the "Organola" Mode of the "Phonola" at a dealer's in your locality, write direct to us.

Other "Phonolas" from $25 up. All makes of disc records can be played.

DEALERS: The "Phonola" line comprises 10 models—a "Phonola" for every requirement. The "Phonola" agency is the most valuable asset you can add to your business today. Write for particulars.

Who Goes There

(Continued from preceding page.)

she bent her head and sat twisting her slim fingers on her lap.

"That's all I know," she faltered—"all I know about it. I have tried to be true to my word, and loyal to—you."

Her emotion was reflected in his own face; he bent forward, laid his hand over her restless fingers.

"Karen," he said, "you are the pluckiest, straightest, whitest woman I ever knew."

"I'm only—honest," she whispered. . . . "And I want you to think me so."

"I do!—Karen, dearest, sincerest, most fearless of women!"

"Do you believe me—that?"

"Karen, I——"

A sharp knocking at the door cut him short. They looked at each other, startled. At the same moment he realized that the ship had stopped.

"Could it be the stewardess?" she whispered.

"I don't know."

He rose, picked up the satchel and went to the open port.

"If a British guard-ship has stopped us to search us, we can't have this thing found," he said.

She stared at him in frightened silence.

"They may have found those men we tied up and left in your house at Westheath!" he whispered. "A wireless would set a score of warships ready to intercept us. If they board us they must not find that satchel."

The sharp, loud rapping came again.

Guild went to the open port, pushed the satchel through it, leaned out himself. As he did so something brushed his head, and, looking up, he saw a rope's end dangling there.

In an instant he had tied it to the handle of the satchel, stepped back, screwed the heavy glass fast, and then, motioning Karen to fling herself on the bed, he went to the door, opened it, and stood yawning in the face of a ship's officer.

"Don't wake my wife," he said drowsily. "What is the trouble?"

"The trouble is," replied the officer coldly, "that a British cruiser has signalled us to stop, and has asked whether an American named Guild is aboard."

CHAPTER IX.

"WELL," said Guild coolly, "have you any idea what a casual British cruiser might want of *me*?"

"I have not," said the officer, "so perhaps you had better tell *me* what is wanted of yourself and your wife by the captain of that warship. It might save some argument between him and our own captain. We are due in Amsterdam at noon to-morrow," he added meaningly.

"Do you mean to say that the officer in command of this British ship desires to speak to my wife?"

"His signals stopped us and his wireless told us to detain you and your wife."

"What ship is it?" demanded the young man, so nervous now that he scarcely knew what he was saying.

The Dutch officer remained icy and precise: "The ship is the light cruiser *Wyvern*, of the 'Monster' class. Her consorts yonder are the *Hippogriff* and *Basalisk*—if this information enlightens you, Mr. Guild."

"It does not. But I know this much: You can't detain an American! Neither can that British captain take a neutral from a neutral ship! And that settles the matter."

"Be good enough to come on deck," said the Hollander in his correct and fluent English. "The captain desires to speak with you."

"Very well. I'll follow you in a moment"—and turning to Karen: "Dearest, are you awake?"

"Yes, dear."

"The captain wishes to see me. I'll be back directly." He stepped out into the corridor, hesitated, excused himself to the officer, and returned to Karen, closing the door and locking it.

She was sitting up on the bed, very still and white, and when he came over to her she instinctively laid both chilled hands in his. He held them in a firm and reassuring clasp; but he was terribly disconcerted.

"Listen, dear. I think a British officer is coming aboard for us. I don't know whether he has any right to take us off this ship, but I'm afraid that the law in the matter won't worry him.

"Now listen to me, dear. If I come back and knock and [illegible] to you by name, open. If somebody knocks, and there is no voice—or if it is not my voice, go to that port, open it, untie your satchel, which is hanging outside at a rope's end, take out the papers, and drop them into the sea. And not until you have done this shall you open the door to anybody."

"Yes, Kervyn."

"Then," he said, "if we've got to go back to England on a warship, we'll go clean-handed."

"Yes."

"And you had better take these passports, too." He drew them from his breast pocket. "They're forged. Throw them out with the other papers."

"Yes, I will."

"Then—I'm going. . . . Don't worry—dear. Don't tremble so, Karen—dear Karen——"

"I'll try not to. I'll not be cowardly. It—it has been a long—day. . . . I'm thinking of Anna, too. You know, if she had any papers, she was bringing them to me. That will be against me."

"I forgot that," he said, appalled. Then he squared his shoulders and forced a smile: "Anyway, whatever faces you faces us *both!* . . . Dear—keep every atom of courage you have. I shall stand by you, always. But I must go now. Do you promise me to keep up courage?"

"Yes—dear——"

They were excited, their every nerve now stretched to the breaking, yet both were striving for self-control in the instant menace of this new peril confronting them. Neither knew just what they said or did; he bent over her; she lifted her face to his, closing her eyes as his lips touched her forehead. Then he went away swiftly, and she sprang to the floor and locked the stateroom door. The next moment the awful flare of a searchlight turned the room to a pit of silvery fire, and she cringed against the bed under the fierce white glory, covering her bloodless face with both hands.

On deck, the Dutch captain, who was awaiting Guild at the companionway, came forward hastily and drew him aside.

"They've boarded us already," he said; "there comes their lieutenant over the side. Tell me, Mr. Guild, are your papers in order and your conscience clear? Can I make a fight over this affair?"

"I have no papers, but my conscience is in order. Don't let them take us if you can help it."

"You have no papers?"

"None that can help me or my wife."

"Then it's no use fighting."

"Fight all the same!" whispered Guild, as they both turned to meet the young naval officer who had just stepped aboard. He and the Dutch captain exchanged civilities stiffly, then Guild stepped forward into the lantern light.

"Kervyn Guild!" exclaimed the slim young officer in surprise. "Is it *you!*"

"Jamison!" ejaculated Guild, astonished. "Well, this *is* lucky! I'm tremendously glad! I am indeed!"

They exchanged a warm, impulsive hand-clasp, smiled at each other—then the quick smile on the youthful lieutenant's features altered, and his face fell.

"Guild," he said soberly, "I am afraid I shall have to inconvenience you and—your wife. I'm afraid I shall have to ask you to come aboard the *Wyvern* with me. I'm sorry; I know it must inconvenience you fearfully——"

"Jamison! We *can't* go aboard your ship! What on earth are you thinking of?"

"Orders," returned the young fellow gravely. "I've no discretion, you see."

As by common consent, they had stepped aside from the group of ships' officers, and, standing in the shadow of a lifeboat, they now gazed at each other very seriously.

Guild said: "There must be some mistake about this. I have no wife on board this boat."

"Did you not board this boat in company with your wife?" asked Jamison in a low voice.

"No."

"Our information is otherwise."

"Jamison, you know whether I am likely to lie to you. And I say to you on my word of honor that I did not come aboard this boat with my wife."

"Is she not on board?"

"She is not."

Jamison said regretfully: "No good, old fellow. We know she is not your wife. But we want her. I think you had better prepare her to come with us."

"Jamison, will you listen to me and believe me?"

"Yes, of course."

"Then, on my word of honor, the woman you have come to take from this ship is absolutely innocent of any—intentional—crime."

"I take your word for it, Guild."

"You can guess *my* sentiments in regard to this war, can't you?" insisted Guild.

"I think I can."

"Then listen, Jamison. I pledge you my word that through this young girl, and through me, nothing shall ever happen that could in any manner be detrimental to your country or its allies. Don't press this matter, for God's sake!"

"Guild," he said quietly, "I believe you absolutely. But—both you and this young lady must come aboard the *Wyvern* with me. Those are my orders, old fellow. I can't go back on them; I have no discretion in this matter. You know that, don't you?"

"Yes."

After a silence, Guild linked his arm in the gold-laced arm of his old-time friend and walked back to where the captain stood fidgeting.

"I won't go, Jamison," he said, loudly but pleasantly. "I am not obliged to go aboard your ship. Captain Vandervelde, I claim the protection of your flag for myself and for my wife."

"Captain Vandervelde knows that it means only trouble for him," said Jamison, forcing a smile. "He is not likely to defy the *Wyvern*, I think."

They all turned in the sudden glitter of the *Wyvern's* searchlight and gazed across the darkness where the unseen cruiser was playing on them from stem to stern.

"Will you come with me, Guild?" asked Jamison quietly.

"No, Jamison, I'm hanged if I do . . . And that's too close to the truth to be very funny," he added, laughingly.

"The *Wyvern* will merely send a guard for you. It's no good bluffing, Guild. You know it yourself."

"International law is no bluff!"

"International law is merely in process of evolution just now. It's in the making. And we are making it."

"That remark is very British."

"Yes, I'm afraid it is. I'm sorry."

"Well, I won't go aboard the *Wyvern*, I tell you. I've *got* to stay on this ship! I—" he leaned over and said under his breath—"it may mean death to me, Jamison, to go aboard your ship. Not because of anything I have to fear from *your* people. On the contrary. But they'll shoot me in Germany. Can't you tell your captain I'm trustworthy?"

"What is the use, Guild?" said the young man gently. "I have my orders."

Only a miracle could save Karen. He knew that as he stood there, silent, with death in his heart.

And the miracle happened. For, as he stood staring at the heavenward beam of the unseen cruiser's searchlight, all at once the ship herself became grotesquely visible, tilted up oddly out of the sea in the centre of a dull reddish glow. The next instant a deadened boom sounded across the night as though from infinite depths; a shaft of fire two hundred feet high streamed skyward.

"That ship has been torpedoed! Oh my God!" said a voice.

"The *Wyvern* has hit a mine!" roared the Dutch captain. "I'm going to get out of this *now*."

Jamison's youthful face was marble; he swayed slightly where he stood. The next instant he was over the side like a cat, and Guild heard him hailing his boat in an agonized voice which broke with a dry, boyish sob.

From everywhere out of the blackness searchlights stretched out tremulous phantom arms towards the *Wyvern*, and their slender white beams crossed and recrossed each other, focusing on the stricken warship, which was already down by the stern, her after deck awash, and that infernal red glow surrounding her like the glow of hell around a soul in torment.

Passengers, seamen, stewards crowded and crushed him to the rail, shouting, struggling, crying out in terror and pity.

Guild caught an officer by his gold sleeve. "We ought to stand by her," he said mechanically. "Her magazine is afire!"

"There are boats a-plenty to look after her," returned the officer; "the British destroyers are all around her."

Soldiers Home THE SALVATION ARMY Coming Campaign

The WAR WORK and the AFTER-WAR WORK of the

SALVATION ARMY

"FIRST TO SERVE — LAST TO APPEAL"

If one institution in the Empire was prepared for war, it was the Salvation Army. For 53 years, it has been practising the relief of distress wherever and whenever the need arose.

And when the War came, intensifying human suffering and the need for bodily and spiritual help in a thousand ways, the Salvation Army was *Ready*.

The entire Salvation Army has always been organized on a military basis—inured to hardship, sacrifice and service. It is always in action, day and night.

And so the twelfth day of the War found the Salvation Army at work behind the lines in Belgium. Since then, it has maintained 197 Huts, 96 Hostels and 40 Rest Rooms, 1,200 uniformed workers and 46 ambulances at the front—in addition to taking care of the problems which arose here in Canada, as a result of the departure of our soldiers.

Hostilities have ceased, leaving vast and complex problems—human problems—that call expressly for the sympathetic and ardent workers trained by and organized into the Salvation Army.

The Salvation Army Million Dollar Fund

JANUARY 19th to 25th

The war work of the Salvation Army has been conducted without any general appeal to the public for funds. While it could "carry on" without appealing, it did so. Now a crisis has arisen. The budget has been prepared for essential work during the coming year, and it has been found that a million dollars must be raised to continue the after-the-war activities, including:

Hostels for Soldiers

For our troops "consolidating" the Victory in Europe; for soldiers in France or England awaiting transportation; and for returned men landing in Canada, the Salvation Army Hostels provide good food, clean beds, wholesome entertainment at a price the soldier can afford to pay. The service of the Salvation Army, founded on sacrifice, demonstrates the true spirit of the Master and is directed to the extension of the Kingdom of Christ.

Care of the Wives, Widows, Dependents and Orphans of Soldiers

The Salvation Army operates Emergency Receiving and Maternity Homes for the care of those whom the soldier leaves behind him. The widows and orphans alone present a vast and complex problem that needs the human touch of the Salvation Army.

Visitation of War Families

The misery endured by helpless families of our soldiers by reason of debt, sickness, and misfortune is alleviated by the relief work of the Salvation Army workers, who realize that immediate action is necessary to provide for the *present* need and to prepare for *future* need.

Demobilization

Through its Hostels maintained throughout Canada, the Salvation Army is already assisting vitally in the repatriation of our soldiers, especially those who have returned with no homes to go to, and those who are looking for a new start in civil life. The discharged soldier must not be turned adrift, and the Salvation Army has already proven indispensable in dealing with phases of the situation not provided for by the Government or any other organization.

Your earnest co-operation is needed. For two generations the Salvation Army has stood out and out for God. It approaches practical problems in a practical way and achieves *Results*

"LET YOUR GRATITUDE FIND EXPRESSION IN SERVICE."

THE SALVATION ARMY MILLION DOLLAR FUND COMMITTEE

Headquarters, 20 Albert Street, Toronto

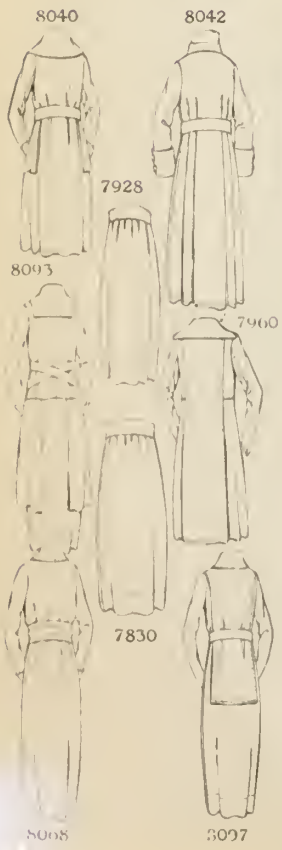
Simple Lines and Little Trimming Mark the Latest Styles

Coat 8042

Jacket 8040
Skirt 7928

Dress 8093

8040—Ladies' Jacket. Six sizes, 34 to 44 bust. Size 36 requires 3 yards 54-inch serge—4¼ yards 36-inch satin for lining. No. 7928—Ladies' Two-piece Gathered Skirt. Seven sizes, 22 to 34 waist. Size 26 requires 1¾ yard 54-inch serge. Width at lower edge about 1⅜ yard. The combination of this jacket and skirt makes a very good-looking tailored suit which may be fashioned of serge, gabardine, or tricotine. The severely simple lines are unbroken by any suggestion of trimming, and the note of severity is further emphasized by the high choker collar of self-material which crosses in surplice style. The jacket shows the new modish length, and the short peplum sections at the sides may be omitted. The skirt is a two-piece gathered model with two-inch raised waist-line closing at left side seam.



8042—Ladies' Coat. Six sizes, 34 to 44 bust. Size 36 requires 3½ yards 54-inch plush—⅜ yard fur fabric for collar—4⅜ yards 36-inch satin for lining. Length at center-back 47½ inches. The straight simple lines of this coat which may be fashioned of Bolivia cloth, plush, Silvertone, or velvet, are typical of the newest models of the season, and a very convenient feature is the convertible collar which may be worn high to the throat, or rolled with the fronts forming revers. The fulness at the waist-line is held in by a straight belt which fastens with two buttons in front. There are button-trimmed patch pockets applied each side of the center-front, and deep turn-back cuffs, also trimmed with buttons, finish the plain one-piece sleeves.

7960—Ladies' Jacket. Seven sizes, 34 to 46 bust. Size 36 requires 3¼ yards 54-inch check material—4⅛ yards 36-inch satin for lining. Length at center-back 43 inches. No. 7830—Ladies' Skirt. Seven sizes, 24 to 36 waist. Size 26 requires 2½ yards 54-inch check material. Width at lower edge about 1½ yard. This practical suit displays one of the new long jackets so much in vogue. The neck finish illustrated is a square collar, but a shawl collar is provided in the pattern should this be preferred. There are separate underarm sections with applied pieces having belt extensions. The sleeves are in plain two-piece style with deep turn-back cuffs open at the back, and the fronts of the jacket are slashed each side of the center for inserted pockets. The skirt is a plain two-piece gathered model.

Jacket 7960
Skirt 7830

Dress 8068

Dress 8097

8093—Ladies' Long-waisted Dress. Six sizes, 34 to 44 bust. Size 36 requires 3½ yards 54-inch gabardine—2½ yards braid to trim. Width at lower edge about 1⅜ yard. Paris approves of all sorts of braid, and wide black silk braid forms a very effective and distinctive trimming for this smart frock of gabardine which closes on the left shoulder and underarm. The neck-line may be V-shaped or square finished with a large square collar. The side panels are perforated for shorter length or they may be omitted altogether. The two-piece skirt is attached to the lower edge of the waist, and the long one-piece sleeves may be made with or without the pointed turn-back cuffs.

8068—Ladies' Dress. Eight sizes, 34 to 48 bust. Size 36 requires 2⅝ yards 54-inch velours—⅜ yard white satin for vest—6½ yards braid. Width at lower edge about 1½ yard. Simplicity is a prominent feature of the newest models, and it is attractively exploited in this smart street dress suitable for velours, serge, gabardine, or tricotine. There is an inset vest of white satin cut square at the top, and braid is used as a finish on the revers which are extensions of the collar, on the turn-back cuffs, as a hem finish on the skirt, and also on the belt. The modish long revers which extend below the belt are perforated to be cut off to form a small pointed collar. The skirt is a two-piece gathered model with one-inch raised waist-line closing at the left side seam. Without the long revers using the small collar as a neck finish this frock is just the thing for a simple house-dress, and for this development the short sleeves with turn-back cuffs are ideal, as they permit the housewife perfect freedom of movement. For house wear it may be fashioned of ginghain, chambray, or percale.

8097—Ladies' Long-waisted Dress. Nine sizes, 34 to 50 bust. Size 36 requires 3½ yards 54-inch Poiret twill—3¼ yards braid. Width at lower edge about 1⅝ yard. Nothing could be smarter for the indispensable tailored dress than this charming model of Poiret twill. The very simple in line, it has decided style, and displays the fashionable apron panel front and back. These panels may be full-length if desired, or perforated for the shorter length illustrated, or they may be slashed in front below the waist-line forming two panels. Like most of the new season's models, this frock makes use of the exceedingly chic braid trimming, innumerable rows of which give a smart tailored finish and form the only decorative note. The neck shows the fashionable collarless outline, but if desired, it may be in V-shaping finished with a round collar. The long plain one-piece sleeves are perforated to be cut off and lengthened with flowing sections. The dress is made without lining, closing in front, and the skirt is a plain three-piece model. In its plainest form without the panels this frock is decidedly attractive also. This accentuates the long-waisted effect that is so fashionable. It is fitted by a dart on the shoulders in front, and the narrow string belt may have ends that are crossed in front and buttoned onto the dress.

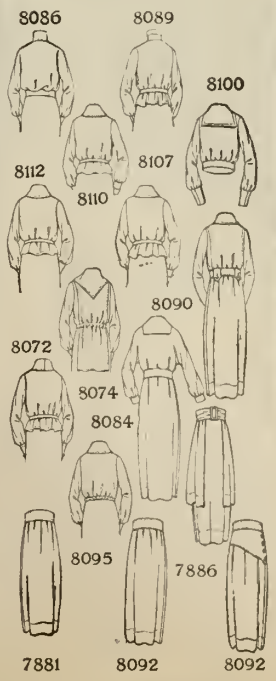
If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

The Newest Models in Blouses, Skirts, and House-Dresses

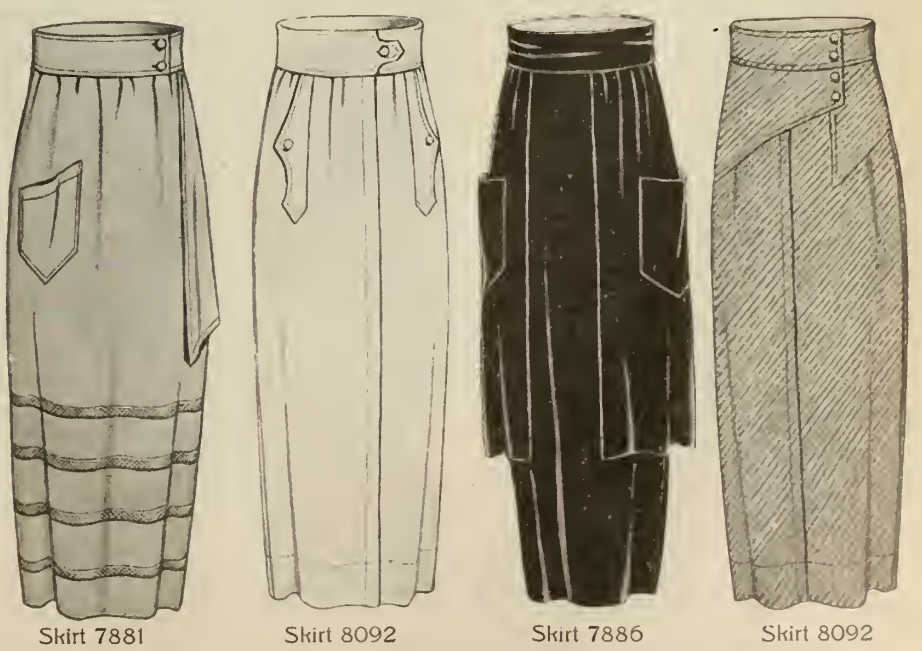
8086—Ladies' Tailored Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 1⅞ yard 40-inch Georgette crêpe—1 yard grosgrain ribbon for bow. Here is one of the fashionable new tailored blouses that may button to the top of the standing collar, or if preferred, the collar being convertible, may be rolled low. The blouse is gathered in front below a yoke effect formed by extending the back over the shoulders.

8110—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 2¼ yards 36-inch crêpe de Chine. A rolling collar finishes the open neck, and a yoke effect is formed by extending the back over the shoulders. Below this the fronts are gathered. Quite simple in style are the one-piece sleeves which are gathered to deep cuffs with turn-back sections. They are perforated for shorter length.

8089—Ladies' Tailored Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 2¼ yards 36-inch striped crêpe de Chine—¼ yard white satin for collar and cuffs. White crêpe de Chine striped in blue, rose, orchid, or primrose yellow makes up attractively in these tailored blouses. The convertible collar may be rolled high or low.



8100—Ladies' Panel Blouse. Six sizes, 34 to 44 bust. Size 36 requires 2⅛ yards 36-inch voile. Braiding No. 12424, blue or yellow transfer pattern. The front panel which descends below the belt gives distinctive style to this otherwise simple blouse.



8112—Ladies' Blouse. Seven sizes, 34 to 46 bust. Size 36 requires 2 yards 40-inch bisque Georgette crêpe—½ yard white Georgette crêpe for vest. Braiding No. 12426, blue or yellow transfer pattern. A braided vest of white Georgette crêpe affords charming contrast to this blouse of delicate biscuit-color. The closing is at left side-front.

8107—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 1⅝ yard navy blue Georgette crêpe—⅝ yard white Georgette crêpe. Among the most popular blouses are those that combine two shades of Georgette crêpe. Navy blue and white are attractively combined in this model, but brown and bisque would combine equally well.

8074—Ladies' Blouse. Six sizes, 34 to 44 bust. Size 36 requires 2¾ yards 36-inch crêpe de Chine. The closing is at left side-front under a tuck, and the front and back of the blouse are in panel style and extend to form a peplum. The collar forms a point at the back.

8092—Ladies' Three-piece Gathered Skirt. Nine sizes, 24 to 40 waist. Size 26 requires 2⅜ yards 44-inch gabardine. Width at lower edge about 1½ yard. Two views of this skirt are illustrated.

DESCRIPTIONS CONTINUED ON PAGE 47

Sensible War-Time Fashions for the Girl in Her Teens

8075—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 3¾ yards 36-inch crêpe meteor for foundation dress—2 yards 40-inch Georgette crêpe for tunic blouse—1⅝ yard fringe—3¼ yards filet lace banding—⅞ yard 36-inch lining for underbody. Width at lower edge about 1¼ yard. For afternoon wear Georgette crêpe combined with one of the satin-surfaced fabrics is very popular. In this model the sheer fabric forms the long overblouse, and the satin is used for the foundation. The overblouse slips on over the head, and the neck is finished with shirred tucks. Long kimono sleeves are cut in one with the side-front and side-back of the waist.

8082—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 5 yards 36-inch crêpe de Chine—⅝ yard 36-inch satin for sash. Beading No. 11506, blue or yellow transfer pattern. Width at lower edge about 1½ yard. The popular back panel is introduced, looped up under the tunic.

8098 — Juniors' One-piece Dress. Three sizes, 13, 15, and 17 years. Size 17 requires 4⅞ yards 36-inch velveteen—14½ yards braid—⅜ yard fringe. Width at lower edge about 1⅝ yard. For the all-day frock which may be worn indoors and outdoors, nothing is so fashionable as velveteen in black, dark blue, burgundy, and seal brown. Braid is the favored trimming. This model is in panel style, the front and back panels fastening on the left shoulder. The neck is finished with a square collar and the panel is perforated for two shorter lengths, the longest length illustrated.

8038 — Misses' Double-breasted Coat. Four sizes, 14 to 20 years. Size 16 requires 3¼ yards 54-inch Bolivia cloth — 4½ yards 36-inch satin for lining. For cold weather the collar is very comfortable buttoned high as illustrated, but, if desired, it may be rolled flat at will

7982 — Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 1⅞ yard 27-inch velveteen — 3¼ yards 36-inch satin—1⅞ yard 36-inch lining for underbody and top of skirt. Width at lower edge 1½ yard. The irregular tunic is attached diagonally.

7913—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 1½ yard 36-inch satin—4⅜ yards 40-inch Georgette crêpe—⅞ yard 36-inch lining for underbody. Beading No. 12348, blue or yellow transfer pattern. This is an excellent model for Georgette crêpe, satin, or any of the soft fabrics. The blouse shows the fashionable round collarless neck and back closing. Lower-edge width 2 yards.

7906—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5½ yards 40-inch Georgette crêpe. Width at lower edge about 1½ yard. The panel blouse, kimono sleeves, and tunic mark this frock as in the very latest mode. It is charming in Georgette.

Around the Hearth

(*Continued from page* 23.)

dreaded, to see the postman, who have tremhled at the sight of a telegram, and yet have been brave in the face of heart-breaking sorrow.

Back of this great concourse comes another vast crowd of faces, glad with new courage, set with strong purpose. They have stood beside the women in this affray; they have helped to finance their projects; and rohbed their business of funds to contrihute largely to the Victory Loans to help "Carry on." They have given their sons — their right-hand helpers — to do the work they fain would do themselves for King and country. They have buried their griefs and become old and grey in a few months, because the lad they had counted on to fill father's place in the business at home, would never return.

The war is over, but we know that many eyes that now reflect the sudden relief will be suffused with tears before the last casualty list is published. A bitter fate will reveal some sadness in those last days before the armistice was signed. "*Just* one week before — one day—one hour!" Ah, yes!

* * * * *

The war is over, and now the judgment. The nations with their records stand up in array before me, for just as individual character has shone out during the fifty-two months of dark days, so has the quality of nations been revealed.

First, that aggressive country responsible for the war, passes by, humiliated by defeat, but still charged with deadly hatred towards certain of her opponents. Written plainly on her chart is *failure*. Might against right had proved a losing game. Her future is dark, and pregnant with internal strife, which, if carried on with the same inhuman practices adopted in other countries will mean a terrible reckoning.

Sharing her doom are her allies, who staked their all on the prowess of a mighty army with years of preparation, but who found that "Chariots and horsemen are sunk in the wave" of a mighty rebellion against tyranny and brutality.

Then out of a pit of horrors rose that brave little kingdom who first opposed the progress of a giant host who disregarded all the laws of morality and national rights. *Honor* in large letters is written upon her banners of righteous warefare.

Next in line behold the land of gay and happy people, who in this war have suffered intensely. Her records from the beginning has been that of self-sacrifice and heroism. For almost fifty years she has heen under the cloud of a heavy suspense, and so her battle-cry seemed to be—"To the last man; to the last dollar, the last drop of blood."

The smaller nations, one by one, presented themselves in this early morning review, each fulfilling its part by bravely meeting the advances of the destroying hordes of invaders. "Conquering heroes" was emblazoned on the flags they carried.

The Stars and Stripes lead an immense army loaded down with food and ammunition, which seemed to be endless. Her resources of men and money, energy and enthusiasm, were opportune and acceptable, and was munificently granted.

* * * * *

Out of a mist of anarchy and revolution loomed up that great country who struck out so nobly in the beginning, but because of treachery and intrigue, became unbalanced and dropped out. Miserable old Russia, the only country where arms where not laid down that glorious day of world-wide celebration! (On that eleventh day of the eleventh month, our Canadian artillery were engaged in battle with the Bolsheviki.)

Lastly came the Empire of which we form a part—staunch old Britain. Her part in the war cannot be estimated at present. The future will reveal that story. Though unprepared for such a gigantic conflict, she entered it with a dogged determination characteristic of her race and country.

There was no letting go after she quietly and steadfastly gripped the situation. No one faltered in that grand old Motherland. This flag bore the words—"England expects every man to do his duty."

The war is ended, and now the world is watching intently for the verdict. The enemy demands a "peace of justice." This can only be determined by the perfect understanding, the concentrated wisdom, and Divine inspira-

Chic Frocks that Express the Very Spirit of Youth

Dress 8096
Embroidery
12469

8096—Misses' Long-waisted Dress. Four sizes, 14 to 20 years. Size 16 requires 2½ yards 44-inch serge—2 yards 36-inch satin—¼ yard 27-inch white satin for collar—⅞ yard fringe for view shown at upper left of page. Embroidery No. 12469, blue or yellow transfer pattern. Width at lower edge about 1½ yard. In its original form this dress displays one of the new long swinging panels front and back, and this view is illustrated at the center of the page (right), but perforations permit of shortening and slashing the panels. For the view at center size 16 requires 4¼ yards 44-inch tricotine. Braiding No. 12474, blue or yellow transfer pattern. In the upper view the dress combines satin with serge, the serge attached at the fashionable low waist-line.

Dress 8036

8036—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 3⅞ yards 36-inch velveteen—⅜ yard 40-inch Georgette crêpe for collar—12 yards braid—¼ yard 36-inch satin for girdle—⅞ yard 36-inch lining. Width at lower edge about 1½ yard. This frock is illustrated here in its plainest form without the swinging panels which are part of the pattern. Rows of silk braid form the trimming. The neck instead of being in V-shaping with collar of white Georgette crêpe, may show the new oval collarless neck-line. The waist is closed on left shoulder and under the left arm, and the underbody at center-front.

Dress 8105

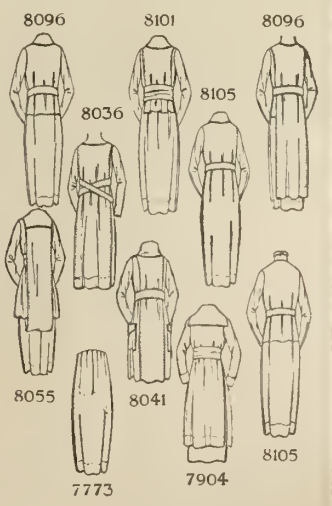
Dress 8096
Braiding 12474

Dress 8055

8055—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5⅝ yards 36-inch velveteen. Width at lower edge about 1¼ yard. A large collar that extends into broad revers forms an attractive finish for the surplice blouse of this chic frock of black velveteen. Below the girdle there are peplum sections at the side with a looped-under panel at the back. If the dress is made of satin or any of the soft fabrics, an accordion-plaited skirt may be selected instead of the gathered one, and plain sleeves are provided in addition to the flowing sleeves illustrated.

Dress 7904
Braiding 12427



Jacket 8041
Skirt 7773

Dress 8105

8101—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 2⅝ yards 48-inch broadcloth—1¼ yard 36-inch velvet for panels—⅜ yard 27-inch white taffeta for collar—⅝ yard fringe—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅜ yard. Braiding No. 12469, blue or yellow transfer pattern of 24 motifs. Fringe-trimmed panels of velvet are applied effectively on the plain broadcloth frock. The deep girdle is elaborately braided.

7904—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5½ yards 44-inch serge—½ yard 36-inch satin for collar and vest—⅞ yard 36-inch lining for underbody. Braiding No. 12427, blue or yellow transfer pattern. Width at lower edge about 1½ yard. Featured on this dress is the fashionable apron tunic front and back. The dress closes at left side-front.

Here Are Practical and Smart Styles for Little Folks

8079—Girls' and Juniors' One-piece Dress. Six sizes, 6 to 16 years. Size 12 requires 1¼ yard 42-inch serge for panels and belt—2⅝ yards 36-inch satin for dress—⅜ yard 36-inch white satin for collar and cuffs. Panels are by no means the exclusive property of mother and big sister. Little sister has calmly appropriated them to use on her frocks as well, and they are especially popular in navy serge over a foundation of black satin. A new effect is gained by slashing the panels through the center from the lower edge almost to the waist-line.

8085—Infants' Set. One size only, requiring for nightgown 1¼ yard 36-inch cambric or 1¾ yard 27-inch flannel—either style band ⅜ yard flannel or stockinet—upper diaper drawers ½ yard 27-inch rubber sheeting or stockinet—lower diaper drawers ⅝ yard 27-inch stockinet. The nightgown may be drawn in to cover the feet, as illustrated, or the lower edge may be left open.

8103—Girls' and Juniors' One-piece Dress. Five sizes, 6 to 14 years. Size 12 requires 2⅝ yards 44-inch serge—½ yard 27-inch fancy silk for collar and cuffs. Embroidery No. 12372, blue or yellow transfer pattern providing 3½ yards of 2- and 3¾-inch borders. Attached to the separate underarm sections of this smart serge frock are the popular panels which are embroidered at the bottom. Perforations permit of shortening the sleeves.

8087—Girls' and Juniors' Dress. Five sizes, 6 to 14 years. Size 12 requires 3⅛ yards 44-inch serge—6¾ yards braid—¼ yard 27-inch white satin for collar. From Lanvin comes the fashion of trimming serge and velveteen frocks with rows and rows of wide braid. The simple waist of this frock closes on the left shoulder and left side-front.

Victoria, Canada's Winter Resort

(*Continued from page* 18.)

Garden City of Canada. Like Vancouver, its winter is tempered by the Japan current; and all the year round its gardens are filled with roses and other flowers. Snow is a stranger here, too, and causes as much excitement as it does in England, and disappears as readily.

Not only do Victorians enjoy golfing all through the winter, but there are scores of motor drives both long and short. through mountain and valley scenery that even in the winter can hardly be surpassed. One can drive comfortably across the Island to Alberni where you can look out on the broad Pacific. There is the Malahat Drive which winds through majestic Douglas furs, high above an inlet of the sea, on into the dense virgin forest where the foliage is almost semi-tropical. For the fishermen, the interior of the island is a paradise all the year round, and for the huntsmen big game shooting in season and scores of varieties in game birds.

Victoria is more of a residential city than is Vancouver, and has been the Mecca for many years of the retired business men of Eastern Canada and for the service men of England, whose duty to their Motherland has been done. Its homes are striking and picturesque. It is a busy city in many ways, but business never protrudes on the calm comfort of the men who have chosen this Pacific wonderland for their resting days.

Music After The War

(*Continued from page* 27.)

music for consolation and for the expression of their thoughts and ideals."

Recognizing music as the language of the ideal and higher emotions, Mr. Spalding holds that it is also the natural language of liberty. He thinks that if the German people had been true to the message of their older composers, Bach, Beethoven, Mozart, Schubert, Schumann and Brahms; all of whom spoke in tones of divine tenderness and serenity they would never have become the monsters that they are in the minds of the rest of the world to-day. On the other hand, the peoples who took up arms for liberty, good faith and humane ideals, are the natural inheritors of the message of the masters which a people dazzled by the gross material glitter of Hohenzollern and Hapsburg ambitions, cast aside. There is nothing fantastic in this philosophic conclusion; it has the ring of truth.

In the era of better thinking that we hope has begun, based on a less material view of things, and a higher appreciation of spiritual values, music should be more than ever an active agent for the welfare of mankind.

Eat Oranges If You Would Be Healthy

(*Continued from page* 21.)

juice of the oranges, and lastly the whites of eggs beaten to a stiff froth. Mix lightly, and pour all into the prepared dish. Bake in a moderate oven until set and of a light brown color. Sprinkle over with grated maple sugar, and serve hot.

ORANGE MARMALADE WITH HONEY.—Cut twelve large oranges in quarters, remove the rinds, seeds and all the white pith, but be careful to save all the juice. Put the pulp and the juice into a preserving saucepan with an equal weight of honey, and one-third as much sugar as honey, then add the strained juice of two lemons. Boil until very thick and clear, then bottle and seal.

ORANGE AND RHUBARB MARMALADE.—String and cut in one-half-inch pieces five pounds of rhubarb. Divide fourteen oranges in sections, removing the seeds and the tough part of the skin. Put into a preserving kettle, heat slowly to boiling point, and simmer slowly for forty minutes. Then add two pounds of sugar, two pounds of corn syrup or maple syrup, cook for two hours, then pour into glasses and seal.

Who Goes There

(*Continued from page 34.*)

like chicks about a dying hen. She's their parent ship; and there go their boats, pulling hell for sweeps! God! If it was a mine, I wish we were at Amsterdam, I do!"

The steamer was already under way; electric signals sparkled from her; signals were sparkling everywhere in the darkness around them. And all the while the cruiser with her mortal wound, enveloped in her red aura, agonized there in the horrible sombre radiance of her own burning vitals.

Far away in the black void a ship began to fire star shells.

As the awed throng on the moving liner's decks gazed out across the night, the doomed cruiser split slowly amidships, visibly, showing the vivid crack of her scarlet, jagged wound. For a second or two she fairly vomited hell-fire; lay there spouting it out in great crimson gouts; then she crashed skyward into incandescent fragments like a single gigantic bomb, and thunderous blackness blotted out sea and sky once more.

CHAPTER X.

HE knocked sharply at the stateroom door and called "Karen! It is I! Open!"

She flung open the door, satchel in hand, and he entered, closing the door, relocked it, and dropped down on the lounge, staring at space.

"Kervyn! What is it?" she asked faintly, one hand against her breast.

"It is all right," he said—"as far as we are concerned—for the present anyway. God! I can't realize it—I can't get over it——"

"What, Kervyn?" she faltered, kneeling on the lounge beside the half dazed man. "What happened? Why are you so ghastly pale? Are we really quite safe? Or are you trying to make it easier for me——"

"No; you and I are safe enough for the moment," he said. "But men are dying out yonder. The sea is full of dead men, Karen. And I saw it all."

"I heard guns. What has happened?"

"I don't know. It was a mine perhaps, perhaps a torpedo. A ship has been blown up." He lifted his head and turned to her: "But you are not to say such a thing to anybody—after I leave you at Trois Fontaines."

"No, Kervyn."

"Not to anybody. Not even to your father. Do you understand me, Karen?"

"No. But I won't tell anybody."

"Because," he explained wearily, "the Admiralty might have reasons for concealing it. If they mean to conceal it, this ship of ours will be stopped again and held for a while in some French or British Port."

"Why?"

"So that the passengers cannot talk about what they saw to-night."

His haunted glance fell on the satchel at their feet. "As for that," he said, "I've had enough of it, and I'll take no further chances. Where are our passports?"

"Locked in with the other papers. I was ready to throw them out of the port when you knocked."

"Unlock the bag now. I'll get rid of the whole business," he said bluntly.

"Kervyn—I can't do that."

"What?" he exclaimed.

"I can't destroy those papers if there is a chance of getting through with them. I gave my promise you know."

The dull surprise in his eyes changed gradually to impatience.

"If another ship stops us, they'll have to go overboard, anyway."

"We may not be stopped again. If we are, we have time."

"Karen."

"Yes—dear?"

A slight flush came into his haggard face; he hesitated, looked up at her where she was kneeling on the sofa beside him. "Dear," he said gently," "I have never intended that you should carry those papers to your father, or to anybody else."

"I don't quite understand you."

"Try to understand. I am a friend to England—even a closer friend to —Belgium."

"I know. But you are *my* friend, too."

"Devotedly, Karen." He took hold of her hand; she slipped down to the sofa and settled there beside him with a little air of confidence which touched and troubled him.

"I *am* your friend," he said. "But there is another friendship that demands first of all the settlement of prior obligations. And if these obligations conflict with any others, the others must give way, Karen."

"What do you mean?"

"The obligations of friendship—of—of affection—these must give way before a duty more imperative."

"What duty?"

"Allegiance."

"To—whom?"

"To the country in which my race had its origin."

"Yes....but America is neutral, Kervyn."

"I mean—Belgium," he said in a low voice.

"Belgium! Are you then Belgian?" she asked, amazed.

"When Belgium is in trouble—yes."

"How can you be loyal to two countries?"

"By being loyal to my own manhood —and to the God who made me," he answered in a low voice.

"You feel so deeply about this war?"

"Nothing on earth could stir me so deeply, Karen.

"I can't understand."

"Let me help you. My family was Belgian. For many years we have been good and loyal Americans. America means home. But, nevertheless, we inherit obligations toward the country of our origin, which, so far, time has not extinguished....When I became of military age I went to Belgium and served my time in the Belgian army. Then I went—home. My father did it before me. My grandfather before him. My younger brother will do it, God willing. It is our custom to fulfil our obligations," he added with a faint smile, "even when those obligations seem to others a trifle fanciful and old-fashioned."

She bent her head in silence, considering for a space, her hand resting rather lifelessly in his. And, after a few moments: "But how does all this interfere with our friendship?" she asked innocently.

"It does not....Only I could not let you take those papers to Germany, Karen."

"But I've promised."

"You promised to do it if it were possible." He lifted her hand to his lips. "But it has become impossible, Karen."

"Another ship may not interfere."

"No. But I must—interfere."

"You! *Kervyn!*"

"Dear—I *must.*"

"*Betray* me?"

"Karen! Karen! What are you saying?

"If you take my papers away you betray our friendship!"

"I have told you that there is a higher obligation than friendship. Even *your* friendship, Karen."

"You—you mean to take my papers from me?"

"Yes, dear."

"By—by *violence?*"

"Karen! Look at me!"

She gave him a white, breathless glance, wrenched her hand from his, stooped suddenly, seized the satchel, and gathering it against her breast, clasped both arms around it. Then she looked him straight in the eyes.

"Yes," he said, "that is the only way. You must keep your word to the last and do your best. Only—remember that what I do now has no bearing whatever on our friendship. I—I care for you—at this moment—more than I ever did. So—forgive me—Karen——"

"I never shall! Kervyn! Kervyn—think what you are doing!——"

He encircled her with his left arm, and with his right hand he gathered both her slender wrists in his grasp and held them. The satchel rolled from her knees to the floor.

"Kervyn!" she cried, "think what you are doing!" She looked up into his set face where he held her crushed against his shoulder. "I am your friend. Think what you are doing! I —I—care—so much—for you!"

"And I care for you, Karen....Is that the key around your neck on that blue ribbon?"

"You shall not have it. Oh, Kervyn! Kervyn!" she gasped—"what are you doing to our friendship! What are you doing!"

(To be continued.)

WANTED!

Time to help others!

▼

These GOLD DUST hints shorten household tasks.

Short work after baking

Mixing bowls, rolling pins, spoons, pans, are obstinate to clean when they get "stuck up." One woman made this discovery: Grease left by shortenings causes nine-tenths of the trouble. She looked around for grease-dissolvents. Gold Dust, being the most effective and gentlest, dissolved that nine-tenths of the trouble. It shortened the work of cleaning up after cooking.

Bathroom quickly cleaned

Even in the bathroom there's a bit of oil, a bit of grease. But Gold Dust quickly gets rid of dark circles and rims in wash bowls and bath tubs—because Gold Dust quickly dissolves the grease. And, you'll find, Gold Dust cleans gently, without scratching or marring the surface of porcelains, enamel, tiling or nickel-plated fixtures.

Sparkling mirrors and windows

Your everyday plain or "pressed" glass will quickly respond to this treatment: Dissolve a tablespoonful of Gold Dust in a dishpan of hot water, and use a small brush. Gold Dust quickly dissolves the thin film of oil or grease, and your glass will sparkle like diamonds. Mirrors, windows, glass doors and set-in glass of all kinds come out from their Gold Dust bath clear as crystal.

A quicker way to wash the dishes

If you want to get rid of drying your dishes with a towel, try this: Use a tablespoonful of Gold Dust to a dishpan of water, wash all dishes of one kind together, scald with boiling water in a wire dish drainer. It is because Gold Dust so thoroughly dissolves the grease that the dishes come out clean and sparkling.

GOLD DUST

Ask about our farm and ornamental fencing. Agencies nearly everywhere. Agents wanted in unassigned territory.

The Banwell-Hoxie Wire Fence Company, Ltd., Winnipeg, Man., Hamilton, Ont.

The "New" MacLean's

Starting with the January issue, MACLEAN'S MAGAZINE comes out in a new size—11 x 14¼—same size as *The Saturday Evening Post*. This change will enable us to give readers more entertaining articles and stories, and a very much enlarged "Review of Reviews" Section. You will find this January issue of MACLEAN'S more pleasing and instructive than the great majority of magazines you find displayed on news-stands—and

contents are carefully censored—no sex stories—you can take it into your home with the utmost confidence.

A word about the contents—

"Why Laurier Will Wait"

In discussing the policy of the Liberal leader during the coming session of Parliament, J. K. Munro predicts, in January MACLEAN'S, that Laurier will allow Union Government a free hand. In this policy of inactivity "he sees the way open to the accomplishment of all his purposes. If he is half the politician his friends believe he is, he will sit and smile and wait—yet a little longer."

All Canada is interested in what is going to happen in Ottawa. J. K. Munro, veteran press gallery man, is a shrewd observer, and his political articles in MACLEAN'S have stirred up more comment than anything else appearing in the press of the country. He knows politics from the inside. "Why Laurier Will Wait" is a forecast of the near future that bristles with interesting points.

A few of the other "head-liners" in this issue:

Bolsheviks at Work in Canada

A sensational article on activities in subterranean circles. There are foreigners in Canada ready to wave the red flag.

Achievements of the Canadian Army

Since the Canadian Division was formed, they have not retired a foot nor lost a gun—a marvellous record. An inside story of how this great army was handled and controlled is told by H. F. Gadsby, who spent a month at Headquarters during the last great offensive.

The Grave Dangers of Peace

An article by Agnes C. Laut on the insidious new propaganda being launched by the Germans to split the Allies.

Jock in a Juggernaut

The most interesting war article in a long while, because it is new—it deals with experiences in the tanks.

The large Picture Section, printed in sepia, will start in the February number of "Canadian Home Journal." In this will be shown typical Canadian scenes, interesting military pictures, and a page reproduction of a famous Canadian artist's masterpiece.

Black Blood and Blue Blood

(*Continued from page* 10.)

He found Charley sitting beside Helen's bed. She was holding his hand tightly.

Bond beckoned him to the door.

"Sit with her until morning," he whispered. "Call me if you need me."

His one desire at that moment was to get away from the Blakeleys, but knowing that to be out of the question, he returned to his room and sank into a chair before the fire.

The air of an almost forgotten African love song stole through his brain, and he began to rock back and forth, crooning softly to himself while great tears rolled down his cheeks.

Charley came in at daybreak and found him asleep in his chair, his features drawn and lined.

But Charley thought it was fatigue and let him sleep until breakfast time.

The morning brought new tortures for Bond.

He was obliged to listen to the thanks and congratulations of the whole family, including Helen herself.

She was weak and shaken, but appeared at the breakfast table and bravely sat through the meal.

Bond was silent through the meal. Never had he seemed so alone.

He was among friends, showered with compliments, and for a time at least, quite the social equal of the Blakeleys, but the old gnawing hunger for real equality beset him on this particular morning to such an extent that his usually robust appetite dwindled to a mere pecking.

Charley sensed something wrong with Bond, but the true situation never occurred to him.

Helen noticed the change in his demeanor, but thought nothing of it, except that Bond was tired out by his exertions the night before.

After breakfast Charley asked him if he was ill or in trouble of any kind.

Bond smiled and shook his head: "Nothing at all, old man," he said, "I am a little tired, that's all. Another night's sleep will set me up."

The morning was spent in visiting police headquarters and entering a complaint against the burglar, who turned out to be a thoroughly hardened person, perfectly indifferent as to his fate at the hands of justice.

There was another theatre party that night, and Helen, who had recovered from her experience, made a particular effort to be agreeable to Bond.

To all disinterested observers, he was the gayest of the merry little party, but the strained look never left his eyes, and Charley watched him with hawk-like intensity, searching for a clue to his odd demeanor.

It was not until they started for home that his vigilance was rewarded.

The motor was a small town-car, and the five people of the party made a tight fit.

Bond and Charley sat on small folding seats, facing the others. Helen was directly opposite Bond, and during the ride home her small handkerchief slipped to the floor.

Before Charley had a chance to lean forward and pick it up, Bond cautiously placed his foot on it and kept it there until the car drew up at the door.

Allowing the others to alight first, he picked up the bit of linen and lace and put it in his pocket.

Charley saw, but said nothing.

A wave of anger swept over him, and late that night he got up and searched Bond's pockets.

He did not find the handkerchief, however, and went back to bed feeling rather guilty.

* * * *

Bond's dreams were fantastic in the extreme.

He saw himself in Africa, crowned King of Kasongo, with a white Queen sitting beside him.

He looked at her closely, and was amazed to see that she was weeping.

Each tear that fell was a magnificent pearl, and a man whose face was in shadow was picking them up and stringing them into a necklace.

Through it all, plainly heard, yet visible to the eye like vapor, floated the love song that had come back to him the night before, plaintive and appealing, chanted by hundreds of his black tribesmen.

He took her hand gently in his, and the chanting instantly died away.

Bond awoke to find himself clutching Helen Blakeley's tiny handkerchief, which hung about his neck on a silken cord.

* * * *

Very early in the morning he received a telegram and came down to breakfast, looking so worn and haggard that Mrs. Blakeley asked him if he was ill.

He pulled himself together with a tremendous effort, and laughed lightly as he replied to her anxious questions: "No, indeed. Charley was worrying about me yesterday. I am not used to so much gayety, that's all—that and the late hours."

Immediately after breakfast, however, he excused himself for a few hours and did not return until nearly dinner time, carrying a large box under his arm.

It was Christmas Eve, and Charley's curiosity got the better of him.

He followed Bond upstairs. "Been shopping?" he asked.

Bond shook his head and opened the box, displaying a magnificent fan of ivory and ebony, beautifully carved and ornamented, with feathers of wonderful length and color.

Charley whistled his admiration. "Say! That is a beauty! Where did you pick it up?"

"I'll tell you all about it after dinner," answered Bond, closing the box carefully.

They were sitting before the fire in Charley's room late that night.

The fan lay on the table between them, and for a time they smoked in after-dinner content.

Charley broke the silence.

"What's on your mind, Dan? Something has been riding you ever since the burglar episode."

Bond rose to his feet and laid his pipe on the mantel-shelf. He picked up the fan and opened it slowly to its full width, fanning it gently to and fro.

A sharp, aromatic odor, pungent and incense-like, floated from it, and the gorgeous feathers made a rainbow blur as they moved.

"You asked about the fan," he said, "so I will begin there. It happens to be the beginning of this story, anyway. I did not buy the fan. It could not be bought. I went back to college after it. It belonged to my mother until she died. Our people are not polygamous, and my father never took another wife. This fan is the official insignia of the Queen of Kasongo. I inherited it when I came of age. Early this morning I received a cable that my father is dead. I am King."

He paced up and down, waving the fan and sniffing the peculiar perfume which floated from it.

Charley sat and regarded him wonderingly, his pipe in one hand, out and forgotten.

The thin cloak of civilization which Bond had worn so easily seemed to be as easily slipping from him.

He halted in front of the fire and stood at ease, with one foot slightly advanced, resting easily on the other leg.

"You are going back?"

"I think so."

"And waste all your years of study and work?"

Bond laughed, a hard, ugly laugh, and Charley felt the impending answer before it came.

"My dear fellow, I waked up last night to the fact that a black man is a black man, and that nothing can change his condition. The other night I carried your sister in my arms to the window to restore her to consciousness. She lay against me like a child. As she was coming back to life she smiled at me, not realizing who it was. My heart melted, and so it will remain."

Charley sprang to his feet. "Good heavens, Dan," he ejaculated, "are you mad?"

Bond nodded gravely. "I imagine so. I don't seem to act like other black men. I must be mad."

"But why did you allow this to happen? You must realize how hopeless it is!"

"Well, I propose to put it to the test. I will ask her."

Charley's body stiffened, but his voice was dangerously cool as he asked: "Do you intend to insult my sister under her own roof?"

"No, I mean to ask her to marry me. I have been entertained here as your equal, and—"

Charley hurled himself bodily across

(*Continued on page* 44.)

The Madness of McAra

(*Continued from page 7.*)

her cigarette and she idly let the smoke ooze in a double jet from the corners of her lips before she rose with an inquiring expression and advanced to the newcomer. For at least half a minute she failed to recognize the tall, somewhat gaunt man with the lean, brown face who stood quietly observing them. His blue eyes were grave, his lips set in a grim line and he seemed almost as though he didn't see her, the fair young hostess who approached.

After that first swift glance, a glance that gathered in so many conflicting impressions, McAra's eyes passed beyond the groups of women and rested on the corner he had called Heart o' Home. Several sandwich-trays were piled one above the other on the window-seat, the two old chairs had disappeared and been replaced with smart wicker ones, a small typewriter and stand stood under the cage of love-birds and the teakwood table was littered with cigarette-butts.

Kathie gave a quick, rapturous little squeal and darted forward.

"John, John!" she cried, and flung her arms about his neck.

* * * * * * * *

It was not until the others had gone —an eternity of waiting in ill-concealed impatience on the part of both McAra and his young wife—not until the last chatterer's voice had melted into silence after a "Don't forget my bridge on Friday!" that Kathie realized that her husband had not yet kissed her. He had merely taken her caresses in unbending silence.

She turned to him again, searching his face.

"John! Oh, John—what is it?" She asked in consternation. "Have you bad news? . . . . . But how silly of me! What could be bad news now I have you safe home again! But—aren't you going to say you're glad to see me? What—what is wrong, John?"

"Wrong?" he echoed, with a short laugh.

"You seem so—you're so *unresponsive!* Won't you kiss your little wife?" she faltered.

He flung her slight clutch of his arm off.

"*Kiss* you?" he said, shortly. "Not —not *those* lips!"

She fell back a step and the pleading in her eyes changed to distress and —yes, guilt. Quickly she had a defence ready.

"You mean, of course—" she began, awkwardly.

"I mean you have been smoking," he cut in sternly.

Never before had she known his eyes so steely.

"But John! How ridiculous you are! Why, everybody does it. It's considered quite the thing. There isn't a woman in our set——"

"Then you'll leave that particular set."

"And—and we've done just heaps and heaps of war work. I've learned to knit, John, and I'm secretary of our Red Cross. See my typewriter over there?"

He was silent.

"One can't knit *all* the time. One must relax occasionally," she went on. "And besides, John, *you* smoke. You know the smokes we've sent to you, parcel after parcel—"

"I'm a man," he broke in, impatiently.

His mouth still set in that implacable line! A strange husband indeed! This lean, solemn, cold-eyed man her loving genial husband? Was *this* what war did to men? Kathie having been twice repulsed did not venture to him again but stood leaning against the card-table nearest the door, her face white, her blue eyes wide with anxiety and a vague sort of fear.

"Why didn't you send word you were coming?" she asked, suddenly. "Had I known you were coming ——"

"You wouldn't have let me catch you as I did. Is that what you mean?"

"John!"

"Don't lie, now!" he said, breathing rapidly.

She stiffened. Never, never had he used such a tone, such words to her before! Anger—hot, resentful, quick—filled her whole being. She fairly trembled with it. He stood over her, his breath coming short, his lips working, his hands clenched and unclenched at his sides. But her momentary fear had gone.

"You shan't treat me like a child!" she blazed. "And I'll smoke if I please."

"You won't!"

"I will. I refuse to be bullied—"

"You're a nice looking wreck for a man to come back to!" he taunted. "How many of these things do you get away with in a day?"

He picked up a stub of a cigarette from the floor and flung it into a huge brass bowl that stood by the door. She refused to answer his question.

"You white faced, shaking little simpleton!" he said, and reached for her.

But she eluded him and placed the table between them. He followed her and at the library door caught her by one silken shoulder.

"You'll stop this folly *now*. See?" he said, swinging her around none too gently, so that she faced him.

"John! You hurt!"

"I telegraphed you from Montreal this morning. You probably got it but this nicotine poison so befuddled your brain ——"

"I received no telegram."

"It makes little difference now at any rate. The point is I caught you ——"

But she had jerked away and now stood straight, mutinous—and adorably lovely—before him. Her eyes flashed and two red spots stood out sharply on her white cheeks.

"That's twice you've insinuated that I am a sneak," she said, excitedly. "Do you think I smoke only at home behind drawn blinds and in the company of my own sex?"

"I don't care a ——!"

"Well, you're wrong if you do! I smoked two boxes the other night at the Brounc's. We had a betting-match on to see who could ——"

"Good God!"

"—— to see who could stand the most. I won! I was fearfully ill afterward, but I won! And that brought in one hundred dollars for our side. It went to the Red Cross ——"

"Damn the Red Cross!"

"John!"

"Heaven alone knows what other foolishness has been committed in the name of that—that splendid organiza-

Don't Miss
THE MADNESS OF McARA
on page 7 of this issue

$5.00 for $4.00 **$5.00 for $4.00**

W-S S

What is a WAR-SAVINGS STAMP?

It is a stamp for which the Dominion of Canada will pay you $5.00 on January 1st, 1924.

It enables you to lend small savings to the Government at a rate of interest which accumulates 20 cents a year on each $4.00 invested.

A War-Savings Stamp costs you $4.00 if purchased in December, 1918, or January, 1919, and the price increases one cent each month after January.

Canada's Pledge for FIVE DOLLARS

Every man, woman and child in Canada should invest in War-Savings Stamps all the money that he or she can save by STRICT ECONOMY.

With W.-S. S. you can "build a bond" at your own convenience, taking advantage of the unexcelled security and the high interest. You are not tied down to making payments at stated times, though it is desirable to purchase as regularly and as often as you can.

Should you at any time need money, you can cash your W.-S. S. at the Post Office for the indicated surrender value—the amount you paid with fair interest.

By placing your W.-S. S. on the Certificate provided, and registering same, you are protected against loss by fire, theft or other cause. Your registered Certificate is of no value to anyone but yourself.

As an aid to the purchase of W.-S. S., you can buy THRIFT Stamps of the value of 25 cents, 16 of which may be exchanged for one W.-S. S.

W.-S. S. are on sale at Money-Order Post Offices, Banks, and other places displaying the W.-S. S. sign shown at the top of this announcement.

LOOK FOR THE SIGN

Black Blood and Blue Blood

(*Continued from page 12.*)

the light table which separated them.

It went over with a crash and the men clinched, Charley reaching for a hold on Bond's throat, the latter trying only to avoid it.

The floor was heavily carpeted, and no sound of the struggle penetrated beyond the closed door.

Backward and forward they wrestled, silently and furiously, the white striving to choke, the black trying to avoid being choked.

They were very evenly matched in strength and skill, and Bond had taken several vicious blows without attempting to return them, when Blakeley's fingers closed on the heavy iron poker which stood beside the fireplace.

He raised it to strike, and Bond instinctively threw up his hand to guard his face, receiving the full force of the blow across the knuckles.

As the blow fell, there was a light knock on the door. Neither of the men heard it, nor did they hear the door softly open and then close again.

Bond, with two fingers broken, was fighting back desperately with his left hand as Charley came at him again with the poker.

He had just picked up a small marble bust of Shakespeare and was about to throw it at his antagonist when a clear voice startled them both into temporary immovability. "Stop it!"

Charley whirled around. "Get out of here, Helen. How did you get in? I thought the door was locked!"

"I knocked, and walked in and found you fighting like beasts. What is it all about?"

"Never mind. I will settle this."

She turned to Bond, who stood with his broken fingers clasped in his uninjured hand.

"Will you explain this scene, or shall I call my father?"

"Sorry, Miss Blakeley," he smiled.

She turned like a flash and was gone.

"You'd better get out of here quick," snapped Charley, "she's gone to call the pater. If he hears of this there will be the dickens to pay! I'll call it off if you will duck right now."

Bond laughed outright, but stood warily on his guard. "Do you realize," he said, "that you assaulted me? See here, your poker has broken my operating hand."

Charley's face was knotted with anger, but he spoke coolly. "Dan, you are a fool. What could you hope to gain by speaking to Helen? If I had had a gun a few moments ago I would certainly have shot you. Now beat it, quick!"

Before Bond could reply, the door was opened without ceremony, and Mr. Blakeley entered, followed closely by Helen.

The old gentleman stood on the threshold and looked inquiringly from one face to the other.

He guessed what had happened, and was plainly relieved to find no one mortally injured.

"Well," he said, after a very awkward pause, "don't you think one of you had better say something?"

Bond stepped forward and placed a chair for Helen.

"Please sit down," he said. "If you will excuse me for a few minutes, I will run out to the doctor's office. I have hurt my hand quite badly."

As the door closed behind him, Mr. Blakeley turned to Charley. "Well," he snapped, "what have you got to say? This is a fine situation."

Helen had seated herself quietly in the chair Bond placed for her.

Charley stood beside her, still panting from his exertions. He held the poker grasped tightly in his hand, and suddenly realizing this fact, stooped to lay it down before answering his father's angry query.

"Send Helen out, dad, and I will talk to you."

"I won't go!"

"She might as well stay," said his father. "I imagine it concerns her, and I want it settled without your mother's hearing of it."

"All right!" Charley made a gesture of despair, "but she spoiled a good job well done when she came in a few minutes ago. Dan said he was going to propose to her, and I started out to kill him. He has been my best friend, but that settled it. I suppose it is all my fault, but I thought he had more sense than to try a trick like that, and I told him so a little while ago."

Mr. Blakeley glanced rather helplessly from one to the other as he said: "I do not know just how to deal with this. I feared some such trouble as this, but I am particularly helpless now on account of the service this man rendered us the other night."

Charley scowled. "Service or no service, he can't go beyond a certain point, and I would not be surprised if he never came back to face us."

Helen rose abruptly. "I think I had better go to mother before she begins to wonder where we all are. Settle the matter as you will," and she slipped quietly out of the room.

She found placid Mrs. Blakeley very busy in her own room with various household affairs, and very unwilling to be disturbed.

After a few moments of conversation Helen started downstairs again.

In the half-light of the lower hall she came face to face with Bond.

His right hand was swathed in bandages and suspended in a sling made of a silk handkerchief.

His face was drawn with pain, and showed a ghastly, bluish tint under the low light of the hallway.

Helen hesitated and swayed slightly to one side, putting out her hand to steady herself against the wall.

Bond's eyes glowed like coals. "Charley told you?" he asked in a low voice.

"Yes; have you gone quite mad?"

Bond frowned in a puzzled way. "Charley asked me that same question. I don't understand exactly what either of you mean."

"I cannot argue the point here," she said shortly, and started to pass him.

Bond seemed to go suddenly out of his senses. He clasped her around the waist with his sound arm and whispered fiercely: "Do you know that I am a king's son? I am King of Kasongo! If I were an ordinary black you might call me mad, but I am not an ordinary black! I am of royal blood!"

But before he had finished speaking, Helen had fainted away and hung lifeless on his arm.

Bond looked down at her and the madness passed. He laid her gently on the floor with a muttered ejaculation of pity.

Flight, sudden, ignominious flight, was all that was left for him.

He turned and started down the stairs, but before he reached the bottom of the flight, the door of Charley's room opened, and Charley, followed by his father, came out into the hall.

Helen's unconscious form lay before them.

A startled oath escaped from Charley's lips, and he re-entered the room, emerging a moment later with an automatic revolver in the palm of his hand.

A glance over the banisters showed the fugitive Bond almost at the front door. "Stop where you are and wait for me," said Charley in a level voice. Put on your hat and wait for me."

He glanced at his father, who was bending over Helen. "Look after her, dad," he whispered, and sped down the stairs, taking his hat from the rack as he passed.

Bond was waiting at the door.

He had caught a glimpse of the pistol half hidden in Charley's hand.

"Go out ahead of me," was the curt order, "I will give you one chance to prove yourself a man."

Snow was falling lightly, and belated shoppers were hurrying homeward, laden with packages and holly.

None of the passers-by noticed the two men, and for a time they walked rapidly and in silence, Bond a little in the lead and Charley close at his heels, with the pistol in his hand.

They had traversed a number of blocks when Charley spoke shortly. "Walk straight ahead to the end of this block and turn to the right."

Nothing further was said, and in a few moments they came suddenly upon a bridge and started across it.

Bond's broken hand pained him fearfully, and he stumbled every few steps, a growing paleness under his dark skin showed as they passed under the arc lights.

"Are you going much further?" he asked, as they neared the centre of the span.

Charley stopped. "This will do. Get up there on the railing!"

Bond hesitated and glanced up and down the bridge for help. The place was deserted, and the snow, which had increased in force, enveloped them like a white curtain.

"Are you going to murder me in cold blood?"

"Certainly not. I said I would give you a chance to prove yourself a man. You may jump from the rail, or I will shoot you. I do not consider it murder."

The whole place seemed to be revolving in an awful nightmarish way as Bond slowly and painfully climbed the railing and balanced himself on the top. He made up his mind to ask no mercy. After all this was the best solution of the difficulty.

The lights along the river far below showed yellow through the whirling snow.

A distant clock struck two.

Charley's voice sounded close behind him, cold and hard. "I will give you until I count three—one, two—"

Bond uttered a sob of mortal anguish and stepped off the rail into space.

He seemed to turn very slowly in the air, and instead of striking the water, floated softly on his back with a strange ringing in his ears.

His good hand sought the handkerchief which hung about his neck, and he opened his eyes slowly and painfully.

Charley lay asleep in his own bed. There was no ivory fan on the table, and Bond now fully awake became aware that he was clutching a little handkerchief which hung on a silken cord about his neck.

Getting up very quietly he went to the fireplace and laid it on the glowing coals.

It flared for an instant and then died down to a heap of gray fluff.

"The end of a dream," murmured Bond.

He stretched both arms over his head and turned to find Charley watching him, the ghost of a smile curling his lips. "What's up, Dan? Don't you feel well?"

"Yes, but I had a horrible nightmare. Got up to scare it away. Guess it is gone for good now."

He glanced at the heap of fluff, already dissolving into nothing.

"The end of a dream. Good-night."

Four Footed Monarchs

(*Continued from page 16.*)

Wainright, Alberta, numbered 402. Since then the gradual increase per annum has been about 200. Up to 1913, some 338 head were imported at different times from other herds, but the main increase has been from breeding. At the last report there were 2,397 buffalo in the park, and the report of the superintendent states that the young stock gives every reason to believe that the future herd will be made up of much better type of animal than many of the original herd.

The park covers an area of 160 square miles, and in this there are many clean-bottomed lakes, many sheltered valleys and no end of hay-swamps. The entire park is enclosed with a high wire fence, sustained by tamarac posts.

Some 70 elk, 17 Moose, 3 Antelope, about 100 Mule Deer and 20 Cattelo are also in the park, so the buffalo are well supplied with a variety of animal companions.

Situated conveniently on the main line of the G.T.P. from Winnipeg to Edmonton, this park at Wainwright, is fast becoming a popular place for the tourist to pause and become acquainted with the premier animals of America—or what has been saved of them from the marauder's hands. Everyone likes to look at wild animals, but to observe them in practically unfettered spaces, where they can be perfectly natural and at home, is an opportunity few people will allow to pass. Canada's buffalo park is becoming widely known and appreciated, and is decidedly a credit to the government, and the energy of the men who originated the idea.

The Scotch of It.

Two old Scotsmen sat by the roadside, talking and puffing away merrily at their pipes.

"There's no muckle pleasure in smokin', Sandy," said Donald.

"Hoo dae ye mak' that oot?" questioned Sandy.

"Weel," said Donald, "ye see, if ye're smokin' yer ain bacca ye're thinkin' o' the awful expense, an' if ye're smokin' some ither body's yer pipe's ramm't sae tight it winna draw."—*Tit-Bits.*

What About The New Thrift and War Savings Stamps?

UP to the present it has been the privilege of only those who could purchase Fifty Dollar Bonds, to loan their money to the Dominion of Canada and feel that they were directly helping in this way to win the war and assist in the enormous schemes of reconstruction. With the coming of this new year, however, the barriers have been removed, and there is not a man or woman, boy or girl, who cannot participate in the splendid new system of saving, which is being introduced. It is thoroughly in accord with the spirit of the times; all are united in the great bond of "service." Rich and poor have stood side by side in the trenches; it is only fair that some plan should be evolved by which every one might share together in the glorious task of assisting financially in the reconstruction here.

Very soon everywhere will be seen triangles with the letters WSS inside and the picture of a beaver on top. This means that wherever this sign appears, thrift and war-savings stamps are to be had. Twenty-five cents is enough to buy a thrift stamp, at which time a small folder is given the purchaser with squares on it numbered to sixteen, each to have a thrift stamp affixed to it. The name of the purchaser will be written on the cover, also the address, but if this folder is lost a dishonest finder may retain it. The warning is therefore very evident—take good care of your stamp book. When the final thrift stamp is affixed to this little folder, it should be taken to the post office where a Canadian war-savings certificate is given the one who presents it, and one war-savings stamp placed on the first square. This folder has ten squares in all to be filled each representing sixteen thrift stamps. That is, a folder full of thrift stamps, or $4.00 must be presented to receive one war-savings stamp. This war-savings certificate or folder may be fully registered, and if lost the money can be recovered. Then on January, 1924, the Canadian Government will pay $5.00 for every war-savings stamp.

The plan is very simple indeed, and should meet with the heartiest support of Canadian people everywhere. There is no one who cannot save quarters, and watching these gradually grow into dollars will prove most fascinating for many a young investor. It is quite safe to predict that many a fortune will be started in this small way, and parents should encourage their children to buy their first thrift stamp at the earliest opportunity. The principles of saving are best established in childhood—and with this plan of investment there is the added glamor of patriotism, and the feeling that one is backing up the "boys over there." Not only the children but the older people will find thrift stamps a very simple and effective form of saving. The Government has shown excellent judgment in introducing this method of saving, and every loyal Canadian should recognize the privilege of participating in a campaign which will put our nation safely "over the top."

Around The Hearth

(*Continued from page 38.*)

tion of men who are capable of rendering a just and fitting sentence of penal retribution.

Victory means duties and responsibilities almost beyond reckoning. In the settlement of so many obligations, and the reconstruction of so many shattered countries, there is bound to be wide diversity of opinion, saying nothing of the untold labor of such adjustment, hence the necessity of sterling qualities in the men who sit in judgment at the Peace Conference.

The work cannot be accomplished by these men alone. Old foundations are tottering, new standards are being raised. There is a clarion call to each individual—

"The Torch—be yours to hold it high."

My early morning reverie ended, I faced the glad day with renewed hope and bright outlook. When darkness closed down I watched the blaze of the huge bonfire only half a block away. At intervals I wrote to our soldier boy. There was a thorn in the rose of my happiness—the letter was addressed to *Siberia.*

What shall we do — now that the War has been won?

We must be Prepared to "Carry On" where Our Boys have Left Off

CANADA is great not because of her mines, her forests and her fisheries, but because of the character of her people. Shall Future Canada be worthy of the great sacrifices her present men and women have made and are making? Surely—That is the ideal before every right thinking man and woman in Canada, to-day. The Great Question is—How is it to be accomplished?

We know that no nation is greater than the homes. That no nation is greater than the individuals which make it up. That the home is the foundation upon which the more complex structure is built.

The Home is producing the future men and women—the greatest crop of all.

We must be ready to "carry on," where our boys have left off. Ready to do something for the home, for the community, for the school, etc. Something, perhaps, we have never understood before.

We break faith if we do not help to make the country a better place to live in. Let us never forget that every child has a right to the very best that we can give it.

There must be a *training* of the *Head,* the *Hand,* the *Heart* and the *Health.* But a child, to be mentally and morally strong, must be *physically* strong.

Health Problems therefore, will be one of the most important problems for women during the Reconstruction period.

It is a broad subject and it includes a careful study of many problems.

Home Conditions Must Be Studied.

The *Sanitation* of the Home—The ventilation and Heating of the Home, Household Conveniences and Labor Saving devices which will save strength, energy, time and health should receive attention. A careful study should be made of those *foods* most suitable for the *growing child* Care and feeding and training of children are of vital importance to the future of the race.

Sample Equipment for School Use—Mid-day Lunches and Domestic Science Work.

School Conditions Must Be Studied.

There are little things that require constant attention if the child's health is not to be impaired. The School must be properly heated, *early in the morning;* it must be properly ventilated, lighted, cleaned, etc.

Are you interested in the "Hot Lunch" for the children in the rural schools? It has many advantages:—

1. Digestion is aided and the mid-day meal is better balanced.
2. Pupils are enabled to do better work in the afternoon.
3. Interest is added to school work.
4. Practical training is afforded in household management.
5. Pupils are encouraged to take sufficient time to eat.
6. The relationship between home and school is strengthened.
7. The introduction of definite instruction in Household Science is rendered much easier.

The Department of Education is making provision for a small and complete equipment for rural schools whereby the child may receive one hot dish for the noon lunch. See that your trustees get full information and encourage them to secure the necessary equipment. Arouse community interest in this most important question.

Public Playgrounds Are Important.

Is there sufficient playground space for the children of your community? Are there any games and appliances provided?

Play is a necessary part in every useful, healthy life, and just in proportion as any section of the country fulfills this need will the young people of that part be happy and contented in their community. It is one good way to check the "drift to the cities."

Education Will be the Vital Factor

in solving the problems which are now confronting us. In the rural districts it will be necessary for us to get together for the purpose of study. Perhaps, a Reading Club, or a Literary or Dramatic Society, could be formed. Special lines of study could be followed. Outside speakers could be brought in, occasionally, and even debating could be carried on with a nearby community

A Library is Needed.

But, it is very necessary to have a library to which you can have access at any time. If you have not a library secure a Travelling Library for 3 or 6 months until you can establish a permanent one. Women's Institutes wishing to obtain Travelling Libraries should write to the Inspector of Public Libraries, Department of Education, Parliament Buildings, Toronto, asking for an application form and stating the class of books desired. These books may be lent to all people in the community who wish to borrow.

The Inspector of Public Libraries will be pleased to inform Women's Institutes on the best means of establishing small public libraries.

Lecture Courses.

In addition to the assistance which the Women's Institute Branch of the Department of Agriculture has offered in previous advertisements, it is prepared to send Instructors to conduct Demonstration Lecture Courses in Household Science, Home Nursing and First Aid, or Sewing to any Institute desirous of taking advantage of the same.

Equipment Used by Women's Institute Lecturers

A charge of 25c will be made to the Institute members and 50c to non-members for each of the courses, while one dollar additional will be charged each person taking the Sewing course. An outline of the Courses will be furnished by writing to the Institutes Branch, Department of Agriculture, Parliament Buildings, Toronto. They include:

Domestic Science.

Treats of the cooking and preparation of vegetables, fruits, milk, cereals and cheese, eggs, meat, bread, cakes, salads etc., etc.

Home Nursing and First Aid.

Takes up the study of the human body and its structure; care and ordering of the sick room; Bed-making for various forms of sickness; the Bath, kinds and effect; Emergencies—hemorrhages, drowning, burns, etc., etc; Bandaging; Contagious and infectious diseases; administration of Food and Medicine; Baby Hygiene.

Sewing Courses.

Ten lecture course on handsewing, measurements, plain and fancy stitches, button holes and eyelet, drafting and cutting, machine finishing, plackets, tailoring skirt, making one piece dress, plain and fancy, etc.

Start an Institute.

Every community should have an organization representative of all classes in the locality. Get your people together to consider the needs and possibilities of the Reconstruction period, and if you have not a Women's Institute, write to the Department of Agriculture for full particulars as to aims and objects and methods of organization. The Institutes will be furnished, at an early date, with suggestions as to lines of effort during the Reconstruction period for members who have been so active in patriotic work during the past four years.

ONTARIO DEPARTMENT OF AGRICULTURE

PARLIAMENT BUILDINGS, TORONTO

Hon. Geo. S. Henry, Minister of Agriculture

ONTARIO

The old order changeth—giving place to new

The Madness of McAra

(*Continued from page* 43.)

tion," said McAra, hotly, "but *this* is going to end here and now!"

As he spoke he reached up suddenly to the wall behind him and took down his old riding-whip. The act was dispassionate and very deliberate. He seemed all at once to have made a stern resolve.

"Come here," he said, peremptorily.

Then as she didn't obey but shrank backward, watching him in a kind of fascinated horror, he repeated his command.

"John! What on earth ——"

"Come here, I say!"

"Are you *mad?*"

"Yes. I think I am," he returned, with a kind of terrible quietness.

He seized her then and half-dragged her into the middle of the room.

"John! You—you wouldn't—oh, you wouldn't *dare!*" she whispered, shutting her eyes.

"Your breath! Faugh! . . . . Turn away your head!" he cried.

He swung the whip backward and brought it down over her back. With a muffled scream she tried to break loose from that terrible grip, but failed. Again the whip descended with its hissing cut.

"John! Oh John!" she whimpered.

Again that stinging lash and with a wail of pain she sank to her knees. But he roughly jerked her up, and shaking her, flung her from him. She staggered across the room and brought up against the big oak table.

It was that terrible trench madness she had read about! Thoroughly terrified she leaned pantingly against the table and gazed at the coldly enraged man who was her husband. Her husband? Oh no, surely! This was all but a horrible nightmare from which she would emerge presently——"

He seemed to read her thoughts.

"Mad? Yes. But not in the way you think perhaps," he said, throwing the whip down and then turning to the door.

Then he had meant it!

"You—you Whitechapel wife-beater!" she flung at him, her voice weak and shaking with the passion that surged through all her slender being. "You—you brute!"

The berserker rage had spent itself. The flame in his eyes had died out. He wheeled slowly and became aware, dazedly, that she was weeping. He had never been able to stand Kathie's tears. With a sudden, blind movement he made as though to reach her side but she screamed and retreated from him. Perplexed, he stopped, and drawing one trembling hand across his forehead as if to clear away the mists in his brain, he stared at her half-stupidly. Through a jagged tear in her dress her white shoulder gleamed. With a start he saw that two great blue bruises marred the flesh. Closing his eyes he turned aside his head.

"Kathie ——," he began and gulped.

"Don't Kathie *me!*" she sobbed. "Go back to—to wherever you learned wife-beating. This is *Canada.* Men don't beat their wives *here.*"

"Kathie, if you could know the sickening horror that filled me when I saw a cigarette between your lips! I went mad, I tell you! I—I wasn't accountable ——"

"You Cockney Sergeant!"

"None of the McAra women ever—why we McAras have reverenced our women always. My mother, the purest among women, my ideal in womankind ——"

He broke off with a dry sob. All his fine strength had deserted him. Had Kathie but known it he couldn't just then have hurt a kitten. Dropping into a chair he sunk his head into his arms on the table and great sobs shook him.

But Kathie was still very angry—and more than a little frightened. Biting her lips she stood watching him and wondering how she could get to the hall door without passing close to him. She ought to summon help. He might fall upon her and kill her next! She remembered with a throb, half of dismay and half of thankfulness, that she had given her little maid permission to go downtown at four o'clock. They two were alone in the house.

Well, thank heaven there had been nobody to overhear them, to witness the disgraceful scene just past! And ——and—if he killed her——

A groan and a sob mingled came from that hunched-up khaki form. Kathie took a tentative step forward, and stopped, uncertain what to do. She had never known John to give way to his emotions in this way before. The sight was startling, to say the least, and when he looked up and she saw that his eyes were wet she melted perceptibly. He rose.

"John," she began, timidly.

"Kathie, come here," said McAra, gently.

"No! I ——"

"Then let me have your hand. I don't blame you for standing off. . . . I was a brute . . . ."

The fear yet lurking in her face hurt him. She refused to advance further and his own hand dropped to his side.

"Kathie, back there where I've spent the past two years and more I have seen some terrible things," he began, abruptly. "But I hadn't meant to tell you about them. I would have spared you——"

"Are you trying to make excuses for——"

"Heaven forbid!" and he sighed.

Presently he went on, brokenly:

"I want to tell you about this one occurrence. It may not impress you as—it did me. . . . . When I've done you may pass judgment, decide whether or not you should try to forgive me."

She had turned half away and he now saw, with a great start, that a long red welt extended across her back where the lace of her bodice was torn. The sight almost unmanned him. That he—*he* had done this awful thing! He felt like a murderer, and in the agony of remorse he groaned aloud. A silence ensued.

"Go on. I will listen," said Kathie, patiently.

"It is this, then: One day a Hun 'plane was brought down in a field near our billet and I and three others extricated from the wreckage—a woman pilot. She was quite unhurt but had been pinned down so that she hadn't been able to move hand or foot. She immediately sat up and—spat in our faces. Then she coolly pulled out matches and a box of cigarettes and began to smoke. That sight maddened us for she was well known by reputation amongst us as the pilot who had dropped poisoned candy in the villages all along the line. I myself had witnessed the death agonies of two lovely little children who had eaten some of the candy, and I had promised myself that if ever I had the luck to be in the vicinity of a captured enemy 'plane I should treat the aviator to a long-drawn-out process of torture. . . . . But this was a woman. Some of the men were for shooting her on the spot. We stood around looking at her and unable to decide just what to do. We had 'the goods' on her as they say—some of her poisoned candy lay on the ground at her feet—and one of the men suggested that we forcibly feed her with some of her own stuff. It seemed too good a death. So did shooting. I was standing nearest to her and suddenly she blew a breathful of smoke right into my face and said: 'Kanadien Schweinhund!' with all the vitriolic force she was capable of. My gorge rose and I saw red. 'Don't take *that* from her Captain!' said one of the men and he rushed forward and seized her by the neck with both hands. Probably he would have strangled her. I don't know. All I know is I pulled him off and at that moment she drew a revolver and fired. The shot grazed my ear. Then all the men went for her at once. They disarmed her and pinioned her and the Sergeant, who had found a whip somewhere near at hand, began to beat her. She screamed at every lash and between lashes. When he seemed tired I took the whip myself. I thought only of the two little children I had watched die. The blows rained upon that squirming form until the woman-fiend fainted away. We carried her, then, into the billet. She was shot at dawn the next morning."

Kathie had listened in silence to this tale. She had moved nearer to him and now with a little sigh she put a hand on his arm and stood gazing past him out of the window in a trance-like state, her eyes widened with horror.

"John," she said at last, bringing her glance back from the horrible scene his words had conjured up. "John, I think I understand."

He did not reply at once, did not stir. Perhaps he was half afraid she might withdraw that sympathetic hand.

"Afterward I had a revulsion of feeling," he said, presently. "I had never laid violent hands on a woman. The whole instinct of my nature, all the British tradition that is in me is against such a thing. But while the anger was on me I was a veritable wild man, with no more compunction than I should have in hitting at a cobra."

McAra spoke slowly, earnestly, almost sadly.

"And forever more, when I see a woman with a cigarette between her lips I'll see that German—devil in woman's form. I'll see red. I cannot stand it, Kathie. I *cannot.* Some men may be able to tolerate the habit in their wives but I cannot. . . . . And if you feel that you can't forgive me. . . . . ."

With a broken little cry she crept into his arms.

"And now," she whispered, after a while lifting a shining face to his, "*now* you'll kiss me, John? Just once? And I'll run right upstairs and wash out my mouth!"

Literature and Journalism

(*Continued from page* 14.)

men and women want to write for a living, and have no idea how to go about it. The literature course of the public and high school is useless, and the only resource is some American Correspondence School of Journalism, which may be better than nothing, but really gives one no actual experience. This, and the more important work of home-keeping, that beautiful and exact science, are realms in which apparently one must enter blindly, with no guide save reason, and no technique other than that which a stray School of Journalism in some large centre, unavailable to the student who needs it most, can afford. To say that the real school of journalism is life is only a half truth. All the training in the world will avail nothing if one has not gone to the school of life, but training is also necessary. In the meantime, I would repeat that a good school is the nearest newspaper office. If this is not available, there are other newspapers and magazines to be assailed with material as fresh and brief and to the point as you can make it.

(3) "What are the qualities necessary in any article before a publisher will consider it worthy of acceptance?"

Obviously, the first quality is interest, and the second is human interest, and the third is very human interest.

* * *

Another correspondent asks: "What do you consider the requisites of a poet?"

Well, one can take that question several ways. I do feel deeply that the first requisite is a comfortable income, for it is hard to write poetry and live in Canada! And another requisite is common sense enough to prevent one reading one's own poetry aloud to friends. And a third requisite is a ruthless desire to revise one's own work. But if you mean the equipment of a poet, I should say that it is usually based on a long past, either of "thinking" forebears or by some process of education which has sharpened a brain so sensitive and a hand so true that the thing felt, divined or experienced flows under the pencil like a song. This equipment implies work. It is no easier to write a good sonnet than to play a difficult sonata. It is amazing how much good poetry and how much bad poetry is being written to-day. Do you know an American—really a Canadian for she was born in our own North-West,—one Mary Carolyn Davies? If not, I would advise you to send for a little book of hers published in Canada by the MacMillan Company, called "Drums in Our Street." It is an example of a certain phase of the best modern poetry. The writer takes the impression of the war as it has come to the people in any street, yours or mine. The poems are very simple, yet they constitute in themselves a practical text book on the effect of restrained emotion that sees every-day things and people in the clear light of what, for want of a better word, we call genius. This thing is not always imagination—sometimes it is just a straight relation of the truth. For instance, this is the way Miss Davies begins one of her poems called "Evan":

"The war is not in Europe. No. It's here
In our parlor, underneath the chandelier,
Where Evan used to sit, and hold his head
Within his hands, a problem there before him.
He couldn't make the thing come right, he said.
It was natural to watch him studying there."

When one can instantly summon an atmosphere like that in six very simple English lines without using one "poetical" phrase, he or she has obtained that mastery over material things which is the conquest of art.

* * *

From an Ontario writer comes another letter: "Do you know where I could obtain subjects upon which to write articles pertaining to farm life, and should one send articles to the editors, asking their value?"

Write to the Agricultural Department of the Ontario Government, Toronto, and the Dominion Government at Ottawa, for recent blue books and pamphlets pertaining to farm life, where you can get any amount of data and subjects. You might submit manuscript to the "Farmers' Advocate," of London, Ontario.

* * *

From Vancouver comes the question: "How does one obtain an interview with a celebrity, with a view to making an article, if the writer is not connected with any special newspaper?"

Under these circumstances, an interview might be difficult to obtain, as the standing of the journal has much to do with the welcome of its representative, but as an usual thing celebrities are very human. They like to be written up—it all means advertising—and if you communicate with the manager of your celebrity, introducing yourself, and asking, ahead of time, for an interview, you will probably receive a favorable reply. I have interviewed a good many "stars," and found them as a usual thing very companionable and kindly. Semi-occasionally I have myself been interviewed, notably once in extreme youth when touring Canada with a concert company. Arriving in an Eastern city, a grimy card was handed to me by the hotel clerk on arrival. It read: "Dear Miss, I heard you sing last night, and liked it. Willing to write you up in this city, but I warn you beforehand it will cost you the price of my dinner. I was a writer once; am a drummer now. Yours truly."

Never warn them! That is one of the first rules of interviewing.

Katherine Hale

Rose In The Bud

(*Continued from page* 15.)

seen the different members of the firm, and to-morrow the articles would be signed. To-night. Ah, to-night, he would come into his own. He had everything to offer her now, the things that belonged to every woman. Opening the gate he went up the tiled walk.

Somewhere music was heard. Across the lawn he sped and through the open French windows saw her at the piano, candles shedding a soft glow over neck and arms. "Katharine!" "Ah, Dick." She came forward quickly, a little breathless and with a softness in her eyes he had not seen since the night of her debut when she had given him the rose. She was still the same, he thought, a little more gracious, gentler perhaps, and the black frock suited her perfectly. He had not thought it possible that she could be more beautiful. But the woman was all eager questioning. When had he come? How long was he going to stay? He must tell her everything. Sitting there in the open window, he told the tale of the struggle it had been and of how his chance had come at last and then of his reward, of how to-morrow he would sign the papers that would ensure his future.

"And now, Katharine," he said, "I swore I'd never ask any woman to marry me again until I could offer her the things that are every woman's right. These things are now mine to offer,"—he laughed a little—"that is along with myself." Rising, he bent over her.

"Auntie," a voice broke in, "there's a great round moon in the sky, just like a silver bubble. Do you think it

FASHIONS

(*Continued from page* 37.)

8072—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 2⅜ yards 36-inch white voile—¾ yard striped voile for vest. The rolling collar is prolonged to form revers which roll back from the inset vest. These revers extend below the waist-line and are finished with trimming sections. There are perforations for shortening the sleeves.

8095—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 1⅜ yard 40-inch Georgette crepe, ½ yard 36-inch satin for collar and cuffs. Beading No. 12469, blue or yellow transfer pattern of 24 motifs. The inset vest of this blouse extends below the waist-line in panel style, but it is perforated to be made without this extension. The large collar extends into long narrow revers.

8090 — Ladies' House-dress. Nine sizes, 34 to 50 bust. Size 36 requires 4⅝ yards 36-inch percale—¼ yard white linen for collar. Width at lower edge about 1¾ yard. Neat and trim is this house-dress to be fashioned of percale, chambray, or gingham. The closing is at centre-front, and the waist is tucked on the shoulders front and back. Turn-back cuffs finish the long plain sleeves which are perforated for the shorter length, and the three-piece gathered skirt is attached at one-inch raised waist-line.

8084 — Ladies' House-dress. Sizes small, medium, and large, corresponding with 36, 40, and 44 bust. Small size requires 3½ yards 36-inch striped gingham or percale—⅝ yard 36-inch white rep for collar and trimming. Width at lower edge about 1¾ yard. The simplest thing in the world to make is this house-dress, the sleeves of which are cut in one with the dress. They are in full-length, but are perforated for the shorter length illustrated.

7881—Ladies' Two-piece Gathered Skirt. Seven sizes, 24 to 36 waist. Size 26 requires 3⅝ yards 44-inch serge—8¾ yards braid. Width at lower edge about 1¾ yard. Included in the pattern is a jumper attachment which is not illustrated. The skirt has three-inch raised waist-line, and closes at left side seam.

7886—Ladies' Two-piece Tunic Skirt. Six sizes, 24 to 34 waist. Size 26 requires 5⅞ yards 36-inch velveteen. Width at lower edge about 1¾ yard. The tunic of the skirt is in four sections, but only two are illustrated; one applied at each side. The pattern provides a box plaited tunic section for the front and back. The waist-line is raised three inches, and the closing is at left side seam.

(*Continued from page* 38.)

7938—Misses' and Juniors' Single-breasted Coat. Eight sizes, 13 to 20 years. Size 16 requires 3¼ yards 54-inch tweed—3⅞ yards 36-inch lining. The large collar rolling high at the neck may be worn flat with the fronts turned back to form revers.

8103—Girls' and Juniors' One-piece Dress. Five sizes, 6 to 14 years. Size 14 requires 2⅛ yards 44-inch serge—1⅛ yard 36-inch satin—1⅛ yard fringe —¼ yard white organdy for collar. A rolling collar finishes the V neck, but instead of this a removable shield and round collar may be worn.

(*Continued from page* 39.)

8105—Misses' One-piece Dress. Four sizes, 14 to 20 years. Width at lower edge about 1½ yard. Two illustrations of this frock are given, the one at the foot of the page showing how the dress may achieve the fashionable long-waisted effect. In this view it is composed of velveteen and satin, the upper part of the dress of satin, and the lower part of velveteen. The velveteen is applied along a line of perforations given for this purpose. For this view 2¼ yards 36-inch satin—2⅜ yards 36-inch velveteen are required. At the center of the page the dress is shown fashioned of one material, for which size 16 requires 3⅛ yards 44-inch check serge—¼ yard white satin for collar. The dress may close at center-front or side-front, and may have high or low neck, both are illustrated.

8041—Misses' Single-breasted Jacket. Four sizes, 14 to 20 years. Size 16 requires 3¼ yards 44-inch tricotine—3½ yards 36-inch lining. No. 7773—Misses' Two-piece Skirt with Suspender Attachment. Three sizes, 16 to 20 years. Size 16 requires with jumper 2⅝ yards 44-inch tricotine Width at lower edge about 1½ yard. A large crushed collar buttoning in surplice style is a smart feature of the jacket of this suit. This is comfortable for cold weather wear, but for warmer days the collar, being convertible, may be rolled low and the fronts of the jacket turned back in revers. The front and back are in panel style. The skirt is gathered at the top and may have a jumper-like section in front with suspender straps at the back, or if preferred, the skirt may be worn without this attachment.

(*Continued from page* 40.)

8109—Boys' and Youths' Blouse. Five sizes, 8 to 16 years, Size 12 requires 2¼ yards 32-inch madras.

8046—Girls' and Juniors' Coat. Five sizes, 6 to 14 years. Size 12 requires 2¾ yards 54-inch velours—½ yard 36-inch plush for collar and trimming—3¾ yards 36-inch satin for lining.

8104—Boys' Double-breasted Coat. Six sizes, 3 to 10 years. Size 8 requires 2 yards 54-inch cheviot—2⅜ yards 36-inch lining.

8113—Boys' Blouse. Three sizes, 4, 5, and 6 years. Size 6 requires 1⅝ yard 36-inch percale. A box plait is applied to the front of the blouse, and the neck is finished with a collar-band, and turn-down collar.

7985—Child's Dress. Three sizes, 2 to 6 years. Size 4 requires 1½ yard 40-inch lawn or batiste—5½ yards 3-inch eyelet embroidered banding—8¾ yards edging. Round neck and long sleeves may be substituted for the square neck outline and short puff sleeves illustrated.

7972—Child's Dress. Four sizes, 2 to 8 years. Size 4 requires 1⅞ yard 32-inch check challis—⅝ yard plain challis. This frock closes at the back, and is gathered below a square yoke. The sleeves may be long or short, and the novel collar is especially attractive.

7931—Girls' and Juniors' Dress. Five sizes, 6 to 14 years. Size 8 requires 2¾ yards 36-inch crepe—2½ yards velvet ribbon. The waist is cut in one with the sleeves which are perforated for shorter length, and it is joined to a straight gathered skirt.

7945—Girls' and Juniors' Dress. Five sizes, 6 to 14 years. Size 10 requires 1⅝ yard 27-inch dotted swiss—2½ yards 40-inch organdy—4½ yards ribbon for sash. Featherstitch borders No. 12363, in blue only. Plain and dotted swiss or organdy may be combined attractively in this frock which displays a new fashion note in the overblouse or jumper in peplum style.

7914—Girls' and Juniors' Dress. Five sizes, 6 to 14 years. Size 10 requires 3¾ yards 36-inch organdy—2⅝ yards Valenciennes insertion—9½ yards edging. Embroidery No. 12367, blue or yellow transfer pattern of 38 motifs. Flesh-color, orchid, or jonquil yellow organdy may be selected for this dainty party frock with embroidered jumper.

Worth More Than It Costs

THIS watch can be bought at any dealer's for $3.00. It is different from the ordinary watch because it tells the time in the dark.

Real Radium in the substance on the hands and figures makes them glow brightly, no matter how dark it is, and this glow lasts for the lifetime of the watch.

You do not need to strike a match to see the hour.

Most people find a Radiolite much more useful than the ordinary watch. It is indeed worth more than it costs.

More than 50 million Ingersoll watches have been sold during the last 25 years, and Ingersolls can be bought in any town or village just the same as in the big cities—same high quality, same low price. Ask for Ingersoll Radiolites—$3.00—at any dealer's.

Look for the words Ingersoll Radiolite on the dial.

ROSE IN THE BUD

(Continued from page 46.)

would break if I leaned out and touched it with my fingers?" A child of fifteen came into the room, awkward, dishevelled, and untidy. "My niece Rosita," Katharine made the introduction a little breathlessly, and then "Why aren't you in bed, dear?" "No one could go to bed on a night like this," said Rosita calmly, and turned to the impatient man: "So you're Dick Delamere of the Yukon. Have you got any nuggets in your pockets?" The prosaic curiosity of the child broke the tension, and Katharine laughed a little and sent her away with a warning against speculating with the moon. But the child had hardly reached the door, when she ran back. "Here's Uncle John," she cried. "What's he coming over for and in such a hurry?"

Across the lawn they saw the figure of an elderly man approaching In his hand he held an open telegram. "Katharine," he said, "It's come at last. It's war. Look," and then catching sight of the man, "Dick," he said, "You! This *is* good news." The two men shook hands heartily. The elder man had watched him grow up, and there was a real affection between them.

"But, war, Uncle, what do you mean?" John Chelcote read the telegram. It was in code and from an old friend high up in military affairs, advising him to sell out certain stocks immediately, as it was only a question of hours before Great Britain would declare war with Germany.

"War," said Dick, "then all this talk about Serbia wasn't bunkum?"

"War," said John Chelcote. "I was through South Africa, but this . . . We cannot think what this will be," and while the elder man talked, Dick Delamere's swift brain pictured what war would mean for him. Every man would be needed in Europe, and he too must go. The papers were not signed, there would be no need now for a new member of the firm, people would have more to think about than petty knots of law. War. It meant waiting longer for Katharine. She couldn't live on a soldier's pay. Through the open window came Mrs. Chelcote and her sister, all old friends, and it was midnight before they left and he with them.

"I shall see you again to-morrow," he said at parting, and Katharine smiled back. She could wait another night for her happiness she thought, as she and Rosita went up the stairs together. She had never realized how much she had missed him, how much she had cared, until she saw him standing there to-night.

The fourth of August dawned clear and cool. In Europe troops were being mobilized on every frontier. In England the standing army was entrained for Dover en route for France. In Ottawa there was already the nucleus of the great Canadian Expeditionary Force. Dick Delamere was sent for that morning. He had been a Captain in a Militia Regiment in earlier days and the great chief remembered him. Experienced men were needed. Would he start training at once?

Six weeks later he said good-bye. He had not seen her since the night war was declared.

"Katharine," he said, "the night I came here first, I had planned to say things that now I have no right to say, but when the war is over, may I come back?"

"You will find me waiting, Dick," she answered.

* * * * *

"I suppose the 'Ladies Walk' must have looked like this before Hell broke loose across it," he mused as he walked up the avenue. Above him the chestnuts hung their scented boughs and a little wind brought the perfume of lilacs. At the gateway he paused. A rose bush laden with heavy pink blossoms broke the path across the lawn. Out there amongst the mud and stench and beastliness, he had not thought to hold them in his hands again. Roses. They brought back the memory of the London flower girls and of the fragrant blooms they had thrown in upon them as the ambulance passed. Breaking off a bud, he thrust it into the lapel of his coat, and crossed the lawn.

In a little ingled window of the drawing room Katharine sat looking out across the garden. She was tired, more tired than she liked to confess. "It is the end of the long strain," she thought, "that has left me like this," or, she laughed a little, "my advancing years." When his note had arrived saying that he would be with her that night, she had gone to her wardrobe and lifted out a frock of ivory white. "He always liked me best in white," she remembered. "I'll wear it to-night." But when she slipped it on and stood before her mirror, she shook her head. "So I am no longer young," she said and took down a filmy mass of black lace that brought out the fairness of her skin and intensified the brilliance of her eyes. Sitting at the window, she went over the past since that night three years ago. They had corresponded regularly, and she had followed his promotion with a pride that only equalled her agony of heart when he was reported dangerously wounded. But she had filled her days with war work, giving her time and voice generously wherever her services were needed, and Rosita was a success. All her time and trouble with the child had been rewarded. She was as sweet as any debutante could hope to be, as gracious as if the planned-for years in the French finishing school had been an accomplished fact. Would he never come? She moved restlessly.

And then she saw him standing in the window. Afterwards she wondered how long he had been watching her. "Ah, Katharine," he said easily, "It's good to see you again."

"He has changed," she thought. "He has more poise, more charm."

"She is no longer young," thought the man.

Swiftly the woman in her sensed his disappointment, and she strove desperately to recover her poise. "You must tell me all about it, Dick," she said, "what you thought of my beloved France, what the King said when he pinned on your medal, what you felt like when he pinned it on."

"I felt like a bally ass," he said and laughed. The tension was broken. For the moment her tact had saved the day, but she was worn out; the strain of waiting had been too long and she could not keep it up.

"Her brilliance is gone," thought the man.

"He no longer cares," thought she.

The door opened and the slender figure of a girl stood silhouetted against the light. A white frock enhanced the glory of her red gold hair, creamy skin, and deep blue eyes.

"It's Colonel Delamere," she said coming forward, "and I am Rosita. You are welcome home again." All the tragedy, the horror of the past three years seemed to vanish as he looked at her exquisite freshness.

"Katharine," he said, "I congratulate you. She is perfect." The girl flushed with pleasure and dropped a half-mocking courtesy. "Auntie," she pleaded, "just once before I go. If he's heard cannon, he can stand me." Katharine rose and went to the piano.

"It is Rosita's first concert to-night," she explained," and she is anxious to go through her song once more" She lit the tall candles on the piano and the soft notes of the prelude filled the room. The girl lifted her voice.

"Rose in the bud, the June air's warm and tender." Her fresh young voice sang on until almost the end, when suddenly conscious of the man's intense interest, she faltered, lost her words, and turned to her Aunt. Katharine's mellow voice swept in and steadied her, "Love comes but once, and then, perhaps, too late."

"Bravo," cried Dick and taking the rose from his coat he came forward and presented it to her. She bowed gravely, and then looking at the blossom, "You have given me my first bouquet," she said, "and I'm glad it's a rose." She is like one herself, he thought as he slipped the cloak across her shoulders. "Dick," said Katharine, "shall we go across the lawn and see Uncle John? He knows you are here."

How the following weeks passed she never knew. From the very first she understood. All that youth and joy and belief could do to heal his shattered nerves Rosita did, and Katharine was helpless against the appealing softness of her youth. Day after day, she filled her house with people. There were luncheons, drives, teas, rides in the early morning and informal dinners and dances at night. The charming deference of his manner towards her never faltered, yet he did not speak.

One night as he sat telling tales of his men, the girl burst in with the news that Uncle John was giving a formal dance for a visiting foreign celebrity and had invited her.

"You are not out yet, Rosita," Katharine said coolly.

"I'm eighteen," said Rosita.

"You are not out yet."

"But——Oh, please!"

Katharine raised a slender hand. The girl hurried from the room, but the man saw that her eyes were full of tears. Yet angry and disappointed as he was, there was something about Katharine that forbade him to plead for Rosita.

"At least," said Katharine to herself, "that one night shall be mine," and the next day she ordered a frock of tulle and lace, a floating, clinging thing such as he loved.

Two days before the ball she and Rosita were hunting for some lost music that the visiting celebrity had heard her sing in the old Paris days. From one of the rolls there dropped a photograph. The girl picked it up and as she did so, Katharine heard her sob. She looked up, Rosita stood with a little old-fashioned photograph of Dick Delamere in her hands. "Oh, Auntie," she cried, "Let me go, let me go. Don't you see? Can't you understand?"

"What is there to understand?" asked Katharine. Sobbing, the girl vanished down the stairs.

That night Katharine sat for a long time at her window. Again the moon hung low in the sky—"a great silver bubble" Rosita had called it on that night three years ago when she had broken in upon them. What was it she had asked? "Would it break if I leant out and touched it with my fingers?" Well, it was all broken now and by her fingers.

In the morning she called Rosita to her. "I have changed my mind," she said, "you are to go to the dance, provided you tell no one, not even Dick, you are going." Eagerly the girl promised, and the next two days were spent in a whirl of preparation. That night Katharine dressed the girl herself and then stood back and looked at her. In a drifting cloud of white tulle, with green leaves in her sunny hair, a great white fan in her slender fingers, she was flower-like, exquisite.

(*Continued from page* 26.)

hundred-acre farm in Ontario. On a farm I found there was plenty of work. We have a large garden, and I helped plant and hoe the vegetables, pick the berries and currants.

We had fifteen cows milking all summer, so I helped with these. Although I was rather slow at first, I soon "got up speed." I took the cows to pasture, and brought them back at night. We have seven little calves, which I cared for.

When harvest time came I took my part. I pitched and placed sheaves in the mow, and took water to the barn for the men to drink. I also tried my skill at cutting weeds.

We raised over one hundred chickens and some ducks. I gathered the eggs, and although this may seem to some city folks a very easy task, it certainly proved quite puzzling when the hens had the run of yards, lanes, sheds and fields.

Potato planting and harvesting found me right there. There was a good crop of apples this year in this vicinity, and I found apple-picking great fun. Afterwards came the turnips and mangolds, which I helped top and draw in.

As mother is the only one in the house, I also helped her with the housework. I can bake, and though my brother says it is not as good as mother's, I notice that it disappears very quickly. Then there were other household duties, such as sweeping, dusting, washing dishes, cleaning cutlery, tending to lamps, washing, ironing, canning vegetables and fruits, preparing the meals, and many, many other tasks found in every farm home. All my time, though, was not spent at work. Time was found for music, crocheting, knitting, sewing, reading and games. Another way I am aiding is by being the proud possessor of Victory Bonds. I am going to school again now to educate myself to be a good citizen of Canada.

Now, when summer is over, I can look back with pride at my work. Although I sometimes felt like giving up, I directed my thoughts to the boys "over there," and somehow I just seemed to forget about myself.

I helped production, which is so essential now when all Europe is depending on Canada for food.

Peace has dawned at last, and when the boys come home I shall be able to look them bravely in the face, knowing that I have done my "bit" to support them and bring liberty to the world.

STORY CONTEST FOR GIRLS AND BOYS

12-16.

Prize Story

By Imogene Secord, Age 15.

As I strolled one day among the trees that border our little creek, my heart throbbed when I came unexpectedly upon a nest at the foot of an old stump, overlooking the water. One—two—three—four—twelve warm, blue-green eggs were cradled in a downy bed of feathers.

It was with a feeling of awe that I realized the wonderful things Nature had taught this little mother duck—taught her to build her nest near to water, sheltered from enemies by bushes, grasses and trees.

Two weeks later, I returned, and although I remembered the location of the nest well, I could not find it. After walking around among the leaves and hushes for a little time, I was startled by a slight flapping of wings, not two feet from me. The frightened duck flew from the nest a short distance, and then began to flap her wings and pretend she was wounded. She was trying to draw me away from her nest. It was then that I noticed how similar she was in color to the shrubbery where her nest was built. The eggs were not yet hatched, and not wishing to alarm the mother duck any more, I left the nest.

A few days later, I returned. The mother duck, on seeing me, flew swiftly away and alighted not far distant. I bent over just in time to see little brown balls of down scampering into the grass to hide. They did not go two feet from the nest, but they were so similar in color to their surroundings that I had trouble in finding them, and when I did get them all together in the nest, I had a hard time to keep them there.

A few days later, I went again. This time I found the nest deserted, but chancing to glance over the bank of the creek, I saw them disappear around a bend in the stream—the mother sailing proudly and majestically in the lead.

As those little objects of interesting study disappeared, I whispered softly, "O Lord, how wonderful are Thy works; in wisdom hast Thou made them all."

Honorable Mention in Story Contest.

By Clara Findly, Age 15.

One day, as I walked through the forest, I noticed a small red squirrel skip rapidly away over the rustling leaves and leap into a tree, where it perched on a high limb, and looked saucily down at me.

I hid behind a bush, and thought I would watch it and see where it lived and how it worked. As it thought I was gone, it came down and ran away in another direction, but soon returned with another squirrel larger than itself.

In the distance were some beech and hickory nut trees. This is where they were going. I still watched, and each took up a nut and looked at it to see if it was sound. Quickly they discarded this one and picked up another, which was sound and good. Both having secured one, they hurried away to a small crevice at the foot of a tree. Here they were laying up their winter provision of nuts and a few grains of corn. Having left them there, they returned for more. They continued this for several hours, never complaining or stopping for rest.

I went home that night thinking next day I would return and see if they still worked at their tedious work. This I did, and found them busy as ever. I looked into their cupboard, and found it had several handfuls of nuts stored for winter.

I hope no cruel boys or girls will take these nuts for their own pleasure, thinking it was not hard for Nature's creatures to lay by their store of food.

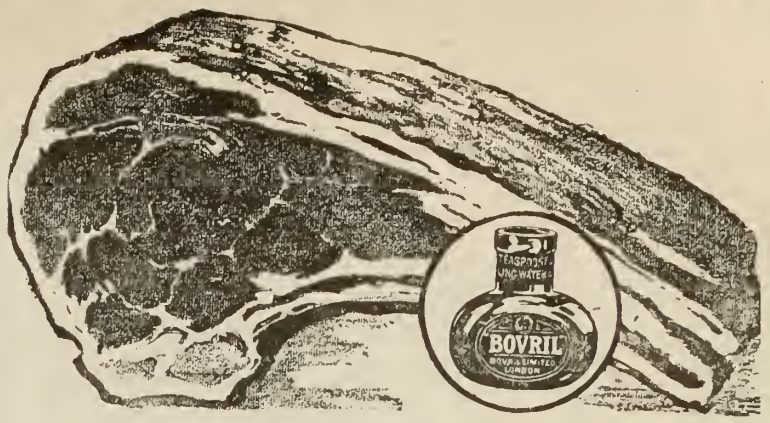
Rose In The Bud

(*Continued from preceding page.*)

"Remember, dear," she said, "you are not to come down until he is here."



Below in the shadowy drawing room she waited, her new frock trailing about her in soft folds, pearls around her slender throat. "Ah, Dick, you are a little early."

"Yes," he replied, "but I came on. I thought I'd spend the extra time here."

He looked around anxiously and she knew it was for Rosita. The door opened. Bride-like, ethereal, in her white tulle, she came into the room. Straight to him she went and he to her, until Katharine's voice broke the spell. "Dick," she said, "I do not feel well enough to go to the dance tonight and so Rosita is going in my place." She put her hand on the girl's arm and made a little gesture, as if offering a gift. "I give Rosita to you. Will you take great care of her—always?" The man looked up. In her eyes he read her message. "Always," he said, and bent and kissed her hand.

From the window she watched them cross the lawn together. Hours later through the trees came the faint echo of the violins—"Rose in the bud, the June air's warm and tender"

On the piano the candles burnt out one by one.

It takes a joint of beef to make a bottle of Bovril

Bovril contains the goodness of the beef

THE vital elements that give beef its special place and value as a food are concentrated and stored in Bovril.

Just as the equivalent light of 32 candles is concentrated in one electric lamp, so the vital elements of beef—of many pounds of beef—are concentrated in a single bottle of Bovril.

But Bovril is not merely a precious food in itself; it possesses the peculiar power of enabling you to extract more nourishment from other foods. This gives Bovril its wonderful body-building power, proved by independent experiment to be from 10 to 20 times the amount taken. Bovril, therefore, in the true sense of the word, is a Great Food Saver.

Always keep Bovril in the house.

BOVRIL STANDS ALONE

Speaking of Breakfast –

WHAT could you get more appetizing than juicy slices of richly-flavored, delicately-cured, Rose Brand Bacon — pan fried, in the old-fashioned way?

ROSE BRAND BACON

is the real treat at any breakfast table—the one appreciated by all.

Try Rose Brand Bacon—it costs no more than good bacon should cost, and besides its tempting qualities, it is rich in food value.

The Work of The Salvation Army

A CAMPAIGN for the continuance of the work of the Salvation Army at the front and its work in the Army hostels in Canada will be put on during the week of January 19-26, 1919, with one million dollars as the objective. This organization, first in the field at the front, is making its first appeal to the people of Canada, and should receive a hearty response from the Canadian people, as every person should be aware of the disinterested purposes and noble aims of the Salvation Army; and the plans in view for the distribution of the funds should win the approbation of all donors. This million-dollar, Dominion-wide demobilization and reconstruction campaign of the Salvation Army has been personally endorsed by the Duke of Devonshire, Sir Wm. Hearst, Sir Wilfrid Laurier, Sir Edmund Walker, Sir Robert Borden and many other influential people. A number of the most prominent business men in Toronto and other large centres have already formed executive committees to carry the campaign through to success.

The Salvation Army, realizing the immense problem facing the Government at this critical time, desires to co-operate with every department of the Government to the utmost extent in meeting the urgent needs of the returned soldiers, their families, and the working classes during the reconstruction period, and especially during the coming winter.

The purposes of the campaign are threefold:—

(1) To establish hostels for returned soldiers who are discharged and in need, until re-absorbed into industrial life.

(2) To provide emergency receiving and maternity homes for soldiers' wives, widows and dependent children in need.

(3) To continue, during the demobilization period in England and France, the equipments and comforts already provided by the Salvation Army for the Canadian soldiers overseas.

The peace and war record of the Salvation Army is sufficient justification for this appeal. Their peace record covers a 53-year world-wide service in 60 different countries, and speaking 40 different languages; also a 37-year record of service in Canada. Through its 300 different departments of service there is no kind of distress into which a poor man, woman or child of any creed or color can get, but the Salvation Army is equipped to take care of them. Their war record includes service with the soldiers on the Canadian and all Allied fronts during the entire period of the war; their officers and members have worn in action the uniforms of all Allied Governments; in Canada they have helped all other organizations in their war campaigns, including all Government Victory Loans. By this peace and war record, the Salvation Army has the confidence of the whole Canadian public, including municipal, provincial and Dominion Government officials, business men, the returned soldiers, the working classes and the churches.

The business men who are behind this campaign feel that no other agency can get equal results among the soldiers and working classes in need, with as little expense, as the Salvation Army, and in the judgment of these men, this campaign will be one of the greatest and most popular auxiliaries to all the Government plans for demobilization and reconstruction.

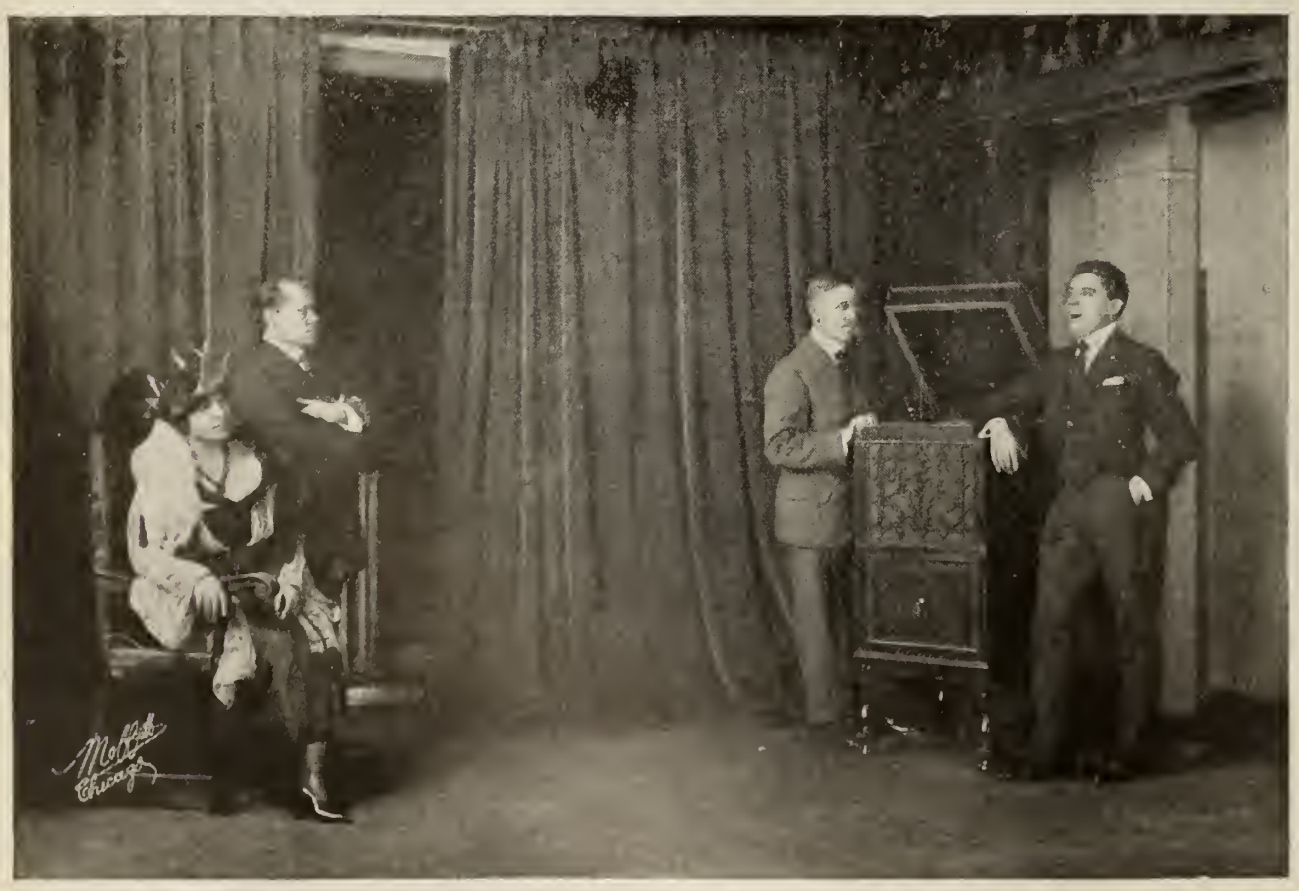
Among the first voluntary helpers to commence operations for our men in the early days of the war were Salvation Army workers, and the first Salvation Army ambulances, manned by Salvationists, arrived in France at a time when they were urgently required. Later on, other ambulances were given by the Army—all being supplied with a Salvationist driver. The Salvation Army huts, situated along the battle lines wherever there was opportunity to aid the boys, were wonderfully helpful during war time. One soldier said: "I found them always willing to accommodate, and glad to give, free of charge, many things of real value to the boys." At all Salvation Army institutes at the front, every soldier who entered received a hearty welcome. Chances were given them to purchase at a counter sundry little trifles to send home to mothers, wives, or sweethearts, all of which were carefully parcelled, addressed and sent to the boys' friends by the Army workers. At the hospitals of the Army the boys who were wounded or ill were made happy by the home-like surroundings and sympathy extended to them by those in charge.

Humble, but useful and most appreciated, was the work of one devoted woman, a Salvation worker, who repaired the torn or ripped uniforms of the boys, and even acted as tailor, refitting with deft fingers the new uniforms as they came in. For this unique service no charge was made, and this special worker was kept continuously at her task, using as a workroom the corner of a house, once spacious, but now wrecked by war.

Since its opening, one Salvation hostel has provided sleeping accommodation for 105,000 service men. In one night 570 men slept beneath its roof and the Brigadier in charge estimates that in 48 weeks a quarter of a million men have been provided with meals and shelter.

Recently a conference of the heads of departments and divisional commanders at Salvation Army headquarters was called concerning what should be done to meet conditions which would arise were peace to be established, and a programme was drawn up, with a special view to the period of reconstruction, as well as the present needs of our boys overseas.

1. It was considered imperative that all present huts be maintained, to provide comforts and safeguards against temptation for the men while they are still overseas.



2. That the establishment of Convalescent Homes for Canadian soldiers be continued.

3. That accommodation of a nature which would show proper appreciation of the returning men to Canada be provided. Immediate action was decided upon, the objective being the provision of hostels, where practicable, similar to those already established at various cities.

4. With the assistance of several leagues and societies, in touch with thousands of homes, to endeavor to ensure the warmest welcome being given the men on their return to civilian life, and to help them in any difficulties they may meet with.

5. That homes for soldiers' children needing guardianship be provided at once.

6. That, in view of the appeals which are reaching the Salvation Army from the men themselves for the Army work to be continued during the demobilization and reconstruction period, every possible effort, workers and equipment should be devoted to making provision to meet the needs that are already in view, or which may be disclosed as events develop.

CHICAGO OPERA STARS HEAR CICCOLINI TEST EDISON'S $3,000,000.00 PHONOGRAPH

GUIDO CICCOLINI scored a great triumph as Alfredo in "Traviata" at the opening performance of the Chicago Opera season. Scarcely less happy than he, over his success, were Carolina Lazzari, leading contralto, and Virgilio Lazzari, the brilliant basso, of the world famed Chicago Opera Association. To them, on the following day, Ciccolini said: "Last night two thousand people heard me on the stage of the Auditorium. Every day two hundred thousand hear me on the New Edison. It is the same voice—listen and tell me if you observe even the slightest difference."

As shown in the photograph, Ciccolini stood beside the New Edison and sang for his friends in comparison with its RE-CREATION of his voice. Their critical ears could discover no quality in Ciccolini's wonderful voice that was not also present in the RE-CREATION.

Similar tests have been made by thirty different artists before audiences aggregating two million people. The results of these astounding comparisons are described in the news columns of America's principal newspapers. May we send you the booklet "What the Critics Say"?

Mr. Edison spent more than three million dollars in research work to develop

The NEW EDISON

"The Phonograph with a Soul"

He did this so that you may have in your own home all the ear can give you of the art of the world's greatest artists. You owe it to the music loving side of your nature to hear this wonderful instrument.

Let us send you a complimentary copy of our musical magazine "Along Broadway."

THOMAS A. EDISON, INC., ORANGE, N. J.

Real Yankee Language.

A French soldier who came proudly up to an American in a certain headquarters town the other day asked:

"You spik French?"

"Nope," answered the American, "not yet."

The Frenchman smiled complacently. "Aye spik Eengleesh," he said. The American grinned and the Frenchman looked about for some means to show his prowess in the foreign tongue. At that moment a French girl, very neat and trim in her peaked hat, long coat, and high laced boots, came along. The Frenchman jerked his head toward her, looked knowingly at the American, and said triumphantly: "Chicken."

The American roared.

"Shake," he said, extending his hand. "You don't speak English; you speak American."

Flatly Impossible.

"Yes," said Simpkins, "I want to do my bit, of course, so I thought I'd raise some potatoes."

"Well, I thought I would do that," said Smith, "but when I looked up the way to do it I found that potatoes have to be planted in hills, and our yard is perfectly flat.

If I Was Paw.

If I was paw and paw was me,
Gee! what a great thing that 'ud be!
I wouldn't whip him just 'cause he
Went sneakin' off sometimes to fish;
And if he'd ruther play than go
To school I'd say "All right," and oh,
But wouldn't he have good times
though,
With everything for which he'd wish!
I'd let him stay up late at night,
And then I'd go ahead and light
The gas for him, because he might
Bump into chairs or things, you see;
I'll bet he'd be that glad all day,
With not a thing to do but play,
He'd haft to yell, he'd feel so gay.
If I was paw and paw was me.

How She Got It.

At the Christmas dinner the little girl had eaten freely of turkey, of which she was particularly fond. And after two generous helpings she asked for more.

"You've had all that's good for you, Margery," said her mother.

"I want some more."

"You can't have any more, dear. But here's the wishbone for you and Mamma to pull. That will be fun. You pull on one end and Mamma will pull on the other, and the one who gets the longer will get her wish. Why Margery! You got the big end! Now what did you wish for?"

"More turkey," said Margery.

She got it.

Try This.

The captain of the s.s. Piffle listened patiently to a passenger's account of his shooting abilities, then he quietly remarked:

"I don't think you could hit this bottle at twenty yards, placed on the taffrail, while the ship is heaving like this."

"It would be only child's play," said the passenger.

"Well, I'll bet you a guinea you don't hit it three times out of six."

"It's a wager. Come along."

The bottle was placed in position. Crack! The passenger hit it, and it disappeared in fragments into the sea.

"Trot out another one," said the marksman.

"Not at all. The conditions were that you hit that one three times out of six. Five shots more."—*Chicago News.*

Carnation

-adds flavor to Potatoes

Try This Delicious Dish!

"USE more potatoes" is the timely, sensible suggestion—because the potato crop is abundant.

There is lots of food value in potatoes — proteins, carbohydrates, mineral salts, but only a trace of "fats." Add Carnation Milk to potato dishes and you not only get "fats" in quantity about twice as rich as ordinary milk, but you give the potato a delicious taste.

There's *real* baked potato goodness when you pour Carnation right into the hot, mealy potato and season it as usual. Carnation makes the potato rich and creamy in flavor. Try it also with mashed and creamed potatoes, potato souffle, potato au gratin. Every one at your table will enjoy the dish.

Carnation is the regular milk supply in hundreds of thousands of homes. It is just pure, whole, cows' milk, evaporated to the consistency of cream and sterilized to maintain its purity and wholesomeness. Only water is taken out—nothing is added.

Carnation is convenient—keep a few cans in your pantry; it is always ready for every milk use. With your coffee, use Carnation undiluted, as you would cream. For cooking, baking and drinking add pure water to reduce its richness as desired. (Half water and half Carnation is the general method.) Try it with your favorite recipes and see the improvement.

The economy of Carnation is more than worth while. It "stays sweet" until opened and for several days thereafter, if kept in a cool, dry place. It is the "wasteless milk supply."

If you are not a user of Carnation Milk, write for our booklet, "The Story of Carnation," telling how it is received and handled in our sanitary condenseries, and also giving 100 choice, practical, tested recipes, including "The Carnation Way of Creaming Vegetables."

GILLETT'S GOODS

ESTABLISHED 1852

"Best by Every Test"

THE constant effort of manufacturers to improve their products and reach the highest point of perfection entitles them to your consideration, and while, for selfish motives there may be forces working to belittle such commendable efforts, the ultimate results are sooner or later bound to be recognized and appreciated by the thoughtful and intelligent individual. The success of any of the well-known articles that have come to be looked upon as the standard articles of their kind, is invariably followed by the attempt of envious imitators to benefit by another's success, basing their claims for recognition on the unsubstantial statement of "just as good." Such claim is of itself a recognition of superiority of the article imitated.

Gillett's Goods have reached the point of perfection that places them in a class by themselves, and while often imitated, are never equalled.

All dealers are authorized to guarantee Gillett's Goods as being the best and purest that it is possible to produce, and to be just as represented.

NEXT COMES THE SPRING FASHION NUMBER OF "CANADIAN HOME JOURNAL"

The Largest and Best From a Pictorial Standpoint in the History of This Publication

Distinctive dress depends more upon proper selection than unlimited means. The woman who always looks smartly dressed is the one who knows the trend of the styles, who buys when a certain feature is coming in, not going out, and knows how and what to combine. This knowledge does not cost money, but is gained by careful study of a reliable Fashion guide, and this is what the March Number of "Canadian Home Journal" will be to our readers—a Fashion Guide,—a simple and easy course whereby smart Spring costumes showing the newest features and bearing the unmistakable stamp of good taste may be correctly planned.

KATHERINE HALE,
Author of "Pine Clad Woodstock," in this issue.

Katherine Hale has prepared a most valuable article for March, "The Qualifications of a Newspaper Reporter," as an answer to the numerous letters received from young aspirants throughout Canada.

Canadian celebrities who have lived in old Quebec city will be the subject of Katherine Hale's article in April.

YOUR GARDEN

Under their blanket of beautiful snow those thousands of last year garden plots are waiting. Does this start like a fairy tale? It is rather a very practical and important warning to everyone to start at once to plan those this-year gardens. For the March number George Baldwin, F.R.H.S., has prepared three well illustrated articles to help you:

"Possibilities of the Hot Bed,"

"Starting Vegetables and Flowers Indoors,"

"The Herbaceous Border and Vegetable Garden."

Make March your garden-planning month.

SHORT STORIES

"The Trail of the Blonde Beast." A dramatic story of German treachery, by W. H. Pabke. Illustrated by Norman Price.

"At the Sign of the Coal Scuttle." A pretty tale with real heart interest, by Blanche G. Robbins. Illustrated by Hamilton Williams.

"Oh, What a Tangled Web," by Nan O'Reilly. Illustrated by E. J. Dinsmore.

This is the fiction which will appear in the March "Canadian Home Journal" in addition to a large instalment of the serial "Who Goes There" by Robert W. Chambers, illustrated by Dan Sayre Groesbeck.

"Where Our Oranges Come From—How they are Grown, Packed and Shipped," makes an intensely interesting story in the March number. Photographs show the fruit in its various stages—one of special interest will appear which shows one of the two parent or first trees brought into California.

"What Has Joan of Arc to do with Modern Times?" by Edith Halstead Lorway. "Around the Hearth" by Jennie Allen Moore, and "Journal Juniors' Club" by Ethel Bain are but a few of the many features of the March number—the best issue ever published of "Canadian Home Journal."

Specially Good for Children's Shoes in Winter

The same Neōlin Soles that have given satisfaction to millions of grown-ups, you can get on shoes for children.

And they are specially good during the winter and spring months.

Specially good because through snow and slush and rain Neōlin Soles keep the kiddies' feet dry. They defend against colds and sore throats.

And when shoe uppers become soaked, Neōlin Soles hold them in shape. They keep shoes good looking.

Neōlin Soles have year-round advantages of great importance.

First and foremost, they wear longer. Shoe bills become less frequent. And because of that you can buy shoes with better uppers, which in turn give longer wear. Especially is this true of children's shoes, where ordinarily are used soles of low quality.

Neōlin Soles add flexibility to their other virtues. No breaking in of new shoes. No little feet spoiled by stiff soles.

Your children should be wearing shoes with these better soles. They are easy to get from your shoe store.

You'll find there, too, shoes for the grown-up members of the family which are better because of Neōlin Soles.

For the shoes you are now wearing, the repairman has full-soles or half-soles of Neōlin.

On new shoes or as repairs, all Neōlin Soles have the name "Neōlin" on the bottom.

The Goodyear Tire & Rubber Co., of Canada, Limited

What Canada Is Doing For Her Returning Soldiers

Nothing's too good for the soldier. Canada is thrilled with pride over the deeds of her gallant army, and now that the tide has turned homeward and there is an opportunity to give expression to this appreciation, the Government is resolved that at least it will not be found unprepared in the matter of plans for their comfort and future welfare. A half-dozen or more organizations have been formed to take up the different phases of work in this connection, and each is doing its utmost to make the path as smooth as possible for the soldiers when they again take up civilian occupations.

The public has but a hazy idea of the tremendous task which confronts those planning this work, and in the great undertaking to restore Canada to a steady state of industrial activity in the period of demobilization, the Government can be greatly helped by public opinion. The change from war service to productive industry can be made in an orderly way, provided there is an informed and patriotic public opinion behind this national work.

Shortly after the signing of the armistice the Re-Establishment Department sent a representative officer overseas to secure information and to impart information to the men, with regard to the plans of the Government to help them on their return from overseas. Each man is asked to fill in a questionnaire card, including questions with regard to his previous experience, the employment he will now prefer to take up, and the locality in which he intends to settle. In addition a special representative of the Re-Establishment Department is appointed to each transport, to impart information and advice as the men may desire it on their voyage home.

DISPERSAL STATIONS. There will be a dispersal station at each of the following Canadian cities: Charlottetown, Halifax, St. John, Moncton, Quebec, Montreal, Ottawa, Kingston, Toronto, Hamilton, London, Port Arthur, Winnipeg, Brandon, Regina, Saskatoon, Medicine Hat, Calgary, Edmonton, Revelstoke, Vancouver and Victoria. The dispersal station is going to be a point of tremendous interest; it is there that the returning Canadian soldier will officially become a civilian again.

Where the responsibility of the Department of Militia ends, at the dispersal station, the responsibility of the Re-Establishment Department is just beginning. It is the duty of Sir James Lougheed, Minister of Civil Re-Establishment, to see that every discharged man is served by the Department until he is properly settled back to civilian life, with opportunities of employment under satisfactory conditions. The Repatriation Committee of the Cabinet, under the chairmanship of the Hon. J. A. Calder, Minister of Immigration and Colonization, is for the purpose of co-ordinating the activities of all organizations, helping the returned men to find employment.

EMPLOYMENT OFFICES ESTABLISHED. There will be employment offices probably in every city of 10,000 or more population, and in smaller towns if the need warrants it, to serve the unemployed of every class in the community, first attention being given to the returned soldier. This special preference could not be shown if the employment offices were only for the soldiers, and there would be much overlapping of work.

The Government may properly bespeak public interest in its policy of establishing employment offices under national and provincial control throughout Canada. The employment offices are for the purpose of fulfilling an obligation contracted by the nation in the recruiting offices. The men who left their work, sacrificing wages, prospects, the comforts of home life, to give their lives if needs be in defence of Canada, are entitled to employment again on their return. The nation can do no less than see that every man is restored to work, whereby he can support himself and his dependents in modestly comfortable circumstances. Many patriotic citizens gave their time, and employed much eloquence, in exhorting men to enlist. The same spirit of patriotic service by private citizens, in striving to find opportunities for the returned men through the employment offices, is likely to be necessary in the period of demobilization ahead. Public support of the employment offices, in their endeavours to find work for the men back from overseas, is due; it is the natural and just sequel to public support of the recruiting offices.

The general labor situation in each Province will be kept under survey by a provincial clearing house, where daily reports will be sent by each local office telling of the activities of the day. A record can thus be kept of the requests for men, the number of vacancies filled, etc., and it will be possible to arrange for the transfer of men from places where work is scarce to where there is a demand for workers.

The Dominion Government is similarly arranging for clearing houses to arrange for the transfer of labor from province to province. The men will know before they go whether there is employment awaiting them, and what the nature of the employment will be, what wages are offered, and what the working conditions are.

COURSE IN AGRICULTURE IS PLANNED FOR RETURNING SOLDIERS. Anticipating the desire on the part of a large number of the soldiers returning to Canada to take up farm work and agriculture in its different branches, a short course has been planned by the Soldier Settlement Board for the soldiers to take while still in Great Britain, awaiting their return orders. This instruction is for men who know nothing of farming, and while it cannot provide a complete training in this line, it gives a general working knowledge of farming operations. Farms have been secured in England, equipped with Canadian machinery and appliances, and will be conducted according to Canadian methods. The soldiers will be given an opportunity to familiarize themselves with the every-day pursuits of farm life, and in a few weeks' time will know whether they care for this kind of work and are physically strong enough to continue the course.

Such a plan should prove an excellent means of testing the ability of the soldiers for farm work, and saving many disappointments and much financial loss later. Not all the soldiers who think they would like farming will find themselves fitted for it, and it is much better to have a sifting out process before they have gone extensively into the work and invested money in farms, stock and farm equipment. Canada needs sincere, well-trained men, who will make farming a success.

The Soldiers' Settlement Board is also prepared to assist the returned soldier to buy his farm; $2,500 will be loaned by the Government with interest at 5 per cent. to any qualified returned man in order that he may make a payment on his land, erect buildings and purchase some live stock. The Board also advises the soldier regarding the plans and erection of buildings, the kind of machinery and equipment to purchase, as well as helping him to select a piece of land which will be productive.

The Director of Repatriation, Mr. H. J. Daly, is doing everything possible to enlist the constructive aid of all the public bodies in Canada, and the friendly societies, and the community-spirited people and associations to join in the work of finding places for an army of men in home life. It is Canada's task. We asked these men to go; now it is for us to see that they get a square deal, and some sort of appreciation for their sacrifice and suffering.

Before shampooing, rub the scalp thoroughly with the tips of the fingers (not the finger nails). Do not let the fingers slip along the scalp, but make the scalp itself move in little circles. This stimulates the blood that feeds the roots of the hair, and loosens the particles of dust and dandruff that clog up the pores.

Now dip the hair in warm water, separate it into small parts and scrub the scalp with a toothbrush lathered with Woodbury's Facial Soap. Rub the lather in well and then rinse it out thoroughly.

Next apply a thick, hot lather of Woodbury's Facial Soap, and leave it on for two or three minutes.

Clear off with fresh, warm water. Wash all the soap out carefully and finish by rinsing in tepid water.

Dry very thoroughly. To make the hair fluff out prettily around the face, dry it hanging over the face instead of down the back.

The Right Way To Shampoo

HOW THIS TREATMENT HELPS YOUR HAIR

DO you think your hair grows from the head like a plant? No, indeed. There is a fundamental difference.

For your hair does not breathe as does a plant. No vital fluid circulates through it as does the sap in the plant. Except at the very tips of its roots, hair has no more life than a silken thread.

The whole beauty and lustre of your hair depend upon your *scalp*. Here the hair forms. Here a network of blood vessels feed and nourish the roots. Here lie the color-supply pigment cells. Here thousands of tiny fat-glands supply oil to give your hair its glossy, life-like appearance.

This is why caring for the hair is, in reality, exactly the same as caring for your skin.

To keep your hair lovely and abundant, you must, by the proper treatment, keep your *scalp* healthy and vigorous, on the same principle as you give your skin the proper care and treatment in order to have a lovely complexion.

Which of these is your hair trouble?

Is your hair dull and lifeless? It can be made rich and lustrous.

Is it greasy, oily? Or dry and brittle? You can correct the condition which prevents the tiny oil glands from emitting just the right amount of oil to keep your hair soft and silky.

Is it constantly powdered with dandruff? Or does it come out in combfuls? Begin at once to keep the pores of the scalp as free and clear as you keep the pores of your face.

Keep your scalp healthy

To keep your scalp healthy and vigorous, use persistently Woodbury's Facial Soap, formulated after years of study by John H. Woodbury, the famous skin specialist.

Use the soap treatment given on this page as a regular shampoo. You will enjoy the healthy, active feeling it gives your scalp. You will soon see the improvement in your hair—how much richer and softer it is.

For ten or twelve shampoos, or for a month or six weeks of any of the famous facial treatments, you will find the 25c cake of Woodbury's Facial Soap sufficient. Around it is wrapped the booklet of famous Woodbury skin and scalp treatments. Get a cake to-day. Woodbury's is for sale at drug stores and toilet goods counters throughout the United States and Canada—wherever toilet goods are sold.

Send for sample cake of soap with booklet of famous treatments and sample of Woodbury's Facial Powder

SEND 6 cents for a sample cake (enough for a shampoo or for a week of any Woodbury Facial treatment) together with the booklet of treatments, "A Skin You Love to Touch." Or for 12c we will send you, in addition to these, a sample of Woodbury's Facial Powder. Address The Andrew Jergens Co., Limited, 5202 Sherbrooke Street, Perth, Ontario.

MADE IN CANADA

Other Men's Luck

By BEATRICE REDPATH.

Illustrated by MARY ESSEX.

In which Morrison sees his wife as others see her. A very human story of married life.

MORRISON realized that he had been evolving it in his mind for some time, that he had been preparing and making his arrangements without definitely pronouncing even to himself what was his intention. It had been a plant of slow growth, fostered by his continual discontent, and now it was coming to flower.

He had put his affairs in order, he had straightened out everything, and now this morning it was as if something had snapped within him that bound him to the old life, the psychological moment had in fact arrived for which he had waited.

At breakfast there had been only the usual noise and disturbance of the children getting ready for school. It had been perhaps a trifle accentuated by a loud outcry from their youngest son about wearing his rubbers. Carrie's voice had risen shrilly above the hubbub in a manner which always intensified his irritation. Carrie never seemed to understand that she could enforce obedience just as well if she spoke quietly. Finally, with a sense of complete exasperation, he had retreated behind the damp sheets of his paper in protest against the babble of voices. He detested noise, and yet he never escaped from it, least of all in his own home. It was a subject that was worn thin between Carrie and himself, and he was conscious that she was aware of his extreme irritation this morning as he sat shrouded in the morning paper.

She showed her consciousness of it in her voice when she sat down finally to her tepid coffee after the children had slammed the door for the last time that morning. It was in her manner as she asked him with exaggerated politeness for some eggs and bacon from the covered dish before him. Her whole attitude was a reproach that he should show irritation about something that could not be avoided. He was not sure, but he thought that it was in the moment when she asked him if he had remembered to send a cheque to the butcher, that something snapped within him which set him free. Then it was that he rose with a sense of finality and looked at her with an eye that did not miss the slightest detail of face, figure or attire. She was wearing a blouse with narrow blue stripes cut on masculine lines that displeased him. He liked soft, feminine clothes, and saw no reason why she could not please him in this instance. He noticed the few gray threads in her black hair, coiled with no unnecessary elaboration, and he noticed the lines about her eyes. He recognized that she was a good-looking woman, but there was a note of efficiency about her, a certain masterfulness that gave a hard tone to her voice and to her appearance. He supposed that she had been so used to giving orders to servants and children that it had caused her to become like this. She was undoubtedly admirable as a mother, she was an excellent housekeeper, a good wife in every sense, but he could have dispensed with it all if in place of it she could have offered him the sympathy he craved.

He looked at her curiously in that moment as he stood folding his paper, wondering if he would miss her out of his life. He was secretly amused at her complete unconsciousness of all that was going on within his mind. How little we know of those with whom we live, he thought to himself. It struck him as quite absurd that she should continue to eat her eggs and bacon while her whole existence tottered on the brink of something so decisive, so final.

She looked up from her plate as he passed from the room with a repetition of the same question which he had omitted to answer.

"Yes, yes; I have sent the cheque," he responded, with a curious smile which, however, she did not appear to notice. She was occupied in buttering a piece of toast as he left the room.

He felt a momentary regret as he passed down the path and noticed that his rose bushes were almost ready to bud, and he wondered how many blossoms they would bear this year. Last year they had done well, but this year he expected the blooms to be much larger and more varied to repay him for all the care he had expended upon them. There was a tea rose which he particularly valued, and he felt sorry that he would not be there to see it flower. In all probability, the children would destroy it with a cricket ball, for Carrie encouraged them to play cricket on the lawn, in spite of his frequent protests that it destroyed his flowers. She had never taken his hobby very seriously, she was completely absorbed in the children. The children were all right in their way, but they were noisy and alien to him. Somehow he felt that he had never got into touch with them. It may have been his own fault entirely that he could not interest himself in their lessons or amusements. He knew that they regarded him as a silent ruling sovereign whom it was well to propitiate in view of future requests for money. He had so often heard Carrie hold him over their heads in a manner which annoyed him excessively and seemed to form barriers between himself and the children.

"I will tell your father," was frequently upon her lips, and it seemed somehow to have the effect desired, although it never went further than the threat. She had taken the entire reins of government into her hands, with only this reference to his authority. No, the children belonged to Carrie; he was only a figurehead, and would not be missed.

The entire day was spent in saying a mental farewell to all that had been his life for so long. The office, where he had always fretted at the stale routine, that yet managed to bring him in a fair salary each month, without much increase. He could very well estimate just how much more he would be getting in five years, in ten years, and thus it lost all the charm of the unexpected. But, then, he had sufficient, more money would not have helped him; no, it was not money which was at the root of it all. It was just the terrible monotony, the repetition year in and year out of the same thing, at home and in the office, and never what he desired. It was stale, flat, and utterly alien to all that he would have wished his life to be.

After a solitary lunch at his usual restaurant, he went to a steamship office and bought a ticket for a steamer sailing that night for the East. Even the posters of the Orient nailed up in the office, vivid things of palms, a stretch of golden sand and a girl in white being wheeled in a jinrikisha gave him a thrill which he had not known was possible any longer for him to feel. How he had always longed for the East—all the colour, the mystery and romance! He could imagine himself dressed in white, smoking a long cigar, visiting the bazaars and tea houses, where wonderful dark-skinned girls would come to wait on one. Pictures he had seen of Japan, China, India and the South Sea Islands raced through his mind in pleasant confusion, giving him a delicious sense of colour and romance, and all for the price of the small ticket which he had put away in his pocket with care.

He went next to a large departmental store and bought himself a bag and outfit that he would require on the steamer. He was glad that he had not brought his old bag that had gone with him every year on his trips to the seaside with Carrie and the children. The new things pleased him; he fingered some hair brushes that the clerk was fitting into the bag with pleasure. He had put away the old life, everything must be new and different; a new existence was before him, and he would fill it full of all that he desired.

Pine Clad Woodstock

By KATHERINE HALE.

With Its Long Past and Its Busy Present It Has Been the Home of at Least Three Canadian Artists of Distinction in Their Various Lines of Work

Florence Carlyle's Home in Woodstock.

"IT is a pretty place. It has broad streets, quiet and tree-lined. It has sunny empty lots where children play. No one is crowded or shut in. The houses stand in their own green lawns and are comfortable and even picturesque. The roads are like country roads, soft and yellowish; green grass grows along the sides of many of them and board sidewalks are still to be found, springy and easy to tread. There is a main street with macadamized roadway and stone pavements. There is a post-office with a tower and a clock, a courtyard with a fountain and a cannon, a park with a band-stand and a baseball diamond, a town hall with a belfry and no bell, an exhaustive array of churches, an Imperial hotel and the market."

"Burnside," where George R. Pattullo lived.

Mrs. Isabel Ecclestone Mackay in her description of "Coombe" in "Up The Hill And Over" has faithfully portrayed her native Woodstock, and many another tranquil Ontario town.

Furthermore she makes the stray traveller set down in such a community experience "a sense of north in the air, a light freshness very invigorating." "He liked," she says, "the quiet shaded streets; the cannon by the court-house amused him; the number of church steeples left him amazed. He felt as if he had stumbled into a dream-town and must walk carefully lest he stumble out."

Let us concede that Travellers' impressions are often true and that the last folk who realize that they are under a spell are the Enchanted. Therefore I am afraid that Woodstock would smile, Woodstock, Industrial City—oh! most uninteresting word city, why cannot all places remain villages or towns? Woodstock with its manufactories and its munition plant, its bustling market, its enterprising shops, I know Woodstock would smile at the faintest allusion to Enchantment

And yet that is just the spell under which it seems to lie, or so it appears to the Traveller; especially if the Traveller is Canadian-born of another of these sleeping cities.

It is only those who have escaped that realize the Enchantment.

Some day a Canadian may penetrate this singular spell that has lain about our land, and that hovers miasma-like over the lovely villages and towns. No one has touched it yet. It is as impalpable as it is actual.

For the colour of Canada in spite of her brilliant skies, wide distances and flaming atmospheric effects has been, psychologically, rather hazy, of a faint gray-blue.

The call-to-arms stirring the whole country in 1914 produced the first definite scarlet note of national purpose and high endeavour, and I believe that more color will be added to the fabric of this country from now on. For it is the soul of the people that weaves these colors, and the soul of Canada has been awakened.

We are always hearing that this is a young country. No statement could be more misleading. Young indeed we are by Oriental or European comparison, but not by new-world measurement. Indeed, from the point of view of time, there should be mellow and beautiful colors overhanging some at least of our towns and cities. Woodstock is distinctly a place of tradition.

Her fine College, for instance, was one of the first residential schools for boys in Ontario. It was founded in 1857 under the name Canadian Literary Institute, with Dr. Fyfe, then Pastor of the Jarvis St. Baptist Church of Toronto, as its first Principal. On the organization of McMaster University the Literary Institute became the Academic Department of McMaster for boys, under the name of Woodstoek College. Thousands of boys have received training here since its inception. Among the many students two names stand out—Bernard Trotter, the poet, who was killed at the Somme and who has left verse of singular beauty and delicaey, and Wilson MacDonald, also a poet of distinction.

If you wander in and about that quaint little English church, St. Paul's. you will see by the many tablets within, and the old yellowing tombstones set here and there in the picturesque graveyard surrounding the church, some interesting histories of aristocrats of a century or more ago, who tried to found here a really old-world village.

Speaking of this time a resident of Woodstock says: "From about the year 1830 until late in the Seventies we had a number of naval, military, and civil officials of more or less high rank from England. They formed a society by themselves, and were the elite at the time in Woodstock. They built good houses, had their carriages, rode their horses, had periodical dances, were in fact the society of the day, with butlers, coachmen, servants and all the paraphernalia of society. But, alas, they are all gone. Not a solitary representative of any of these families is in the County at the present day. The descendants of their grooms, carpenters and butlers are among our respected yeomanry, but withal they left their impress on the town and county. Apart from the fact that they spent all their money at a time when the settlers needed it, the community entertains a pleasant recollection of their presence."

I wondered about them as I stood in that picturesque church that they had built, with its old wooden pews each with its own door, antique stained glass and the testimony of those impressive tablets. Here is one to the memory of a naval officer drowned at Constantinople long and long ago. Another is to the memory of a son of the Stipendary of the Presidency of Madras and Paymaster-General of India. There lies a naval officer of high distinction, and again an Esquire of Degree is chronicled by the dismal legend:

As the tree falls so shall he lie,
As a man lives so shall he die,
As a man dies so shall he be,
All through the days of Eternity.

Whispers and doings of the great world surround them still though they lie so quietly in the small and apparently deserted graveyard of this little church of England. They have left one or two beautiful country places behind them, this half forgotten generation, a handful of British aristocrats and apparently no other heritage.

Perhaps it was the intermediate decades between these first settlers, who must have been people of imperious mould, that the sleepy spell set in.

Farm land about

Who Goes There

By ROBERT W. CHAMBERS

Illustrated by
DAN SAYRE GROESBECK.

Her hand poised, she hesitated, trying to remember the papers were hers.

THIRD INSTALMENT

In which the valuable papers again come into the possession of the German General's daughter Karen.

Synopsis of previous chapters will be found on page 12.

CHAPTER X (*Continued*).

THE struggle was already over; with his left arm he held both of her arms pinned tightly to the supple body which lay panting against him, while with his other hand he untied the narrow blue bow-knot at her throat and freed the tiny key. Then he released her. They both were deadly pale. She dropped back among the pillows and lay there staring at him. There was in the white calm of her face an expression almost pleasant.

"So—you have done it," she said in a curiously altered voice, but her lips scarcely moved when she spoke.

He did not answer, but in her level eyes he saw blue lightning glimmer.

"You did your best." he said. "Your conscience is clear. Nobody can reproach you."

"Do you understand," she said in a low, expressionless voice, "that I am your enemy?"

"Do you reason that way, Karen?"

"Reason?"

"Yes. Reason it out, Karen, before you come to such a conclusion."

She said, very quietly: "A woman takes a shorter cut to her conclusions than by reasoning. As I did with you . . . when I gave you my friendship . . . unasked—" She turned her head swiftly, and sat for a moment while the starting tears dried in her eyes, unshed.

"I must end what I have begun," he said gently.

"Does it matter, now?"

"I don't know, Karen. I have no choice—even when your hatred threatens me. . . . I suppose it will be that, when I unlock your satchel."

He picked it up and fitted the key to the lock. As he opened it, a faint fresh fragrance came from it, as though he was violating the delicate intimacy of this young girl herself.

But he set his jaws; she saw the cheek muscles tighten; and he drew from the satchel two flat envelopes. One contained the forged passports, and he placed these in his breast pocket, then looked steadily at her.

"Our friendship breaks with those seals," she said unsteadily.

"Karen—I cannot help it."

"Yes, you can help it. . . . Kervyn! . . . Wait! I will—will say—that it is more than friendship that breaks—" She caught her breath and her lip quivered—"I—I have the courage to say it—if it means anything to you—if it will help——"

His face reddened, then it grew pallid and expressionless.

"Even that," he said, "must stand aside. . . .Karen, from the moment I saw you I have been—in love with you."

And, looking her steadily in the eyes, he broke the seals.

When the last seal broke she gave a little cry, turned and covered her eyes with both hands.

As for Guild, he stood with a sheet of paper in his hands, staring at the tracery which covered it and which meant absolutely nothing to him. Then he looked at the remaining sheets of paper. None had any significance to him. There were three sheets of thin translucent paper. These sheets were numbered from one to three.

The first seemed to be a hasty study from some artist's sketch book. It appeared to be a roughly executed and hasty sketch of several rather oddly shaped trees—a mere note jotted down to record the impression of the moment—trees, a foreland, a flight of little hedge birds.

On it, in English, the artist had written "Sunset" Indeed the declining and somewhat archaic sun of the horizon and the obviously evening flight of the birds seemed to render the label unnecessary.

For a long while Guild stood studying it in the light of the stateroom ceiling lamp. And what continually arrested his attention and perplexed him was the unusual shapes of the trees and the unbirdlike flight of the birds. Also artists don't sketch on such paper.

Now and then he looked across at Karen with an inscrutable expression, and each time he looked at her his face seemed to grow more rigid and his set jaws more inflexible.

The girl crouched in the corner of the lounge, her face covered by both hands and pressed against the pillows.

He did not speak to her. Presently he turned to the next paper. It bore the rough sketch of a fish, and was numbered 2.

It was a wretched drawing, intended, evidently, to resemble an old pike and three young ones. What it meant he had no idea. He passed to the third and last sheet of paper, and it instantly held his attention.

On it was depicted a figure, which he supposed was the artist's idea of a Japanese dancing girl. She held a fan in her left hand. Over her extended right hand a butterfly hovered.

But what interested and concentrated Guild's attention was not the very amateurish drawing, but the series of silly decorations on the paper above her head—a number of quartered circles inclosed in squares and oblongs.

As decorations they meant nothing, indicated nothing, except that the intellect responsible for them must be a meagre one.

But as a cipher message these doubly bisected circles promised anything.

This is what Guild saw and what caused him to seat himself on the sofa beside the girl who still lay huddled over her pillows, her face hidden in her hands.

Seated, he drew out the portfolio containing his letters and a notebook. Then, slipping a lead-pencil from the leather socket and tearing out a sheet of paper, he started work—using the leather-backed book for a support—on a cipher which looked to be impossible. Yet, all ciphers are solved by the same method. And he knew it.

The first thing he did was to find his "numbers" in the mass of quartered circles. And, working steadily, swiftly, but intelligently, he had, in the course of an hour, discovered, separated and jotted down, nine of the quartered disks which he believed to represent numbers; and one extra disk which he supposed to be zero. And he numbered each symbol accordingly; merely eliminating all lines except those bisecting the smaller circles.

The next thing to do was to find what letters those numbers, or combinations of numbers, represented.

For a while he tried English, but arrived at no convincing result. So he tried German, first making a list of the letters which were likely to occur most frequently in the written language and then trying them with the symbols which occurred most frequently in the manuscript before him.

He found that the first symbol represented the figures 21.

The twenty-first letter of the alphabet is *u*. He wrote it.

The next symbol was

(*Continued on following page.*)

WHO GOES THERE

(Continued from preceding page.)

for which he substituted the figures 14. The fourteenth letter of the alphabet is *n*. He had, so far two letters, *u* and *n*, to experiment with.

He had sat for several minutes gazing absently at these two letters when, like a shot, it struck him that the French word for the number, one, was spelled *un*. Could the key of the cipher be French? He separated and jotted down the next combination of disks

which gave him the numbers 19. The nineteenth letter of the alphabet is *s*. He wrote it.

The next symbol was

or the figure 9. The ninth letter of the alphabet is *i*

The next symbol was

which, translated, gave him 24. The twenty-fourth letter of the alphabet is *x*.

He now had the letters *s-i-x*. And no sooner had he written them in order than the word *six* stared him in the face, and he flushed with pure excitement.

He had now two words, *un* and *six*. The chances were that he was somewhere on the right track, and he fell to work with a concentration and ardor which left him oblivious to everything else—to time and place, and to the silent, motionless little figure huddled over the pillows beside him.

At the end of an hour—checked twice—but finally overcoming apparent defeat, and always following the same method of deduction, he came to an end of his symbols, and he found the leaf from his notebook was covered with the following words in order of symbol:

Un, six douze cinq cinq vingt, douze quinz' vingt-un sept eight, nineteen vingt-trois nine douze douze twenty-five, eight cinq trois eight vingt-un sept eight, nineteen vingt-trois nine deux nine eighteen quatre nineteen.

For these numerals spelled out capriciously in either abbreviated French or English he substituted numbers in the sequence given:

1—6—12—5—5—20—12—15—21—7—8—19—23—9—12—12—25—8—5—3—8—20—6—15—12—12—15—23—2—9—18—4—19.

Then for the figure 1 he wrote the first letter of the alphabet—*A*. For the number six he wrote the sixth letter of the alphabet *F*. For the number 12, the twelfth letter of the alphabet *L*.

And when he had written letters for every figure in order given he had on his sheet of paper

A FLEETLOUGHSWILLYHECHTFOLLOW BIRDS

After a while he separated the words *A, Fleet, Follow,* and *Birds*, leaving the unintelligible sequence of letters LOUGHSWILLYHECHT.

Out of this, for a long while, he could make nothing, until, by chance, taking the last five letters together, it suddenly occurred to him that the German word for pike was HECHT. Then, in a flash, he remembered the badly drawn picture of a pike and its young. Pike or Hecht, that was one of the words in all probability. But what *other* word the word Hecht represented he could not imagine.

He looked at his notebook again. The letters remaining were LOUGHSWILLY. They meant absolutely nothing in any language he had ever heard of. He studied what he already had—A Fleet (Blank) Pike Follow Birds. A *pike* follow *Birds*—*birds*—and swift as lightning a thought struck him which set him tingling to his finger-tips: somewhere in that rough, hasty, and apparently innocent sketch in which oddly shaped trees and a line of little birds figured, lay the key to the whole thing.

He felt it, he *knew* it. He spread out the drawing on his knees and studied it with terrible concentration, conscious somehow or other that something about it, something *in* it, was vaguely familiar to him. *What?* Had he ever before seen another sketch by the same hand? He could not recollect. It was like millions of rough, hasty sketches jotted down by painters as notes for their own guidance only and not for others to see.

What was there about it unusual? The trees? The *shapes* of the trees. Ah! he was getting nearer the goal—he realized it, felt it, and, balked, fell into a mental rage for a moment.

Then his habitual self-command returned; he squared his jaws, gazed grimly at the trees, and forced himself once more to answer his own questions.

The shapes of the trees, then, were unusual. He had gotten that far. What was unusual in the shapes? The trunks and branches? No. The foliage. No. The outline!

"God!" he whispered. And he had it.

Over the sofa was hanging a map of the British Isles and of the Western coast of Europe. Dotted lines indicated the course taken by the Holland Line steamers. He reached up, unhooked it, looked at it, then at the drawing in his hand.

Then he detached half of the thin sheet of paper on which the sketch was drawn and laid it over the sketch. Being translucent to the verge of transparency, he could see the drawing beneath the thin sheet covering it.

Then, with his pencil, he steadily traced the *outlines* of the trees.

When he had done this and had removed the sketch from beneath his tracing-paper he had what he expected—an *outline* of the British Isles, the Hebrides, Orkneys, Shetlands; part of the coast of Norway, the French, Belgian and Dutch coast. Heligoland, and the German coast at Cuxhaven and Wilhelmshaven.

From the map of the steamship company he carefully filled in boundaries and a few principal towns, then placing his outline drawing over the sketch of the trees he drew a dotted line following exactly the flight of the little birds.

Where that flight terminated he made an arrow, then turned his eyes on the steamer map to find out where that arrow's point rested.

And there on the Irish coast he saw the name Lough Swilly!

It was the last link!—the last but one.

"A Fleet Lough Swilly. Hecht (Pike) follow birds."

A pike, with little pike following her, was to follow the flight of the birds—the dotted line on his outline map. The dotted line curved up out of Cuxhaven, around the Orkneys and Hebrides and into Lough Swilly—*where there was a fleet!*

Out of Cuxhaven—*Cuxhaven!* where lay the German submarines!—A pike, and young! A parent ship and the submarines!

The last link was forged; the chain complete—not quite—not entirely. The Japanese dancing girl? And under the number of the sketch, 3,—were three symbols. They were junks with latten sails.

Perhaps there were three Japanese battleships at Lough Swilly. It didn't matter; the chain was complete enough for him.

CHAPTER XI.

As he rose from the sofa, stretching his arms to ease his cramped muscles, Guild became conscious that he was very tired.

He had had little sleep the night before and none at all this night. He glanced at his watch; it was four o'clock in the morning. He went to the port, unscrewed it, and looked out into pitch darkness. There was not a light to be seen on the sea, no flare from any headland, no spark which might indicate a lighthouse, not a star overhead, not a sparkle.

He turned and looked gravely at Karen. The girl still lay unstirring among the pillows on the sofa. One arm covered her head as though to shield it from some blow.

He bent beside her, listening to her breathing. It was quiet and regular, and on her cheek was a flush like the delicate colour of a sleeping child.

He had no mind to disturb her, yet he could not make her more comfortable without awaking her.

All he dared do was to unbutton her spats very cautiously, and slip off the little brown suede shoes.

Over her he laid the blankets from the bed lightly, then opened wide the port.

His own toilet for the night was even simpler; he folded together the batch of damning papers, originals, his own notes, the forged passports, strapped them with an elastic band, buttoned them inside his breast pocket, reached over and extinguished the electric globe, and fully dressed, lay down on the stripped bed in darkness.

They had been travelling sixteen hours. Allowing for their detention by the ill-omened *Wyvern*, they should dock at Amsterdam in five or six hours more.

He tried to sleep; but his nerves were very much alive and his excited brain refused to subscribe to the body's fatigue.

All that had happened since he first saw Karen Girard he now went over and over in his mind in spite of himself. He strove to stop thinking, and could not; and sometimes the lurid horror of the *Wyvern* possessed him with all its appalling details made plain to his imagination—details not visible from the liner's decks, yet perhaps the more ghastly because hidden by distance and by the infernal glare that fringed the doomed ship like a very nimbus from hell itself.

This obsessed him, and the villainous information which he had wrested from the papers which this young girl had been carrying—information amply sufficient to convict her and to make inevitable the military execution of the man Gratz and the grinning chauffeur, Bush.

And if the wretched maid, Anna, had been arrested with papers similar to these on her person, her case too, was hopeless. Because the very existence of England depended upon extinguishing forever people who dealt in secret information like that which lay folded and buttoned under his belted coat of tweed.

He knew it, knew what his fate must have been had the satchel been searched on Fresh Wharf—knew what Karen's fate must have been, also, surely, surely!

And had those papers been taken aboard the *Wyvern* it had not been very long before the simplicity of the cipher had been discovered by anybody trained in code work.

For, in spite of its surface complexity, the cipher was a singularly simple one, even a stupid code, based on simple principles long known and understood in all of their hundreds of variations.

And all such ciphers, granted time and patience, could be solved by the same basic principles. The only function of that kind of code was to so multiply its intricacies and variations that, with a time limit for delivery understood, measures could be taken at the other end to minimize the effect of discovery, the elapsing of the time limit serving as an automatic warning that message or messenger were under forcible detention within the enemy's lines.

Yes, it had been a stupid cipher, and an easy one.

A trained man would have solved it in half the time he had required.

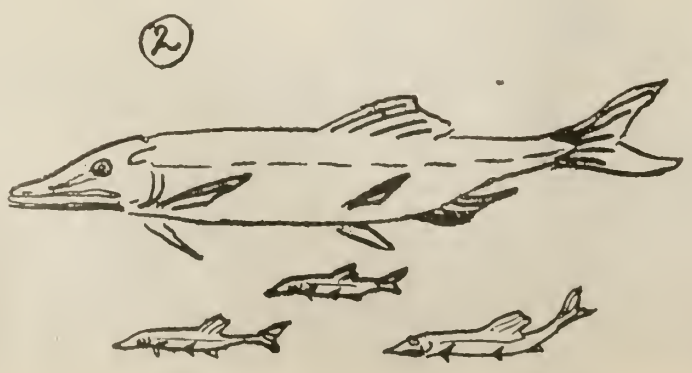
Nothing about the message remained really obscure except the Japanese dancing girl playing with her butterfly and fan, and the lack of information concerning the "fleet" at anchor or cruising near "Lough Swilly" on the Irish coast.

As far as the fleet was concerned, Guild was very confident that he understood. The whereabouts of the British battleship fleet was not known, had been carefully guarded. Without a doubt Lough Swilly was its rendezvous; and the German spy system in England had discovered it and was sending the information to Berlin with a suggestion that submarines "follow the birds," i.e., take that dotted course around the northern Scottish coast, slip south into Lough Swilly, and attack the first line of battle squadron where it had been supposed to lurk in safety, awaiting its call to action. That was clear as daylight, but the Japanese figure he could not understand.

He was utterly unable to sleep. After an hour's staring into the darkness, he rose cautiously, opened the stateroom door and stepped into the lighted corridor.

Here he lighted a cigarette against regulations and began to pace up and down.

Presently the sharp nose of a steward detected the aroma of tobacco, and he came prowling into the corridor.



So Guild nodded and tossed the cigarette out of the open port at the end of the corridor.

"We ought to dock by nine," he said.

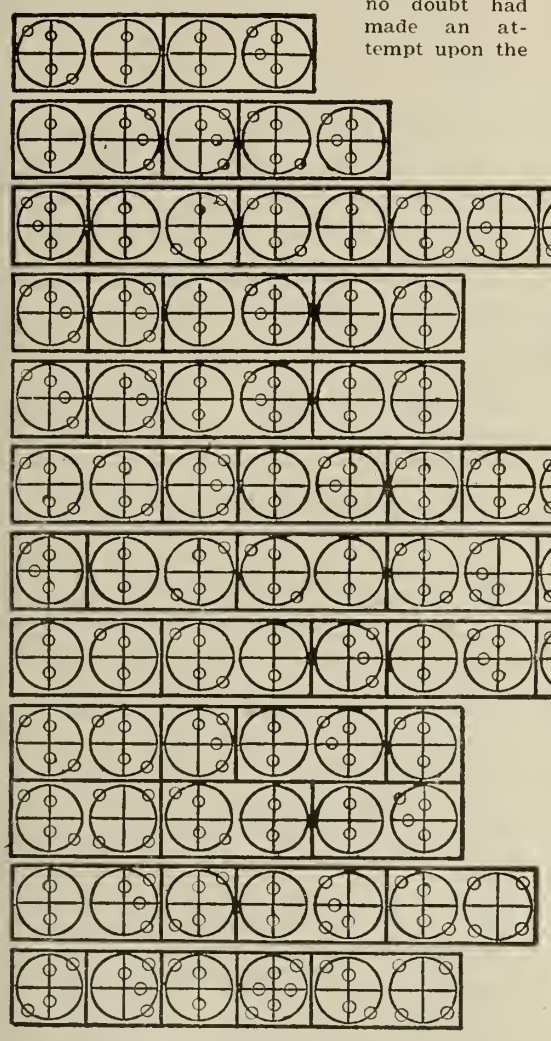
"About nine, Sir."

"We're lucky to have run afoul of nothing resembling a mine."

(Continued on following page.)

WHO GOES THERE

(Continued from preceding page.)



"Wasn't it awful about the *Wyvern?* I expect some passenger steamer will get it yet. Mines by the hundreds are coming ashore on the coast of Holland."

"Have you had any news by wireless?" asked Guild.

"A little, sir. They've been fighting all night south of Ostend. Also, we had a wire from London that a German light cruiser, the *Schmetterling,* is at Valparaiso, and that a Japanese cruiser, the *Geisha,* and a French one, the *Eventail,* have been ordered after her."

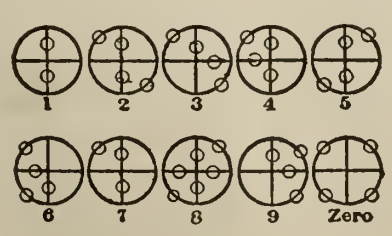
Guild nodded carelessly, stretched his arms, yawned, and returned to the stateroom, knowing that now, at last, he was in possession of every item in the secret document.

For the Japanese dancing girl was the *Geisha,* the fan in her hand was the French cruiser *Eventail* and the butterfly fluttering about her was the German light cruiser *Schmetterling*—which in that agreeable language means "butterfly," and which no doubt had made an attempt upon the

Geisha and had been repulsed.

And this warning was sent that the *Schmetterling* had better keep her distance, because the *Eventail* had now joined the Japanese ship, and the two meant mischief.

As for the drawing of the Pike, perhaps on the German naval list there might have been a vessel named the *Hecht.* He did not know. The symbol of the most ferocious fresh-water fish in Europe was sufficient to indicate the nature of the craft even had the flight of the "birds" not made it unmistakable. There could be no doubt about it that the Hecht with the three little Hechts following had been explicitly invited to cruise in the North Sea and have a look-in at Lough Swilly. And that was quite enough to understand.



He turned on the cabin light, went to Karen's side and looked at her.

She had moved, but only in her sleep apparently. The back of one hand lay across her forehead; her face was turned upward, and on the flushed cheeks there were traces of tears.

But she still slept. He arranged her coverings again, stood gazing at her for a moment more, then he extinguished the light and once more lay down on the bare mattress, using his arm for a pillow.

But sleep eluded him for all his desperate weariness. He thought of Gratz and of Bush and of the wretched woman involved by them and now a prisoner.

The moment he turned over these papers to the British Consul in Amsterdam the death warrant of Gratz and Bush was signed. He knew that. He knew also that the papers in his possession were

going to be delivered to British authority. But first he meant to give Gratz and Bush a sporting chance to clear out.

Not because they had aided him. They cared nothing about him. It was Karen they had aided, and their help was given to her because of von Reiter.

No, it was not in him to do the thing that way. Had he been a British officer on duty it had been hard enough to do such a thing.

As it was he must give them their chance and he knew of only one way to do it. This point settled he dismissed it from his mind and, with a slight sigh, permitted his harassed thoughts to lead him where they seemed always now inclined to lead him when permitted—back to the young girl he had known only a few hours, but in whose company it seemed to him that he had already lived a century.

He was not a man given to easy friendships, not a man in whom sensations were easily stirred. Under ordinary circumstances, perhaps, neither the youthful beauty of this girl, nor her talents and accomplishments had stirred him to more than an amiably impersonal interest. He had known many women and had been friends with a few. But on his part the friendships had not been sentimental.

Women of all sorts and conditions he had known: fashionable idlers, professional women, domesticated women; women with ideas, women without them, busy women with leisure for mischief, mischievous women whose business was leisure, happy women, unhappy ones, calm ones, restless ones, clever ones, stupid ones and their even more irritating sisters who promised to amount to something and never did, all these varieties of the species he had known, but never a woman like this.

Usually he could place a woman after seeing her move and hearing her speak. He could only place Karen on a social par with any woman he had ever known, and he was afraid she didn't belong there, because well-born German Madchens don't intern themselves in nun-like seclusion far from Vaterland, Vater, and maternal apron-strings, with intervals of sallying forth into the world for a few months' diversion as a professional actress on the stage.

At least Guild had never heard of any girls who did such things. But there remained the chance, of course, that Karen Girard was a perfectly new type to him.

One fact was evident; her father was a Prussian officer and belonged to the Prussian aristocracy. But gentlemen of these castes do not permit their daughters the freedom that Karen enjoyed.

There was a mystery about the matter, probably not an agreeable one. Antecedents, conditions and facts did not agree. There was no logic in her situation.

Guild realized this. And at the same time he realized that he had never liked any woman as much—had never come to care for any woman as easily, as naturally, and as quickly as he had come to care for Karen Girard.

It stirred him now to remember that this young girl had responded, frankly, fearlessly, naturally; had even met him more than half-way with a sweet sincerity and confidence that touched him again as he thought of it.

Truly he had never looked into such honest eyes, or into lovelier ones,—two clear, violet wells of light. And Truth, who abides in wells, could not have chosen for her dwelling place habitations more suitable.

She seemed to possess all qualities as well as all accomplishments and graces of mind and body. The quality of courage was hers—a courage adorable in [illegible]. But there was nothing hard about it, only firmness—like the white firmness of her skin. And her intuitive generosity was as quick and melting as the exquisite motives which prompted it.

Never could he forget that in the dreadful peril of the moment, she had tried to give him a chance to escape the consequences of his companionship with her,—had tried to send him ashore at the last moment so that she alone might remain to face whatever there was confronting her.

It was a brave thing to do, generous, self-forgetting, merciful, and finely just. For though she had not tried to deceive him she had gradually realized that she herself might be deceived, and that she was in honour bound to warn him concerning her suspicions of the satchel's contents.

And now—in the end—and after danger was practically over, how did they stand, he and she? How had they emerged from the snarl of circumstances?

Had his gentle violence killed forever a very wonderful beginning of what they both had spoken of as friendship? And she—he reddened in the darkness as he remembered—she had begged him in the name of friendship not to violate it—had spoken of it, in the excitement of emotion, as *more* than friendship.

It had been the most difficult thing he ever had had to do.

Was it true that her friendship had turned to hatred?

He wondered, wondered at the dull unhappiness which the thought brought with it. And, wondering, fell asleep.

In the grey of dawn Karen sat up, wide-eyed, still tremulous from the dream of death that had awakened her.

Through the open port a grey sky glimmered.

1 2 3 4 5 6 7 8 9 0

She rose to her knees and gazed out upon a grey waste of water heaving to the horizon.

Then she turned and looked across at the bed where Guild lay, his blond head cradled on one arm asleep.

Her eyes rested on him a long while. Then she caught sight of her shoes and spats on the floor—looked down at the blankets and covers that had kept her warm. The next moment her eyes fell on her satchel where it stood open, the key still in the lock, and her silver toilet articles glimmering dully inside.

The vague tenderness in her blue eyes vanished; *he* had done *this,* too!—shamefully, by force, treading mercilessly on the frail bud of friendship—ignoring everything, sacrificing everything to a dull, obstinate determination which he had characterized as duty.

She turned and looked at the man who had done all this, her eyes darkly beautiful, her lips stern.

Duty? He had not considered the duty she owed. He had not respected her promise to bring back what had been intrusted to her. And when the discussion had tired him—when her warnings, pleadings—even her appeals in the name of the first friendship she had ever given—had been ignored, he had coolly used violence.

Yes, violence, although, perhaps, the violence had not been very violent. But it was force—and hateful to her who never before had been obliged to endure the arrogance which her caste only knew how to dispense.

"So brauch' Ich Gewalt!" kept ringing in her ears like a very obsession as she knelt there, sitting back on her own supple limbs, and watching the sleeping man out of beautiful, hostile eyes.

That man! That *American*—or Belgian—whatever he was—with his clear grey eyes and his short yellow hair and that mouth of his which could be faintly humorous at times and, at times, be so ugly and set—what was there about him that she liked—or rather *had* liked?

Not his features; they were only passable from an ornamental point of view—not his lean but powerful figure, which resembled many other figures she had seen in England—not his manner particularly—at least she had seen more deferential attitudes, more polish of the courtly and continental sort, more *empressement.*

What was it she liked,—had *once* liked in this man? Nothing! *Nothing!*—the tears suddenly glimmered in her eyes, and she winked them dry, angrily.

And to think—to remember in years to come that she—*she* had pleaded with that man in the name of friendship—and of something *more* than friendship!—The hot color mantled face and throat, and she covered her eyes in a sudden agony of mortification.

For a few moments she remained so, then her hands fell, hopelessly, again.

And, as she knelt there looking at him through the increasing daylight, suddenly her eyes narrowed, and her set face grew still and intent.

Crowding out of the shallow breast pocket of his Norfolk where he lay were papers. *Her* papers!

The next instant, lithely, softly, soundlessly on

(Continued on following page.)

WHO GOES THERE

(Continued from preceding page.)

her unshod feet, she had slipped from the lounge and crossed the stateroom to his side, and her fingers already touched the edges of the packet.

Her papers! And her hand rested on them. But she did not take them. There was something that seemed foreign, repugnant to her nature.

Breathless, her narrow hand poised, she hesitated, trying to remember that the papers were hers—striving to aid herself with the hot and shameful memory of the violence he had offered her.

Why couldn't she take them? This man and she were now at war! War has two phases, violence and strategy. Both are legitimate; he had played his part, and this part was strategy. Why shouldn't she play that part? Why?

But her hand wavered, fell away, and she looked down into his sleeping face and knew that she could not do it.

After a moment his eyes opened and met hers, pleasantly.

She blushed to her hair.

He said: "Why didn't you take them, Karen?"

"You couldn't understand if I told you," she said with youthful bitterness.

He looked very grave at that. She turned, picked up shoes and spats, and seated herself on the sofa.

So he got up, opened the door and went up on deck, leaving her the stateroom to herself.

At the office of the wireless station the operator seemed to have no objection to sending a message for him to the British Consul in Amsterdam, and obligingly looked up the address. So Guild sent his message and prepaid reply.

Then he went into the smoking-room and lit a cigarette.

He was dozing when a steward awoke him with a reply to his wireless message:

Kervyn Guild,
On board S. S. *Fcyenoord.*
Will call at American Consulate. Many thanks.
CHURCHILL, Consul.

He sat thinking for a few minutes. Then remembering that he did not know where the American Consul was to be found, he went again to the wireless office and procured the address.

Turning, as he was leaving, to thank the boyish operator, he found that youth's shrewd eyes fixed on him intently.

"Look out, sir," said the operator, in perfectly good English. "There's a lot o' talk about you on board."

"What do you mean?"

"Wasn't it you the *Wyvern* was wanting?"

"Yes."

"You're friendly to us, I take it?"

"Do you mean to England?"

"Yes, sir."

"Yes, I am."

"I fancied so. Be very careful aboard this boat, sir. Half the crew and most of the stewards are German."

"Thanks," said Guild smilingly.

But as he walked slowly away he realized rather uneasily what an object of interest he had become to the personnel of the ship since the *Wyvern* had honoured him by her wireless inquiries concerning him.

CHAPTER XII.

HE went straight to the writing-room. Only one or two of his fellow-passengers were up, and he had the place to himself.

He wrote first:

W. A. Churchill, Esquire,
British Consulate,
Plantage Middenlaan 20,
Amsterdam,
Holland.

"Sir:

"The following items of information should be immediately transmitted to your home govenment. The importance of the matters in question admit of no delay.

1st. It has come to my knowledge that German spies in England have discovered the whereabouts of a British fleet — presumably the first line battle fleet—and have attempted to communicate the intelligence to Berlin. One document in cipher embodying this intelligence has been intercepted and translated. But other communications in cipher may get through.

"2nd. Another document of the same sort advises the Berlin Government to send from Cuxhaven a cruiser (parent ship) as convoy to three submarines for the purpose of attacking the British armoured ships.

"The rendezvous of the ships, as given in the cipher message, is Lough Swilly, North Irish Coast.

"The route suggested for the German cruiser and submarines is around the north coast of Scotland.

"3d. Still a third document in cipher informs the German Government that the light cruiser, *Schmetterling*, at or off Valparaiso, is being pursued by the Japanese ship *Geisha* and the French gunboat *Eventail.*

"4th. The fourth and last item of information to be transmitted to your Government concerns an actuality witnessed by myself and by the majority of the passengers of this steamer, now docking at Rotterdam.

"Last night, somewhere between eleven o'clock and midnight, and somewhere off the Belgian coast, H.M.S. *Wyvern* was blown up, whether by mine or torpedo or by a bomb from some unseen air-craft I do not know. She was using her searchlight at the time.

"The ship was tilted out of the water at an odd angle when the red glare that suddenly enveloped her made her visible. It appears to me as though some submarine convulsion had heaved her up out of the sea.

"There was one of her officers aboard our liner when the catastrophe occurred—Lieutenant Jamison. A boat's crew lay alongside of us. With these exceptions it does not seem probable that anybody aboard the *Wyvern* could have escaped death, although other ships were in the vicinity and their searchlights played upon her, and I saw small boats on the way to her before she finally blew to pieces.

"This is the information which both duty and inclination impel me to place at the disposal of the British Government.

"Permit me to add that I am leaving in the hands of the United States consul, Henry H. Morgan, Esquire, a separate packet of papers containing full corroboration of the foregoing details.

"The packet is addressed to you in his care, but he will be instructed to give you this letter, only, and not to deliver the packet to you until a week from to-day for reasons which I cannot explain.

"The packet contains—

"1st. Three pages of cipher and pictographs employed by the German spy system in London.

"2d. A key to the cipher.

"3d. A key to the pictographs.

"4th. A full translation of the cipher.

"5th. A translation of the pictographs.

"6th. A map.

"The German personage to whom the packet was originally addressed, the names and addresses of those who sent it from London, the circumstances under which it was intercepted, will be written out with what detail is necessary, and will be contained in the packet with the original cipher.

"In one week from to-day the American Consul, Mr. Morgan, will deliver to you this packet, but under no circumstances is it to be delivered before a week from to-day.

"I have the honour to be, sir, with great respect.

"Your obt. serv't,
KERVYN GUILD.

"Union Square, New York."

This letter he sealed, addressed, and laid aside.

He then wrote to the American Consulate, addressing the note to the Consul and Vice-Consul, saying that he committed to their care—

1st. A letter to be called for immediately by the British Consul in person, and so marked.

2d. A packet addressed to the British Consul, but not to be delivered until a week had expired.

3d. A letter to be sent to the United States Consul General in London with all speed.

4th A telegram to be sent to Edmeston Automobile Agency in London.

5th. A letter to the same agency.

He then wrote out his telegram, wondering whether the United States Consul could put it through:

Edmeston Agency,
White Hood Lane,
London, E.C.,

Business of instant importance requires you all to leave for Holland immediately. Lose no time.
Signed—RIDER.

Holland Line S.S. *Feyenoord.*

The letter was directed to the Edmeston Agency:

DEAR SIRS:

Gratz and Bush must leave at once if they wish to enjoy the fishing here. The *pike* are biting. *Four have been caught. The shooting, also, is excellent. Eight birds were killed yesterday.* If Gratz and Bush do not leave within a week business in London is likely to detain them indefinitely and they will miss their holiday, with little chance for another.

Tell them to take the urgent advice of a sportsman and clear out while they have the chance.

Yours with good intentions,
D. BROWN SATCHELL.

While Guild was busy writing and consigning what he had written to separate envelopes, he was aware of considerable movement and noise outside on deck—the passing to and fro of many people, whistle blasts from other craft—in fact, all the various species of bustle and noise which, aboard any steamer, indicate its approach to port.

He raised his head and tried to see, but it was still raining, and the air was dull with fog.

Passengers, stewards and officers came and went, passing through the writing-room, where he sat in a corner sorting and sealing his letters. Twice, glancing up over his shoulder, he noticed a steward cleaning up, dusting and arranging the pens, ink and writing paper on the several tables near by—one of those too busy and officious functionaries whose zeal for tips usually defeats its own ends.

And so it happened this time, for, as Guild, intent on what he was writing, reached out absently for another envelope, a package of them was thrust into his hand with a bustling, obsequious—"Paper, sir! Yes, sir—Beg pardon, sir! I'm sorry!"—For somehow the ink-well had been upset and the pile of letters scattered over the floor.

"Damn it!" said Guild savagely, springing back to avoid the streaming ink.

The steward appeared to be overwhelmed; down he flopped on his knees to collect the letters, hopping up at intervals to sop the flowing flood of ink from the desk.

Guild took the letters from him grimly, counted the sealed envelopes, then without a word went to the neighboring desk, and, sitting down there, wrote on the last sealed envelope not yet addressed—the envelope which contained the cipher-code, translation, and the information concerning the Edmeston Company. When he had written on it: "To be delivered to the British Consul in a week," he gathered all the letters, placed them in his breast pocket, buttoned his coat, and went out. For half an hour he walked to and fro under the shelter of the roofed deck, glancing absently across the rail, where there was nothing to see except grey mist, grey water, and rain.

After he had enough of this he went below.

Karen was not in the cabin, but her luggage stood there beside his own.

He had plenty of time to make a decent toilet; he bathed, shaved, chose fresh linen, brushed his wrinkled tweeds as thoroughly as he could, then, leaving the luggage there, he went away in search of Karen with a view to breakfast.

He found her on the starboard deck very comfortably

(Continued on following page.)

Synopsis of Former Chapters of

WHO GOES THERE

Applauded by men, admired by women is Kervyn Guild—the hero Robert W. Chambers has chosen for his graphic romance of the war, "Who Goes There!"

Guild is an American, but of Belgian ancestry, and is in Belgium when the horde of Huns overruns and devastates that country. With all the chivalry of a typical, clean, high-minded young man, he immediately gets involved in the Belgian resistance and quickly finds himself the centre of a group being backed up against a wall to be shot—but he isn't shot—and how he escapes forms the brilliant opening chapters of the story.

While Guild's life is spared, he is not given his freedom because he frankly refuses to equivocate, and proves to the German general who cross questions him that honor is not a lost attribute of some nations, even in war.

The German general says he has a daughter in England whom he is anxious to have returned in safety to his estate in a Rhine province of Germany. Guild, being a neutral, is offered his freedom and safe conduct out of the German line if he succeeds in getting the girl to the safe haven of the general's German home. He undertakes the mission.

While there has been plenty of action up to this point, the moment Guild starts for England things begin to happen with such rapidity that one is tempted to compare the quick succession of events with volleys from a machine gun. Just about this time the English officials, and even the ordinary citizens, are much concerned about all aliens going to and from their country, and Guild discovers that while he has no trouble in getting into England and locating the girl, getting out is quite a different matter.

The moment Guild lands in England he becomes aware that the general has paved the way for him; in fact, a complete chain of spies connects London with the general's Rhenish home, to aid Guild in his journey. The British secret service gets on the job almost as quickly, and the fight between these two forces, both of which are frequently outwitted by the greatest of all factors—chance—forms an absorbing part of the story.

After starting on their journey, the young man learns that Karen, the German general's daughter, has papers of value to Germany in her possession. These he is able to obtain only by force, and the story last month closed just as Guild secured the documents from the angered girl.

WHO GOES THERE

(Continued from preceding page.)

established. The idiot deck steward who had upset his ink-well and scattered his letters was serving her obsequiously with marmalade.

As Guild approached, Karen looked up at him coolly enough, though a bright color surged into her face. The steward bustled away to find more coffee and rolls.

"Do you feel rested at all?" asked Guild pleasantly.

"Yes, thank you."

"May I take the next chair and have breakfast with you?"

"Yes, please."

He seated himself. She said nothing, ate nothing. Suddenly it occurred to him that in her quaint way she was waiting for his breakfast to appear before beginning her own.

"You are not waiting for me, are you?" he asked. "Don't do that; everything will be cold."

With an odd air of old-fashioned obedience, which always seemed to make her more youthful to him, she began her breakfast.

"We'll be docking presently," he remarked, glancing out into the fog and thinly falling rain.

"Yes."

He lay back in his chair, not caring for her monosyllables, but good-humoredly receptive in case she encouraged conversation.

Neither the freshness of her clothes nor of her skin seemed to have suffered from the discomforts of the night; her hair was lustrous and crisply in order. From her hat-crown to the palms of her gloves rolled back over her wrists, she seemed to have just left the hands of a clever maid, so fresh, sweet, fragrant and immaculate she appeared to him, and he became uncomfortably conscious of his knickerbockers and badly wrinkled tweeds.

The same fool of a steward brought his coffee. And as Karen offered no encouragement to conversation, he breakfasted beside her in silence.

Afterward he lighted a cigarette, and they both lay back on their steamer chairs watching the fog and the drizzle and the promenading passengers, who all appeared to be excited at the approaching process of docking and over the terrible episode of the previous night.

In all languages it was being discussed; Guild could catch fragments of conversation as groups formed, passed, and repassed their chairs.

Another thing was plain to him; Karen had absolutely nothing to say to him, and apparently no further interest in him.

From time to time he looked at the pure profile, which never turned in response. Self-possessed, serene, the girl gazed out into the fog as though she were quite alone on deck. Nor did there seem to be any effort in her detached interest from her environment. And Guild wondered in his depressed heart whether he had utterly and hopelessly killed in her the last faint glimmer of friendly interest in him.

The docking of the *Feyenoord* in the fog interested him very little; here and there a swaying mast or a black and red funnel loomed up in the fog, and the air was full of characteristic noises—that is all he saw or heard where he lay silent, brooding on fate and chance and on the ways of a woman in the pride of her youth.

The idiot steward reappeared, and Guild sent him below for their luggage.

On the gang-plank they descended with the throng, shoulder to shoulder in silence. Inspection did not take long; then a porter who had been following took their luggage.

"Karen, do you speak Dutch?" asked Guild, mischievously.

"Yes—a little."

"I supposed you did," he said smilingly. "Please ask him the shortest way to the United States Consulate."

She turned indifferently to the porter: "Wat is de Kortste weg naar——"

She hesitated, then with a dainty malice indescribable—"—Naar the Yankee Consulate?" she added calmly.

Guild reddened and strolled a few steps forward, thoroughly incensed.

The porter smothered a smile: "Mejuffrouw—" he began, "ga recht uit links, en den de derde Straat rechts——"

"Hoe ver is het?"

The porter glanced sideways and cunningly after Guild, then sank his voice: "Freule—" he began, but the girl's haughty amazement silenced him. He touched his cap and muttered in English: "Madam is known to me. The chain is long from London to Trois Fontaines. I am only another link in that chain—at madam's service."

"I *am* served—sufficiently. Find a motor cab and tell the driver to take us to the United States Consulate."

The porter's visage expressed sullen curiosity: "Why," he asked in German, "does the gracious, well-born young lady desire to visit the *American* Consulate when the German Consulate is possibly expecting her?"

At that she straightened up, staring at the man out of coldly insolent eyes.

"That is enough," she said. "Take our luggage to a motor cab."

"To the Yankee Consulate?"

"*To the Consulate of the United States!* Do you hear? Move, then!" she said crisply.

It was raining torrents; Guild held the sullen porter's umbrella while Karen entered the cab; the luggage was stowed, the vehicle wheeled out into rain-shot obscurity.

Karen turned impulsively to the man beside her: "Forgive my rudeness; I am ashamed to have insulted your Consulate."

He flushed, but his lips twitched humorously; "I am sure that the United States very freely forgives Fraulein Girard."

"Do *you?*"

"Does it matter?" he asked lightly.

"Yes. Are my amends acceptable to *you?*"

"Of course. But what am I—Karen——"

"You are—amiable. It was very common of me."

"It might have been rather common in anybody else. You couldn't be *that*. Somehow," he added, smiling, "as we say in America, you seem to get away with it, Karen."

"You are very—amiable," she repeated stiffly.

And constraint fell between them once more, leaving him, however, faintly amused. She *could* be such a *little* girl at times. And she was adorable in the role, though she scarcely suspected it.

At the American Consulate the cab stopped, and Guild turned up his coat collar and sprang out.

While he was absent the girl lay back in her corner, her eyes fixed on the rain-smeared pane. She remained motionless for some time when a tapping at the cab window attracted her attention. A beggar had come to the street side of the cab, and was standing there, the rain beating on his upturned face. And the girl hastily drew out her purse and let down the window.

Suddenly she became rigid; the beggar had said something to her under his breath. The English shilling fell from her fingers to the floor of the cab.

His hand still extended in supplication, the man went on in German:

"Your steamer swarmed with English spies. One of them was your stewardess."

The girl's lips parted, stiffly: "I don't understand," she said with an effort.

"The stewardess spied on the deck steward, Ridder. They were all watching each other on that ship. And everybody watched you and the American. Ridder told me to follow you to the American Consulate."

"Who are *you?*"

"I served as one of the waiters in the saloon. Gratz knows me. If you are carrying any papers of value, be careful."

"What do you mean?"

"Ridder gave you some papers. The stewardess saw him. She came ashore and watched you while your luggage was being inspected. She knows you have driven to the American Consulate. Your porter told her—the fool! Do you know what she is up to?"

"I—I can—guess. I think you had better go—quick!" she added as the Consulate door opened and Guild came out. And she fumbled in her purse for a coin, thrust it hastily through the window, and turned in confusion to meet the young man's sternly questioning eyes.

"What are you doing?" he asked bluntly.

"A man—begging."

"For what, Karen? For money or information?"

The girl avoided his gaze. The cab wheeled in a short circle and moved off through the rain again.

"Which was it he wanted, Karen?" repeated Guild quietly. "Was it money or—something else he wanted?"

"Does—it—concern you?" she stammered.

"Yes. Because I have just learned over the Consulate telephone that German agents are now attempting to do what you refrained from doing last night."

"What?"

"Steal the papers."

"Do you mean the papers you *stole?*"

"I mean the papers I took by highway robbery. There is a difference," he added. "But both are robbery, and I thought *you* were above such things."

"I am!" she said, flushing.

"No, you are not!" he retorted sternly. "What you were too fastidious to do for yourself last

"To the Consulate of the United States. Do you hear? Move, then!"

night—take the papers when you thought I was asleep—you had done for you this morning by a steward!"

"I did *not!*"

"Why do you deny it? What do you mean? Don't you know that while I was busy in the writing-room a steward upset my ink, scattered my papers, stole the envelope containing the papers I took from you, and left me a sealed envelope full of tissue paper?"

"It isn't true!"

"It is true."

"How do you know?"

"Your stewardess told me over the telephone a few moments ago. Karen, you are untruthful!"

She caught her breath; the tears flushed in her eyes.

"I am *not* untruthful! It does look like it, but I am not! I did not know that the deck steward had robbed you. He came to my door and gave me the papers, saying that he had picked them up in the corridor outside our—my—door! I did not engage anybody to steal them—if it *is* stealing to recover—my own—property——"

"That deck steward is a spy, but I don't understand how he could have known that I had taken the papers from you."

"I don't know, either," she said excitedly. "But everybody knew everything on board that ship. It was a nest of spies."

His grim features relaxed. "I'm sorry I charged you with untruth, Karen. I never shall again. But—what was I to think?"

"When I tell you a thing—*that* is what you are to think," she said crisply.

"Yes . . . I realize that now. I am sorry. May I ask your forgiveness?"

"Yes—please."

"Then—I do ask it."

"Accorded."

"May I ask a little more?" he continued.

"What?"

"May I ask you to tell me what you did with those papers after the deck steward gave them to you?"

"I shall not tell you."

The Perpetual Adoration

By MABEL BURKHOLDER.

A Story of The Famous Chapel of The Franciscan Sisters

WINTER is severe in Quebec. During the time of Monsieur Bertrand's sojourn there, which was the three months between Christmas and Easter, the thermometer never rose above zero. An unprecedented tangle of business forced him to waste much time in that grim fortress city, if the time should be reckoned as wasted which he spent waiting to see certain men, with big interests in lumber or furs, who were shut in for long periods by storms which swept over the Laurentian mountains.

During the first fortnight of his stay in the ancient capital, Bertrand was caught in the toils of an enterprising "cabby," who insisted on showing him the sights. Placed in a sled, which was designed to be historical, but was only bumpy, he was driven up the Grand' Allee to pass his opinion on the old St. Louis gate, the statuary of the Parliament Buildings, and the far-famed Plains of Abraham. Lastly he was advised to pay a visit to the chapel of the Franciscan Sisters, where Perpetual Adoration is made to the Blessed Sacrament.

The traveller found it difficult to muster sufficient curiosity to descend from the sled, in order to view a score or more of women veiled in white, who moved continually before the altar of the famous chapel, intoning interminable responses and chanting weird music. The fact that this was kept up every hour of the day, and every day of the year, aroused in him only a languid approval. Bertrand passed the portal without special feeling of reverence, as one who says, "When in Quebec do as the tourists do." He saw his cabby shiver and blow on his fingers, and resolved to oblige him by a speedy return. When, however, he had stood five minutes in the aisle, eyes riveted on that marvellous scene being enacted before the altar, Bertrand returned to the sled saying abruptly in French:

"I shall not go farther to-day. The church interests me. What, the sight-seeing trip? The Lower Town, the harbor, and all the rest of it? I'll finish it some other time."

The cabby's frost-nipped fingers closed stiffly over the full fare of three dollars which Bertrand offered. Then the two parted, and Bertrand found himself tip-toeing up a side aisle, like a man in a dream, gliding from one immense pillar to another, as though he wished to hide himself from the scattered worshippers. The dusk of the interior was rendered very palpable by the glow of some candles burning on a side altar, and by a few soft lights clustered high on the wall. In the shadow of the foremost pillar Bertrand dropped into a seat, with the air of a man who is very tired, eyes closed, and fingers, in which a pulse beat, gripped across a swinging knee.

"I am not mistaken! It is—it is the voice of Hildah!"

Closed eyes rendered the ears more sensitive. Bertrand sat there, borne to the seventh heaven by the singing of a nun, whose voice was higher, purer, more divine by far than those of her sisters. On first opening his eyes he could not distinguish the singer, surrounded as she was by a group of nuns, all in flowing white robes, with semi-transparent veils dimly suggesting their wrapt faces. But finally the ears selected her, and then the eyes knew, by her every little mannerism, by the stately gait, and the figure tall as a queen, that they looked on the woman whom the world proclaimed dead six years before.

Bertrand was not a man given to noisy emotions, but there was such a savage triumph in the thought of finding her whom he had never hoped to see again this side of the grave, that it swept him off his feet. He rose, softly calling her name, "Hildah! Hildah!" He felt she might have counted his heart-beats, had she stooped to listen, for she was standing quite near the altar rail, with only the width of the aisle dividing them. Simultaneously with his call she turned and swept him with her eyes, while her hand trembled so that her candle flame went out momentarily, and had to be replenished from a sister's lamp.

"Sister Dolores sings divinely to-day," whispered a girl to her friend.

Bertrand snatched up the name.

Sister Dolores! Sister of sorrows! So? Could she know grief? Did marble mourn?

The thought of triumph was succeeded in his brain by one of abject helplessness. The altar-rail, what was it? A mountain? An ocean? How could it separate them so completely that he dared not touch her hand?

Bertrand became a devotee of the Perpetual Adoration, for many days visiting the Franciscan chapel so regularly that he earned the name of a religious fanatic, who fed his soul first, and his body afterward, if at all. Sister Dolores came always at the appointed hour, heading the procession of white nuns. She adored God, and he, Bertrand, in turn, adored her. She could not choose but feel his presence; she dared not run away.

Persistently Bertrand's mind dwelt on the oath he had sworn when his great sin parted him from her six years before. To cause the marble to feel—to make it weep! To force her through the hell of torment he had endured! To make this pure one fall from her little heaven! God, how worth while it seemed! Should he rush to the entrance door as she glided out, and crush her to his heart with a madman's kisses? What would happen if he did? Would they kill him? To allow his touch, that would be sin enough to my Lady of Sorrows. Therefore he swore he would touch her.

The day Bertrand worked his design he was mad probably. So little food had passed his lips that his head was dizzy. A countless number of times he swore that he would snatch away this bride of the church and pollute her with a wordling's kisses. It was evening, and the small door through which the nuns passed out, was veiled in shadows as black as if dipped in dye of Hades, when Bertrand took his stand beside it, resolved to interrupt the procession of the sinless.

Usually Sister Dolores walked in ahead of the procession a few feet, to denote her higher rank; and, reversing the order, walked out a few feet behind. This evening she walked apart as usual, wrapt, devout, clasping to her bosom an armful of lilies which she had taken off the altar. Beyond the door to which she was approaching a light shone to illumine the way, but it was impossible for her to see that a man stood concealed in shadows behind the pillar.

"Hildah!" he breathed, intoxicated by the sweetness of her lilies.

She reeled but went forward. One fragrant flower fluttered from the sheaf, and was caught up immediately by the suppliant's hot hands.

Bertrand knew not what penalty of the church would overtake him if he passed the little door—yet he passed, and closed it. In a large dim hall he found himself alone with the bride of the church, the long procession of white nuns filing silently away through another door in the distance.

His burning hands reached for her—then fell. He felt himself gripped by an unseen power—his innate reverence for purity, perhaps—and forbidden as by a voice to defile her with the touch of his flesh. As he stood like a man turned to stone, she had time to flee from him more than once, but she seemed to have lost the power of motion, even as he.

"Hildah! Speak to me!"

Supreme moment! She turned and pushed her veil from her face. Though not a tendril of hair showed beneath the snowy bands, the face was still fair, the features exquisitely carved, eyes burning like lamps in their deep sockets. Only about the closely pressed lips showed lines of pain and endurance. Then the marvel happened. Freely without persuasion, she glided to him her whole countenance glowing with an expression which could only be interpreted as an all-consuming human love. It was a sight for an old master, seeking to depict the triumph of the human over the divine. Another moment of that perfumed semi-darkness would have seen her lips clinging to Bertrand's, her starved heart absolutely intoxicated by its unexpected draught of human love. Then suddenly a taper gleamed from the sacristy, and the tread of a priest was heard in the hall. Sister Dolores dropped her veil, and fled sobbing.

Next day an illness, induced from exhaustion, rendered Bertrand unfit to perform his pilgrimage to the chapel. It seemed probable he should never return. Had he not proved to his own satisfaction that he was not the only sufferer, or the only sinner?

However, on the second day, he was in his place at the usual hour. A heavy twilight rested on the interior of the building, and the change from the snow-laden atmosphere of the street to the perfumed air of the church made him faint. A score of worshippers were on their knees in various pews. Bertrand had never noticed the crowds particularly, though sometimes he picked up from them odd bits of gossip about the lives of the Franciscan sisters. It had always surprised him what a perennial source of interest the Perpetual Adoration was to the public.

Said a French woman to her companion, in her native tongue:

"Let us move into a position where we can observe Sister Dolores doing her penance. Nobody knows the sin, but the punishment is that she shall remain before the altar for forty-eight hours without rest or food. Mon Dieu. I thought her sinless—but be that as it may, she has knelt in that spot since yesterday, with scarcely a change of position."

Bertrand rose in the shadow of his favorite pillar, and with locked arms over a guiltily beating heart, observed the prostrate figure. Presently the sisters seemed to notice what had been most apparent to him from the first, her rigidity. One among them bent and touched her. In a moment there was confusion in the rear, which was but poorly concealed by the singers at the front, who bravely continued to lift up their voices.

While Bertrand's heart stood still with certainty of disaster, he saw two stout men enter by a side door and carry the rigid figure forth. So he knew without doubt, what he had guessed at first glance. Sister Dolores was dead.

Was he her murderer? Bertrand could not feel so. She died of starvation. It was her famished womanhood that killed her.

Fate Chaperons Eleanor

By GEORGENE H. WILDER.

A Humorous Description of a High School Sleigh-ride By One of The Girls

I DO think it a pity grown people get so sort of still and poky. It's almost impossible to get mother excited. When I came home and told her our class decided to have a sleigh-ride, she just turned 'round from peeling the potatoes and said, "That's nice. But you are *very* late, Eleanor. You know I don't like to have you stay so long after school. Hurry and get your things off and help me. I expect your father every minute." As if dinner amounted to anything when I had such *big* news! I just made her put down her knife and waltzed her 'round the kitchen, singing, "Dashing through the snow in a one-horse open sleigh," etc., 'til I saw she really couldn't get her breath. I was so glad, so glad, so glad!! I wanted her to be glad, too. I thought I was going to have the grandest time. We little know in this world how dubious the future is!

I had decided as soon as the class voted to have a dance after the supper, to wear my net dress. It has short sleeves and the neck is low. Mother says it is *too* low for a young girl, but I'm real glad Miss Winn made it that way. I don't think it would have hurt me a bit to leave off my winter underwear. But mother is like other people of her generation I've noticed, scared to death over wet feet or slippers or summer underwear in winter. I just hate bundling up in fuzzy, wuzzy things. I think thin, lacy clothes look much nicer. Besides a girl can't expect to get any dance partners if she goes looking like her grandmother in Eskimo clothes.

But mother was scandalized at the idea of the net dress. She said I must either stay home or wear my pink voile and *then* a sweater under my coat. I believe I would have stayed home, if she hadn't offered to let me wear her lovely fox furs.

Worse than bundling up, she just insisted that I couldn't go unless there was a chaperon. None of us thought a thing about a chaperon, I'm sure High School Juniors are old enough to know how to behave, without some teacher sitting and staring at them every minute.

Madge and I rode part way to school the next morning for the walking was fierce. Madge is the sweetest girl you ever saw. It isn't any wonder the boys don't like me because I'm really not pretty, but I'd think they'd be wild over Madge. One trouble with her is she's sort of an aristocrat, besides being smarter than any boy in the class. They call her a high-brow.

All the girls were steaming around the radiator, when we came in, drying their clothes, and they were awfully excited. Everyone was telling what she was going to wear and wondering what girls the different boys would ask. Hattie Barnes was saying, "Oh, girls, Rob Smith called me up last night and asked if he might take me. He's the swellest kid I know!" It set my heart to thumping, and my throat to swallowing. It must be beautiful to have a young man so anxious to be your escort that he'd call up so soon as that!

Some of the other girls couldn't go either unless a teacher went. Joe said, "Oh, we don't want any old stiff along to bawl us out. We get enough of that in school." All the boys seemed to think so too, but when the girls insisted that they couldn't go unless there was a chaperon, they gave in and said we'd decide in class meeting after school.

We finally voted to ask the English teacher. She gives the girls a pain, but Ned Graves and Horace Black had a crush on her and wanted her to go awfully! They are both terribly good looking, and it makes the girls madder than hops. She's only just out of Normal and her room's always full of boys, at recess. She just sits at her desk and blushes and dimples and smiles and smiles when she's helping them with their English. It's mighty noticeable though that we *girls*, none of us *need* any help.

Jimmie Lovell knows an Adele somebody. He takes her everywhere. He's a swell fellow and gives

Taking Chances

And Where It Will Lead

By DR. LAURA S. M. HAMILTON.

"I'll take a chance on it, I'll take a chance on it." The words were reiterated nervously. The speaker was a young clerk in a store who was busily counting out a roll of bills, wetting his fingers on his tongue or lip every moment or two to assist in the operation.

"A poor chance you're taking," I said, "don't you know that you may get any filthy disease from those bills?"

"I suppose so, but I'll have to chance it," he said flushing with nervousness, "Well," I replied, as I left the store feeling that my duty at least had been done, "It may be the chance of two or three years' miserable hospital treatment, and much else beside."

His words, however, kept repeating themselves to me for many days, and the utter fallacy of their argument seemed to become more evident the more I thought of them. "I'll have to chance it." What a lie! And yet to look at that young man one would know that the last thing in the world he would wish to do would be to tell an untruth. He simply was deceiving himself.

I read the other day that the mother of the former emperor of Germany had once remarked of him "that the trouble with Willy was that he could not tell the truth, even to himself." Such an affliction evidently tends to a bad end.

There are, however, not a few people who will most punctiliously tell the truth to other people, and yet deceive themselves.

Of such a class is the clerk. I saw him a few days later counting money again the same way. "I'll have to chance it."

Could he have had the mental picture of what he was chancing that I had, possibly he would have roused himself from his lazy acquiescence to a filthy habit; but he might have at least glimpsed it, and he would not try. He preferred to take a chance.

There are multitudes of such people in the world; people of whom one would naturally expect a higher degree of intelligence. For lack of intelligence can be the only explanation of such a mode of action. Lack of intelligence goes hand in hand with laziness and these two of course nurture ignorance.

People take chances, unneccessary chances, continually, in the handling of money, of materials, of foods, especially cooked foods, of everything that has had to pass through many other hands before reaching their destination. I would like to know if, during the not yet past plague of so called influenza, there has been any appreciable difference in the sale of cooked foods that are exposed for inspection in the various supply stores. From appearances I should think not. Yet such foods in our great cities and probably, where they have them, even more so in the village or country store, are exposed to the breath of every passerby. Where food has to be cooked again at home as in the case of raw meat, etc., it is a different matter.

In cities and in the provincial bulletins the medical officers of public health have tried patiently to instruct the public as to the proper use of the handkerchief and other ordinary marks of civilization, but with only a small proportion of success.

Only a couple of days ago, necessity compelling me, "the man of the house" and myself were seated in the street car, and a tall, fine looking young man, who nevertheless had a cold, was standing opposite. Presently he drew from his pocket a large handkerchief, I was thankful to note that it was fairly clean, but it had been used, and he deliberately shook that thing, largely as befitted his size, sex, and importance, in our faces, not once but twice, before using it to blow his very respectable nose.

I ducked my head, and endeavoured to put myself between the small boy and the offensive banner of thoughtless ignorance. Very thankful I felt that I took no chances I could possibly avoid in exposing ourselves to infection, for had we not before going out into crowds that day made sure that we were well fed and comfortably clothed, and did not remain in town to the point of fatigue?

Nevertheless what business had that young man, or anyone else, to allow himself to form habits of handling his handkerchief, or of sneezing, or coughing, in such a manner as to run the chance of infecting the innocent people with whom he happened to be surrounded?

Playing in the street outside the house now are two little children, who are staying with a relative, because their mother is in the hospital with an apparently serious case of influenza. Those children's noses are in such a condition that they never breathe through them, and their appearance, though otherwise warm and comfortable, is such that one does not care to look at them! Yesterday when they had been worrying my boy to come and play with them, I made direct inquiry as to their handkerchiefs, to find that such an article of nicety was apparently quite unknown? It is needless to say that "the man of the house" is instructed to keep such children at a polite distance. I take no chances.

Perhaps right here is a good opportunity to give a few rules in regard to handkerchiefs.

Handkerchiefs should be clean always, if soiled they should be discarded.

Each person, old or young, should have his own handkerchief, and use no other.

In the case of any cold, or infection of any kind in a house it is wiser for everyone to use rags and burn them at once, or better still use the soft paper that may be obtained for this purpose, so that a soiled article will not be carried about the person at all.

Handkerchiefs before being handled in the wash at all should always be boiled. If they are soaked first with a little soda in the water, and then boiled, the "dirt will not boil in."

Children should be taught from babyhood to keep the nose not only dry, but clean, so that breathing is quite easy.

They should be instructed how to handle a handkerchief daintily, never to wave it about, throw it around, or wipe their boots with it, or any other person's face.

They should be trained to regard a soiled handkerchief as an object of loathing and the condition of nose and throat that produces such a handkerchief as also a condition of loathing, to be *cured* at any cost, *and with all possible speed.*

They should regard it as immoral to transfer such a condition to any other person, and if infection is given inadvertently it should be a matter for apology and if possible reparation.

Incidentally it may be remarked that these rules are more binding on adults than on children.

People take strange chances in the places they visit, and more especially in the places they allow their children to frequent.

For instance take the moving picture shows, theatres, department stores and other places of public assembly, where mixed crowds gather.

Let us consider these at first wholly from a physical standpoint. Adults unaccustomed to crowds, or poor air grow faint or fatigued as the case may be while shopping, or "at the show." To how much greater extent must this be the case with children—the younger the child the more susceptible to exhaustion. Children are peculiarly susceptible to the emotional atmosphere of people around them. They are like little Eolian harps and every passing breeze finds response on sensitive strings. Imagine the exhaustion that must necessarily result. And with physical exhaustion comes immediate susceptibility to disease germs which always are found in plenty in crowded enclosed places—this susceptibility because the general bodily powers being even temporarily at a low ebb the power of resistance is proportionately low.

Since the power to resist disease may be called one of the overflows as it were of good health, one can quickly realize that in a lowered condition of general health the *overflow* would be practically nil.

And yet people for the sake of an hour's recreation (re-creation) or the "pleasure" of shopping in one of the big stores, deliberately expose themselves and their children to the dangers indicated, "taking chances" with what object in view, anyway?

One dislikes to think that such a large number of people are without objective. Yet surely they at all events are curiously near-sighted.

Economy can scarcely be urged as a reason for the shopping mothers one sees, dragging their exhausted selves and panting, wailing babies about the big stores, for one visit from the doctor, or even one bottle of medicine these days will completely knock the bottom out of almost any bargain that might be gotten by such shopping. Of course there *are* people who never pay their doctor's bills, that class might make a slight monetary gain.

The query—is it pleasure then?—calls to mind the experience of the little Irish city bred waif, a jolly party of young people took with them once when they went on a good old fashioned camping trip in two canoes to a wild little rocky bay in the far north of Muskoka. Mary had slept in a tent on moss and spruce boughs for the first time in her life, and thought poorly of it. And now at noon the next day one of those infatuated young women whom she had thought so wise was cooking in a tin can suspended over an open fire, on a flat rock, a curious mixture of partridge and other things (that same stew was one of the most delicious things I ever tasted) when a sudden "merry little breeze" blew ashes from the fire in a wild swirl into the pot and, mixed with smoke, into poor Mary's eyes. After several futile attempts to dodge the smoke which seemed not to disturb the cook any more than the ashes in the stew did, Mary finally stood up straight, and, removing her hand from her eyes, she pointed an accusing finger at that offending individual, and in a tone in which profound pity for the madness of her companions, mingled with righteous indignation at her own enforced misery, she wailed out, "Plai-zhure; plai-zhure! An' do yez call *this plai-zhure?* Take me back to Toronto." The shriek of unseemly mirth which greeted her only made her more certain of the madness of the community, and she retired with dignity to the tent.

But often when I see the weary looking crowds coming out of "the show," or an exhausted mother carrying about a fretting, piteous-looking child in her arms, Mary's words come back to me, "Plai-zhure! Plai-zhure, do yez call *this* plai-zhure?"

As a complete antithesis to the people who "take chances on it" are a much smaller class who "shut the door after them," otherwise take no chances they can avoid, and make all possible preparations for what they cannot avoid.

Have you heard the little rhyme, "Advice to Children"?

"Come when you're called, do as you're bid,
Shut the door after you, and you'll never be chid."

Very sound advice it is, and applicable to older children.

It was in my student days, and a well-known physician and I were returning home in those eerie hours somewhere between two and four o'clock on a winter's morning. Very weary we, botb were, and very awe-struck was the student, for all night long had she been watching the older woman struggle with wonderful skill to save not one, but two lives. It was in a poor home, over full, and not very clean, and the only help the doctor had had was such as had been rendered by the nervous, unskilled hands of the student herself. But now mother and babe lay clean, peaceful and comfortable, and everyone was happy in the little home. A woman had again gone down almost to death, and had returned, and another little life been lifted over the threshold of the strange door between Eternity and Time.

It was one of the very first cases I had seen, and the awe of it has never quite gone, but that night I broke a long silence by asking the skilled obstetrician at my side the question that had been on my mind for weeks, "Aren't you often afraid to leave a case like that when you think of the infections there might be?" Her reply was abrupt in its terseness, "No, I am not, because I leave no doors open behind me." Otherwise, she took no chances. She was noted for her success, as she was also for the unswerving care of her routine work, in which the element of chance had no place.

"I'll just take a chance on it." "I leave no doors open behind me." Would that I had the pencil of the artist and could sketch for you the faces of the speakers, every feature and line of which indicate the differences in character—weakness and force; indecision and decision; narrowness and breadth; helplessness and helpfulness; childish good nature and God-like sympathy; nervous fear and calm repose; ignorance and high intellectuality.

To which class would you like to belong, my reader? Perhaps someone is saying, "But we cannot all be like the doctor." Possibly not just in her line, but we can each practice one of her favorite mottoes, Shakespeare's well-known, "To thine own self be true; thou canst not then be false to any man." We can insofar as we understand "shut the doors behind us."

We can remember, without any exception to the rule, that in all matters relating to humanity (and we ourselves are human) no chances can be taken. no gift can be acceptable but our best, our gold and frankincense and myrrh. The only path we can tread to bring our gifts to the King of Kings is the path that was marked for us by the feet of the King's Son, who brought *His* gift to *Humanity.*

Since last I wrote to you the war has ceased, and our hearts are still thanking God that the awful slaughter has ended; but following the period of delirious rejoicing has come on many of us the reaction of a strange apathy, as we strive to awaken from what, alas, has not been merely a horrible nightmare.

For, as the aftermath of war, pestilence and confusion surround us; as stark details of horror, which in the rapid passing of events we had scarce time to realize, now crowd in upon us, we are conscious of something akin to stupefaction that presses in on mind and spirit.

Just now let us remember to walk softly and take no chances. "To thine own self be true." Let us be patient with ourselves, and above everything.

The Best Books For Winter Evenings

Selected by OWEN E. McGILLICUDDY.

Canadian Poems of the Great War: Edited by John W. Garvin. Published by McClelland & Stewart, Ltd., Toronto. Price $1.50.

The poetic event of the year, so far as Canadians are concerned, is undoubtedly the publication of this very complete Canadian anthology of war poems, edited by Mr. Garvin. There are two hundred and twenty poems, representing seventy-three poets, and although one is puzzled as to why certain stanzas have been included in the book, the anthology is most complete, and will serve to vocalize Canada's war thought during the past four years or more.

Among the poets represented are W. A. Fraser, Bliss Carman, Helena Coleman, Wm. D. Lighthall, Isabel Ecclestone MacKay, Lieut.-Col. John McCrae, J. E. Middleton, Chas. G. D. Roberts, Frederick George Scott, Robert W. Service, Bernard Freeman Trotter and Arthur Stringer. Mr. Garvin has performed a worthy work in compiling this anthology, and it should find a place in every Canadian library.

Old Days on the Farm, by A. C. Wood. Published by McClelland & Stewart, Ltd., Toronto. Price $1.50.

This is a volume containing a series of sketches of farm life as it was lived in the country thirty or forty years ago. They were originally contributed to the "St. Mary's Journal," and depict the author's recollections of his boyhood days amid the natural surroundings of farm life.

In a brief preface, the author outlines his purpose in publishing the book. "I hold to the belief," writes Mr. Wood, "that one born and raised in the country has a distinct advantage over those unfortunates who from infancy have been doomed to artificial ways and so missed the delights of woodland places, hawthorn lanes and the innumerable joys that pertain to rural life. I have essayed to recall in these chapters the pleasures that are still to be found and enjoyed by those who may adventure in the field of pioneer agriculture."

An American Family, by Henry Kitchell Webster. Published by McLeod, Allen & Co., Toronto. Price $1.50.

This work of fiction deals with the industrial problems which hinge on the manufacturing business owned and operated by Gregory Corbett, the father of the hero in the story. The scene of the book is located in Chicago, between the years 1911 and 1916, and the author's purpose in writing the story is to attack the industrial unrest as represented by Anarchy, Bolsheviki and the I.W.W. movement. Like all propaganda novels, the story lacks reality. Nevertheless, Mr. Webster pictures American industrial conditions of to-day with more than ordinary skill.

Professor Latimer's Progress, by Simeon Strunsky. Published by McClelland & Stewart. Price $1.40 net.

This book is the first novel of Simeon Strunsky, who for a number of years has been a staff writer on the "New York Evening Post." It is a story of the sentimental journey of a middle-aged American scholar, who seeks a cure from the weariness of war in a walking trip through New York State.

Prof. Latimer is not too sentimental, and the adventures he meets on the broad highway are surprisingly modern. He finds himself playing the haughty father to a Mexican beauty before the moving picture camera; he invades the roadside blacksmith shop, which has graduated into garages, and consorts with philosophic tinkers of the 1918 model; he is arrested for speeding, is subjected to the Binet test in a modern criminological laboratory, and engages in a fist fight on the country road in the manner of George Borrow. He finally comes home with a moving picture actress, "registering" sympathy, and two modernist young women, to say nothing of a wealth of new ideas and something of an answer to his quest after the meaning of war.

"The New York Sun" and "Boston Transcript" have hailed "Professor Latimer's Progress" as "an American Britling," but to the editor of this column the big essential difference between Wells' book and the novel under review is the difference between a search for a cure for a diseased mental viewpoint and a search in which the main purpose is to avoid discomfort. Prof. Latimer is not nearly as strong a character as Mr. Britling, nor, on the other hand, is he as clearly delineated by his author.

A Reporter at Armageddon, by Will Irwin. Published by Frederick D. Goodchild, Toronto. Price $1.50.

Public interest in war books has been waning rapidly since the signing of the armistice. Nevertheless, there will be for some seasons to come several outstanding war books which will compel the attention of the discriminating reader.

One of this season's war books which merits careful reading is Will Irwin's new book, in which he describes the people and places visited during his travels through France, Italy, Belgium, Great Britain and Switzerland. All of the articles deal with certain phases of life which are peculiar to the countries visited, and indicate very keen powers of observation on the part of the writer. Some of the articles appeared last year in a number of prominent periodicals, and all of them are marked by an unusually sympathetic understanding of the various peoples and places.

(Continued on page 45.)

THE first of a series of Book Reviews by Owen E. McGillicuddy appears on this page.

In future each month Mr. McGillicuddy will tell our readers what is new, what is worth reading, and what is not, in the realm of books, thus providing a most valuable guide to busy readers who have not time to choose for themselves from the entire output of new books.

An excellent book of verse by this writer has just been published.

Our Friend The Piano

Something About Its Evolution and the Place It Holds in the Community

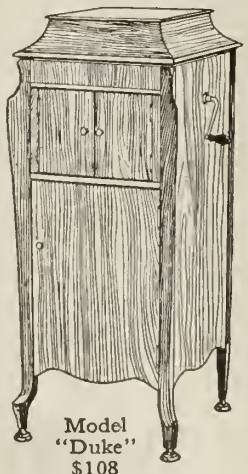
By HECTOR CHARLESWORTH.

Despite the greatly increased diffusion of reproducing instruments of recent years, those directly interested in the manufacture and sale of the piano tell me that the vogue of that instrument has not suffered. In fact, the falling off in sales which was expected during the first year of the war did not transpire. A just proportion of the increased earnings of the people which were the result of war contracts went into pianos. Music teachers who specialize in the instrument did, indeed, suffer severe privation in the first twelve-month or so of the conflict, but presently began to be recompensed by the fact that large numbers of young people, suddenly becoming self-supporting, had shown a desire for musical instruction that they had not been previously able to afford; and the instrument to which they turned was the piano.

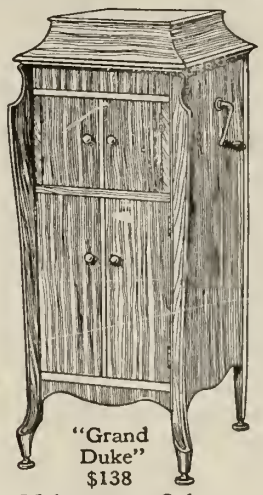
Few of us stop to realize how great a part the piano has come to play in the modern community. Thirty years ago it was very rarely, indeed, that one might encounter pianos in the homes of even wealthy farmers; and to-day they are everywhere. At the period when men of middle age received their education, a piano in a public school was a very rare sight, even in the big cities. Now no educational institution, even of the humblest pretensions, is without one. The piano is part of the equipment of the smallest country hotel and of every boarding house, to say nothing of the part that instruments of a more magnificent order play in the furnishing of elaborate homes. The reason is not far to seek. A great proportion of mankind have an instinct that leads them to desire to make music themselves—to participate, so to speak, in the creation of the melody. To people of such inclination the piano, while capable of being the vehicle of the highest artistic expression, is the easiest of all to play upon easier even than the mouth-organ. People who never had a music lesson in their lives, and to whom staff notation is Greek, can play on it quite passably by ear. There is another more subtle reason for its popularity discerned by psychologists. The piano is in essence a percussion instrument, in which the tone is produced by a series of hammer-strokes on wire; and is capable of infinite varieties of rhythmic effect. In this respect it partakes of the nature of the drum and other instruments that have been favored by mankind since the beginning of the human race. Unquestionably, there is that in the nature of all of us which loves percussion and the rhythmical effects that can be produced thereby. This despite the fact that in the higher examples of pianoforte interpretation it is the aim of the artist to overcome the percussion effect and produce the same flowing tone that characterizes the human voice and the violin when properly used.

Despite its universal vogue, the piano, as we know it to-day, is, in comparison with most other instruments that are used to make music, modern; though it is a scientific development of one of the most ancient of all instruments—the harp. Its mechanism is, indeed, partly that of a harp, which can be tuned with keys, and is struck with hammers rather than with the fingers. On the many devices that modern invention has produced to make piano tone richer and more beautiful and to regulate and soften the blows which produce the sound, it would be impossible to dilate without entering into a dry mechanical dissertation. Suffice it to say that the piano of to-day is the outgrowth of centuries of ingenious development.

Musical historians tell us that in its infancy it was a two-stringed harp. From time to time more strings were added. By the dawn of the twelfth century A.D. it had become known as an cithara, somewhat of the shape of the modern letter "P" and having for the most part ten strings. It is quite possible that Richard Coeur de Lion, King of England, who was a poet and musician, solaced his leisure with such an instrument. About that time another instrument which may also be regarded as an authentic ancestor of the piano came into vogue in the shape of the monochord, known to Guido D'Arrezzio, the supposed inventor of modern musical notation. As its name indicated, the monochord had but one string, and remained in use for two centuries at least. But the modern piano was really on the way when the clavichord was evolved, in which the strings were touched by a brass tangent instead of a hammer. Records preserved in the National Museum at Vienna bearing date of 1440 A.D. show that the clavichord had been in use at that time for about a century. Though mediaeval in origin it managed to hold its own, owing to various modifications and improvements, for another three centuries. Many of the piano compositions of Bach, which are heard on concert platforms and given to pupils for study, were composed for the clavichord, on which his wife was a gifted executant. I have heard a clavichord played by the famous authority on ancient instruments, Arnold Dolmetsch, and the tones were so light and low that they would have little appeal to modern ears, which by the conditions of modern life have been attuned to noise or to louder sounds than the clavichord was capable of producing.



Allied with the clavichord were the spinet, the virginal, to which allusions will be found in Shakespeare, and the clavicimbalum, an adaptation of the cimbalum. The cimbalum is an ancient instrument which is still used by Hungarian bands and in which the musician strikes with a pair of light hammers a series of wires stretched over a horizontal board. The origin of the word spinet is, like most matters connected with the ancestry of the pianoforte, a subject of controversy. Some think that it got its name from the fact that sharp-pointed quills or thorns (Latin, spina) were used to elicit the tone from the wire. Others hold that the name comes from Giovanni Spinetti, a Venetian maker of musical instruments, who lived at the dawn of the sixteenth century.



By the time the eighteenth century had been reached a most potent rival to the clavichord had been born in the harpsichord, which is the real mother or father of the modern pianoforte. It was invented in 1640 by Jan Couchet, whose grandfather, Hans Ruckert, was a noted clavichord maker of Antwerp. It was used by Handel, Mozart, Bach, and, in fact, all the notable composers of the eighteenth century. There is in Queen Mary's music room at Buckingham Palace a very fine harpischord, which was once the property of Handel.

Though it was of Dutch origin, England became the home of the harpsichord and of makers of that instrument. For instance, among the Kaiser's treasures at Potsdam was a magnificently decorated harpsichord made for Frederick the Great by Jacob Kirckman, of London. The boom which the manufacture of harpsichords enjoyed in England was largely due, no doubt, to the patronage of successive monarchs. It was a favorite of the Dutch King of England, William III., Prince of Orange, who came to reign in 1690, and later with good Queen Anne and the first three Georges. It was one of the virtues of George the Third that he was a great lover of music, and found it a

For the nightly cleansing, use Pond's Cold Cream

As a protection to the skin, use Pond's Vanishing Cream just before you go out

Cold weather whips out of the skin all its natural moisture

YOU can keep your skin soft, smooth, pink-and-white the winter through, but you must guard it against the harsh winds which whip out of it all its elasticity. To make and keep your skin lovely you need two creams—one kind for protection and an entirely different kind for cleansing.

The reason your complexion suffers in winter is because the cold weather whips out of the skin all its natural moisture.

With each exposure to the cold, the skin becomes tighter and rougher until it cracks and breaks. It loses its delicate color and takes on the unattractive redness of coarse, chapped skin.

How to protect your skin

Before going out protect your skin by an application of Pond's Vanishing Cream. Use it on your hands and neck as well as your face. Compare the fresh, soft condition in which it keeps your face with the drawn, dry feeling that generally follows exposure to cold, windy weather.

Based on an ingredient which doctors have used for years for its softening, beautifying qualities, Pond's Vanishing Cream is of the utmost value in overcoming all dryness and restoring the normal pliancy to the skin.

It is absolutely free from greasiness. You can use it throughout the day or you can put it on while dressing for the evening with the knowledge that not a bit of it will remain on the skin to make it shiny. It has a wonderfully beautifying effect, and as a base for powder is so effective that one powdering is sufficient for the whole evening. Try it the next time you want your skin to look its very best.

Photo by Charlotte Fairchild

Billie Burke, whose beautiful skin is the envy of everyone who sees her, says: "No one appreciates Pond's Vanishing Cream more than I"

Photo by Charlotte Fairchild

Constance Collier, who was a particularly adorable Marr, Duchess of Towers, in "Peter Ibbetson," says: "Pond's Vanishing Cream feels so cooling and soothing to the skin. I never fail to use it after coming in from outdoors. Just one application is enough to do away with all roughness and windburn"

Some of the famous women who use it

Many of the most famous women of the stage use Pond's Vanishing Cream constantly. Among them are Billie Burke, Constance Collier, Frances Starr, Martha Hedman, Elsie Janis, Norma Talmadge, Marion Davies, Mabel Taliaferro, Marjorie Rambeau.

Your nightly cleansing needs a different cream

Without thorough cleansing of all the dust gathered during the day, the skin cannot be clear and fine-textured. Pond's Cold Cream was prepared especially to give the skin a *perfect* cleansing.

Try it for your bedtime toilet tonight. You will revel in the sensation of grateful cleanliness it produces.

For massage, you will find Pond's Cold Cream delightfully smooth and easy to work into the pores.

Only the very freshest, purest ingredients are used in the preparation of Pond's Vanishing Cream and Pond's Cold Cream. They will not grow hair or down on the skin.

Get a jar or tube of each today at any drug or department store.

Or we will send you free samples of each cream

Mail the coupon below for free sample tubes of each cream. For enough of each cream to last two weeks send 10c, or 5c if you want only one cream. Send for them today and give them a week's test. You will find that your complexion has become smoother, fresher, lovelier than ever in coloring. Address The Pond's Extract Company, 146-S Brock Ave., Toronto, Canada.

One application relieves chapped skin

If your skin has become rough or reddened by exposure to the cold, apply a little Pond's Vanishing Cream. The very first time you use it you will notice how it relieves the tight, drawn feeling, how it smooths away and softens all roughness

MADE IN CANADA

Pond's Extract Co., 146S Brock Ave., Toronto, Can.

Please send me free the items checked:

- A free sample of Pond's Vanishing Cream
- A free sample of Pond's Cold Cream

What Is Osteopathy?

By W. OTHUR HILLARY.

Through merit and scientific progression, Osteopathy has finally become the subject of earnest discussion and investigation by the laity, the press and the Government. And by its teachings and practice, Osteopathy has so influenced the dogma of the old schools of healing that it has become necessary to readjust medical legislation all over America.

Ontario is no exception to this reformation. Our Government has spent thousands of dollars in an effort to define this new art of healing and determine its relation to allopathy and homeopathy.

An answer to the above question might be expected in the form of a definition. But a comprehensive definition of the healing art, or any school of the art, is inadequate since the theory and practice of therapeutics are in constant change. An example: The old conception of a doctor was that of a dignified, prosperous gentleman with a pill-bag.

The greatest physicians of to-day have discarded the pill-bag, since they have learned to give little or no drugs.

Sir William Osler very aptly stated the position of drugs in the medical art of healing; "The new school (of medicine) does not feel itself under obligation to give any medicine whatever, while a generation ago not only could few physicians have held their practice unless they did, but few would have thought it safe or scientific."

The old system of drugging was in vogue long before Harvey discovered the true nature and course of the circulation of the blood. It has grown in custom through centuries. The "dictionary" of drugs grew in volume generation after generation in spite of the fact that thousands of remedies given as specifics yesterday, are proven useless to-day.

So Sir William Osler's revolution in treatment is a marvelous change to accredit to one generation.

It is remarkable to consider that Osteopathy was conceived and developed in this particular generation; and the medical school can but honestly accredit this reformation in drug giving, largely to the influence of the persistent non-drug principles and practice of Osteopathy.

For through persistency and opposition Osteopathy grew.

Tradition gave precedent to the old school physician and unquestioned confidence in his medical method of combating disease.

The Osteopathic physician did not at first enjoy that confident faith of his patient. In consequence this new art of healing had to grow by successfully treating the so-called hopeless cases, driven in despair from the old faith.

It has been a painful progress on the part of the Medical profession to accept the fact that Nature cures, and not the remedy prescribed. And since non-drug methods of healing have grown on the failures of the orthodox school of medication, Osteopathy early won favor and success because it taught that drugs are palliative, that Nature cures, that the most any physician can do for his patient, is to render operative the natural curative forces within the body.

Conditions decreed that the Osteopathic physician could not "tend" his patient, because he had not the prerogative of traditional confidence and submission granted the "old school" doctor. Osteopathy must get results or get out. If any long term of suffering was to be borne by the patient, while waiting until the journey should end, it must needs be traveled under the care of a "regular" doctor.

It is well for Osteopathy that it was so.

The life-saving stimulation which developed the Osteopathic concept into a complete science of healing, was that very opposition of tradition. The Osteopathic missionaries faced a daily challenge. "You are a new school. The old school says they can do no more, we will defy orthodoxy and submit to your treatment as a last resort." But at first they came with skepticism, with anxiety and faint heart that this new method might cure the hopeless.

Is it not a worthy tribute to the efficiency of Osteopathy that in spite of this prejudice and impatience, Osteopathy has developed and broadened into a complete school of science influencing the reform of the whole therapeutic Art?

So we must consider Osteopathy is either true or false. There can be no compromise.

That it is incompatible with the medical school is not general knowledge, and the establishment of this fact is Osteopathy's only right to exist in the world as a special school of healing.

We can best consider this new system of therapeutics by discussing the three principal points of radical departure between Osteopathy and medicine, the theory of the cause of disease, the method of diagnosis and the manner of treating these causes.

Causes of Disease.

Osteopathy has developed a new theory as to the origin of most diseases. This new idea is expressed in the term—lesion.

This is the one characteristic concept of Osteopathy—that lesions, or structural defects, by interference and pressure cause and maintain disease. Since every interference affecting the health balance of the human mechanism has a definite cause, there are necessarily many lesions to be diagnosed and corrected. While Osteopathy has found most diseases to be of spinal origin, many causes are found in all tissues and organs of the body. Further let it be understood that Osteopathy does not look within the body for all the maladjustments causing ill health. It is fully recognized that the lesion may be one of heredity, environment, habit, occupation or temperament. And in treating these cases Osteopathy brings to its aid the corrective forces common to the science of healing. It makes use of diet, hygiene, sanitation, surgery and psychology. In fact it appropriates all that is good in restoring health, and welcomes that which is proved good by whatever school.

It does not appeal to you to accept that which cannot be demonstrated. Its principles are broad, and based upon common sense in full accord with the facts of modern science. It embraces the discoveries of anatomy and physiology and all disease manifestations. These facts bear witness to the fundamental principles of Osteopathy—that bodily structure must be normal, all parts in proper relation one to another, in order that function be perfect, resulting in health and happiness.

Health can only result from a proper quantity and quality of blood supplied to all tissues and organs of the body. This function is possible only with an uninterrupted nerve supply, which condition depends upon unobstructed nerve paths and blood channels.

From these common truths it should be easy to reason why the very basic principle of Osteopathy is adjustment. Adjustment of the structures of the human body as a machine. Adjustment of internal relations to external relations in nature's struggle with heredity and environment.

Osteopathic Diagnosis.

The successful application of Osteopathic principles requires scientific knowledge and training. While manipulation is of Osteopathy, it is but a means of assisting nature and is of secondary importance. But the ability to locate *cause* and properly interpret *effect* is all important and requires a comprehensive knowledge of the human body as a living mechanism. For without scientific knowledge of structure, function and disease, proper diagnosis of *causes* cannot be accomplished. And unless the exact cause, or lesion, of the disease is comprehended, no degree of manipulation or adjustment will effect a cure. So efficient diagnosis is all important.

However it should be common knowledge to-day that the professional training of the Osteopathic physician is equal to the professional training of the Medical physician in all subjects pertaining to the healing art except those having to do with internal medication. In fact the

Economical Dumpling Recipes

By MARION HARRIS NEIL,
Author of "Economical Cookery."

In Cold Winter Days Dumplings Make An Appetizing Dish

Fig Dumplings.—Sift into a bowl one cupful each of barley flour and corn flour, a pinch of salt and one teaspoonful of baking powder, then cut and rub in one-half cupful of butter substitute, add three tablespoonfuls of maple syrup and one cupful of finely chopped figs. Mix all well together, add sufficient milk or water to form a stiff dough. Divide the mixture into equal parts, shape them into round dumplings, put them into a saucepan of boiling water, and boil steadily for one hour and fifty minutes. Serve hot with preserves or syrup.

Cracker Dumplings.—Beat three tablespoonfuls of butter substitute to a cream, add to well beaten eggs, one tablespoonful of chopped parsley, one-half teaspoonful of salt, one-fourth teaspoonful of pepper and a little powdered nutmeg. Add five rolled soda crackers and roll into small balls and drop into boiling soup fifteen minutes before serving.

Corn Meal Dumplings.—Put into a double boiler one cupful of milk or water, two tablespoonfuls of butter substitute and a pinch of salt, when it begins to boil stir in enough corn meal to thicken and allow to cook for twenty minutes stirring all the time. Remove from the fire, and when cold add two well beaten eggs, a grate of nutmeg, one-half cupful of chopped nut meats and a squeeze of lemon juice. Allow to become cold, then make into little round balls and twenty minutes before soup is to be served, drop in the dumplings.

Oatmeal Dumplings.—Melt one-half cupful of butter substitute, then pour it into a bowl, add one cupful of oatmeal or rolled oats, one onion, chopped, one tablespoonful of chopped parsley, one teaspoonful of salt, one-half teaspoonful of pepper and one-eighth teaspoonful of paprika. Rub well together until thoroughly mixed, then add gradually enough cold water to make a stiff dough. Take a clean pudding cloth, wring it through water, and sprinkle the centre of it with oatmeal. Place the dumpling in it, and tie firmly, leaving ample room for swelling. Plunge it into a saucepan of boiling water (placing a plate under it to prevent sticking), and boil steadily for one and three-quarters hours. Turn out on to a hot plate, and serve with baked potatoes. This dumpling is very nutritious for children, and greatly liked if made sweet, by leaving out the onion and seasoning, adding a pinch of salt and three tablespoonfuls of maple syrup or honey. Serve hot with milk.

Delicious Apple Dumplings.—Peel, core and slice eight or ten large apples. Line greased custard cups with war-time paste; fill with apples, sprinkling them with maple or corn syrup, and adding a squeeze of lemon juice, then cover the top with paste. Place in a baking dish, fill with boiling water to come half-way up the cups, and bake for three-quarters of an hour in a moderate oven. Turn out each dumpling into a glass dish and serve with sweet sauce or hot milk.

For the paste.—Sift one cupful each of barley flour, oat flour and flour, one teaspoonful of baking powder, and a pinch of salt into a bowl. Cut and rub in four tablespoonfuls of butter substitute, and add enough cold water to make a smooth paste. Roll out thin, when it is ready for dumplings.

Another Method.—Select firm, medium sized apples, pare and core them. Take a piece of the paste and cut it into neat squares of about four inches. Place an apple on each square of paste, fill the cored centre with apple or quince jam, wet the four corners of the paste and bring them to the top of the apple and join, care being taken that the whole apple is neatly covered. Place the dumplings on a greased baking tin and bake in a hot oven for half an hour. Serve hot or cold.

A Delicious Sauce for Sweet Dumplings.—Boil one cupful of maple syrup or corn syrup with one cupful of water and two tablespoonfuls of butter substitute for five minutes, then add one tablespoonful of cornstarch moistened with a little cold water and cook for eight minutes longer. Beat one yolk of egg with one-half cupful of milk and a pinch of salt, and stir into the boiling mixture. When well blended and thick, remove from fire and add one teaspoonful vanilla extract.

Potato Dumplings.—Wash one dozen large potatoes, and boil them with the skins on the night before the dumplings are to be prepared. Skin and pound them and when perfectly cold, add six tablespoonfuls of barley flour, one tablespoonful of chopped parsley, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Mix all well together, then add three well beaten eggs, stirring all the time. Form the mixture into small round balls and drop into boiling salted water, and boil for twenty minutes without lifting the cover. Lift out carefully one by one, drain, place on a hot dish and serve with parsley sauce.

Another Method.—Boil or bake four potatoes until tender, then peel and run through a potato masher, add seasonings of salt, powdered cinnamon and nutmeg, two tablespoonfuls of corn syrup or maple syrup, two beaten eggs and enough corn flour to make them hold together. Drop into boiling soup by spoonfuls twenty minutes before serving.

Dumplings Made With Dough.—Make a light dough as for bread, using to mix it, milk, instead of water, and after the dough has risen a second time, put it on a floured baking board and make into small dumplings; plunge them into boiling salted water, and boil for thirty minutes. Serve the instant they are drained, as they spoil directly by falling and becoming heavy; and in eating do not touch them with a knife, but tear them apart with two forks. They may be eaten with brown gravy, brown sauce, or syrup.

Bread Dumplings.—Boil one cupful of milk or water and pour it over one-fourth cupful of fine bread crumbs, then add one-half cupful of melted butter substitute and one tablespoonful of grated maple sugar. Let the mixture get cold, then add three well beaten eggs and mix well together, add one-half teaspoonful of powdered cinnamon or nutmeg and one-fourth cupful of seeded raisins. Grease some molds, put in the mixture, and bake in a hot oven for thirty minutes.

Another Method.—Soak two cupfuls of dry bread in sufficient milk or water to make it soft. Then add two beaten eggs, one tablespoonful of melted butter substitute, a pinch of salt, one-half cupful of barley flour and two cupfuls of cooked rice and mix together. Have one quart of boiling water in a saucepan, drop in mixture by spoonfuls, dip spoon in boiling water every time, and cook slowly until they float. Drain and drop into a pan of boiling milk and serve with the milk.

Dumplings With Baking Powder.—Sift one cupful each of barley flour and rice flour, three teaspoonfuls of baking powder, one-half teaspoonful of salt and a grate of nutmeg into a bowl, then stir in quickly one cupful of milk. Have the dough soft, then drop the batter from a spoon into a stew, or into boiling salted water; or if preferred, make the dough just consistent enough to roll, and cut it into neat squares. The stew must not be allowed to stop simmering after the dumplings are in; and cook for twenty minutes without lifting the cover. If the dumplings are removed before being thoroughly done, they fall and are hard and indigestible.

Another Method.—Beat the yolks of two eggs, add a pinch of salt, and a pinch of pepper, then add one tablespoonful of chopped parsley, one teaspoonful of baking powder, the stiffly beaten whites of eggs and enough oat flour to make a stiff batter. Drop by spoonfuls into boiling soup twenty minutes before serving.

Lemon Dumplings.—Mix two cupfuls of bread crumbs with one-half cupful of butter substitute, one-half cupful of maple syrup or honey, a pinch of salt and the grated rind of one lemon. Moisten with two well beaten eggs and the strained juice of one lemon; mix well, and put the mixture into small well greased molds, cover with greased papers and steam steadily for one hour. Turn them out on to a hot dish and serve with the following jam sauce: Put into a saucepan four tablespoonfuls of water, two tablespoonfuls of maple or corn syrup, two tablespoonfuls of jam and two yolks of eggs; stand the pan in another containing boiling water, whisk the sauce until it becomes frothy and thickens, then use.

Made With The Appetizing Cranberry

By MARION HARRIS NEIL,
Author of "Salads, Sandwiches and Chafing Dish Recipes."

After the Autumn Fruits Have Gone, the Cranberry Comes to the Aid of the Housekeeper

There is hardly a fruit which lends itself so well to such various treatments and uses as cranberries. The cranberry is one of the few fruits which can be used as a relish served with meats; it proves a most satisfactory stewed sauce; it is easily made into a beautiful clear jelly, and it has as many and varied uses in desserts as any fruit.

CRANBERRY AND BANANA COMPOTE.—Pick and wash two cupfuls of cranberries, put them into a saucepan, add one-half cupful of maple syrup and one-fourth teaspoonful of powdered nutmeg or cinnamon, and cook slowly until tender. Then rub the cranberries through a sieve and return the puree thus obtained to the saucepan. Peel four bananas, cut them in small pieces with a silver knife, and put them into the cranberry mixture. Cook for a few minutes until the bananas are soft and serve cold.

CRANBERRY AND APPLE JAM.—Pick and wash one and one-half pounds of cranberries, put them into a saucepan with two pounds of sugar and one pound of grated maple sugar, and bruise them down with the back of a wooden spoon. Unless this is done, they will never become sweet. Cook for ten minutes.

Peel, core and slice apples, then weigh two pounds and put them into a preserving kettle with a very little water and cook until reduced to a pulp. They must not be made too liquid, then add the cranberry mixture, and boil together until the jam will set. This is a very useful jam, as it is excellent served with roast mutton or roast game instead of red currant jelly. Pears may be used instead of apples.

CRANBERRY AND CORNSTARCH MOLD.—Pick and wash one pound of cranberries and put them into a saucepan with two cupfuls of water and three-fourths cupful of honey or maple syrup and cook them until reduced to a pulp, and then rub through a sieve. Measure this juice, and allow one-half cupful of cornstarch to each two cupfuls. Put the juice into a saucepan, mix the cornstarch to a smooth paste with a little cold water, add it to the cranberry juice and stir over the fire until boiling. Simmer slowly for fifteen minutes, then pour the mixture into a wet mold and put in a cool place to firm. Turn out when wanted, and serve with milk or any preferred sweet sauce.

Sage or any fine cereal may be used instead of cornstarch to stiffen the juice.

CRANBERRY CONSERVE.—Put three pounds of picked and washed cranberries through a sieve, add one package of cleaned and seeded raisins, grated rinds, pulp and strained juice of two oranges and two lemons, one pound of corn or golden syrup, one pound of honey and one pound of sugar. Boil until it sets when tried in cold water, and pour into sterilized glasses.

CRANBERRY DAINTY.—Fill greased fireproof dish with alternate layers of fine bread crumbs and cranberry sauce, having the bread crumbs on the top and bottom. Beat two yolks of eggs with one cupful of milk and add one-fourth cupful of grated maple sugar, pour into the pudding, and bake in a moderate oven until the custard firms. Cover with meringue made from the whites of eggs beaten to a stiff froth and one tablespoonful of sugar beaten into them. Return to the oven to brown slightly and serve hot with hot milk.

CRANBERRY PIE.—Line a pie plate with plain pastry. For the filling: Mix three cupfuls of cranberries with two tablespoonfuls of cornstarch, two tablespoonfuls of butter substitute, one-eighth teaspoonful of salt, one-half cupful each of honey and maple syrup and eight tablespoonfuls of water and cook for five minutes, stirring all the time, allow to cool, then turn into the prepared pie plate, put strips of pastry over the top or cover with a crust and bake in a moderate oven.

Another Method.—Chop together two cupfuls of cranberries and one cupful of seeded raisins or stoned dates, add two tablespoonfuls of cornstarch mixed with one cupful of grated maple sugar, then add one-half cupful of cold water and one-half teaspoonful of powdered nutmeg. Bake with two crusts.

Or, beat two eggs until light, then add one and one-half cupfuls of chopped cranberries, a pinch of salt, one-half cupful each of corn syrup and sugar. Bake with two crusts.

CRANBERRY SALAD.—Mix together equal parts of cranberry jelly, skinned and seeded grapes and diced pineapple, then add two tablespoonfuls of chopped cocoanut or nut meats, and serve on nests of crisp lettuce leaves with mayonnaise dressing made without mustard.

Another Method.—Mix together three cupfuls of stewed and sweetened cranberries, one cupful of chopped nut meats, celery and apples, moisten with lemon juice, then pour over the mixture one-half cupful of strained orange juice. Serve in individual plates and garnish with cranberry jelly.

CRANBERRY SHERBET.—Cook one quart of cranberries in two cupfuls of water until soft, then rub through a sieve and add the strained juice of two lemons, one tablespoonful of gelatine which has been dissolved with one-fourth cupful of boiling water, one cupful of sugar and one cupful of corn syrup. Freeze in the usual way, using one measure of rock salt to three measures of crushed ice.

CRANBERRY COBBLER.—Line a greased baking dish with plain pastry. Mix one quart of cranberries with one cupful of milk, one cupful of boiling water, one cupful each of sugar and maple syrup, two cupfuls of flour, one teaspoonful of baking soda and one-half teaspoonful of lemon extract. Pour into the prepared dish, cover with crust, pinch the edges together, and make two holes in the top. Bake in a hot oven for forty minutes. Serve hot with whipped evaporated milk or any preferred sweet sauce.

CRANBERRY CHEESECAKES.—Line gem or tartlet tins with pastry. Mix one-fourth cupful of cornstarch with one cupful of honey and one cupful of sugar in a small saucepan, add one cupful of boiling water and stir over the fire until thick and smooth, then add one-fourth teaspoonful of salt, one quart of chopped cranberries, and cook for twenty minutes, then add two tablespoonfuls of melted butter substitute and divide into the prepared tins. Bake in a moderate oven for twenty minutes.

CRANBERRY PUDDING.—Pick and wash one quart of cranberries, and then drain well. Peel, core and slice one pound of cooking apples into a saucepan, add four tablespoonfuls of grated maple sugar, one-half cupful of water, and cook until soft, then rub through a sieve. Take one cupful of chopped suet, two cupfuls of flour, one teaspoonful of baking powder, a pinch of salt, and mix into a stiff paste with cold water; roll it out to one-fourth inch in thickness, and neatly line some greased molds with it. Spread the apple puree all over the inside of the paste, fill up with the cranberries, and put into each one teaspoonful of sugar and one teaspoonful of water; cover the tops with a layer of paste, cover with greased papers and steam steadily for one and one-half hours. Remove the papers, run a knife round the edges, turn them out on to very hot platter, and serve with hot milk.

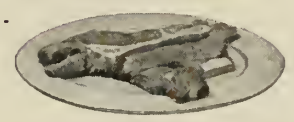
JELLIED CRANBERRIES.—Take four cupfuls of cranberries, one cupful of water and two cupfuls of sugar. Wash the cranberries, removing any that are imperfect. Put them into a saucepan, sprinkle the sugar over them, and pour the water gently over. Cook slowly, and when they reach the boiling point, cover for a few moments, then uncover and cook gently until tender. Pour into a wet mold and when firm turn out.

CRANBERRY SAUCE.—Boil one cupful of corn syrup, one-half cupful of sugar and two cupfuls of water for ten minutes, then add one quart of washed cranberries and cook without stirring until all the skins break, then use.

CRANBERRIES WITH MEAT.—Cranberries cooked with stews or the cheaper cuts of boiled meats, or with pot roast make the meat very tender. To prepare a four-pound pot roast, brown the meat on all sides in hot melted drippings, when browned remove the meat and add four cupfuls of water, stir until boiling, then add three cupfuls of washed cranberries, replace meat in pan, add one tablespoonful of flour to thicken, one teaspoonful of salt and one-half teaspoonful of pepper and cook until tender.

40c a Pound for Water

One Reason Why Some Foods Cost Ten Times Quaker Oats



Many common foods cost ten times Quaker Oats for the same energy value. These include meats, eggs and fish, and numerous vegetables.

A pound of Quaker Oats yields 1,810 calories. A pound of perch, for instance, yields 275.

The difference lies partly in water, for which you often pay 30c and 40c per pound. Note the table below:

Costs 5½c
Per 1000 Calories

Costs 57c
Per 1000 Calories

Costs 54c
Per 1000 Calories

Costs 78c
Per 1000 Calories

Water Content

Quaker Oats	7.7%
Round Steak	60.7%
Veal Cutlets	68.3%
Canned Salmon	63.5%
Hen's Eggs	65.5%
White Bread	35.3%
Potatoes	62.6%
Canned Peas	85.3%

As a result, here is what you get in calories per pound. And the calory is the energy measure of food value:

Calories Per Pound

Quaker Oats	1810
Round Steak	890
Dried Beef	790
Mackerel	370
Codfish	325
Potatoes	295
Milk	325

Consider these facts in your breakfasts. You can feed ten people on Quaker Oats for the cost of feeding one on meats.

You can feed them vastly better. For the oat is almost the perfect food. It is considered the greatest food that grows.

Quaker Oats

Quaker Oats dominate because of their flavor. They are flaked from queen grains only—just the big, rich, flavory oats. We get but ten pounds from a bushel.

You get this extra grade when you ask, without any extra price.

Two Sizes: 35c and 15c—Except in the Far West

The Quaker Oats Company

Peterborough, Canada **Saskatoon, Canada**

Moore Push-Pins

Glass Heads, Steel Points.

Absolutely necessary in every Home, Store, Office, or School for hanging Pictures, Charts, Pennants and all decorations without injuring paper or walls. No hammer needed. Simply push them in with the fingers.

Moore Push-less Hanger

"The Hanger with the Twist"

The only safe and easy way to hang heavy Pictures, Clocks, Hall Racks, Clothing, etc., or anything weighing up to 100 pounds. Won't mar the walls.

At Stationary, Hardware, Photo Stores 13c.

Send 10c for Illustrated Booklet and Samples.

MOORE PUSH-PIN COMPANY

Philadelphia, Pa., U.S.A., Dept. E

The Inhalation Treatment for Whooping-Cough, Spasmodic Croup, Colds, Catarrh, Asthma, Bronchitis, Coughs.

Established 1879.

Simple, safe and effective, avoiding internal drugs. Vaporized Cresolene relieves the paroxysms of Whooping-Cough and Spasmodic Croup at once; it nips the common cold before it has a chance of developing into something worse, and experience shows that a neglected cold is a dangerous cold.

Mrs. Ballington Booth says: "No family, where there are young children, should be without this lamp."

The air carrying the antiseptic vapor, inhaled with every breath, makes breathing easy and relieves the congestion, assuring restful nights.

It is called a boon by Asthma sufferers.

For the bronchial complications of Scarlet Fever and Measles, and as an aid in the treatment of Diphtheria, Cresolene is valuable on account of its powerful germicidal qualities.

It is a protection to those exposed.

Cresolene's best recommendation is its 39 years of successful use.

Sold by Druggists. Send for descriptive booklet. Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist or from us, 10c in stamps.

THE VAPO-CRESOLENE CO., 62 Cortland St., N.Y. or Leeming-Miles Building, Montreal, Canada.

"Pine-Clad Woodstock," by Katherine Hale, on page 8, tells some interesting stories about this Canadian town.

Under The Maple Leaf

By ELIZABETH BANKS ("Enid").

The Spirit of The Beaver Hut

THE "Y" is just around the corner from where I live in the Adelphi. Next door to me is Bernard Shaw; across the street are Sir James Barrie, John Galsworthy, Granville Barker and other celebrities. Then comes the "Y" which used to occupy the Little Theatre and now occupies not only the theatre but a great block of ground that extends around into the busy Strand.

Outside the "Y" throughout the night and foggy days hangs a beacon light, so welcoming, so inviting, telling of warmth and comfort and cheer within—a swinging Maple Leaf lamp.

This is the Beaver Hut.

Some evenings before I go inside to don my blue uniform and make myself generally useful at "washing up" and waiting on table for the boys you Canadian mothers have sent over here to help make Canada, the Empire and all the world "safe for demoeracy," I stand outside a moment on the pavement under that swinging Maple Leaf lamp and think of my wonderful visit to wonderful Canada just a little over a year ago. I remember the glorious land where I travelled from the Atlantic to the Pacific, seeing your fine cities, your prairies, forests and mountains, going down into your mines, enjoying the lavish hospitality that was extended to me on every hand, and then I go on into the Hut and look round at the hundreds of Canadian boys and wonder if any of them are the sons, the brothers or the lovers of some of those of you who helped to make my visit to Canada so delightful an experience.

Then I go down into the big dining room and hand out coffee and polish forks and knives and make the cups and saucers fairly shine—all for the sake of you, dear Canadian women and your boys.

Down in that dining room and washing up room "everybody's doing it." "Doing what?" do you ask? Why, being cheerful and happy and helping to make your boys cheerful and happy! Do you think they are over here in London town with nobody to love them, nobody to smile on them, nobody to listen to their little tales of woe or joy as the case may be? Not so! We all love them, we voluntary workers at the Beaver Hut. We all want to wash up for them, wait on them, see that their kidney stew is nice and steaming hot and their coffee just to their taste. Sometimes when we hear a boy speak of some nice Canadian dish "that mother used to make" we run fleet-footed to the kitchen and whisper something in the ear of the cook—and lo! the next day or the day after when that same boy comes down for his dinner or supper we tell him of a new item on the bill of fare, and you ought to see his smile! I wonder if there is anything more delightful than the real, genuine Canadian boy's smile at the Beaver Hut when he's pleased! I really can't imagine anything more heart-cheering than that smile.

There are eight hundred of us voluntary workers, all dressed in blue overalls and wearing filmy, nun-like veils over our heads. On my own veil I have stuck some pretty maple leaves, and the other day one of the boys asked me where I got them.

"They're maple leaf seals," I said. "They're just stuck on."

"If I could only have one of those to stick on a letter to my mother, wouldn't she just be tickled to death!" he exclaimed wistfully.

Then what could I do but take one of the seals from my veil and give it to him for his envelope? Did one of you mothers who read this get that seal, I wonder, and if you did, weren't you just "tickled to death"?

I have said there are eight hundred of us, but we don't all work at once. We work in shifts of four hours each. Some go every day, others twice a week, others once a week. Some, like myself, are American, others Canadian, others English women. Our work is to wash all the dishes, dry them, polish them, lay the tables, wait at table, sell cigarettes and chocolates and postage stamps and other things at the little Beaver Shop at the end of the lounge. I myself, being an expert typist as well as one of the swiftest of "washers-up," sometimes sit at a table in the lounge and run my little machine at such odd jobs as are needed. Did one of you mothers get that typed letter I did for your boy whose hand was a bit troublesome owing to something a certain Hun had done to him somewhere round the Marne way? No, his hand wasn't dangerous, but only taking a nice rest on a board for a week or so. My! But what that hand of your boy's did to the Hun first! You are to be very proud of that hand of your boy's when it comes home, mind you!

Here's a nice girl in blue overall and veil cleaning all the knives. She works hard in an office all day and you would think she would then want to go home and rest. Instead of that she comes to the Hut and cleans knives, wipes dishes, polishes spoons or any other useful job for several hours. Sometimes she sighs because other women have such chances to do such big things for their country as V.A.D.'s or "Waaes" and that sort of thing. One day a boy at the Hut spoke of the "nice shiny knives" and then her face brightened up and she's stopped sighing for so-called great and noble deeds to do, for she realizes that to shine up a knife for a Canadian boy, to help him enjoy his meals, is doing her "bit" for her country.

The spirit of the Beaver Hut is cheerfulness and willingness. You Canadians have doubtless heard of the important question the applicant for a place as servant always used to ask an English mistress in the pre-war days of long ago—"Who cleans the knives, madam?" Now, at the Beaver Hut you never hear any such question among the voluntary workers. We don't mind what we do so long as we're helping. Thousands of dishes have to be washed, wiped, put on the table, made dirty again, washed, wiped, put on the table again, and so on through the day and the night. Once I spent the whole day there washing up, and I never could make out whether it was breakfast, dinner, tea or supper dishes I was washing. They kept on coming and coming and going and going, and rattling and rattling, and the first thing I knew it was getting dark: by that I supposed the cups I was washing were being used for supper coffee.

Every volunteer tries to help every other one. The "green" ones are taken in hand by the experienced ones and told all the easiest and quickest ways of doing things. Girls who never in their lives before washed a dish come to the Beaver Hut and learn how, and will remember always afterwards through their lives the pleasant experience they had in learning to help make Canadian boys happy.

There is a buzz all about me, and smoke in the air. Up in the gallery a khaki-clothed figure sits at the piano, and I hear the strains of music that I love—"O Canada."

Now the music changes, and I am listening to snatches from "Tales of Hoffmann" and "Schubert's Serenade."

Down below, the crowd of other khaki-clothed ones which I am surrounded by—those who make the buzz and the smoke—give themselves over to hand-clapping for an instant, and I go up to the gallery to see who has been playing.

"I came to thank you!" I say, "You have been playing so many of my favorite airs."

"Oh, have you enjoyed it?" asks the boy in khaki, his eyes brightening up with pleasure because of the pleasure he himself has given. "I only play a little by ear and from memory."

Of course, he is wearing the badge of the Maple Leaf, but the Maple Leaf means all Canada, and so I ask, "What part are you from?" He names a little town in Alberta. "Why, that's the town," I exclaim, "where I had such good things to eat at such a funny little wooden hotel two years ago!" And then we are friends.

I am back again at my writing table where the smoke and the buzz are so thick, for now that I have found the boys like to see women about rather than resent their presence as at first I had thought possible, I like to do my work right in the big, comfortable lounge of the Beaver Hut. The boys grin as they pass my table, for there is a large printed sign tacked to it:

"Be kind to my table,
'Tis very unstable,
So deal with it gently, I pray!
Just use it for writing,
And not for hard fighting,
Whenever I'm from it away."

Yes, there now, I've let it out! You see, Canadian mothers, those boys of yours have been getting and feeling very strong in the trenches, and my little writing table being only a somewhat wiggly and tender affair, was several times used instead of a chair when I happened not to be present, with the result that we had to nail it together again. I have already told you that the spirit of the Hut is cheerfulness, so I never scolded the culprits. The appeal of the sign works beautifully. I'm sure my table is now safe "for the duration."

I often wonder just what would have become of all the boys who have come over here to fight with the Motherland if it hadn't been for the "Y". However, let it not be thought that the boys have not done something for the "Y" as a return. When this war is over the Young Men's Christian Associations of every land will be about the most popular and best beloved clubs in the world. Every boy in khaki has something good to say of his particular "Y", and is given to inviting others to come and sample its special comforts and luxuries.

In London, the Beaver Hut is what we call "the last word in Y's", meaning that it is the latest thing of its kind, the newest one and the most attractive looking "Y" building in the whole of London. Besides the Hut proper so recently built, it includes all the premises of the Little Theatre, so that the boys of the Beaver Hut have a regular theatre auditorium of their own, with every proper fixture, stage and all, for performances. Every afternoon and evening there is either a moving picture show, a theatrical, operatic or concert entertainment, absolutely free of charge. At every performance the auditorium is crowded. Some of the best actors and actresses and musicians perform on that stage for the benefit of your Canadian boys, and are always so pleased with the enthusiastic and appreciative reception they get.

Such tales as your boys will have to tell you, such historical information as they will give you, such enthusiastic accounts of the "Y" conducted trips they have taken while on this side, apart from their experiences at the front, make me envy you Canadian mothers, wives and sisters, in anticipation of the interesting times that await you against the day of your boys' home-coming—all covered with honor and glory which shall lend lustre and renown to the name of Canada forever more!

When James Whitcomb Riley was a Boy.

Young Riley did not get on well at school, particularly in arithmetic. "Little children came and little children went, but I stuck there in the first class in numbers," he said. "I was always a good reader, only reading counted for little in *those* days." A significant incident of his boyhood was running away from school when "The Death of Little Nell," was the lesson. "It was a matter of eternal wonder to me," he said, "how the other children could go strong-voiced and dry-eyed through those tragedies that almost broke my heart."

The earliest letter that we have shows him as not the most promising boy in the community. Sixteen found him out of school "truanting up and down old Brandywine" or lost in Longfellow, Trowbridge, and Dickens. "I read them all day long," he said. From his reading of literature Riley was to secure his real education. Among the townspeople "Jim" Riley came to be known as a "do-less" kind of boy who was "wasting his youth." Manual industry was to the early Hoosier settlers a duty idealized, and to them idling was a sin more reprehensible than drunkenness or blasphemy. "An idler is the sure quarry of the devil," ran the old saying. The boy was not what to so many of his townspeople he seemed to be; they were not aware of a world of dreams and hopes behind his mischievous blue eyes. The youthful Riley learned to play the guitar and "fiddle." He sang, gave readings at church benefits, and in his time acted in heroic parts. He drew well, but for work with his hands he had little liking or aptitude. It is not strange, then, that he earned "a bad name."—*Edmund H. Eitel in "Harper's Magazine."*

Training Boys and Girls

By THOMAS BENGOUGH,
Secretary Toronto Vocational Committee.

New Educational Methods For Home Teaching

My article in the November Journal on "A Wonder-Child and Her Clever Mother"—the story of Winifred Stoner—has excited so much comment and correspondence that the Editor, like Oliver Twist, asks for "more."

I can only tell a few of many interesting plans used by Mrs. Stoner in training her child; but they are methods which any mother can use at home and produce similar results, though perhaps not so striking.

Learning Letters and Numbers in the Cradle.

When Winifred was six months old her mother placed a border of white cardboard, four feet high, around her nursery walls. On one wall were the letters "A, B, C." etc., cut from red glazed paper. On another wall were simple words (all nouns) like bat, cat, mat, hat, pat; bog, dog, hog, log. On a third wall the numbers were arranged in ten columns—from one to ten, ten to twenty, and so on up to a hundred. On the fourth wall were pictures of notes in the musical scale. The letters were "sung" day after day to the tune "Lauterbach," thus making a pleasant impression on the baby's ear, while the bright colors attracted her eye. Thus, almost unconsciously, she learned the English alphabet. After singing the letters, the mother would point to the big red "A" on the wall, then show the child "A" on one of her blocks, telling her she had two Misters "A." Then from a box of anagrams she would take all the small "a" letters and place them beside the block "A." For several days mother and child played "Seeking A," then mother would ask the child for one of the little baby "a's," which the child would try hard to find "for mother"—thus learning the joy of service. This game was played for weeks, until Winifred could pick out all the letters as asked.

Then began the word-building game. The mother would spell out words on the wall—cat, rat, etc.—and make rhymes about them. Using a large scrap-book of pictures and letters, the mother would show the picture of a cat, then point to the "C-A-T" on the wall and spell out the letters. Then mother and child played with the anagrams, and had great fun picking out all the "C's" for one pile, the "A's" for another, and the "T's" for a third. With these letters they then made a whole page of cats, placing them around a cardboard representation of Her Catship.

The mother found a Noah's Ark and cardboard pictures of animals, both wild and domestic, helpful in many educational games.

Through these word-building games, and the impressions made on the child's mind by reading to her, Winifred learned to read at the age of sixteen months without having been given a so-called reading lesson. Four of the mother's friends afterwards tried this method, and all the children taught in this way could read simple English text before they were three years old.

As soon as Winifred could read, the portals to great fields of knowledge swung open to her, and from this time on the mother had little trouble in amusing the child. She put good books in her way, and through these Winifred is filling her mind with knowledge and good thoughts that will help her and bring pleasure while life lasts. The mother has always directed Winifred's choice of books, and taught her that reading without a purpose is the idlest of all amusements—nothing being so destructive to muscular and mental tissue as aimlessness in reading, work or play. Every book that Winifred reads has some object in view.

Teaching Music as a Game.

"Mother" Stoner believes that, next to the power to read, ability to appreciate good music gives mortals the greatest pleasure. Hence Winifred's ears were trained to love good music by hearing it while in the cradle, and she learned to distinguish tones by means of bells hung at the foot of her bed. When she knew the alphabet, the letters for names of musical notes, "C, D, E," etc., were pointed to as the notes were sung to the child. The baby soon learned to do likewise, and when a year old she loved to play "Finding Notes." The mother would hide something in the room, and baby would start to find it. When she got near it, the mother, instead of calling out "Hot," would strike a low note; if the child went away from the hiding-place, the mother would strike a high note; thus the baby learned to distinguish notes.

The idea of rhythm was taught by playing pat-a-cake with the child's hands, keeping good time; also holding her hands on the drumsticks while the mother beat out certain measures, or directing the baby fingers to strike certain notes on the piano. A sweet-toned xylophone, with notes printed above each key, was also used, the mother pointing to certain notes on the wall and the baby striking them on the instrument. At age three, Winifred knew all musical notes and could play simple airs in treble on her play-piano.

Mothers are urged to play the "Finding Notes" game daily with children until they grasp the significance of high and low notes. Teach rhythm in story-telling or reading; children love to hear mother say: "Long, long time ago there was a little boy who lived far, far away in the dark, dark forest"—repeating and drawing out words to give rhythmic effect.

As soon as Winifred could walk, her mother taught her simple dances, and encouraged her to give expression, with both hands and feet, to emotions aroused by music. She believes there should be music in the very air that children breathe; if the mother cannot produce it, she should give it through graphophone. Babies all listen intently; that is how they learn to talk. When they hear good music their bodies vibrate to rhythmic sounds; hence rattles date back to the Egyptians, 4000 B.C. It is quite unusual to find a Hawaiian child who cannot sing; but in America one-third of the adults rarely try to hum a tune—because their mothers did not begin early enough to teach them how to sing as well as talk. All mothers who can sing should sing songs each day to the little ones. Mrs. Stoner has a friend who in calling her little girl, Josephine, uses the three notes mi-sol-do.

Winifred loved to hear her mother repeat melodious poems while they marched around the room together; Riley's "Circus Day Parade" was found very suitable. Sometimes Winifred did interpretative dances to poems her mother repeated, and before she was six she learned to do the waltz, three-step and two-step. She delights in Hindu, Japanese and Indian dances, and she dances with the castanets, tambourine, cymbals and shawl. She often whistles her own accompaniments, or sings simple French opera airs when interpreting them.

Mrs. Stoner believes that all children should be encouraged to pick out on the piano simple melodies they have heard, and they should also be helped in making original musical compositions. Winifred has a blank book in which she has written all the simple melodies she has composed since infancy; also notes concerning musical technique, names of compositions as she learns them, and all facts she collects on musical matters. Winifred's mother always co-operated with her when practising on the violin, by playing her accompaniments on the piano.

Learning to Spell Through Games.

It was very easy to teach Winifred spelling by a game called "Building Word-Castles," and even to-day both mother and daughter enjoy it, using the anagrams, seeing who can build the largest castles or the greater number of them.

Another spelling game that was very amusing to the little girl was called "Bee-Hives." The alphabet was arranged in a perpendicular line, and mother and child tried to find how many "AT" buzzing bees they could make. They got along all right from "A" to "C," making "at," "bat," "cat," but "D" was put aside as a "drone." Only eleven letters—"a, b, c, f, h, m,

(Continued on page 41.)

Your Dainty Silks, Georgette or Crepe always gives an idea of quality, but—how to keep them dainty. That problem is solved. Your daintiest garments can always be kept beautiful and fresh by washing with Lux.

The pure Lux flakes will not hurt anything that pure water itself will not hurt.

Remember Our Boys At The Front

To them the cigarette is the panacea for all ills. I have seen men die with a cigarette between their lips, the last favor they had requested on earth. If the soldier is in pain, he smokes for comfort, if he is restless he smokes for solace; when he receives good news he smokes for joy; if the news is bad, he smokes for consolation; if he is well he smokes, when he is ill, he smokes. But good news or bad, sick or well, he always smokes.

"The First Canadians in France"
by F. McKelvey Bell.

Canadian Magazine, February issue 1917.

SWEET CAPORAL CIGARETTES

Time and Money

We want and we will liberally pay one energetic lady in each community to represent the "Canadian Home Journal."

We already have scores of local representatives in our big Home Journal Club, and some are making as high as $100.00 per month.

There are still many towns and villages in Canada in which we have not a representative and if you have any spare time that you desire to turn into money, write us to-day.

The remuneration of a "Canadian Home Journal" representative is according to the time and activity devoted to the work.

If you have plenty of time and energy there is practically no limit to your income or territory, for we make special provision for the live ones.

The women of Canada require more money to-day than at any time in the history of the nation. The "Home Journal" will supply that money in exchange for your time.

Write us to-day.

A Snow Ball Puzzle For February

By TOM WOOD.

Can you find, in these snowballs, some things which may be seen in any part of Canada in the month of February?

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete.

Answers must be received before February 25th to be included.

THE CORRECT SOLUTION OF THE DECEMBER PUZZLE:

1. "Christmas comes but once a year,
   And when it comes it brings good cheer."
2. "Ghosts never appear on Christmas Eve."
3. A—Skin, B—Sting. C—Ton, D—Ink, E—Tins, F—Tick, G—Coins, H—Knot, I—Sock, J—Nag, K—Cot, L—Kings.
4. 1—Flour, 2—Suet, 3—Sweetening, 4—Spice, 5—Nuts, 6—Dried Fruit, 7—Candied Peel.

No absolutely correct answers were received, but prizes have been awarded those with fewest errors. Miss Sara E. Clark, Arner, Ont., succeeds in capturing the first prize, and the second prize goes to Miss Dorothy Meehan, R.R. No. 4, Jarvis, Ont.

Address all answers to the Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto, Ont.

8125—Ladies' Side-closing Combination. Nine sizes, 34 to 50 bust. Size 36 requires for corset cover and petticoat 1⅞ yard 36-inch batiste—1¼ yard wide, 3⅞ yards narrow embroidered banding. Embroidery No. 12182, blue or yellow transfer pattern of 16 sprays. This combination may be formed of a corset cover and envelop drawers, or corset cover and petticoat.

8134—Ladies' Combination. Sizes small, medium, and large, corresponding with 36, 40, and 44 bust. Small size requires 2 yards 36-inch crêpe de Chine—2½ yards ribbon. Embroidery No. 12367, blue or yellow transfer pattern of 38 sprays. This combination slips on over the head with shoulder-straps attached to the points of the combination.

8139—Ladies' Brassiere Combination. Nine sizes, 34 to 50 bust. Size 36 requires 2⅜ yards 36-inch crêpe de Chine—1⅝ yard wide banding—3½ yards narrow insertion. This is admirable for the stout woman as the upper part takes the place of a brassiere. The drawers are circular in shaping.

8117—Ladies' and Misses' Neckwear Set. One size only. Material requirements for the various collars will be found on the pattern envelop.

6224—Men's and Boys' Shirt. Ten sizes, 32 to 50 chest, corresponding with 13½ to 18 inches neck. Size 36 requires for shirt with coat closing 3¼ yards 36-inch flannel. This shirt may close in coat style as illustrated, or may slip on over the head.

5969—Men's and Youth's Shirt. Ten sizes, 32 to 50 chest, corresponding with 13½ to 18 inches neck. Size 36 requires 3⅛ yards 36-inch percale. Two styles of collars are provided for this shirt.

8127—Ladies' Nightgown. Sizes small, medium, and large, corresponding with 36, 40, and 44 bust. Small size requires 3⅝ yards 36-inch crêpe de Chine—2½ yards ribbon—4 yards insertion. The nightgown slips on over the head and is gathered to a straight band. The straps over the shoulders may be of self-material trimmed with banding, or they may be of ribbon.

DESCRIPTIONS CONTINUED ON PAGE 40

7553—Ladies' Union Suit or Combination. Six sizes, 34 to 44 bust. Size 36 requires 2½ yards 36-inch washable silk.

Dress Sleeves 8065

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

The Severe Neck-Line and Long Narrow Skirts Are Emphasized

8150—Ladies' Tunic Blouse. Six sizes, 34 to 44 bust. No. 8092—Ladies' Three-piece Gathered Skirt. Nine sizes, 24 to 40 waist. Width at lower edge about 1½ yard. The costume in medium size requires 4¾ yards 44-inch serge—⅞ yard 36-inch lining for underbody. Embroidery No. 12466, blue or yellow transfer pattern providing 3½ yards of 3-inch border. Among the new Spring fashions, the tunic and peplum blouses loom very important. This model is sleeveless, the sleeves sewed into the armholes of the front-closing underbody. The closing is on the left shoulder and under the left arm, and several neck outlines are provided, tho the one illustrated is in very good style. The dress is completed by a simple three-piece skirt closing at center-front, and to be made with an oddly shaped yoke or with a belt and simulated pockets.

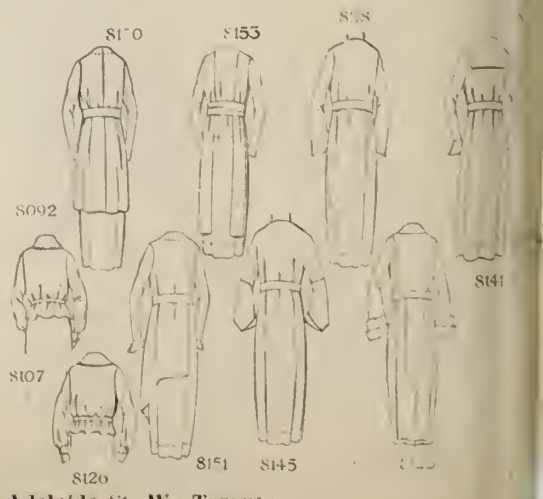
Blouse 8126

Dress 8151



Dress 8145

8153—Ladies' Dress. Seven sizes, 34 to 46 bust. Size 3[illegible] requires 3½ yards 36-inch beige tricolet for waist and panel—1⅞ yard 36-inch brown tricolet—⅞ yard 36-inch lining fo[illegible] underbody. Embroidery No. 12372, transfer pattern in blu[illegible] or yellow. The combination of a light and dark shade of th[illegible] one material is very pleasing and is emphasize[illegible] in the new fashions. The long narrow panel[illegible] fasten on the shoulders, and are held in loose[illegible] at the waist-line by a belt. The Medieval waist[illegible] line is accentuated by the contrast in color. Th[illegible] waist closes on the left shoulder and under th[illegible] left arm, and the underbody closes in front[illegible] Width at lower edge about 1⅜ yard.

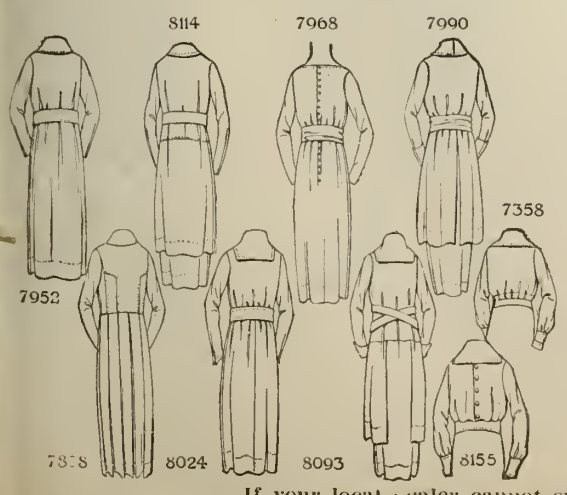
8118—Ladies' One-piece Dress. Six sizes, 34 t[illegible] 44 bust. Size 36 requires 3⅞ yards 44-inch serge[illegible] Width at lower edge about 1¾ yard. Braidin[illegible] No. 11453 blue or yellow transfer pattern[illegible] The simplicity of this frock makes it par[illegible] ticularly welcome to women who are learning t[illegible] sew, and who are a little bit nervous abou[illegible] handling patterns with a number of pieces. Th[illegible] model is very simple, made without lining, an[illegible] the neck may be collarless or finished with a shaw[illegible] collar.

8141—Ladies' Dress. Nine sizes, 34 to 50 bust[illegible] Size 36 requires 4 yards 44-inch serge—9 yard[illegible] braid. Width at lower edge 1½ yard. Here[illegible] another easy-to-make frock closing at center-fron[illegible] and with a decidedly tailored finish given by th[illegible] binding of silk braid. The waist is joined to[illegible] three-piece gathered skirt. Novel pockets a[illegible] attached to the belt of self-material, and th[illegible] sleeves are finished with flare cuffs.

DESCRIPTIONS CONTINUED ON PAGE 40

8107—Ladies' Blouse. Nine sizes, 34 to 50 bust. Size 36 requires 2 yards 40-inch Georgette crêpe. The fronts are gathered on the shoulders below a yoke effect formed by extending the back over onto the fronts, and at center-front a vest is inserted that may be of self-material or satin. The sleeves are gathered to deep cuffs.

8126—Ladies' Blouse. Eight sizes, 34 to 48 bust. Size 36 requires 2⅝ yards 34-inch washable satin. A box plait is formed on the front of the blouse in which buttonholes may be worked if desired, or it may be fastened with snap fasteners. The long rolling collar ends in points and there are extensive tabs that button across.



Smartly in Accord with the Season's Silhouette Are these Models

7952—Ladies' One-piece Dress. Eight sizes, 34 to 48 bust. Size 36 requires 4½ yards 44-inch check cloth—⅜ yard 44-inch white cloth for collar. Braiding No. 11602, blue or yellow transfer pattern. Width at lower edge about 1⅝ yard. Now that peace is here women are taking more interest in clothes, and dress assumes a much more important position than it has held for some time, so we notice a tendency toward checks and plaids and toward the use of brighter colors. This model is admirable for checks in light Spring colorings, and is in one piece from neck to lower edge, closing at center-front. A rolling collar finishes the open neck, tho if preferred, the neck may be high with standing collar. Perforations permit of shortening the sleeves.

7858—Ladies' Long-waisted Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4¾ yards 44-inch white gabardine. Width at lower edge with plaits drawn out about 2⅝ yards. Here is another one of those simple frocks that has made Pictorial Review justly famous. The long-waisted body section has a yoke descending into a panel at center-front and back, and the closing is arranged on the shoulder and at left side-front. A straight lower edge marks the smart three-piece side-plaited skirt.

8024—Ladies' Dress. Eight sizes, 34 to 48 bust. Size 36 requires 4½ yards 44-inch serge—¾ yard 36-inch satin for shawl collar—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. In its plainest form this dress is presented with gathered skirt and without the flying panels which may be applied front and back. For the gathered skirt an accordion-plaited skirt may be substituted, and if plain sleeves be preferred to the flowing sleeves shown, these too are included in the pattern.

8114—Ladies' Dress. Nine sizes, 34 to 50 bust. Size 36 requires 1⅜ yard 54-inch plain wool velours—2¼ yards 54-inch plaid wool velours—⅜ yard white satin for vestee—2 yards 36-inch lining for underbody and top of skirt. Width at lower edge about 1¼ yard. Accentuated on this dress is the fashionable irregular line, the bodice being longer at one side than the other, and attached diagonally to the tunic which also shows an irregular lower edge. The two-piece skirt closes in front.

8093—Ladies' Long-waisted Dress. Six sizes, 34 to 44 bust. Size 36 requires 1⅜ yard 54-inch plain velours—1⅜ yard 54-inch check velours. Width at lower edge about 1⅜ yard. Plain velours is attractively combined with velours in a darker shade marked off into large checks by lines of white. The dress closes on the left shoulder and under the left arm. The check velours is repeated in the turn-back cuffs and rolling collar.

8155—Ladies' Blouse. Six sizes, 34 to 44 bust. Size 36 requires 2 yards 40-inch Georgette crêpe—2½ yards satin ribbon for binding. This blouse shows the new back closing, and has a novel bib collar.

DESCRIPTIONS CONTINUED ON PAGE 40

7358—Ladies' Blouse. Six sizes, 34 to 44 bust. Size 36 requires with jabot, 2⅞ yards 36-inch crêpe de Chine. Embroidery No. 12377, blue or yellow transfer pattern of 72 motifs. Instead of the high collar and jabot, the blouse may be made with open neck and large collar.

Afternoon Dresses for Stout Women and Stunning New Skirts

8123—Ladies' Long-waisted Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4 yards 44-inch check worsted—¾ yard 36-inch bias black satin—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅝ yard. Length of line is given to the stout figure by this frock that may be developed in check material in unobtrusive shades. The collar of satin is cut bias, and it is finished with straight trimming-pieces of the check material extending below the girdle onto the skirt. The waist, which closes at the side-front, is arranged over a front-closing underbody. Slashes at the sides of the one-piece gathered skirt give the effect of inserted pockets. The sleeves are especially attractive in style, and the ubiquitous back panel is provided hanging from the neck, gathered at the waist, and tacked at the top of skirt.

8095—Ladies' Blouse. Nine sizes, 34 to 50 bust. No. 7677—Ladies' Two-piece Tunic Skirt. Six sizes, 24 to 34 waist. Width at lower edge about 1⅝ yard. The costume in medium size requires 3⅝ yards 54-inch wool Jersey—½ yard 36-inch satin for shawl collar and vest. Braiding No. 12443, blue or yellow transfer pattern providing 3 yards of 3- and 6-inch borders. Jersey has lost none of its vogue, and it is particularly smart in tunic frocks combined with the fashionable braiding. This model is especially good for stout figures giving them the length of line so necessary. The blouse may have a pointed collar extending into revers instead of the shawl collar illustrated. The vest may, if desired, form a panel which extends some distance below the girdle. Instead of the gathered sleeves with deep cuffs, plain sleeves lengthened by wide bell-shaped sections may be selected.

7600—Ladies' Blouse. Nine sizes, 34 to 50 bust. No. 7926—Ladies' Tunic Skirt. Seven sizes, 22 to 34 waist. Width at lower edge about 1⅝ yard. The costume in medium size requires 3¾ yards 36-inch foulard—⅞ yard 36-inch satin for trimming—1½ yard 40-inch Georgette crêpe for sleeves and vest—⅜ yard white Georgette crêpe for overcollar—1½ yard 36-inch lining for underbody and top of skirt. The stout woman can find no more charming afternoon frock than this model in dotted foulard softened by trimming of satin and Georgette crêpe. The blouse is in jumper style, and the skirt has an oddly shaped tunic.

8137—Ladies' Dress. Five size 34 to 42 bust. Size 36 requires 3 yar 54-inch serge. Braiding No. 1247 blue or yellow transfer pattern. Wid at lower edge about 1½ yard. T simplicity of good style is a notab feature of this frock of blue serge which is a mirable for early Spring wear. Soutache braidi outlines the round collarless neck and forms pocket effect on the skirt. Under the appli panel the waist closes at center-front, and flowi sleeves may replace the plain ones illustrat The flowing sleeves are formed by cutting t plain sleeves along the line of perforations given this purpose, and then attaching bell-shaped s tions to the top of the sleeves. The two-pi gathered skirt closes at left side seam.

The Girls' "Carry-On" Column

By BETTY O'HARA.

The Woman's Side of The Returned Soldier Problem

The boys are coming home. After four years of war they are at last on the road to home and happiness. By the time this magazine reaches you, fifty-five thousand of our Canadian soldiers will have been sent back, and after February, they are to return at the rate of thirty thousand a month. Just think of it—boys galore, with lots of parties and dances and all kinds of good times. It really seems too wonderful to be true. After four years of sorrow and partings, at last we are going to have a chance to make up for it all.

The English Brides.

There has been much figuring and conjecturing about "those English girls" as many express it, as with a shrug of the shoulders, and a tone of half resignation and half disgust they tell of the boys who have married girls across the seas.

But we must not forget that these girls, many of them are just as clever and gifted as our own girls, and in some cases just a trifle more willing to make good. In war work, especially, you meet this type of English girl, and I must say, and grudgingly I admit it, that Canadian girls find it hard to cope with their determined plodding.

We must thank the English girls for helping our boys chase away the blues during the weary days of convalescence, which otherwise would have been intolerable. And if our Canadian girls open their homes to our soldier boys with the same ease and understanding that the English girls did, it will indeed be a happy home-coming.

The war has seemed not yet to have touched our Canadian girls' chilling reserve, and it is chilling to some of our returned men, although they never complain of it, but of those of us who are part of their daily life, they never fail to ask the reason.

Our soldiers are not deserting the Canadian girls, not for a minute, in spite of all the cartoons and newspaper articles which try to persuade us otherwise. Many of the so-called Canadian marriages overseas are those of men who originally came from the old land.

However, we are not going to grouch about it, but rather put on our gayest gowns and do everything in our power for those soldiers of ours. For in these days of thanksgiving and happiness, there is no place for a grouch, not when there are no muddy trenches or Fritz's jam pots and whizbangs to put up with.

If there is anything that a soldier wishes to find in a girl, it is cheerful optimism, and, dear me, we do not know the meaning of the word in comparison with that of the men in the trenches. It was only their ability to see a joke, when some of the ghastly horrors of war were staring them in the face, that kept them from coming back to us raving mad. Just be cheerful, and above all, what the boys call a good sport, and you will have a place in the heart of every soldier boy you meet. See if you don't!

But for some of us there are still some long, weary days of waiting. After our wounded have had their ten days' leave, there is the hospital treatment to be gone through with in the different centres which have been chosen for that work. In some cases this will last six months, and in some cases a year, and sometimes even longer.

Has it ever occurred to you that probably the boy for whom you are waiting may be unable to take up his former employment? That the war and its resultant wounds and disablement may seriously impair his earning capacity, or the brother upon whom you had depended to help with the household expenses, after the war, will have all he can do to make ends meet on his own account, without being able to help any of the other members of the family? If you have never really considered it, just figure out for yourself and see if I am not right.

Every Girl Should Make Herself Independent.

It is the duty of every girl in this country to make herself independent and self-supporting, even if she has enough money to keep her in ease and comfort for a long time to come. Money sometimes has a strange way of taking wings, you know. It has happened before, and it may happen again. Every one of us should take advantage of this period of unrest and reconstruction to make a place for ourselves in the work-a-day world.

There are many of our soldiers who dare not ask the girls they wish to become their wives, and take their lives into their keeping unless they have the assurance that if they are incapable of supporting them on account of the recurrence of old wounds, the girls can shift for themselves and make a tremendous success of it too.

I receive many letters from girls who say, "My brother is a returned soldier, and I do not feel as if I should be a burden to him. Now, what would you advise me to do?" To all I say, depend on yourself and earn your own dollars.

That seems like cold calculating, don't you think? It is, for I have not spent three years with the soldiers without some cool calculating as to where all this trouble and suffering will lead, and as to what will happen when the men are physically fit enough to battle with the world and its problems.

A girl from the farm tells me she must not leave in the summer, it is the busy time. There are ploughing, hoeing, haying and threshing and all the meals to get for the men, not to mention the cattle and fowl that must be attended to. She would like to do something and be independent, yet she is at her wits' end as to how she should go about it. She hasn't enough money to go to the city, and if she did go, she could only keep body and soul together working in a factory. It's a poor policy, girls, I wouldn't try it. Those long, weary hours of factory toil are not sufficiently paid for, by your weekly envelope, when your heart is crying out for green fields and new mown hay. Did you ever think of keeping bees? There is money in it, if you only take the trouble to make yourself efficient in that line of work. Do you know that at this very minute, honey is selling for 30 cents a pound? One lady I know has a small plot of land, and she has rows and rows of red raspberry bushes, and in season she gets twenty-five cents a box. She bought books on how to raise bees, and now has a fine apiary. She lives the happiest and most contented life of anyone I have ever met.

Then there are chickens. Did you ever think of buying an incubator and going in for chicken raising? Well, it is heaps of fun. Any hospital will give you a large price for what they call broilers, and a chicken farm—dear me, it is worth its weight in gold. But whatever you try, be sure to reach the topmost step of the ladder, and read all the books and journals you can find on the subject.

Then there is the girl in the city. Such a vast opportunity is hers. She can take courses in telegraphy, stenography, learn how to run a Y.W.C.A., or to be a librarian. She can take a course in household science or chemistry, or any one of the many courses which the universities and technical schools supply. But whatever she does, she must fit herself for emergencies, for it is emergencies that every girl of this generation will have to face. It is the price we have to pay for four years of war.

But think over it, girls, and make up your minds to be self-supporting in one way or another. It is the only way we can fit ourselves for the "time" in which we live.

QUESTIONS AND ANSWERS.

Could you please tell me how long it will be necessary for me to sign up as a V.A.D. in a Canadian Military Hospital?

T. H., Winnipeg.

It is necessary for you to sign up for six months after your month's probation.

I have not taken my St. John's Ambulance examinations, but I would like to be a V.A.D. I live in the country, and cannot afford to pay my board in the city long enough to take the course. What would you advise me to do?

ANXIOUS, Victoria.

You will be able to take the course while serving your probation. I am sending you the address of the St. John's Ambulance Headquarters.

FARMERS FRIEND FENCING FROM FACTORY to FARM

Announcement

The advent of peace, welcomed with joy in every home in the Dominion, brings to every one of us Canadians a new meaning, new opportunity, new responsibility, as regards our citizenship in this great and growing Nation.

To carry on during these reconstruction days, to build and rebuild for permanency, in everything that makes for peace, plenty and perpetual prosperity, is the ambition of every one of us. Every farm home in Canada must be made pleasant and comfortable. Every field, garden and lawn must be substantially, conveniently and pleasingly fenced. Our greeting to you at this time is to remind you of our part in Canadian development in the past and ask your co-operation and continued patronage for the future. May we, therefore, direct your attention to some of the fence facts that should be known and rightly understood by every patriotic citizen desirous of making Canada a better place to live in these days of well-earned and well-deserved peace.

FIRST, the time to buy and build fencing is now. Our improved and enlarged facilities, giving us the largest Fence Factory in Canada, enable us to render for Canadian farmers a superior, prompt, honest and efficient service—we are the "farmer's friend," first, last and all the time. Why? Because the farmer is our customer. We manufacture just such fencing as best meets the needs of the farmer.

SECOND, the purchasing power of every farmer is the highest ever. The farmer's medium of exchange—the crops he produces—is comparatively large. A bushel of wheat or a ton of hay will buy more fencing now than ever before. Prices will not—cannot—be lower for a long time to come. We mean prices of farm products. What the farmer produces and has to sell, that which represents his buying power, the world needs badly and must pay the price to get it. Nor will the price of materials used in manufacturing fencing be lower for a long time to come. Wire prices across the border are dependably fixed. That fixes the price for Canada. What real difference does it make as long as the parity is maintained? When the price of farm products is lowered, then and not until then will wire prices be lessened. It is to your advantage, therefore, to buy and build now.

THIRD, the Sarnia Fence Company has saved the farmers of Canada thousands upon thousands of dollars in actual money saved. Our plan of saving money for you is made possible under our selling system of direct dealing from factory to farm. Just two profits in the transaction—yours and ours. We are partners in the fence business. You buy and buy again, and others do the same. Satisfied customers mean a growing business. We pay nothing for your patronage, besides a good service rendered. You save by dealing directly with us on our direct dealing plan. It is a mutual co-operation between manufacturer and user of fencing that produces real fence satisfaction.

FOURTH, our price is always low—very low. If you could save twenty per cent by buying from us, would you do it? We always quote lowest prices for just the kind of fencing you may need. Write us before you buy. Tell us your plan. Our expert advice may help you to a wise selection and, perhaps, mean a great saving of money. It is safest to know the truth about fencing before you act. Remember, we are fence manufacturers. Our one moderate profit added to actual cost of production leaves a larger profit for you.

FIFTH, our business is built upon the service basis—a real service to our customers—the satisfaction kind, the kind that lasts and brings repeat orders and induces your neighbors to do likewise. We owe the farmers of Canada the best fence service we are capable of giving. The farmers of Canada owe us their patronage as a consequence.

SIXTH, the Sarnia Fence Company saves money to every farmer who patronizes us. Our improved facilities, enlarged working capital, together with the fact that we have recently added to our management and working force the best fence talent obtainable, puts us way in advance in fence production. Our guarantee is back of every promise we make. Everything is just as represented in our advertising literature. Thousands of farmers testify as to the good quality of our fencing. The money you save and the satisfaction you get in dealing direct with us will be your compensation.

SEVENTH, we prepay freight on all fence orders over 200 lbs. Our prices are quoted on fencing delivered at your nearest station. You pay but once. That covers the price of the fence and the transportation to your home town, excepting electric lines and on steamboats.

This announcement will be followed by others in the Farm Papers of Canada from time to time. Do not wait, however. Cut out this announcement and get our name and address correctly fixed in your mind. We want you to know the truth about Sarnia fencing. No trouble to answer questions. Write us about your fencing plans. We are specialists in the fencing line and are here to help our farmer friends. Our advertising literature describes in detail the Sarnia fence and the best method of fence construction. It will make plain to you the Sarnia plan. We are yours to serve.

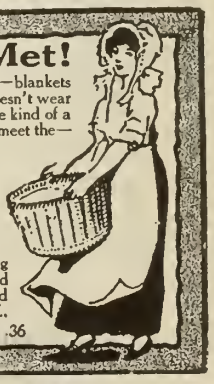
FARMERS FRIEND FENCING FROM FACTORY to FARM

The Best Washer You Ever Met!



Never gets tired or cross! Never "skimps." Handles light or heavy goods—blankets or handkerchiefs—a full tub or a few articles equally well. Doesn't wear table cloths, or tear the most delicate fabrics, and only takes half the time! Isn't that the kind of a washer to have in your home? Then go to your dealer's to-day and meet the—

Maxwell

"Home" Washer

—a ball-bearing washer—light, noiseless, easy-running—of handsomely-finished cypress. Specially-designed dasher makes it best for washing everything. Enclosed gears mean safety. Write us for booklet—FREE.

MAXWELLS LIMITED, Dept. 1, St. Marys, Ont. 36

If you missed the first chapters of "Who Goes There" read the synopsis on page 12. The best of the story is still to come, so do not fail to enjoy the current instalment.

The Patriotic Work of the Ontario Women's Institutes During The War

The Women's Institutes, immediately upon the outbreak of war, were appealed to by the Red Cross Society for a supply of pillows. The response was general, and all requirements were met within a short time. Instead of devoting their resources and time to the regular work of the Institute, practically all of the members at once set to work to make various lines of Red Cross supplies and donated large sums in cash.

Beginning with the Hospital Ship Fund at the beginning of the war, cash contributions have been made by the Institutes to the Canadian and British Red Cross Societies, French and Belgian Relief Funds, and practically all patriotic work for which appeals were made. The Institutes in one county presented a motor ambulance and several districts made gifts of machine guns and field kitchens.

Shipments of canned fruit, chicken, jam, jelly, dried fruits, cereals, field comforts, etc., have been made by nearly all Institutes, and the majority held weekly or fortnightly meetings for sewing, knitting and preparing hospital supplies. Among the many ways of raising funds were sales of home-made cooking, serving meals at fairs, entertainments, all kinds of tag days, old paper collected and sold, self-denial boxes. Possibly, the most successful method was that adopted by many Institutes of systematic giving by the members and others interested.

During the past year ending May 31st, 1918, the 889 branches, with a membership of about thirty thousand, contributed 146,685 pairs socks valued at $220,027.50, 240,475 other articles valued at $355,600.00, and $280,035.00 in cash, making a total for all the Institutes in cash and goods of $855,662.50.

It would not be an over-estimate to state that *the total givings of the Institutes in cash and goods for the four years of the war considerably exceed four million dollars.*

Most of the Institutes are now giving attention to refugee work, and many splendid contributions have already been sent to the various headquarters.

Demonstration Lecture Courses.

The courses in Domestic Science, Sewing and Home Nursing and First Aid have been arranged by the Institutes Branch of the Ontario Department of Agriculture, for the following places. Applications were received from a number of other Institutes, but were later cancelled on account of the epidemic of influenza. A number of these courses are being held in conjunction with the Short Courses in Agriculture arranged by the various Boards of Agriculture.

DOMESTIC SCIENCE.

Harriston, Bceton, Palgrave, Ravenna, Tara, Renfrew, Rockton, Thistletown, Welland, Embro, Dorchester, Courtland, Watford, Iroquois, Stirling, Palmyra, Pembroke, Kars.

SEWING COURSES.

Blyth, Brooklin, Caledonia, Emo, Glanford, Iroquois, Moorefield.

HOME NURSING.

Aylmer, Clanbrassil, Erindale, Grimesthorpe, Hagersville, Longford, Merrickville, Owen Sound, Portland, Ravenna, St. George, Streetsville, Teeswater, Williamstown, Whitby, Tara, Morrisburg, Cayuga, West Ops, and Barrie.

NEW WORK FOR THE INSTITUTES

Miss Viola Powell Has a Message for Institute Workers.

There are few engaged in Institute work who know it more thoroughly, or take a deeper interest in its progress than Miss Viola Powell of Whitby, Ontario, who for years has been lecturing throughout Ontario, as well as being an active worker in her own society. Therefore what she has to say to Institute workers is the result of careful study and a very complete understanding of all Institute problems in both village, town and rural community.

It was the good fortune of a representative of this journal to recently interview Miss Powell, and receive from her a message for CANADIAN HOME JOURNAL readers and members of the various Institutes, which we are exceedingly glad to be able to publish at this time, for it will in a measure answer the many letters which are constantly coming in from Institute workers asking what new line of activity they should take up.

The importance of every branch taking the Nursing Course was emphasized by Miss Powell. "Husbands, sons and brothers are returning from the front who will need intelligent attention in their homes, and it is most important that we know how to care for them. After they leave the hospitals and many who have never been in hospitals will need skilled hands to look after them, and no woman knows how soon she may be called upon to put into practice knowledge gained by such a training as these Home Nursing Courses provide. I would strongly advise every Institute to take the course. The need is so great that it cannot be over-emphasized.

"I also think," continued Miss Powell, "that there is an opportunity for some very constructive work to be done by our Institutes in connection with moving pictures. Institute workers do not keep in close touch with what is shown in their towns. They do not go to the managers of the theatres in their communities and ask them to show more Canadian pictures, and then back up that demand by moulding public opinion in favor of having more Canadian pictures on the screen. There is no manager who will not go to any trouble to secure what he believes his audience wishes and demands. Therefore it rests with the people to ask for what they want, and to be very insistent. The Institutes could also encourage the use of lanterns in schools.

"By combining moral Canadian life with the play hour at the movies, the home-makers will help to fill a long-felt need. If Ontario had a woman inspector of the movies, it would be a step forward, for thus the recreation hour would become a wholesome play time, as we would suggest scenes of supervised play-grounds, community gardens, children and floral culture, Boy Scouts and Girl Guides at work, and similar helpful constructive scenes.

"Another problem for the people of the rural communities to face," said Miss Powell, "is that of introducing more play into their lives. This is a big and very important question, and should be carefully studied by the Institutes. It is as necessary for grown-ups to have play as children, if their work is to be one hundred per cent. efficient. Each community must meet this need in its own way, but supervised play and recreation are important. If we had realized this in the past Canadian farms would not now be as destitute of young people as they are."

"What courses of study would you advise in the Institutes?" was asked, and without hesitation Miss Powell replied that she believed there was not enough continuity in the programme of the ordinary Institute. The topics are too unrelated. Better results would be obtained from a definitely planned and set course of study, something more along the lines of the Chautauqua courses.

"The contests are helpful," continued Miss Powell. "I would like to see them in every Institute—contests in all kinds of house and outside work. The success of the garden work has been marked. I hope there will be no falling off in the coming season. Contests might advantageously follow Demonstration Courses in the Institutes, reviewing the work of the course, thus holding new members gained through the course, and fixing the knowledge and information received in the minds of the workers.

"But probably one of our greatest problems to be dealt with by our Institutes is offering the helping hand to the thousands of English and Belgian brides who are coming to be our neighbors. Without the slightest idea of our country, manner of living, and conditions, they are coming over in large numbers with our soldiers, and it is for the Institute members to meet the situation tactfully, and remove for them as many difficulties as possible. There is no organization better fitted to cope with this question than the Women's Institute—courses in household management, cooking and housekeeping in all its branches having always been a strong feature in the organization, and with careful planning these can be arranged to meet the needs of the newcomers. They have brightened the lives of our soldiers, and are brave enough to come to a new country. It is our duty to befriend and assist in every way possible. The benefits will not be one-sided, for they will doubtless have much to give in return. They have lived nearer the war, and experienced much more self-sacrifice than we in Canada dreamed of. Their education and training along many lines will be far in advance of ours, and it will do us good to get together.

"Another matter which I would like the Institute members to take up is that of securing good picture loans. We are unacquainted with even the work of our own Canadian artists, not to mention those of Europe and United States. We have something very splendid here. Canadian art takes no second place, but it is quite true that it is better known in Europe than in Canada. Secure picture loans, study Canadian art, and you will find a whole realm of undreamed-of pleasure and profit opening before you."

In conclusion Miss Powell remarked that never before had the Women's Institutes the opportunities to leave their imprint on the pages of Canadian history, as in this year 1919.

HOME NURSING AND FIRST AID COURSES MUCH APPRECIATED.

The courses in Home Nursing and First Aid given under the auspices of the Institutes Branch of the Ontario Department of Agriculture, cover information which is of practical value, and that this information has been appreciated is indicated by the following notes of appreciation which have been received by several of the lecturers of these courses.

By Dr. Mary MacKenzie-Smith:—

"In the Rainy River District I went into a house one day last month and found one woman trying to nurse nine people who were suffering with Spanish Influenza, including a thirteen-months-old baby that had just come through a convulsion. The woman told me she could not get a doctor and added, 'I tried to remember all that you told us at the lectures you gave us last summer, and I think that some of us would not have been alive to-day were it not for the information you then gave us.'

"A mother of five children in Gravenhurst, who had taken the Home Nursing Course, said to me when taking the First Aid work a year afterwards, 'I never had anything in my life that was so beneficial to me in rearing my children, as the Home Nursing Course.'

"The evening after I had finished the First Aid Course in a certain Ontario village, a play was staged by the young folk of the place. One young man's attire was covered with cotton wool and, when he foolishly lit a match a spark touched the inflammable material and at once he was enveloped in flames, and fled from the building. A woman who had just taken the First Aid Course, snatched up a coat and ran after him, threw him down in the snow and covered him about with the coat, and, as the doctor of the place said, saved his life. The lady afterwards wrote me saying, 'I would not have known what to do had it not been for those lectures.'

"Many other testimonials could be given, but suffice it to say that I have never given a course in Home Nursing or a health talk but many of the young ladies thanked me for it, and the older ones said, 'Why did not the Government start this work sooner when we were bringing up our families?'"

By Miss E. Harcourt, Nurse:—

Such remarks as the following have been made after the full course of talks on Home Nursing and some following the special talks on Child Hygiene.

"Oh, if I only had the advantage of this knowledge when my children were little! Every mother should know these things."

"If I had only known this when my older children were young, they need not have been handicapped as they are to-day and I would have more rest."

"I would willingly have paid for such knowledge, had I been able to find it, or known where to go for it. Are children not as valuable as our chickens or hogs?"

"We have spoken of you and our class work last winter so many times during our 'Flu' epidemic."

These came from one large town, where the class numbered 80, and most of them well educated people.

The rural class expressed themselves much the same, one woman saying to me last week, "It has opened up such a new line of thought and ideas—things I never thought of before, I can't yet estimate the value of these talks." This woman did not miss one day of the fourteen talks. Others drove ten miles and did not miss any lectures. Dr. Patterson told me that one woman got up at the end of her talk and said that had she known this fifteen years ago, there would have been a different story from her home. Then she sat down and broke out crying. Upon enquiry Dr. Patterson found that this mother had lost several children from an unnecessary disease.

THE BEACHBURG INSTITUTE A PROMPT GIVER.

Following the recent appeal made by various societies connected with refugee work, the Beachburg Institute was one of the many Institutes which responded gladly and promptly. The secretary writes:

"Some day we may have an opportunity of telling you how four or five of us, with the others looking on and prophesying failure, made our appeal in our small village of less than four hundred inhabitants, and in the hurry of Christmas, induced people to sit down and knit 147 pairs of socks and stockings and 35 pairs of mittens in less than a week, and of how the other articles poured in in such profusion that we could scarcely manage to close our campaign inside our stipulated two weeks."

AN INTERESTING MEETING AT ALMONTE.

The following report of the December meeting of the Almonte Institute has been received:—

(*Continued on following page.*)

Red Cross Sewing.—Miss Simpson reported 46 ambulance caps, 104 McNaught bandages, 7 day shirts, 1 suit pyjamas, 50 personal property bags.

A card of acknowledgment from a prisoner of war helped by the branch was read by the treasurer.

The meeting discussed plans for work to be taken up now that the demand for war work has ceased. It was decided to acquiesce to the appeal of the Canadian Red Cross for refugee work, and for the ensuing three months the society will work along this line.

It was further decided to replenish the equipment, where necessary, of the W. I. bed in the R. M. Hospital, and the matter of having a brass plate suitably engraved and placed over this bed was put in the hands of a committee. The branch has, further, practically decided to make an effort to raise a suitable sum to be donated to the endowment fund of the R. M. Hospital.

The possibilities of a rest room for the town, similar to the one inaugurated by the W. I. before the war, was discussed, but no action taken.

WHITBY INSTITUTE PROVIDES A CHRISTMAS TREAT FOR THE AGED.

It would be difficult to find a more joyous number of old ladies and gentlemen than those at the Whitby House of Refuge on Friday, December 20th, when the Whitby Institute visited the Institution and gave the old people their annual Christmas treat.

For twelve months past and for twelve months to come, this is the one most talked of event, and the keen enjoyment of childhood in Santa Claus could not be greater than that of these pathetically helpless ones on this occasion. All pains and infimities were forgotten at the first sight of the beautiful tree generously decorated with sparkling tinsel and gay color. A pretty stocking full of candies, nuts and an orange was presented to each, after they had enjoyed a programme of music provided by the Institute members. Time turned backward and starry eyes grew dim as the old people listened to the children singing Christmas songs, and reciting with sweet, piping voices the verses which must ever accompany the visit of good Saint Nicholas.

After the tree came supper with frosted cakes and every delicacy imaginable to make sad and lonely hearts forget, if but for a time, that they are not still very happy children around the merry Christmas table. Those who could not go to the dining room received their goodies upstairs, and as we quietly chatted with these we soon realized that not all the heroes lie in Flanders fields.

"Yes, I have been sitting in this chair for eighteen years," answered a soft voice to our enquiry. "In the day I save up in my memory all the pleasant and beautiful happenings, then during the long night hours of suffering I think of them."

In such an institution, surrounded by many complaining feeble old people, what could the day bring of either beauty or pleasure, we thought, but a glance at the sweetness, the strength and courage in the face of this woman, brought the realization that beauty must truly come from within rather than without.

This particular work on the part of the Whitby Institute is most commendable. Are there not other branches throughout Canada which could take this matter up locally, and bring an afternoon of cheer to some aged ones, who are so often overlooked, in their communities?

THE ORILLIA INSTITUTE PLANS GOOD WORK.

At the December meeting of the Institute, the President, Mrs. Todd, who was in the chair, pointed out the good that was gained by the Home Nursing Courses, and the help rendered by the girls who took the course during the epidemic, either in their homes or in their own communities. A hearty vote of thanks was rendered to those girls for their hearty response.

The convenor of the Sock Committee, Mrs. J. B. Thompson, reported 30 pairs of socks in hand, and, as the armies are so unsettled at the front, it was agreed that the socks should be sent to the Navy League. Mrs. Thompson deserved praise for the way she carried on, and managed the sock department during the trying days of the war, in spite of the shortage of funds. A hearty vote of thanks to Mrs. Thompson and her able band of workers was passed.

A committee composed of Mrs. Todd, Mrs. Cramp and the school nurse will see what can be done for the large number of children examined by Dr. McKenzie-Smith, and recommended for medical treatment. Only a very small percentage of these children have so far had any attention.

It was moved by Mrs. Cuppage and seconded by Mrs. Lawson, "That we, as a body of women, stand behind the War Veterans ready to help them, and to give a hearty welcome to the returned soldiers and to see that they do not arrive in Orillia without any one to give them a hearty handshake on their arrival and show them that we appreciate the sacrifice they so nobly made for us." This motion was carried and the idea of an Auxiliary in connection with the War Veterans was enthusiastically talked up, with the result that a committee was appointed to wait upon the Mayor and see what can be done to receive the boys as they come home. Captain (Rev.) F. W. Anderson will be invited to address the next meeting of the Institute.

Canadian Women's Institutes

(Continued from preceding page.)

"CARRY ON."

A Talk to Institute Members by Mrs. M. Boulton, of Wiarton.

Our Women's Institutes have done nobly during the past four years in patriotic work. But our work has just begun. In the reconstruction now, in the problems of peace, we women have a place and work complementary to men, but of no less importance.

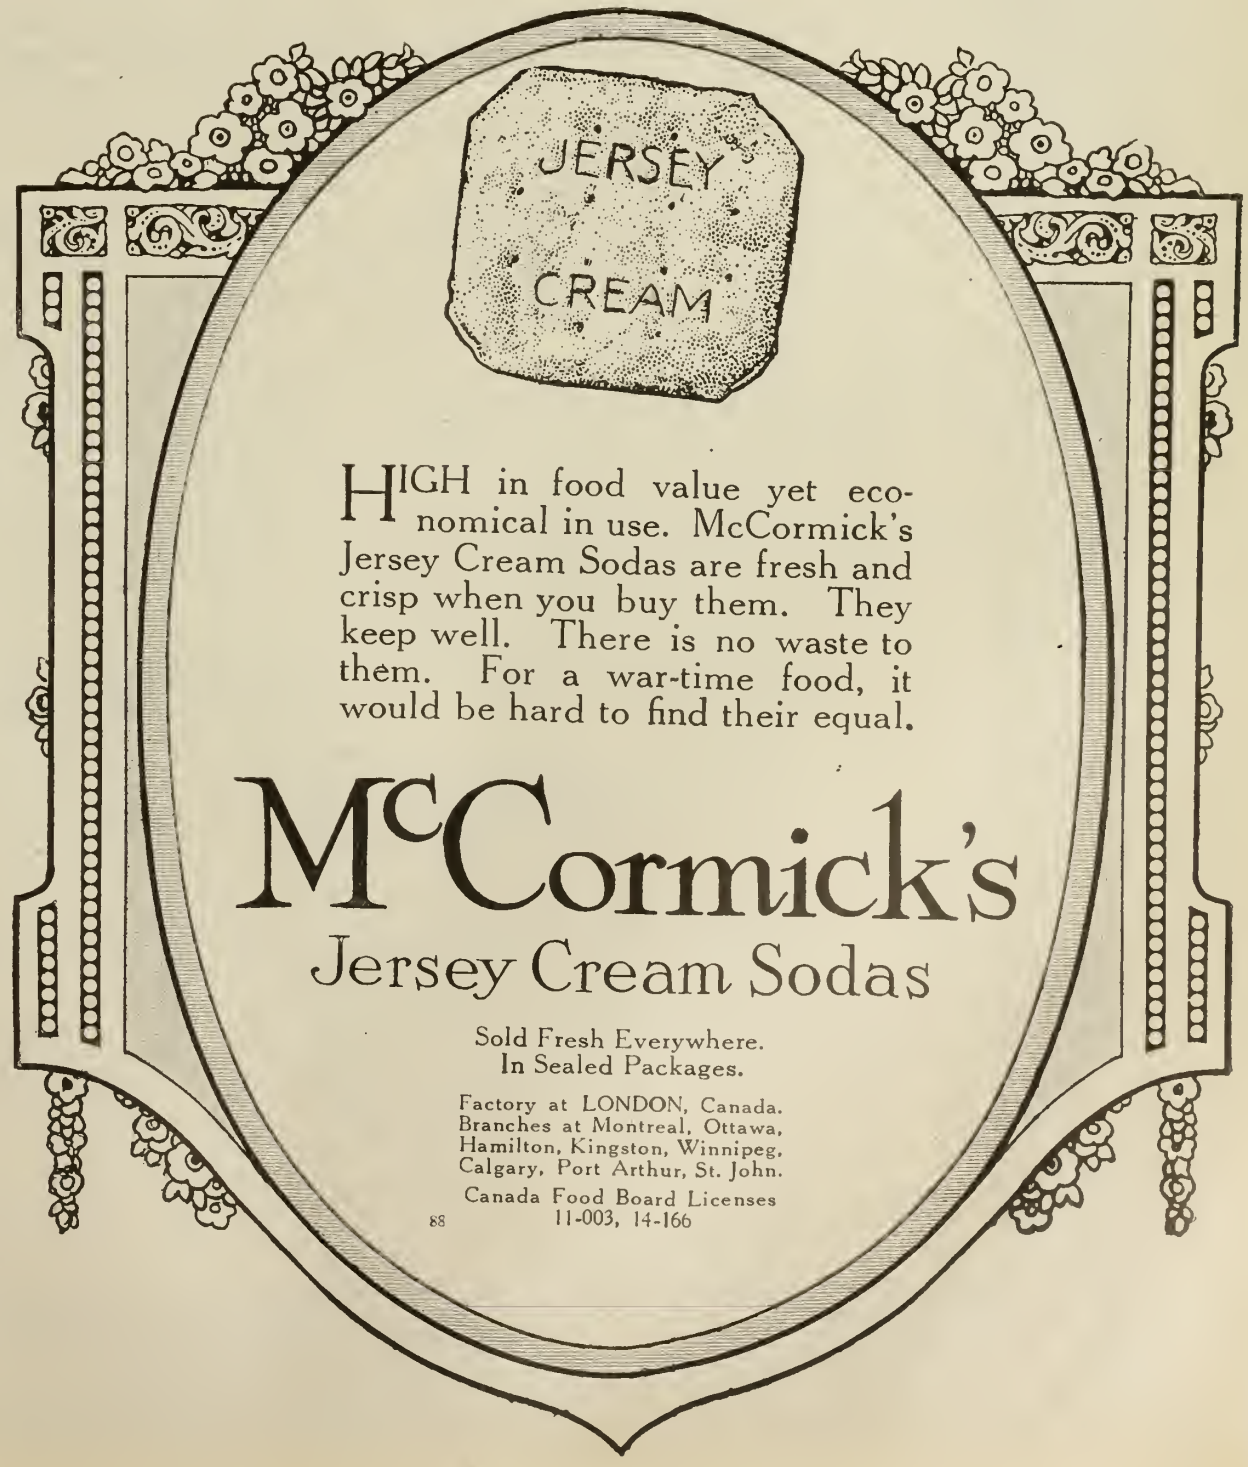
This war has been won by the concentrated efforts and harmonious cooperation of the Allied forces. In the new Canada, to which we welcome our heroes back, triumphant in the battle still on, of right over wrong, that our homes may be pure and safe strongholds for our growing children, women and men must join their concentrated efforts in the harmonious co-operation of education, legislation and religion.

It is in the home and school that the education is given and our future lawmakers are trained.

The wonderful success and staying power shown by the Germans for almost four years may mainly be traced to the fact that for more than forty years in their schools as well as homes the ideal of the "super-man," of world power for Germany, was held before their boys and girls. Had the ideals been those of true liberty and humanity how different would have been the world's history for the last four years.

In this new world's democracy it is for us women to enter the open doors now before us, and loyally and unswervingly lead in those moral and spiritual ideals of honor and humanity, which Britain has striven to uphold. Canada, who has proved herself the strong right arm of the Empire, is welcomed into her councils. In the reconstruction work Canadian women are earnestly called to help in the education in home and school, and in training to wise citizenship.

Our Women's Institutes in the past have effected real help on these lines. By medical inspection in schools we have started a pioneer work which has "made good," and is likely to become universal under our new Minister of Education. We have encouraged school and home gardens, which we must continue to help by various methods. We should follow up by striving to have at least one woman in each rural section upon the School Board. One who will take a personal interest and be capable of wisely leading in the interests of school. We would be glad to hear from other Institute workers on this or any line of educational work.



Dr. Cody, who has so kindly invited suggestions of improvement, is doubtless being over-flooded with advice. Our curriculum and school administration are being assailed without gloves.

As one who taught more than thirty years ago, and recently for a time, I would like to express my opinion. There is a great improvement in the text books, school methods and helps in these latter days. The curriculum is over-crowded, yet all is needed. The difficulty lies rather in the number of classes, frequently from eight to ten in rural schools. Many of these might be joined in teaching half the subjects and many subjects correlated. The three "R's" with spelling, geography, history, literature; composition with grammar, must have right of way. Nature study should correlate with art, agriculture or literature; Hygiene may be taught with household science.

Character-building is granted to be one of the most important functions of the school. "It's not character parents are interested in; passing examinations is all they care about," a teacher once replied, and we fear there is too much truth in it.

In the suggested reforms for the schools, I will not say one word against agriculture, science and constructive training, for these are needful, but I would put in a plea for the more enthusiastic teaching of literature and history which have been slighted in our schools, though not in the training of our teachers in Normal Schools or Faculties of Education. The parents are largely responsible for this lack of interest. I know of boys who eagerly read history in their school days, who are now leaders in state or in patriotic work in our country. History repeats itself. An intelligent student of it will become a wise leader in community or political life. In history, and the choice selections of literature, those ideals are set, which develop true manhood, womanhood and patriotism. One of the most important successes of our schools is to send the pupil into the world with a love of, and ability to read, the best books. Our women may help foster this by co-operating with teacher in encouraging wise reading by pupils, in helping in good literary and musical entertainments, by offering prizes in school for essays or debates on topics from history or choice literature. With the editor's consent we would invite letters on any of these suggestions.

(Continued on following page.)

Canadian Women's Institutes

(Continued from preceding page.)

We would like to have a "Round Table" or Home Circle, open to letters of inquiry, replies and discussion on the many lines of interest in our homes and work of institutes.

A FEW NOTES ABOUT ONTARIO INSTITUTES.

The Java Branch has donated a barrel of fruit to the new hospital lately opened at Guelph.

The Children's Shelter at Sault Ste. Marie will receive a supply of children's mittens from one of the institutes of St Joseph Island.

Seventy-five dollars was voted by the Bowmanville Institute for material for garments for refugee work.

The members of the Annan and Leith Institutes in Grey county have been replenishing the ward which bears the name of that branch in the General Hospital, Owen Sound. This ward is semi-private, and will accommodate two patients.

The Irwin Institute has donated $100.00 to the Salvation Army War Work Campaign. This Institute has also remembered with gifts the Sick Children's Hospital in Toronto and the Muskoka Hospital for Consumptives.

The Dover Branch sent a gift of $119.00 to the Navy League. A letter of thanks expressed much appreciation for the gift.

Two boxes of fruit were sent by the Orrville Institute, in the Parry Sound District, to Pearson Hall in Toronto, the new home and school recently opened for blinded soldiers. The Orrville Branch had the honor of being the first Institute to make a contribution to this new home.

The St. Vincent Branch forwarded a box valued at $260 to the Belgian Relief Headquarters. This box contained both clothing and food.

A new library is the latest enterprise of the Gordon Lake Institute.

SENTENCE REPORTS FROM THE INSTITUTES.

Mrs. C. E. Brown, President of the NIAGARA-ON-THE-LAKE Inst., reports a most interesting time when their Institute served a Christmas dinner to the Canadian men attached to the Polish Camp. They are at present taking up the matter of a memorial to the men of their town who have fallen in France, in addition to work for French and Belgian refugees.

ST. MARY'S INST., with Mrs. Sparks as President, has been studying the question of women's work after the war under the direction of several prominent speakers. A shut-in member of this Institute was pleasantly surprised on Christmas morning when she received greeting cards from all the other members.

Mrs. Bowers, President of RIPLEY INST., reports that in addition to Red Cross and refugee relief work, the Institute workers are helping the Kincardine hospital, and looking after school grounds and buildings. This branch is a very progressive and harmonious one.

DUART INSTITUTE is interested in medical school inspection. They have in addition arranged for a course in first aid. Three hundred dollars was the sum raised by a school fair by this progressive Institute with Mrs. Galbraith as President.

WATSON'S CORNERS INST., with Mrs. Park as President, is principally interested in patriotic work.

WILTON GROVE INST. assisted the Mapleton Canning Centre in addition to their regular Red Cross work. Mrs. John Jackson is the President.

The WHITBY INSTITUTE is just in the midst of a first aid course, with a class of sixty, all intensely interested, and highly appreciative of the splendid value the course is to any and every one. Through the course twenty or more will be added to the branch.

Congratulations are due Mrs. A. C. Beatty, President of the GARDEN HILL INST., and all the members of her society. They have built and completely finished paying for a hall valued at $1,000, and at the same time have devoted much energy in getting clothing for the children in Belgium.

At present the MILFORD INST., with Mrs. Lewis Minaker as President, is raising money to furnish a ward in the new hospital in Picton, in memory of the boys of their township who have made the supreme sacrifice.

The LUTON BRANCH, with Mrs. F. Haggan as President, held an interesting meeting in December, when the subject, "What war work are women of England, France, Italy and Belgium doing?" was discussed. This Institute donated 18 chickens to the Mapleton Canning centre, and five ladies assisted in the work.

Mrs. William Spaetzel, President of the new DUNDEE INST., reports that they are at the present time taking up the subject of efficient managing of the home.

An afternoon with the Canadian poets proved very enjoyable to the members of the SMITHVILLE INST. Gems in song and story were given, and a Christmas story read. The improvement of school conditions is the work before this institute, under the leadership of the President, Mrs. Armstrong.

Ready to meet the future needs as soon as war work is over, the BLUEVALE INST., with Mrs. Breckenridge as President, is planning to lay a sidewalk from the village to the station.

WELLESLEY INST., with Mrs. A. J. Saunders as President, has applied for a sewing course. This institute is enjoying many social affairs, in addition to turning out a quantity of patriotic work, and is planning to start beautifying the village.

Since the war began, MT. ALBERT Women's Institute has done very little outside of patriotic work. With the exception of buying a pump and seats for the cemetery, also keeping a bed supplied with flowers each year, our work has been all for the boys overseas and returned men in the hospital. We have raised in money $2.510.25, have knit 1,542 pairs of socks, and sent away altogether 4,704 articles, valued at $3,582, to the Red Cross and to boys overseas. Besides this we have sent fruit, jam, pickles, etc., also boxes to our own boys at the front, and now we are going to try and do our share in looking after the refugees.

Mrs. Wm. Clark, President of the GODFREY INST., reports that they are engaged in studying ways and means for 1919 reconstruction.

DELHI BRANCH reports 45 members, all actively engaged in sewing for the refugees and studying reconstructive work. They had medical inspection in their schools and a very successful fair. Their President is Miss Minnie Kent.

HILTON WOMEN'S INST. members decided to each donate money to meet expenses, instead of holding a booth at the fair. Mrs. R. O. Morrow reports that the plan worked successfully, a large box containing comforts being sent to Belleville for patriotic purposes.

School improvements and medical inspection are interesting the members of the GLENBROOK INST., with Mrs. Wm. Kennedy as President.

CHARLECOTE INST. provided dinner for those attending the plowing match, and raised $40. A bale of clothing valued at $80 was sent overseas. Mrs. Welsh is President of this institute.

Mrs. J. E. Oxby, President of the ROTHSAY INST., reports that they have arranged for several concerts, the money meeting various needs. Refugee work is now taking up their attention.

Against much opposition the WINGER INST., with Mrs. Geo. Overholt as Secretary, is striving to make headway with medical inspection of schools. By a pledge card system this institute succeeded in raising $100.

JACKSON CORNERS, formerly known as Old Castle Institute, with Mrs. C. A. Allen as President, is busily engaged in making clothing for the Belgian and French children, and looking after the needy at home.

"Medical inspection of schools, Red Cross work and local improvements," reports Mrs. Baekus, President of the WALLACETOWN INST., "are the principal interests of this institute."

CHARLTON BRANCH, with Mrs. Wm. Ennis as President, is taking up the matter of child welfare.

More will be heard of the BANCROFT INST. after their next meeting, when plans will be discussed for reconstruction work in their town.

Mrs. R. A. Starr, President of the NEWMARKET INST., reports as follows: "Our institute held a very successful nursing course under Miss Harcourt's direction. Fifty-two attended the classes, sixteen took the examination for St. John's ambulance course, and all passed, some with honors."

The DRYDEN INST., with Mrs. R. Wigle as President, has succeeded in doing a very large share of war work in the past year; $1,397.95 in cash was given to the Red Cross Society in addition to 583 pairs of socks, and 916 other articles.

Something unique is being carried out by the RIVER VALLEY INST., with Mrs. Edgar Morrow as President. An allied jubilee concert will be held, all the allies in costume being represented, and an address given by each on what he did in the war.

A successful auction sale was held by the WOOLER INST., at which donations from the townspeople and farmers were auctioned off to advantage. Miss Mabel Rogers is the President of this institute.

The aim of the HOPETOWN INST. to beautify and improve their village is a most worthy one. Mrs. James Mellwraith, the President, and the members are undertaking a very splendid work.

The thanks of many a returned soldier in the Base Hospital will be given to the members of the SHELBURNE INST. and their President, Mrs. A. E. Wrigglesworth, for their kindness in buying records to provide music. The "Star" Santa Claus fund was also helped by this institute.

Child welfare work is engaging the attention of the PORT DOVER INST., with Mrs. Maud Bell as President.

Miss Ada Cook, President of the DEVLIN INST., reports that they are interested in erecting a flag and memorial tablet in memory of their soldiers. The sick in that locality are not forgotten by the institute.

VICTORIA HARBOR INST., with Mrs. Thos. Lumsden as President, is thoroughly alive and interested in all problems of their vicinity.

Mrs. Wm. Pollard, President of the BURGESSVILLE INST., reports that before undertaking refugee work, they are completing the Red Cross work on hand.

The SOUTH GILLIES WOMEN'S INST. has started a vigorous campaign for the betterment of rural school conditions and the health and comfort of the school children. The first clinic was held in October, when it was found that a small percentage suffered from nose and throat trouble, and that the heating and lighting of the schools were very poor. These faults will be remedied in the near future by the institute, led by the President, Mrs. F. Park.

Miss Priscilla Powell, President of the WINGHAM INST., reports that their work at the present time is to make the community a better place for the boys.

A membership campaign is being conducted by the MT. BRYDGES WOMEN'S INST., under the leadership of the President, Mrs. F. Iles. This institute is rebuilding the village library into more of a community social centre.

Not a soldier has returned to the community who has not been remembered by a gift from the BAGNOR WOMEN'S INST. Mrs. William T. Moffatt, the President of this institute, and the members, have fitted the public hall with lamps.

BOBCAYGEON INST., with Mrs. Thurston as President, held a pie social on Dec. 11th, the proceeds, $85, will be used in aid of returned soldiers. This institute assists in the keeping of a nurse.

The members of the TILLSONBURG BRANCH and its President, Mrs. M. A. Barnhard, are actively engaged in studying child welfare problems, preparing soldiers' comforts, and assisting the Belgian Relief.

A successful talent tea was held by the TUTELA BRANCH under the direction of Mrs. A. Hird, the President. Medical inspection and Y.M.C.A. work are being undertaken by this institute.

As is their custom, the LEAMINGTON INST. gave the inmates at the House of Refuge their usual Christmas treat. Mrs. Geo. R. Fox, the President, reports that in future refugee work will be started.

Mrs. Robt. Fennell, President of the NORWOOD INST., asks to have suggestions telling how to have more harmony among the different clubs—Women's Institutes, I.O.D.E., and Monday Clubs. Doubtless there are many institute workers who can send along some valuable suggestions telling how they overcame similar problems.

Mrs. W. J. Markham, President of the DUNCHURCH INST., is also asking other institute workers to give suggestions as to suitable reception of boys and the erection of memorials.

"The place of patriotism in the child's education" was the topic of a helpful address given to the members of the DURHAM INST. by Rev. E. J. McEwen, on Dec. 5th. The President of this Institute is Mrs. J. S. McIlraith.

Mrs. Wm. Buchanan, President of the CAMILLA INST., reports that they have been engaged principally in Red Cross work and assisting their hospital. Now Belgian and French relief work is their objective.

The members of the FULTON AND FRANCIS INST. have been devoting all their energies to greater production. Mrs. Harry Merritt is President.

The children's shelter in Barrie has been the recipient of a generous supply of coal from the NORTH RIVER WOMEN'S INST. Mrs. W. J. Durnford is the President. This institute adopted the plan of securing oats from the farmers and selling it as one way of increasing their funds.

DRAYTON WOMEN'S INST., led by the President, Mrs. F. B. Smith, has completed a successful mile-of-coppers campaign. Over half a mile was collected, all the expense being the buying of folders to hold the coppers. Each folder made one foot of coppers, and the folders were given to the members and to all rural school teachers within ten miles, as well as the town teachers, and were then passed on to the children. As the coppers began to come in, they were given to the stores and the bank, in order that coppers would be plentiful. Competition among the various schools, and friendly rivalry, all contributed toward the success of the campaign, and $371 was collected.

DRUMMOND CENTRE INST. has been engaged in local patriotic work, as well as British, French and Belgian. The Women's Hospital, Toronto, received 22 quarts of jelly and jams from this institute. Mrs. Ewart is the President.

Mrs. F. Clarke, President of the SOUTH GILLIES INST., reports that her society has been building a hall in the town.

Mrs. W. L. Craig, President of the GRAND VALLEY INST., asks the following question: "What is the best way to keep up the interest in meetings after Red Cross work has become less important?" Belgian and French refugee work has been occupying their attention.

There are thirty-nine members on the roll of the VANDELEUR INST., with Mrs. S. Gilbert as President, all doing splendid work along patriotic lines.

MAPLETON AND KINGSMILL INST. is still continuing its wonderful work in the canning of chicken, 500 having been made up into jelly and soup. Mrs. Mahlon Bray is the President of this institute.

Mrs. W. J. Starke, President of the MOORFIELD INST., reports that her institute is interested in patriotic work, and it is their intention to buy books for the new library. This branch wishes to express its great loss in the deaths of Dr. Fotheringham and Miss Susie Campbell.

SHENSTONE INST. is busy in the preparation of a suitable home-coming reception for the soldiers of that vicinity. Mrs. M. Dolph, the President, reports a successful Christmas tree and sale of goods.

Mrs. W. J. Starke, President of the BERWICK INST., is also asking for new forms of work for her society.

The GRANTON INST., Mrs. A. Westman, President, sent a Christmas box to the Byron Sanitarium containing a shower of candy, canned fruit, cake, etc.

"Red Cross work, home relief and refugee work are the principal forms of endeavor of the BETHEL INST.," reports the President, Mrs. M. L. Stoner.

Mrs. A. G. Mann, President of BALTIMORE INST., has succeeded in carrying on the regular institute work in her society, in addition to the Red Cross and patriotic campaign.

Mrs. Geo. Havill, President of the ACTON INST., reports that during November that Institute made 70 garments and 3 quilts for the French refugees.

The WABASH INST., with Mrs. Fred Kelley as President, is engaged in Red Cross, patriotic and local relief work.

A decision has been made by the SUNNIDALE CORNERS INST., led by its President, Mrs. Peter Giffen, to send a substantial bale of goods to the Belgians.

Many forms of patriotic work are

(Continued on page 39).

That Witching Drop of Lemon

It improves the best of teas. Tea with lemon is now the rule in most famous dining rooms. See why connoisseurs "take lemon only."

TRY tea without any cream or sugar, but with a dash of lemon in it. That will help you conserve sugar, and it will give you better tea.

Note how the lemon brings out alluring flavors in your favorite tea that you didn't know it held. See if you ever again want the cream or sugar that has neutralized those flavors.

But perhaps more important is the fact that tea with lemon only is a more healthful drink also. For the lemon's valuable salts and acids are rare digestive aids.

When ordering lemons be sure to get California's Sunkist. These are juicy, tart, practically seedless lemons, and they are waxy, bright and clean. They slice best and look best as a garnish or in a cup of tea.

All first-class dealers sell them.

To Relieve and Prevent Colds

Hot lemonade *unsweetened* is an efficient agent in relieving and stopping colds. Take a hot bath just before retiring, drink the hot lemonade, get into bed immediately and cover well so that you perspire freely.

PARISIAN ART

Canadian Women's Institutes

(*Continued from page* 36.)

being successfully carried out by the SOUTH HORTON INST. Mrs. D. Barr is the President.

The district in which the BARNHART INST. members carry on their work is a very scattered one, which renders it difficult for them to do more than work for the soldiers. Mrs. D. Saunderson is the President, and reports that each month the members have packed and sent overseas 12 boxes for the boys.

The OMAGH INST., Mrs. A. Porter, President, has just shipped a box of clothing valued at $121.80 for Belgian relief, and two boxes to the Women's Cottage Hospital, Toronto.

Boxes for the boys overseas and local patriotic work has been the objective of the GRIMSTHORPE INST., under the leadership of the President, Mrs. McDonald.

In addition to their Red Cross and patriotic work, the RICHARD'S LANDING INST. has made several quilts for the children's shelter.

Mrs. Malcolm McLean, President of the GOULAIS BAY INST., asks for suggestions as to new forms of work for her society.

STAFFA BRANCH, with Mrs. A. R. Oliver as President, is opposed to daylight saving, and its members wish to prevent it from becoming law.

DECEWSVILLE INST., President Mrs. Wm. Ebert; HAMPTON INST., President Mrs. Levi Nidery; and SANDFORD INST., President Mrs. Robt. Meek, have been engaged principally in patriotic and Red Cross work.

Mrs. Wm. Goodfellow, President of the MILLCREEK INST., and Mrs. L. A. Groves, President of the CORNWALL CENTRE INST., report splendid progress in their society in various forms of war work, patriotic and refugee work.

At the November meeting of the LOBO WOMEN'S INST., with Mrs. Malcolm Gray as President, the following resolution was passed: "We the members of the Lobo Institute believe that compulsory military training in Germany was one of the chief causes of the great European war. Now in view of impending peace and the establishment of a League of Nations, the object of which is to abolish militarism from the world, we wish to place ourselves on record as being opposed to the continuance of military training in our schools and colleges, and to ask that it be removed from the school curriculum, and that additional prominence be given to physical culture. We feel very deeply on this subject, and have always looked upon military training as purely a war measure. But now that the war is over and a permanent peace is within reach, we wish to see every vestige of militarism eradicated from our land.

"'As the child, so is the man,' and a nation is only a collection of individuals. If we are to follow the advice of Dr. Cody to improve our country, we must begin with the child; therefore, what Canada will be twenty-five years hence is in our power at the present time, and it behooves us to be very careful how that power is exercised.

"As our school curriculum now stands, every boy in the middle schools and colleges, unless physically unfit, is subjected to military training. We consider this the thin edge of the wedge of militarism, to fight which nearly half a million of our men have crossed the sea and thousands have given their lives. But some may say, have military training retained for its value in developing the physique; there are exercises, and many of them, especially designed for that purpose, and which the army makes use of with that end in view, so we are asking that increased time be given to these helpful exercises which have no hint of militarism. In this way we may help to hasten the day when the swords shall be beaten into ploughshares and the spears to pruning hooks, and men shall learn war no more."

Nova Scotia.

Mrs. W. A. Page, President of the HORNING'S MILLS INST., reports that this society has bought and paid for a hall, and erected an addition for a stage. Plans for the reconstruction in their village are being discussed by this enthusiastic society.

The annual meeting of the TATAMAGOUCHE INST. was held Nov. 8, 1918, Mrs. Archibald McTara, secretary-treasurer, reported that there had been 12 meetings held during the year. The membership is 53, with an average of 10 to 25, and during the year $520.81 was raised for patriotic purposes.

Prince Edward Island.

The EAST POINT INST., with Mrs. John McDonald as President, has been busily engaged in Red Cross and patriotic work. Thirty pairs of socks were sent to the soldiers in France, and $10 sent to the Belgian relief fund. Local school improvements were not neglected.

Mrs. Wm. S. Robertson, of the KINGSBOROUGH INST., reports that her society is more alive than ever before. They have been supporting a prisoner of war and visiting the schools to supply necessities that are overlooked by the trustees.

Two members of the STERLING INST. visit the schools every month, and report their needs, which are afterwards provided by the institute. Mrs. Walter Simpson is President.

GLADFORD INST., with Mrs. Geo. Neale as President, held a public thanksgiving meeting for peace in the town hall, Mount Hope, at which a special collection of $52.25 was taken up for Belgian relief. This institute supports a Belgian child, and assists in the maintenance of a prisoner of war.

Quebec.

Mrs. R. J. Wilson, President of CLARENDON CLUB, reports that their oldest member was recently presented with a life membership certificate and pin for the Red Cross. Matters pertaining to the home are studied by this club.

Manitoba.

ROLAND SOCIETY, with Mrs. Fred Reid as President, has planned to conduct a sewing class in addition to their relief work for the refugees.

Mrs. R. W. Sargent, President of the RIVERS HOME ECONOMIC SOCIETY, reports that her members maintain a rest room with resident matron in the town of Rivers. They also donate supplies to the Emergency Hospital, and send clothing and food to the Children's Aid of Winnipeg. This society expresses a wish to have one name for the Women's Institutes, Home Economic Societies and Homemakers Clubs.

The SWAN LAKE SOCIETY, under the leadership of the President, Mrs. W. E. Gardiner, has been doing patriotic and welfare work for women and children.

GLENORA SOCIETY is interested in boys and girls' club work. Their President, Mrs. A. Laurence, reports that they are planning future work along those lines.

The FLEE ISLAND CLUB, led by the President, Mrs. J. A. Graham, discussed plans for a vigorous campaign for more public meetings of general interest to women and children.

British Columbia.

The METCHOSIN INST., reports that its members are expecting the year 1919 to be a very useful and successful one in all their branches of work. In the past, Red Cross, reconstruction and child welfare work have been their objective.

While H.M.S., "Lancaster" was in Esquimalt Harbor, many of the members of the GARDEN CITY INST. entertained the boys in their homes. This institute being in the centre of a rural district, is deeply interested in agriculture and the raising of small stock, chickens, rabbits and pigs. Time is found, however, for careful study of child welfare work.

Trying to make Rutland a good place to live in is the objective of the RUTLAND INSTITUTE, with Mrs. D. Hardy as President. On Dec. 11 this institute met for the final session of 1918 in the school house, and an inspiring address was given on opportunities and obligations of their new citizenship. Each member brought a jar of fruit and vegetables, which were presented to the bride of a returned soldier.

Mrs. J. Osborne, President of the WEST SAANICH INST., reports that this society has succeeded in raising $1,000 for Red Cross and patriotic work. At the present time increased production is being encouraged.

An excellent paper on business methods for women was given by the President, Mrs. B. L. Brown, of SILVER CREEK INST. This society also conducted a successful shower for a needy family in the community.

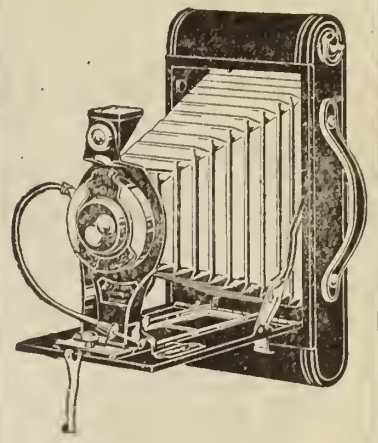
The CHILLIWACK INST., with Mrs. Davies as President, is forging ahead notably. Their branches of work are maintaining a ladies' rest room, food conservation and local school improvements, and they are studying the question of mothers' pensions and penny banks.

The STRAWBERRY HILL INST. have already started a fund to be used to give aid to returned invalid soldiers. Child welfare work and sanitation of schools are two topics of interest to this society, led by the President, Mrs. A. Jack.

Our Friend The Piano

(*Continued from page* 18.)

great solace when he became blind. As its name indicates, it combined the principles of the harp with those of the clavichord. It had two keyboards, the upper (styled piano), and the lower (styled forte). When it had been improved and simplified the modern pianoforte came into being.



Since musical inventors everywhere were in the eighteenth century striving to make an improved type of harpsichord, just as they have been everywhere working on reproducing instruments in this present epoch, there is much conflict of opinion as to the first maker of a pianoforte. The French hold that it was Anatole Marius; the Germans pin their faith to one Gottlieb Schroeder, and the Italians assert the claims of Bartolommeo Cristofori. It would seem that the Italians make out the best case. It has been established that as early as 1709 Cristofori, who held the office of curator of musical instruments for Prince Fernando de Medici at Florence, showed to his patron the model of an instrument he had invented that contained the leading features of the subsequent pianoforte. It introduced the method of producing piano and forte tones by a row of hammers, controlled by keys and striking the strings from below. This is the essential feature of pianoforte action.

It was not until seventy years later that pianos, to give the abbreviated name that was once regarded as savoring of slang, were introduced into England by one Jacob Stumpe, who in 1780 established a factory in London for the manufacture of the instruments and turned out the first square pianos in the British Isles. As everyone knows, the square piano has long since given place for ordinary use to the upright instrument; but they were continued in use for at least one hundred years, and are to be found in old homes and old auction-rooms now. In the rage for fine woods which has taken hold of the public, most of them on this continent have been sawn up for the walnut, rosewood and mahogany in their cases.

It is rather singular that the upright piano was so long in making its way. It was first manufactured in England in 1800, by Broadwood, whose firm is still in existence, and though the square piano long held the premier place as an ornament of the home, the uprights are here to stay, especially since they work very happily in combination with those reproducing attachments which are almost twentieth-century in origin. The upright piano has also superseded the small cottage piano, which was once a feature of many well-to-do homes. For beauty of tone, however, the concert grand piano, which, because of its larger case and sounding board, permits of a greatly increased tonal power, holds first place; and in its development the continent of North America has contributed much. The improvements which give the modern grand piano such exquisite effect when played by great artists, date largely from the days of Jonas Chickering, one of the earliest American manufacturers; though it is interesting to note that before his time and as early as 1775 (five years before pianos were manufactured in England) such instruments were produced in Philadelphia.

It will be seen that the piano has a long and interesting history. Though its ancestors owed their existence in a large measure to the encouragement of royalty and nobility it has now become the popular instrument of democracy.

Gossard Corsets In The War

ONE of the greatest contributing forces to the conclusion of a successful peace was the woman power of the world; the splendid power that held the lines behind the fighting front.

With the declaration of war thousands upon thousands of Canadian women promptly, unselfishly gave their best to their country's work with an efficiency that won the world's admiration.

GOSSARD CORSETS

The Original-Unequalled Front Lacing Corsets

were privileged to take an important place in the great mission of conserving the health of Canadian womanhood. A rare privilege indeed to help these splendid women to the successful fruition of their untiring devotion! The hygienic body support of Gossards gave comfort and added efficiency to millions of earnest workers, safeguarding their health under the strain of unaccustomed labor and offering at all times a wearing service that meant a practical and patriotic economy.

War has taught us much about every subject in the world—but not the least of its lessons has been its warning to womanhood to buy corsets that are hygienically correct; to be fitted carefully; and to adjust their corsets each time they are worn so that their full benefit may be realized.

The world war has taught us not to waste. There is nothing more wasteful than the purchase of an ill-fitting corset or neglect in the adjustment of a well fitted corset which will not permit it to render its full service.

Wear Gossard CORSETS They Lace In Front

Worn with Health and Comfort by Women the World Over

FASHIONS

(*Continued from page* 27.)

6087—Ladies' Surplice Corset Cover. Seven sizes, 32 to 44 bust. No. 8120—Ladies' Two-piece Drawers. Sizes small, medium, and large, corresponding with 26, 30, and 34 waist. The combination requires in medium size 3⅜ yards 36-inch crepe de Chine—8 yards lace edging. Embroidery No. 12206, blue or yellow transfer.

7754—Ladies' House-dress. Six sizes, 34 to 44 bust. Size 36 requires 5½ yards 32-inch check gingham—⅜ yard 27-inch white lawn for collar. Width at lower edge about 1⅞ yard. A rolling collar of white lawn finishes the open neck of this very good-looking house-dress of blue and white check gingham. There is a full-length panel at center-front, and the dress closes at left side-front.

8090—Ladies' Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4⅝ yards 36-inch linen—½ yard 36-inch dotted organdy for collar and cuffs. A choice is offered of long and short sleeves, and the three-piece-gathered skirt is attached at 1-inch raised line. Width at lower edge about 1¾ yard.

8061—Ladies' House-dress. Five sizes, 34 to 42 bust. Size 36 requires 7¼ yards 30-inch chambray. Width at lower edge about 1⅝ yard. Over the front-closing waist of this house-dress a panel is arranged that buttons on the shoulders. The lower edge of the panel is turned back and stitched through the center to form two pockets.

7357—Ladies' Sleeveless One-piece Pajamas. Sizes 36, 40, and 44 bust. Size 36 requires 3¼ yards 36-inch crepe de Chine—3 yards Irish crochet edging—3½ yards ribbon. The pajamas are slashed at the waist-line for the passage of the ribbon that forms the belt. Embroidery No. 12377, blue or yellow transfer pattern of 72 motifs.

7554—Ladies' Pajamas. Sizes small, medium and large, corresponding with 36, 40 and 44 bust. Small size requires 4⅛ yards 32-inch figured cotton crepe. The coat of the pajamas is slipped on over the head, and the front and back are in one piece.

7880—Ladies' Camisole. Sizes small, medium and large, corresponding with 36, 40, and 44 bust. Small size requires ⅞ yard 36-inch longcloth—2¾ yards insertion—⅞ yard ribbon for shoulder straps. No. 7424—Ladies' Four-piece Petticoat. Nine sizes, 24 to 40 waist. Size 26 requires 2½ yards 36-inch longcloth—2¾ yards 16-inch embroidery for flounce. The petticoat closes at left side-front, and the top is finished with a casing in which elastic is inserted.

8065—Ladies' and Misses' Dress Sleeves in Three Styles. Three sizes, small, medium, and large, corresponding with 36, 38, and 40 bust. The center sleeve is perforated for shorter length. Material requirements for these sleeves will be found on pattern envelope.

(*Continued from page* 28.)

8123—Ladies' Long-waisted Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4 yards 44-inch gabardine—¾ yard 36-inch satin for collar—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅝ yard. Embroidery No. 12321, blue or yellow transfer pattern of 12 motifs.

8151—Ladies' Dress. Five sizes, 34 to 42 bust. Size 36 requires 3¾ yards 54-inch check velours—2 yards satin for facing tunic. Width at lower edge about 1¼ yard.

8145—Ladies' One-piece Dress. Six sizes, 34 to 44 bust. Size 36 requires 2⅞ yards 36-inch satin—1½ yard 54-inch wool velours. Width at lower edge about 1⅜ yard. The composite frock has lost none of its vogue, and may combine two shades of the same material or contrasting colors may be selected as well as contrasting materials. The closing of this frock is at left side-front, and the neck may be collarless or may have a rolling collar.

(*Continued from page* 29.)

7990—Ladies' Dress. Eight sizes, 34 to 48 bust. Size 36 requires 4¾ yards 54-inch wool Jersey—½ yard 54-inch white wool Jersey for collar and vest—½ yard 36-inch satin for revers—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Embroidery No. 12468, blue or yellow transfer pattern providing 2½ yards of 18⅞-inch border. Wool jersey in fawn, French blue, and taupe fashions some of the best looking Spring frocks, and Jersey is particularly effective when embroidered or braided. Over the two-piece skirt which closes at left side-front, a two-piece gathered tunic which is open front and back, is dropped.

7968—Ladies' Dress. Six sizes, 34 to 44 bust. Size 36 requires 3¾ yards 44-inch gabardine—⅞ yard 36-inch lining for underbody. Embroidery No. 12473, blue or yellow transfer pattern. Simple as simple can be is this charming frock of serge with its oval collarless neck-line outlined by wool embroidery forming points. The closing is at the back, and allowance is made in the pattern for several neck outlines as well as for flowing sleeves. The swinging panel at the back is perforated to form a double panel. Width at lower edge about 1½ yard.

(*Continued from page* 30.)

7599—Ladies' Blouse. Nine sizes, 34 to 50 bust. No. 7919—Ladies' Two-piece Tunic Skirt. Seven sizes, 22 to 34 waist. Width at lower edge about 1½ yard. The costume in medium size requires 3¾ yards 36-inch dotted net—2⅝ yards 36-inch black satin—⅝ yard 40-inch white Georgette crepe for collar and vest—⅞ yard 36-inch lining for underbody.

8114—Ladies' Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4¼ yards 44-inch gabardine—⅝ yard 36-inch satin—⅜ yard 40-inch Georgette crepe for vest—2 yards 36-inch lining for underbody and top of skirt. Width at lower edge about 1¼ yard. Embroidery No. 12372, blue or yellow transfer pattern.

8153—Ladies' Dress. Seven sizes, 34 to 46 bust. Size 36 requires 4½ yards 36-inch velvet—⅝ yard net for vest—½ yard jet banding—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅜ yard.

8092—Ladies' Three-piece Gathered Skirt. Nine sizes, 24 to 40 waist. Size 26 requires 2⅞ yards 44-inch Poiret twill for skirt with yoke. Width at lower edge about 1½ yard.

(*Continued from page* 31.)

5022—Misses' and Girls' Pajamas. Six sizes, 4 to 20 years.

7406—Girls' and Juniors' One-piece Pajamas. Five sizes, 6 to 14 years.

4922—Misses' and Girls' Kimono. Eight sizes, 6 to 20 years.

7681—Girls' and Juniors' Nightgown. Four sizes, 8 to 14 years.

8094—Girls' and Juniors' Bath-robe. Eight sizes, 8 to 17 years.

8019—Girls' and Juniors' One-piece Pajamas. Five sizes, 4 to 12 years.

8013—Girls' and Juniors' Pajamas. Six sizes, 6 to 16 years. Initial on pocket No. 12254; pattern provides seven different styles in fourteen sizes. Blue only.

7327—Child's Empire Petticoat. Five sizes, 1 to 5 years. Embroidery No. 11569, transfer pattern in blue or yellow.

4643—Child's Nightdrawers. Eight sizes, ½ to 12 years.

7369—Child's House-coat. Six sizes 1 to 10 years.

7368—Infant's and Child's Kimono Sizes for infants, 1, 2, and 4 years.

6095—Child's Drawers and Envelope Chemise. Six sizes, 3 to 12 years. Scallop No. 11659, transfer in blue or yellow.

For material requirements of these designs see Pattern Envelopes.

The Girls' "Carry-On" Column

(*Continued from page* 33.)

Could you please tell me how I can get in touch with some returned soldiers, as I would like to ask them up to Sunday evening tea?

Edna J.

I am sending you the names and addresses of some of the Y.M.C.A. secretaries, and they will be able to give you the names of soldiers whom you might ask, or better still, they would ask them for you, if you prefer it.

I received your letter, and talked over the position with my mother, and I think she will consent after she has had time to think it over. Is it necessary for me to sign up for twelve months? I have been wondering if you receive your mail personally, as I would like to write to you?

Windsor.

I would not advise you to do anything against your mother's wishes, for, after all, sometimes those things do not turn out exactly right. But the occupational therapy is very attractive work, and if your heart is set on taking it up, I hope you are able to get your wish. It is necessary to sign up for twelve months, as the Government does not consider that it pays to train girls for that work if they do not "carry on" as long as that. Yes, I receive all my mail personally although it is addressed to the Canadian Home Journal. I would certainly like to hear from you again, and write me just whenever you wish. I am never too busy to write to any girls who wish to have a heart to heart talk, no matter how often it is. You will be sure to write me again, won't you?

I really do not know if I should write to you or not. But I am so very lonesome, and as I know you are very much interested in the soldiers, I thought perhaps you could help me a little. I just returned from England a short time ago, but I find there is no way to become acquainted with girls only by speaking to them on the street. Well, you know, Betty, as well as I, that that is not the kind of girls one would go out with by choice. Could you help me out of the difficulty, I wonder? I hope I am not intruding?

A Lonesome Soldier.

Why, of course I can help you out. I am sending your name to a couple of girls who write to this column, and I am sure they will only be too glad to write to you and send you boxes. Why don't you go to one of the returned chaplains in the city and ask him to introduce you to some of the girls of his church? He will, I know, for he will understand. Why, half a dozen soldiers of your stamp would be a splendid addition to any church, and you will have some good times. Just try it and see. Let me know how you succeed, won't you?

We are starting a club, and wish to do Red Cross work for our hospitals in Canada. Is there any book we can get to give us directions as to how we should make the articles?

Vera, Stratford.

I am sending you a book containing the directions of how to make all the supplies that are used in our Canadian Military Hospitals. I am sure you will find everything there you require.

Enclosed you will find a post office order to pay for the first month of keeping a Belgian orphan. I hope you can forward it to headquarters for me.

Betty.

I have handed your post office order to the Belgian relief and given them your address. You should hear from them in a few days.

Training Boys and Girls

(*Continued from page* 25.)

p, r, s, t, v"—were "workers" the other fifteen being "drones," so they voted the "AT" beehive no good, and next day tried the "AD" bees—with similar result; then they tried an "IT" beehive, and got fourteen workers and only twelve drones.

They also amused themselves making rhymes or singing "P-a-t, pat," "C-a-t, cat," and so on.

But as a help to learning to spell Mrs. Stoner recommends the typewriter. One day Winifred found her mother pounding at the keys when she wanted her to come out and play. The mother told her to wait till she finished writing a story on the machine, as she could make money by thus writing stories. The next day, when mother returned from market, Winifred presented her with a typewritten copy of the first page of "Peter Rabbit." There was no spacing or capitalization; the little girl had merely looked at the letters on the book and picked them out on the keyboard. After she was shown how to space, capitalize, etc., she took great pleasure in copying poems of the masters and trying to write original letters, rhymes and stories. This was before she was three years old.

Winifred had attained such remarkable proficiency in spelling by the time she was three that her father used to invite visitors to give her any word, assured she would never fail. She spelled street signs, street car posters, everything.

The typewriting habit grew until Winifred learned over a thousand poetic gems by writing them in type, thus impressing their forms in the most striking and natural way. Mrs. Stoner says that if she were a millionaire she would make a bonfire of all spelling books now used in schools, and would introduce typewriters so that all children could learn to spell in this practical manner.

Near to Nature's Heart—Geography Game.

Winifred has always had a garden, and she and her mother have great fun digging and planting both flowers and vegetables. They play that the weeds are dragons and must be killed, but the flowers are fairies. They often played with potatoes, and made babies of them, and sometimes, when tired, would lie under a tree and try to see how many green vegetables people ate, how many brown ones, and so on. Sometimes this was used as a spur for a writing lesson, each of them writing lists of vegetables and flowers they knew. The mother would tell the girl the names of trees they passed in their walks, and on the return trip the girl could tell each name correctly. Favorite trees and lovely flowers were kodaked, and the little girl found delight in painting the photographs.

After an unpleasant encounter with a bumblebee, Winifred wrote the following rhyme as a warning to her little friends:

Let the Bumble Be.

One day I saw a bumblebee, bumbling on a rose,
And as I stood admiring him he stung me on the nose.
My nose in pain, it swelled so large it looked like a potato,
So Daddy said, tho' Mother thought 'twas more like a tomato.
And now, dear children, this advice I hope you'll take from me,
And when you see a bumblebee just let that bumble be.

A naturalist who recently talked with Winifred said that she was undoubtedly another Audubon; but the mother explained that she was simply an ordinary little girl who kept her eyes and ears open to nature's calling, and gained knowledge by seeing, hearing and doing rather than by simply reading what others had done.

Mrs. Stoner followed the plan of seeking knowledge direct from nature, by using laboratories, museums and interesting books to help her in leading her child to knowledge of mineralogy, chemistry, geology and astronomy. The fairies and interesting stories in mythology were also a great help in keeping up interest in those branches.

Geography, once a nightmare of maps and cities, has become a delight to children taught by natural educational methods. "Winifred and I have taken many a jolly trip on a big map spread out on a table," writes the mother. "We would stop at certain places, pretend to talk to people of various countries, and continue our trip by rail or boat. Sometimes we took motor trips, and had all sorts of dreadful accidents. Once we slid down a glacier, and on another occasion we nearly fell into a crater. We were constantly delayed by punctured tires, and had to stay in desolate places where we lived like Robinson Crusoe, and made good use of knowledge we had gained from his experiences. When we wished livelier sport we would turn

The Brunswick
ALL PHONOGRAPHS IN ONE

Cultivate in Your Children Appreciation of True Tone

The Brunswick
ALL PHONOGRAPHS IN ONE

is the one phonograph that plays *all* makes of records *truthfully,* bringing out of each the pure, full tones of the instrumentalist and the singer.

The Brunswick's superiority in tone production is due to:

1. The "Ultona"—a reproducer which, by the mere turn of a hand, plays every make of record with the proper diaphragm, exact weight and correct needle.
2. The all-wood sound chamber—built like a violin—which, with the "Ultona" eliminates all nasal and metallic harshness.

Find Out For Yourself

Write for booklet showing the simplicity principles of the "Ultona" and ask any Brunswick dealer to play any make of record. This test is conclusive.

The Journal Juniors' Club

Conducted by ETHEL BAIN.

My Dear Home Journal Children—

The December prizes have been awarded. Not so many competed this time, but the work sent in was good.

Again I must remind all competitors to state their age on their entries, particularly in the camera contest. A very good snapshot was disqualified in the December contest because the competitor had not given her age. Read the rules for each contest and try again is my message to all the Journal Juniors. Try also to get new members for our Club, because the grown-ups are interested in your special page, and read your letters and enjoy them, too.

Your sincere friend,
ETHEL BAIN.

CONTESTS FOR FEBRUARY

1. My Favorite Winter Sport. Boys and girls 12 to 16 years of age. Not more than 500 words. First prize, $2.00.
2. The Winter Birds of Canada. Boys and girls 12 to 16 years of age. Not more than 500 words. First prize, $2.00.
3. For members under 12 years. A letter of not more than 300 words about Winter Birds you have seen in your district. First prize, $2.00.
4. For the girl or boy under 16 who sends in the best photographs a prize of $2.00.

Take care that your name, age and address are written on each letter. Write on one side of the paper only.

LIVING SNOWFLAKES.

The North wind howled and raged through the forest, whipping the falling snow with his whirlwind breath until he turned it into a blinding blizzard. He snapped off branches here and there, and tossed them about in his anger, and blew such cold breaths that the birds huddled together in their nest-holes and shivered as they heard him whistling overhead. The beavers in their house listened as his voice thundered across the ice-bound pond, and prayed that the ice would not crack, for once let the tiniest crack appear and the angry wind would get through, and then there would be danger—it would mean a wrecked home and a struggle for life amongst the broken ice and waters which would be lashed to fury. The hours passed by, and still the ice held out and not the strongest blasts which boomed like a gun across the surface had made the faintest crack appear.

The trees groaned and cried as the wind tore through their bare branches. They bent their heads before it, for they did not want to be uprooted. Many of them were sheltering the squirrels and birds, and the trees knew full well that their little friends needed protection, especially the birds, in return for their work in keeping down the insect pests that preyed upon the trees.

All day long the snowstorm raged, and in the little cabin in the clearing of the woods the old forester sat by his cheery fire and listened to the storm king as he rattled the frozen rain against the window. The old man was dozing and dreaming when a sudden rush of sleet roused him. Rising, he walked to the window and peered out into the storm, then started back, exclaiming "Well, I do declare!" Quickly he slipped back the window-bar. The rush of snow blinded him for a moment, and he hastily shut the window and rubbed his sleeve across his eyes. "Some storm," he muttered to himself, "but where's the birds?" A slight noise behind him made him turn, and there he saw his guests. One, two, three, four, six Snow Buntings were shaking and preening their feathers on the cabin floor.

"You're welcome," said the old man, as they looked up at him with their bright eyes. "Maybe you're hungry," he went on, and went over to his store cupboard. Opening it, he took out a handful of seed and threw it down to the visitors. The birds, with many chirpings of delight, helped themselves, and soon their cheerful calls repaid the old forester as he sat down and watched them.

Little storm-tossed creatures they were, for they had braved a storm that no man could live through. In fact, they delighted in snowstorms, and, like the chickadees, were wonderfully cheerful during the coldest weather. The light shining through the cabin window had attracted them, and they had flown on to the window-sill from the branch of a neighboring tree, where they were holding on with all their strength, whilst the bitter wind was blowing their feathers every way. They didn't mind the cold one bit, but when the window was opened the wind swept them off their feet and tossed them like snowflakes into the cabin. Only they did not melt like the snow that came in with them, but they looked just like bits of snow as they walked about, for a Snowflake, or Snow Bunting, never hops.

As the birds finished their meal they flew up and about the cabin to find a way out. The old man watched them.

"'Tis wanting to leave me, ye are," he cried. "You're welcome. Won't ye stay the night, for 'tis no' fit for the likes of ye wee things to be out," he continued. Still they flew here and there, and soon they found the window. "Ye must have your own way," he said. Slowly he rose and moved over to the birds. "The snow has ceased," he went on, "but don't ye go far away, for I like ye." The window, now unbarred, opened slowly, and the Snowflakes, scenting the keen air, passed out swiftly. The old forester watched the dainty children of the snow. "Come again!" he cried. "You're always welcome." Seemingly the birds understood, for side by side on the nearest bush, they twittered cheerfully as they swung to and fro in the wind.

Next morning the old forester was awakened by the calls of the winter birds. Rising he hastened to the door and opened it. Before his eyes lay a fairy scene, for the storm had passed and now a world of glittering beauty was left. Every bush and tree wore a sparkling crown of frozen snow. A vivid splash of blue alighted in the clearing before the cabin. It was the mischievous Blue Jay, in his jewelled coat of sapphires and pearls. His cousin, Black Crow, was there, as well as Chickadee, Downy Woodpecker, and his cousin, Hairy Woodpecker. Butcher Bird, the Northern Shrike and Bob White were chatting together, and on the window-sill were the new arrivals, the Snowflakes. They were all waiting for the friend they had learned to love without fear, and as soon as he scattered the seeds and crushed grain they flew down and around him. The squirrels came for their share of the treat, and the old man, content to wait until his feathered friends were fed before he himself touched his morning meal, thanked God from his heart for the perfect trust shown him by the wild folk and forest birds and for the friendship they had given to him throughout the days and years he had spent living close to the heart of Nature.

* * *

Do you know the Snow Buntings? Have you seen these sparrowy little birds in your district? They are the only winter visitors and, like the Northern Shrike, who nests within the Arctic Circle, will leave us as soon as the first warm days of spring tell us that the winter season has gone. You cannot mistake the Snow Buntings, or Snowflakes, for they are almost a ground bird, and rarely perch on anything higher than the fence-rail. You can tell them at once by the great deal of white amongst their rusty brown plumage, but their chief marking is the extra long white eyebrow that runs around the cheek. This peculiar marking will tell you at once who the little visitors are. They feed upon seeds from the weed stalks that one always finds above the snow. They are very restless, and at the slightest sound the flock will start up and fly around, and you will hear them whistle when in flight.

Don't confuse the Snowflake with the Junco, who is about the size of the English Sparrow. The Junco is another of our winter birds, and without a doubt many of you know this pretty snowbird that brightens the winter days with its quiet, friendly ways. The Juncos are known chiefly by the white feathers on either side of the tail, which are to be seen when they are flying. They wear slate-colored coats and grey vests. The underparts are white and their bills are of a pinkish shade, and on their heads they wear the quaintest of black caps. Their song is a very sweet trill, and when a flock of them sing together the effect is beautiful.

What do our winter birds feed upon? The wind is a kind friend to them, and the woods, although to us they look very bare, are still stored with food. The wind does its part by blowing the seed-pods off the trees, and as they fall they open and the life-giving seed falls downward to the tablecloth made of frozen snow. Mother Naturo provides for her bird children, for when the snow covers the ground she still has seed-pods on the trees and berries on woodland vines and shrubs. The leaves may have fallen, but the berries are still there for the hungry birds, and it is always well for us to remember when we take our winter walks that we must not pluck the pretty-looking berries from off the trees and shrubs, for if we do we shall be stealing the food the great Mother has provided for our feathered friends.

Effie Perrin, Bailieboro, Ontario.

PRIZE STORY.

By ALEX. YOUNG, age 10 years, R.R. No. 5, Goderich, Ont.

What I Have Learned About the Maple Tree.

The maple tree starts from the blossom of another maple tree. The frost nips the seed from off the tree, and it falls on to dead leaves and moss. In winter, the snow keeps it from freezing. When spring comes, the seed starts to grow and sends down a root and sends up a stem on which small leaves will appear. The first year the stem is about five inches high, and as the tree grows the leaves and branches become larger and more in number.

A healthy tree will grow about one-quarter of an inch in circumference and eighteen inches to two feet high each year until the tree is five years old. If it is out in a moist field by itself, it will grow a great many branches and the leaves will be fresh-looking, but if it is in dry soil and among other trees it will be tall and slender, with few branches, and the leaves will droop.

In the spring the maple trees are tapped for their sap or juice. This is done by making a hole in the tree. In the hole is put an iron spile. This is a tube with a hook on the end, on which the pail is hung. The sap runs into the pail, and then it is boiled and it is made into maple syrup. By boiling the syrup we get maple sugar.

The maple tree is good for its lumber. When the tree is cut down and trimmed it is loaded on to sleighs and taken to the saw mill, where it is cut into lengths and then into boards. Some of the wood is used for firewood by cutting it into short pieces, and it is left out in piles all summer to dry. The ashes are used in making soap and for fertilizer. The maple tree is also a shade tree, because it has large leaves and spreading branches.

The maple tree is more important than any other tree because its leaf is one of the emblems of Canada, and since the war started Canada and the Maple Leaf has done a great deal for our Empire.

Honorable Mention.

HILDA ALLEN, age 11 years, Caledonia Springs, Ont.

I am going to tell you what I did for a bird in summer time. I was playing in the cellar one day, when I came across a bird's nest. I went up to it, and saw there were four little robins in it. They all opened their mouths when they heard me; so I said to myself: "They look hungry. I shall go and get them something to eat." I got some worms for them, and went away. I peeped through a crack and saw the mother feed her young ones with the worms. Every day I went down into the cellar and fed them. I gave them bread in the morning and worms at night. They grew up very quickly, and the mother became tamer and tamer every day. One day I went down to feed them, but they had gone. After a few days I saw one of them at the front of the house, but its mother came along and took it away with her. Every night they would come and sleep in their nest. Soon they left it because the young ones were able to fly. I threw crumbs out to the birds all the time, and I hope the robins will come back again next year, for their nest is still there; and if they do come back I will feed them again. Would you not like to have a bird in your cellar?

Other Men's Luck

(*Continued from page 7.*)

He gave the order for the bag to be sent to the steamer, and felt that now indeed he had burned his bridges behind him. He bought a new soft hat, and regarded himself with some satisfaction in a mirror. It was different to anything he had worn, and he fancied that it made him look younger. After all, he was only in the very prime of life; his hair was just touched with grey, and if his figure was not so slight as he would have wished, still he was not fat; no, decidedly, no one could have called him fat, he said to himself with some satisfaction. A man of forty-eight has still a long way to go before old age is upon him, a long way, and he would make the most of it.

He returned to the office, and spent the remainder of the afternoon in writing letters, for it was necessary to inform Carrie of the decision he had made. He wrote to her very briefly to tell her that he had left everything in good order for her and the children. They would not be stinted for money, for he had managed to save enough, fortunately, always with this in his mind. There was no use in her writing to him, for he was going to be a ship without a port—he would no longer be anchored to any shore.

At six o'clock he left the office, shutting the door behind him with a keen pleasure at the thought that he would never again see that square desk, the swing chair, and the green blind pulled half-way down the window. He had finished with offices; he had finished with all that was flat, stale and monotonous. The glamour of the East was before him, and it gave a sprightliness to his walk, a thrill to his senses.

He dropped in at an hotel for dinner. He fancied that he would enjoy lingering over his dinner while he listened to the orchestra and made plans for the future. The waiter led him to a table in a corner of the immense room, and he sat down with a pleasurable feeling that his adventure had commenced. It was a long time since he had dined at an hotel, and he never remembered being alone without Carrie—and Carrie always ordered the dinner. To-night he would order what he liked.

He was glancing over the menu when he heard a voice behind him, and started up in surprise as a man about his own age held out his hand with a hearty exclamation of greeting.

"Jim Alloway!" Morrison exclaimed, rising to his feet. "Why, it's years and years since I've seen you."

Jim Alloway! They had gone to school and college together and been friends for years, and then somehow he had lost track of him completely.

"Yes, it's a long time," Alloway responded. "Dining alone? Can I join you? I'm just back from a trip abroad. It's good to see a familiar face."

Morrison gave the order to the waiter, and they spoke for a few moments of the sundry items of world news in the papers that evening till the waiter had brought the soup. Alloway looked across the little table at his friend in silence, and Morrison felt that he was summing up the changes which time had wrought in him, and he returned his glance with a challenging smile.

"Well, it's a long time, isn't it, and I'm a good bit older than when we last met. Is that what you are thinking? Let me see, it must be nearly fifteen years. I think I remember it was at a dinner given for Carrie just before we were married. Do you remember? After that your uncle died and you went abroad. Fifteen years! It's a long time!"

"Fifteen years, is it? Yes, I remember the dinner. Carrie wore a yellow dress with some glittering arrangement in her hair. How is Carrie?"

"Oh, she's well. What a memory you have! I couldn't remember what Carrie wore fifteen years ago."

"Couldn't you?" Alloway smiled. He was a large, massively built man with very white teeth that flashed when he smiled. "But then you've been spoiled. A hungry man remembers the taste of a dinner eaten years ago, while you and I couldn't even remember what we have had for lunch to-day. It's all a matter of what one has had. You've had Carrie all these years, while I've been a lonely beggar knocking about the world looking for distraction from the mere fact of living."

"Travelling, have you?" Morrison regarded his companion with greater interest. He thought he looked as though he had had all the good out of life, and no wonder, with nothing to do but go where he wished.

"You're not married, then?" he added.

"No, no; I'm not married."

"Tell me where you have been; tell me something about the places you have seen? You must have seen a great deal."

He regarded Alloway rather enviously. He thought he appeared years younger than himself. Well, slaving one's life out in an office is not conducive to keeping young. He did not wonder that Alloway had that advantage over him.

Alloway put down his spoon and shrugged his shoulders.

"Oh, there isn't much to tell. When it comes down to it, one place is much the same as another. I always say when you've seen one country thoroughly you've seen them all. India —Russia — Siberia — China—Japan. I've been to them all a score of times. No, there isn't much to tell you that you couldn't read in a guide book. But tell me of yourself and Carrie."

"Of Carrie!" Morrison smiled and took a mouthful of soup before he continued. "Well, I don't know that there's anything to tell. We have four boys and live in the suburbs; a brick house with a patch of lawn in front and rose bushes—yes, some rose bushes, capital ones. There's a tea rose—but perhaps you're not interested in roses. I'm still with Phelps & Smithers, and—well, I really don't think there's much more to tell you."

Alloway laughed.

"It's all so complete; is that it? Your four sons—and Carrie, and your roses! Yes, it sounds pretty complete to me. I suppose Carrie is just the same Carrie she was fifteen years ago. she wouldn't change; no, I can't imagine that she would change very much."

Morrison pondered his friend's words. A picture rose before him of Carrie in the blouse with the white stripes sitting eating her eggs and bacon that morning. He wondered if Alloway would find her much changed. Perhaps not.

"I don't know," he said slowly, "but I suppose we all change, at least in out ideas. I think mine have changed a good bit. It's curious to look back on ourselves as we were so long ago."

"Yes, I suppose so," Alloway returned, absently. "Fifteen years! Fifteen years since Carrie told me that she was going to marry you. I remember how I felt then as though it were only yesterday. It was like a blow straight between the eyes. And now she has four sons. Lucky devil you are! It makes one feel too envious to think about it."

Morrison looked the amazement that he felt.

"I never knew that you and Carrie ——"

"That I wanted to marry her? She never knew it herself. I hadn't a cent then to marry on. You remember, my uncle died just after you were married. It seems strange to talk about it now, but it's all so long ago. Why, it's another lifetime!"

"But you've had a splendid life. After all, marriage ties one down horribly. You've been able to travel ——"

"Oh, I'm not grudging you your luck, old man. Don't think that. Only a man feels a bit lonely at times, knocking about from one hotel to another, and never a soul to care what becomes of him. It's a lonely life, and there's nothing when you come to the end. Nothing but a little

Ingersoll Reliance

A Master Seven Jewel Watch

AS a watch investment, the Ingersoll Reliance stands alone. It is the best 7 jewel watch you can buy at the price.

As a symbol of personal taste, the Ingersoll Reliance bespeaks refinement. Its slim, graceful case, its beautifully designed dial and its artistry of finish satisfy the most critical taste.

As a time-piece the Ingersoll Reliance is the master product of the world's greatest organization of watch makers. It is a close timer, sturdy of movement and capable of a life-time of reliable service.

The sturdy Bridge Construction, the Safety Barrel enclosing the Spring, and 20 other distinct and recent improvements—most of them found in no similar time-piece—make this the Master 7 Jewel Watch.

In solid Nickel case the Ingersoll Reliance sells for $6. In gold-filled case the Reliance sells for $9. At good dealers everywhere.

Other Men's Luck

(Continued from preceding page.)

heap of memories. Four sons, you say!"

"Yes, but ——"

"Carrie's boys! I'd expect Carrie to have sons. I suppose they all have those same blue eyes, like cornflowers. They always seemed to see clear through any falsehood or deceit. Carrie's sons would have eyes like that. Fine, straight lads, I bet. Doesn't it keep your world right just to think of them? Four sons. To carry on your name and do the things you haven't had time to do; climb the heights you've only aspired to climb. That's what sons mean. You can't fail when you have sons. They'll turn your failures into successes if you've had failures, and they'll make your successes seem worth the while. You've had the run of luck, David, and I'm glad of it. The man who married Carrie Webster deserved all the luck."

Morrison felt a curious sense of unreality as he listened to the earnestly spoken words. It was difficult to grasp that Alloway meant just what he was saying; it was difficult to grasp that he was envying him. But he appeared serious. Morrison broke in sharply during the pause.

"But you—why, you've been all around the world! You've been on ships for weeks at a time. Oh, you don't know the fever it starts in my veins just to think of the sea. The Mediterranean—as blue as the sky on a fair day. Athens and the Acropolis—I suppose you've been in Athens. I always dreamed that some day I would go there. India and the Taj Mahal, like a great white pearl, they say, when the moon shines upon it. The East—all the colour and mystery and romance! That is what I have missed out of life. Romance, variety, change! Seems to me as I look at it that you've had most of the luck yourself. Yes, that is how it appears to me."

He sat looking into the lights while an orchestra concealed behind a bank of palms played softly, carrying him away on a flood of glad anticipation. For wasn't the ticket safe in his pocket which was to give it all to him? He was roused from this pleasant contemplation of what was before him by a short laugh from the man opposite to him. The waiter had changed their plates and left them again. Abstractedly, he looked at Alloway over the top of a covered dish.

"And you talk of having missed the romance out of life!" Alloway was saying with a slow, incredulous smile. "You who married Carrie Webster. It doesn't seem possible. The times when I've been knocking about, putting up at some greasy hotel with a pack of mangy foreigners; the times I've thought of Carrie Webster—she'll always be Carrie Webster to me—Carrie, with the cornflower eyes and that clear, direct look that seemed to see straight through whatever you were saying. I remember one night when I had gone to see her. It was a hot night, and we went out into the garden for coolness. You remember the garden, of course, with the stone wall and the hollyhocks and all the dear old flowers. She had some lacy thing over her shoulders, and she looked for all the world like a white moth with her scarf floating behind her like little white wings. I remember the smell of the heliotrope—I can never smell heliotrope that I don't think of Carrie Webster."

Alloway paused, gazing across the crowded room as though he were still seeing the old garden with the stone wall. Morrison sat looking at him, vainly trying to imagine Carrie in anyway appearing like a white moth. He smiled a trifle cynically to himself at the picture Alloway had drawn. How far from reality it was! Carrie in the blue striped blouse, Carrie with the lines about her eyes, Carrie seeing that Robert wore his rubbers to school, Carrie inquiring if the household bills had been paid! It amazed him to think that Alloway had thought of Carrie all these years. He began to wonder if the fault was all within himself. Was he just naturally dissatisfied with what life had to offer? Oh, but he would not be dissatisfied once he was on board the steamer. The blood tingled in his veins when he thought of what was opening before him. The freedom to go where he willed. Japan . . . Japan with the cherry trees in blossom. He realized that it would appear strange to anyone if they knew his mad longing for beauty. A fat . . . for yes, he was fat . . . gray-haired business man of forty eight! There was nothing very romantic looking about him. But how he longed for beauty and romance. He had been so starved for it all these years. Alloway might say what he chose, but he had never found marriage very romantic. Bills and children, noise and drudgery . . . But Japan . . . the very name was magical. He could almost smell the queer scent of sandal wood that things brought from the East had clinging to them. He would drink tea out of tiny cups in the quaint houses made of paper . . . . he had read that the houses were built of paper. He would walk through the streets thronged with strange peoples, each face holding some new interest for him. He remembered the throngs of uninteresting dreary looking figures that he met every day, figures like himself going and coming from their offices! Tired, anxious faces drawn into the same lines by the same trend of their lives. Rushing for trains, stooping over desks in dingy offices, square desks with a swing chair and a green blind pulled half way down the window . . . home in the evenings to a square plot of lawn and a brick house in a row. Thousands leading just the same life day in and day out, year in and year out. What a past to look back upon when one came to old age.

Well, the ticket in his pocket spelled release from all that. Never again would he join the sombre throng. Sunlight . . . warmth . . . colour, the intoxication of new sights, of beauty that surpassed even his most extravagant dreams . . . and Alloway had had all this! He wondered at him, he wondered that he could speak of anything else. He wondered that he was not just bubbling over with the pure joyousness of it all.

Alloway started to speak and Morrison recalled his wandering attention.

"I remember dining one time in Cairo. My hostess had an English garden in which she took great pride, and that night there was a great bowl of heliotrope. I had felt rather drawn towards the girl I had taken in to dinner. I had seen quite a lot of her and it seemed as though I might choose to see a great deal more. But the smell of the heliotrope . . . and somehow I started thinking of Carrie Webster. Her eyes seemed to come in between me and that girl's face. I thought of Carrie sitting in a room with the curtains drawn . . . of heliotrope . . . the scent of heliotrope coming in at the window . . . of the cry of a child overhead . . . Carrie's child! Someway, oh, it seems absurd doesn't it, and just as absurd to speak about it after all these years . . . yet somehow I didn't seem to take any more interest in the girl. I know she found me distrait and was disappointed in me. She left for England soon after that and I never saw her again. Oh, I don't say it was because of Carrie that I never married. But it just happened, I suppose, that I never met anyone who appealed to me in quite the way she had. It seems strange that I should tell you all this . . . but it's ancient history now. Fifteen years ago . . . and Carrie has four sons!"

"What seems curious to me," Morrison said slowly, "is that you should feel like this. I should have thought you would have been so full of all the places you have seen. You've had what I have always longed for and you treat it all as though it were not worth speaking about. That is what seems strange."

"I'm sick of knocking about," Alloway said fingering his glass, "I came back with every intention of settling down this time and making a sort of home for myself. But I don't know . . . one needs children to make a home and at fifty it seems too late for all that." He gave a short laugh as he raised his glass, "You know, I almost wish that I hadn't met you to-night, old man. You seem to have raised the very devil of discontent in me."

Discontent! Morrison was sorely tempted in that moment to tell Alloway just what was in his mind, just what was his intention. He hesitated through a sense of loyalty to Carrie. It would scarcely be fair. Alloway would go off with a wrong impression

(Continued on page 48.)

The Best Books For Winter Evenings

(*Continued from page* 17.)

Possibly the most interesting information contained in the book is the analysis of the Italian viewpoint presented in the second and third to last chapters. In these Mr. Irwin points out that, while the Italian army was the last to admit foreign correspondents to its lines, it has had, since October, 1917, the most smoothly-working press system of any of the allied countries.

Heroes of Aviation, by Lawrence La Tourette Driggs. Published by Frederick D. Goodchild & Co. Price $1.50.

The great war has produced a new kind of hero, and it has given him the wonderful speed afforded by the aeroplane to carry out his adventurous exploits. It has brought warfare—at least in the air—back once more to the individual combat which the chivalry of past years once knew.

In "Heroes of Aviation" Mr. Driggs, one of the most authoritative writers on aviation, reveals the dramatic war careers of some of the most famous of the Allied fliers. No book of wonder-work could produce more absorbing interest than do the vivid accounts of the battles in the air of such world-renowned soldiers of the air as Capt. Georges Guynemer, Lieutenant Rene Fonck, Capt. Albert Ball, Col. William A. Bishop and Major Raoul Lufbery.

While many books have been issued dealing with the personal experiences of individual aviators, Mr. Driggs is the first writer to place in one volume the authentic stories of more than a score of the most daring flyers of the Allied countries.

Horizons: A Book of Criticism, by Francis Hackett. Published by J. M. Dent & Co., Price $2.00.

It is with real pleasure that this column recommends this book of literary criticism. For all those who prefer the English language, written with full word value and a due sense of well-proportioned thought, it will prove a "joy forever," for it is incomparably the best collection of literary essays published during the past year.

Mr. Hackett, in his introductory notes, tells very modestly how he drifted into the field of literary criticism. "One of the great army of American newspaper book reviewers," he writes, "my own aim has been to report the emotions with which I have pursued my enterprise. The word emotion, I dare say, is suspect. Seeing what great cities are, and the havoc they play with attention and susceptibility, it cannot be denied that the quality of aesthetic judgment is subject to all sorts of contortion, and there are many elements which stimulate feeling which do not reside in the thing itself. But, however close one may be to the attenuated and denatured, the persons whose brains twitter in their skulls when taxed by any genuine effort, it is part of the task of criticism to keep independent, and the measure of my usefulness must be the degree to which my impressions are my own. If I sympathize with novelties, it is not for the sake of excitation, not for love of black flowers and green suns. It is because our age is once more a renaissance. The old Mother had her wisdom, deep and disregarded, but she was an exacting mother, peremptory, greedy, intrusive, anti-everything, and I am one of those who think she was only a step-mother in the mansion of life. I see back of her, in her creaking vestments, an older creature, with wild eyes and scrabbling hands and battered dugs, a naked old thing, called Nature, who really bore me, and who had been bemeaned by this insolent intruder. Our renaissance promises to be a new understanding of nature, outside priests and kings and pedants. If I have caught any accent of it, I am fortunate. There can be no wise criticism that is unaware of the new world in travail."

"Horizons" contains essays on "William Dean Howells," "Mrs. Wharton's Limitations," "Mr. Wells Discovers God," "War and Peace," "Crime and Punishment," "Shaw on Marriage," "The Golden Age," "The Sick-bed of Culture," "Patronizing the War," "Domesticated Mars," "The Cost of Peace," and a score of other criticisms, all of which are told with a zest and freshness which are seldom met with nowadays.

While Paris Laughed, by Leonard Merrick. Published by Hodder & Stoughton. Price $1.40.

This is a story of life in Paris before the Great War, and is mainly written in a humorous vein, relating the pranks and innocent passions of the poet Tricotrin. If the reader prefers humor of a more intellectual quality than is usually found among best sellers, he could do no better than read this blithe-hearted book of Mr. Merrick. Reading these pages, one may in fancy roam around historical places with Tricotrin and his Bohemian crew of artists, musicians and poets, and may possibly catch the old-time fancy and flare which the capital of France once knew before the sorrow of war had laid its heavy hand on the shoulders of her people and made them sad-eyed and lonely.

Spunyarn and Spindrift, by Norah Holland. Published by J. M. Dent & Co. Price $1.00.

Without doubt one of the most musical volumes of poetry that have come from the head and heart of any Canadian poet since the earlier days of Bliss Carman is the little book by Miss Norah M. Holland, which made its appearance in the book stores just before Christmas.

All the poems contained in the book are lyrical in character and have the lilting quality which is peculiar to the race of which Miss Holland is a true daughter. The volume contains about seventy-five poems in all, among which are poems of war, songs of the sea, songs of the wailing Celtic key which W. B. Yeats first popularized. But Miss Holland's verse is peculiarly her own. There is no sense of strain in any of her lines, and her ear for rhythm is very acutely developed.

Miss Holland's verse reveals all the sympathy, joy and suffering which denote the poet's finer feeling. One little poem will serve to give an indication of the music and charm which is the dominant feature of the little volume.

The Shepherd's Song.

We be silly shepherds,
Men of no renown,
Guarding well our sheepfolds
Hard by Bethlehem town.
Baby Jesus, guard us all,
Cot and sheepfold, bower and stall.

Wild the wind was blowing,
Sudden all was still;
Laughter soft of angels
Rang from hill to hill.
Baby Jesus, Thou wast born
Ere that midnight paled to morn.

Seek we now Thy presence,
With our gifts of love;
Felix brings a lambkin,
I will give a dove.
Baby Jesus, small and sweet,
Lo! we lay them at Thy feet.

Training Boys and Girls

(*Continued from page* 41.)

chairs upside down, and Winifred, pretending to be engineer or conductor, would guide me and her pet dog or dolls to many places, calling out the stations as we went along. Sometimes we had accidents, and then Winifred turned into a doctor, giving first aid to the injured in putting on bandages and splints as her father had taught her."

I close with part of a rhyme of seventy lines written by Winifred when eight years old to help her remember the names of her bones. Her father, who is a doctor, had taught the child anatomy from a skeleton, and she had learned something of the blood, muscles, etc., by using a microscope. This rhyme was to surprise her father when he returned after an absence of three months:

In my skull, the strong round box
Which protects my brain from knocks,
There are eight bones in its wall—
Glad I have them when I fall!
Occipital there is but one;
One ethmoid, and wedge-sphenoid one,
One frontal bone not very long—
Compared with oak just twice as strong.
Parietals there are but two;
Two temporals will also do.

What Is Osteopathy?

(*Continued from page* 21.)

several American colleges of Osteopathy are creditable institutions, some of them are now endowed and own their own magnificent buildings and hospitals. These colleges are modernly equipped in every department, equally so in their chemical, bacteriological, microscopical, physiological and pathological laboratories.

A capable man or woman having received professional instruction extending over four years of nine months each, in such an institution must be fairly well prepared to serve the public in the struggle to prevent disease and restore health.

An Osteopathic diagnosis is unique in that it is usually the physician that describes the symptoms and causes present, instead of the patient. He searches for minute lesions, such as malpositions, joint irregularities, muscle contractures, nerve pressure, sluggish organs and many disturbances far from the actual field of suffering and often unknown to the patient.

In brief, Osteopathic diagnosis of disease consists in positive determination of the location and nature of the *cause,* whether within the body or in the environment of that organism.

Osteopathic Treatment.

In the treatment and prevention of disease Osteopathy proves itself an art and not a remedy. It is not a part of Medicine or surgery, although truly surgical cases are recognized and referred to a surgeon.

It is not a treatment for some particular *kind* of disease. But Osteopathy has in a brief twenty-five years developed into a complete system of healing applicable alike to all curable diseases.

As stated above, the fundamental principle of Osteopathy is adjustment. The object of an Osteopathic examination is the location of the mal-relation interfering with nature's laws. Consequently an Osteopathic treatment is a scientific application of the mechanical laws of physiology in an effort to remove the lesion and restore structural harmony.

Further, this new science has for its aim the prevention of disease and human suffering. One great innovation is the importance this school places upon the teachings of health, and prevention of disease, striving always to reach the ideal to longevity, efficiency and health. In this effort, Osteopathy adds to the methods in common to all schools of healing the important principles of adjustment and mechanical care of the structure of the individual—the "temple of the spirit."

Herein Osteopathy differs from the palliative Medical treatment of symptoms. This new science applies every effort in removing the cause and trusts to nature to dismiss the symptoms. This is accomplished by applying the law of adjustment to what ever may be interfering with the harmonious functioning of the human mechanism.

Carrying this principle of prevention to an ideal conclusion, it is to be hoped that the day is not far distant when it will be the duty of a physician to prevent lesions and mal-relations, to maintain efficiency and health and not wait until *disease* has control of the organism before rendering aid. It is a most irrational social principle that invokes disgrace and punishment upon the offenders of petty man-made laws, but spends lavishly to assist the persistent offenders of God's laws of health and sheds flowers and tears upon these criminals of nature. Some day it will be a social disgrace for any average normal individual to permit his body to harbor disease.

Dr. A. T. Still, founder of Osteopathy left this message: "We are to improve upon the failures of the past and give the people a science of healing with a philosophy that will feed the minds of the thinking."

MONEY or Your LIFE

It's bad enough to be held up and robbed of your money and your watch.

But, to allow waste matter to be "held up" in your intestines may be far more serious. You can get more money; you can buy another watch. You may *never* be able to get your health back.

Constipation is the "hold up" man of the human system. The food waste it holds up in your lower intestines decays and generates poisons. A poisoned system is the result.

Over 90% of human illness has its origin in the intestinal canal. Nature normally tries to get rid of this poisonous waste. But when she can't do the work single-handed, you must help her, in her own way. *The Nujol Treatment is Nature's way.*

The pills - salts - castor oil - mineral water habits are not Nature's way. They play constipation's game—forcing and upsetting the system.

Nujol acts easily, harmlessly, naturally—makes you "regular as clockwork."

Warning: Nujol is sold only in sealed bottles bearing the Nujol Trade Mark. Insist on Nujol. At most drug stores and many general stores, or send $1.00 for full sized bottle to Canadian Selling Agents, Charles Gyde & Son, Box 875, Montreal.

King Codfish

The Most Prolific and Valuable Fish of Our Atlantic Waters

Specially Prepared for "Canadian Home Journal" by Information Division, Canada Food Board.

The cod is probably the most abundant fish of our Atlantic waters, and it is one of the least appreciated by Canadians. Cod to the value of $7,402,516 was taken out of the sea by Canadian fishermen during 1917, and the bulk of it was salted and dried for export to the Latin countries, where as "bacalhao" it is regarded with esteem as a prime food fish.

The unappreciated codfish looms large in the early history of Canada. The great cod banks of the western Atlantic off the Newfoundiand and Nova Scotia coasts lured the Basque, British and Portugese fishermen to our shores before the discoveries of Cabot, Cartier and Columbus. History vaguely mentions that the Basques fished the Newfoundland cod banks centuries before the discovery of America by Columbus in 1492. This is not at all improbable. Fishermen, in their quest for fish, have wandered all over the world; have sighted strange coasts, and being all absorbed in the fishery, have paid but scant attention to geographical discovery. As a class they are conservative and secretive, and even to-day, fishermen do not advertise the localities in which they have made good catches.

Fishermen Pioneers.

Canada was colonized by these fishermen pioneers. At first they landed on our eastern coasts to cut wood, careen and water their ships ere returning home. Latterly the wealth of fish to be caught in the inshore waters caused them to establish settlements on shore during the summer. The fish caught were salted and dried on the beach, and shipped to Europe in the returning vessels. The summer settlements soon became permanent—the fish and fur trade proving great attractions—and fishermen left the ships and remained ashore, braving savages and a rigorous winter.

In the wake of the cod fishermen came adventurers, outlaws, and those who had religious and political differences with the home authorities. The cod-fishery offered a good livelihood by reason of the prolific nature of the fish. Ship after ship from England, France and Portugal landed the fishermen colonists on the shores of Newfoundland, the Gulf of St. Lawrence and Nova Scotia. Settlements became populous villages with all the inhabitants engaged in the catching and drying of cod. Fleets of fishing craft came from Europe and made these villages a base of operations for the Bank, or off-shore fishery, and even though their respective countries were at war, the fishermen of all nationalities lived in harmony and assiduously plied their vocations in the catching of the cod. Fishing companies were formed and received their charters from France, Portugal and England, and some of these old-established concerns are doing business to-day on the shores of the St. Lawrence.

Cutting bait for cod trawl gear.

In the sixteenth century, the wealth of the cod fishery soon attracted the attention of European Governments, and diplomatic and bellicose struggles commenced over the rights to the fishery and the ownership of the settlements. These are recorded in the histories of Canada, France and the United States.

Dressing cod on a steam trawler.

Eldorado.

Gold was the lure which attracted the early voyagers to the Americas, but the cod soon proved to be the real Eldorado. The habitat of the cod is the great shoal waters which lie in the angle formed by the south coast of Newfoundland and the Nova Scotia and has from time immemorial been caught by the baited hook and line, though some are captured by netting.

Cod Characteristics.

The cod is a cold water fish, and by reason of this, its flesh is firm and palatable. It is a prolific reproducer—a 21-pound cod containing something like 2,700,000 eggs. Though a vast number of these never reach maturity, yet the reproduction of the species is great enough to calm any fears as to extinction, no matter how heaviiy the fishery is prosecuted. On the Grand Banks, and off our coasts, the cod has been fished for centuries by vast fleets, and is as prolific to-day as ever. The Canadian catch of recent years has amounted to over two hundred million pounds annually, and is by far the heaviest weight of fish landed by Canadian fishermen. In addition to this must be added the heavy catches of the Newfoundiand and American fishermen and the fleet which comes out from France, using the Miquelon Islands as their base.

In Canada the cod fishery gives employment to some fifty or sixty thousand persons at sea and on shore. Out of the port of Lunenburg, N.S., a fleet of 125 schooners, manned by two thousand men, engaged almost exclusively in the cod fishery, and their catch is salted and dried for export. In addition to this "Bank" fleet, thousands of fishermen catch cod from small sail and motor craft in the inshore waters, and three steam trawlers fishing for the Canadian markets land huge quantities.

Schooner Fishing.

The schooner fishery is one of the most romantic and arduous of seafaring occupations. Rudyard Kipling, who has combed the world for adventurous backgrounds of fiction, found in the Bank cod fishing fleets a theme for his fine tale, "Captains Courageous." The American writer, Connolly, wrote several tales of the Bank cod fishery, and the Canadian writer, Wallace, has pictured the hazards and hardships of the Nova Scotia fishermen in his novel, "Blue Water." The pursuit of the humble cod contains material which is of the very warp and woof of romance, and the strenuous toil of the industry has no parallel in any other branch of Canadian commercial effort.

The schooners engaging in the cod fishery are strongly built, fast-sailing craft, of from 95 to 125 tons, carrying from fifteen to twenty-five men. The fishing is done from the vessel itself by hand-lines equipped with two baited hooks, or from dories by hand-lines or trawls. The dory is a flat-bottomed boat, about 20 feet long, fitted with removable thwarts. From eight to twelve of these boats are carried on each schooner, and when the thwarts are removed they can be nested one within the other on the schooner's decks. When the schooner arrives on

(*Continued on following page.*)

Codfish schooners outward bound.

King Codfish

(Continued from preceding page.)

the fishing ground, the dories are hoisted out and the fishermen row away from the parent schooner and set their lines a considerable distance from each other. Thus, a schooner carrying ten dories will have them fishing around her over a circular area of six to ten miles. Two men usually go in each dory and fish by hand-line or trawl. The trawl is a line about 2,100 feet long, with short lines and hooks spliced into it about 32 inches apart. From two to three trawls may be set at a time in one continuous length, and anchored at each end along the bottom of the sea. The hooks are baited with pieces of herring, squid or capelin, and the gear is hauled in by the fishermen in the dory after it has remained on the bottom for from twenty minutes to an hour—according to the run of the fish. The fish caught are thrown into the dory, and when the gear has been hauled, the fishermen row to the schooner, which is usually anchored, and pitch their catch out on her deck. The fish are then dressed, split and salted in the fish hold.

The schooner fishery in Canada is carried on from March to October, and the schooners follow the fish around Sable Island Bank, thence to the Gulf of St. Lawrence, and later to St. Pierre and Grand Banks. The boat fishery for cod is conducted all around the coastal waters of the Atlantic, and the methods of fishing is either by hand-line or trawl. Of the 200,000,000 pounds caught annually, the bulk is salted, dried or pickled for export.

Small Canadian Consumption.

The proportion of cod consumed in Canada is very small. It is a fish we have in great abundance, and it is not appreciated as much as it should be by the Canadian housewife. It is plentiful and cheap at all seasons, and if the consumption were larger it would be cheaper still. Our forefathers used more codfish, pickled and dried, than we use to-day. Years ago, every country store in the Eastern Provinces carried stocks of salted and dried codfish, but nowadays the tastes of the people run to halibut, salmon and haddock, and the cod is neglected.

The steam trawlers operating out of Nova Scotia ports catch cod in great quantities, and they can be shipped fresh in refrigerator cars as far west as Winnipeg in first-class condition. Owing to the half-hearted demand, a large proportion of the cod caught by the trawler has to be salted and dried for export.

Cod is an aristocrat among fish, and is featured on the arms of Nova Scotia and Massachusetts. It has been portrayed on postage stamps, bank notes and tokens without end, and in some parts of Newfoundland it is almost legal currency.

As a food it is rich in protein, and if properly cooked is palatable and delicious. There is no reason why it should not be commended to the Canadian housewife. The Canada Food Board and the Marine and Fisheries Department strongly advocate the greater consumption of cod in Canada, and have the strongest desire to stimulate the fishery. The war will have to be paid for out of our resources. In the countless hordes of codfish which inhabit our waters we have an inexhaustible means of helping to pay our debts.

Pine Clad Woodstock

(Continued from page 8.)

the village began to be broken up and improved. Trade grew.

The settlement became a village, and then as wealthy retired farmers moved there it developed into a town and when manufactory entered became a city.

This does not sound like somnolence. It was really enterprise. And yet enterprise can be a short-sighted, sleepy institution when it really settles down. Woodstock developed into a dream-town very much like Mrs. Mackay's picture. The long main street, the post-office, the court-yard and the little cannon duly appeared. But it had not found its voice.

There were two or three young people growing up, however about the same time, in different parts of the town probably. They may not even have known one another, I am vague about that. Anyway the world has come to know them, and when interviewers ask them where they were born and where they grew up the truth compels them to admit, and I am sure they admit it proudly, "in Woodstock, Ontario, Canada."

As I was motoring through the streets and they are lovely streets—Vansittart Avenue, named after Vice-Admiral Vansittart, one of the naval men of whom we have spoken, is a really a charming boulevard—a rambling old house set amid fine pines and fir trees attracted me. I was told it was the home of Florence Carlyle.

We stopped to look, for although the artist herself has been abroad for years this house somehow seemed to speak for her. It was the very house and garden that any lover of her art would have chosen as a background for that vivid personality which pictures men and women and children as souls as well as bodies.

In Paris, New York, and at those monstrous American Expositions or "World's Fairs," which are really huge mercantile competitions, I have watched the curious way in which the pictures of Florence Carlyle calmly assert themselves and rise like a living note out of a perfect chaos of color.

"Florence Carlyle is the greatest Canadian artist, man or woman." This unqualified statement was recently made by an authority who is himself a Canadian artist of wide fame. "She is the greatest," he added. "because she is inherently strong, perfectly true, wonderfully beautiful. She has the sane and at the same time the heroic qualities that are enduring and unforgettable, that do not pass away."

And it was here, in this Ontario

(Continued on page 49.)

Candy a Splendid Food

One of the most attractive forms in which food can be eaten—is candy.

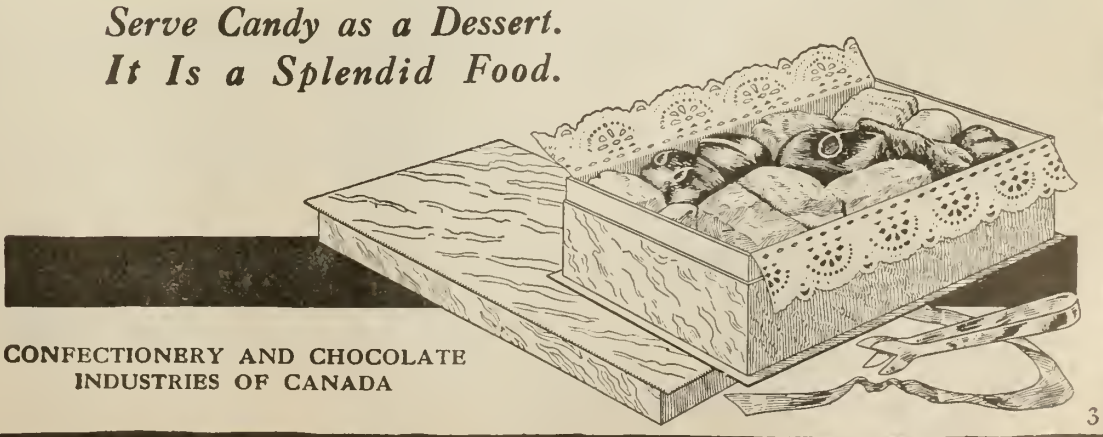
Candy is composed principally of sugar, nuts, fruits, some fats such as butter, and chocolate.

All these ingredients are recognized by eminent medical authorities as food products, which the system craves and demands.

Let us examine their food values separately.

We all know that sugar is a body-building essential; about one-quarter pound of sugar being required by an adult every twenty-four hours.

Nuts and fruits yield a high percentage of nutritious materials.



Fats supply the bodily fuel and should be used in every dietary.

Chocolate is a delightful stimulant, especially valuable in restoring energy.

Combine these ingredients and are they not still food?—satisfying, nutritious, essential and in a most delightful and properly balanced form.

Eat more candy. Candy is beneficial to all and harmful to none.

Serve Candy as a Dessert.
It Is a Splendid Food.

CANADIAN BOOKS OF IMPORTANCE

Three Times and Out.
BY NELLIE L. McCLUNG.
This is the story of Private Simmons and his three attempts to escape from different German Prisons, as he told it to Mrs. McClung. You will enjoy reading one of the most thrilling stories of the War.
Cloth. Price, $1.50.

The Next of Kin.
BY NELLIE L. McCLUNG.
This was one of last year's big successes, and is still in popular demand. A copy of Mrs. McClung's "Next of Kin" should be in every Canadian home.
Cloth. Price, $1.25.

Willow The Wisp.
BY ARCHIE P. McKISHNIE.
This great Outdoor Story is probably the most widely reviewed book this year. If you enjoy Gene Stratton Porter's books, buy this at once.
Cloth. Price, $1.35.

Love of the Wild.
BY ARCHIE P. McKISHNIE.
The title signifies the atmosphere of this book. It is one of Mr. McKishnie's earlier successes and lacks none of the qualities that have made his recent "Willow The Wisp" a success. Ask your Bookseller for a copy at once in the rebound edition.
Cloth. Price, 75c.

Harbor Tales Down North, and Battles Royal Down North.
Both by NORMAN DUNCAN.
These two books are the last manuscripts of Norman Duncan, and are considered his best Labrador Tales.
Cloth. Price, $1.35 each.

For Sale at all Booksellers, or

Other Men's Luck

(*Continued from page* 44.)

and it was through no fault of Carrie's that he felt as he did. No, Alloway would not be able to understand.

They shook hands at the door of the hotel in which Alloway was staying for a few days till he made further plans.

"Let me hear from you," he said to Morrison in his full, deep tones, "it's been splendid seeing you. Remember me to Carrie . . . and by the way, don't repeat all I've told you to-night. She'd laugh at me for a sentimental old fool."

They agreed to see each other in a a day or so. Idle words Morrison felt, for in a day or so he would be on the deck of a steamer sailing for the East. He wished that he had not met Alloway to-night. Somehow it had dampened his spirits, it had left him with a dissatisfied feeling about the step that he intended taking. Was it actually possible that Alloway felt as he said he did? It seemed incomprehensible to him. How Alloway had looked when he had spoken of his sons . . . and of Carrie! How strange it was. He had actually envied him, yes, envied *him*—to envy him he could not be very well satisfied with his own lot in life . . . was it after all just other men's luck . . . the distant horizons . . . the lure of the unattainable! Was one man's luck much the same as another man's luck, providing of course that he had the essentials for comfort and no actual worries? But Japan . . . India . . . Greece . . . oh it was hard to believe that perhaps these would not satisfy him. Yet Alloway was not satisfied, no, plainly he was not satisfied, and yet he had had all this! Perhaps after all it was just that . . . . other men's luck!

He walked slowly along the dimly lighted street brooding over these things. Soon he would be on the steamer with his face to the East. He would be going over the same ground, travelling the same route which Alloway had taken, visiting the same hotels, seeing the same sights. Would they satisfy him after all any more than they had satisfied Alloway? In a sudden flash he saw Alloway in one of these hotels of which he had spoken so scornfully, sitting at a table alone, thinking of Carrie . . . Carrie in the striped blouse . . . it made him smile a trifle cynically . . . and then he saw himself sitting opposite his own fire while he thought of the whole wonderful world beyond his threshold with the same expression on his face that Alloway had worn.

Greasy hotels and mangy foreigners! That was all the description he had been able to get from Alloway of his travels. Apparently it was the same whichever way you took . . . other men's luck was what you craved . . . apparently you always had your eyes fixed ahead on impossible horizons. Far away hills are green! That was perhaps all it amounted to in the long run.

He felt for the ticket and drew it from his pocket. He stood looking at it in the ill lighted street while his dreams fell away from him. To-morrow he would take it to the ticket office and receive his money back in exchange!

He turned and walked slowly back up the long street.

"Far away hills are green," he murmured to himself. Yes, that was all it amounted to after all. Far away hills are green!

THE END.

(*Continued from page* 14.)

her no end of chocolates and violets, so of course he wanted to take her to this sleigh-ride. He got up and moved that the boys be allowed to take girls outside the class. It wasn't a bit fair. Adele doesn't even go to High School. She's supposed to be too delicate, but I notice she isn't too delicate to dance 'til midnight every time she gets a chance! Some of the boys like Freshman girls or Sophomore girls or Senior girls better than they do us, so they railroaded it through. We girls have some *pride* and some *modesty*, so, of course, not one of us said a word. But you should have heard us rave afterwards. I think class parties should *be* class parties, don't you?

Of course I was late home again, but that couldn't be helped. Mother was hurrying with the ironing and the dinner. I really was disappointed in mother. She was less dignified and sympathetic than I had reason to expect. Of course she was tired, but then she might have remembered what a load of anxiety I tottered under too, with that sleigh-ride coming on, and the boys acting so mean!

Wednesday was a day of awful suspense. Every time I saw a boy headed my way, I expected he was going to ask me to go with him, but I didn't want *him* to know I thought that. I'd pretend to be studying awfully hard or something. Bert Fellows walked to school with me and was quite polite, and I expected every moment to be asked. I tell you I felt like a fish when Mamie Burnnup told me at recess, he'd asked her. I suspect she really did the asking, though. She's simply crazy about Bert. She's only a Freshman, mind you. It isn't fair one bit! I don't think I shall even speak to her on the street any more. I don't care to associate with girls who run after the boys! Mama says it isn't nice.

I wrote a note to George. I consider him my best boy friend in school. I just said, "I can go to the sleigh-ride. Are you going?" He wrote back, "Not on your life!"

I wrote a number of notes of that sort during the afternoon. Everyone was writing them. They were just flying thick in Home room I can tell you. David had his seat changed to the one behind mine. He'd get hold of my braid and stroke it and when I turned 'round and smiled, he'd look at me so dreamily and tenderly out of his beautiful gray eyes. He might have asked me to go so easily. I expected it all the time. Finally I wrote him and said, "Who are you going to take to the sleigh-ride, David?" The mean thing never answered. I kept the braid over the front of my shoulder after that. I tell you I felt hurt and mad!

Fred Lane I considered a good friend, so I wrote a note saying, "Dearest Fred—What have I ever done to you?" He was mean enough to laugh and show it to Ted Kimball.

Altogether it was a day of terrible anxiety. I flunked in every recitation and I'm sure it wasn't my fault!

Madge had very similar experiences. After school she confided to me that no one had asked her either, and the girls from the other classes were standing 'round with our boys, mind you, making plans. Oh, I think it is the meanest thing!

When I got home, I just cried scandalously, Mother tried to comfort me by saying she'd take Madge and me to the theatre Friday night if we'd give up the sleigh-ride. But, oh, I couldn't. I did so want a good time with the rest of the crowd.

Madge and I determined to go, boys or no boys. Several boys were going without girls anyhow. They were the mean sort of fellows, too stingy to pay for anyone but themselves, yet expecting to dance with the girls the other boys took. Some other girls said that they would too. It was our class sleigh-ride and we had a perfect right you see.

Mother finally gave in. She said pairing off at our age was silly anyway, and 'twas better to go in groups, and if we had a nice chaperon we ought to have a good time. It has been my sad experience, however, that things sometimes don't pan out as they ought!

Friday, you could just pick out the girls who were going to the sleigh-ride by their clothes. Helen Sylvester had her hair all curled and puffed in the most unnatural way by a hairdresser, mind you, and that silly little Bessie Blake wore silk stockings and white pumps right over the snow, and Sadie Billings was all dolled up in hite Georgette crepe. Imagine! At school! I really am glad I have some sense.

Just picture Madge's and my feelings when we found all the other girls in our class, not asked by boys, were going home! I felt like doing so too, but when I've made a decision I never like to give in. I'm not a vacillating character.

Miss Franklin got on the front seat with Ned Graves and Horace Black on either side. They each brought her a box of chocolates. She didn't have the politeness to pass them to us, but sat there simpering and blushing and eating and making eyes at them all the time, and never turned her head.

The rest piled in and we were off! The snow was hard, white and glistening. It was so cold I thought I'd freeze to death before we got to the hotel. Silly Bessie Blake cried, actually cried, because her feet were cold and the fellow who took her told her to sit in his lap to get warm and called her "pretty baby." Then other girls began to climb into the boys' laps and put their heads on their shoulders and Miss Franklin never noticed a thing. I was perfectly scandalized, and so was Madge. Some of the boys smoked cigarettes.

(*Continued on page* 51.)

Pine Clad Woodstock

(*Continued from page* 47.)

house and garden, that the artist got her first impressions of life and work. Florence Deacon writing of her some time ago gave a bit of charming conversation with the artist whose father by the way, was a grand-nephew of the great Thomas.

"As children," said Miss Carlyle, "we used to draw a great deal here at home. Sometimes out in the garden. I nearly always drew the heads of the people and animals. I remember too the first time I saw color. Our nurse brought in a branch of pink apple blossoms. It was the first thing I ever thought was beautiful. It seemed so large to me and so pink. I have never seen apple blossoms like those since."

In her girlhood she loved riding and tennis. School passed. Then came Paris, in company with Paul Peel and his sister when she studied first with Delecleuse when he was in the Latin quarter. Later she exhibited in London, Paris and New York, and has received awards and medals from World's Fairs and Governments. Among her earlier well-known pictures are: "First Communion," "The Twilight of Life," "Mother Love" and "Pippa Passes."

But you know them all.

As we drove about the pretty streets and I saw the great green-houses stretching like glass cities in the sun, and the fine hospital and nurses' home, the various parks and the industries, I felt wealth. And wondering if this wealth had been turned into permanence, I asked if the city had as yet secured any of Miss Carlyle's work for placement in library or art museum or whatever public building was used for the purpose of treasuring special possessions.

"Why we haven't any special possessions," was the answer. "One couldn't even imagine an art museum here. And certainly the town does not possess any of Miss Carlyle's work."

You see there *is* some sort of spell. The Traveller feels it creeping over him. After a while he wonders if he himself is a little demented in suggesting such a thing as a practical recognition of art.

Well, to go back to this little group of those who would seem to be the voices of this pretty, this prosperous Ontario town.

Miss Carlyle has sung her native place in color, Mrs. Isabel Ecclestone Mackay in verse, for in spite of the fact of three novels—the latest shortly

Who Goes There

(*Continued from page* 13.)

"Then I am afraid I shall have to tell you how you disposed of those papers. You first went to the stewardess and borrowed a needle and thread, and then asked permission to sit in her room and do a little necessary sewing—"

The girl blushed hotly: "The contemptible creature!" she exclaimed.

"A little sewing," repeated Guild, coolly. "And," he continued, "you sewed those papers to your clothing. The stewardess saw you do it."

"Very well! Suppose I did"

"You have them on you now."

"And then?"

"Why, it was a silly thing to do, Karen."

"Silly? Why?"

"Because," he said calmly, "I must have them, and it makes it more awkward for us both than if you had merely put them back into your satchel."

"You—you intend—to—" Her amazement checked her, then flashed out into wrath.

"Do you know," she said, "that you are becoming impudent?"

"Karen," he retorted very quietly, "a man of my sort isn't *impudent*. But, possibly, he might be *insolent*—if he chooses. And perhaps I shall choose."

Checked, her lips still quivering, the girl, despite her anger, understood what he meant—knew that she was confronting a man of her own caste, where insolence indeed might happen, but nothing more plebeian.

"I—spoke to you as though you were an American," she said slowly. "I forgot——"

"I am answering you as an American!" he interrupted drily. "Make no mistake about that country; it breeds plenty of men who have every right to answer you as I do!"

She hit her lip; her eyes filled, and she averted her face. Presently the cab stopped.

"We're at the station," he said briefly.

Whether Guild had paid for the entire compartment or whether it happened so she did not inquire, but they had the place to themselves, so far.

Guild paid no further attention to her except to lay a couple of Tauchnitz novels beside her on the seat. After that he opened a newspaper which he had brought away with him from the Consulate, and began to read it without troubling to ask her permission.

As the paper hid his perfectly expressionless face, she ventured to glance at it from time to time. It was the *New York Herald*, and on the sheet turned toward her she was perfectly able to read something that interested her and sent faint shivers creeping over her as she ended it:

PASSPORT REFORM STIRS AMERICANS ABROAD AND DEALS HARD BLOW TO SPIES

CITIZENS OF THE UNITED STATES RECOGNIZE NECESSITY FOR NEW ORDER, BUT DEMAND TO KNOW WHO WAS RESPONSIBLE FOR ISSUANCE OF FRAUDULENT PAPERS

[Special Cable to the Herald]
Herald Bureau.
No. 130 Fleet Street,
London, Tuesday.

The United States Government's sweeping new order requiring every American travelling in Europe to go through a cross-examination before an American diplomatic or consular officer came as a bolt from the blue to-day. It caused widespread comment, though it is recognized that the measure is necessary to checkmate German spies impersonating American travellers.

There is no criticism of this drastic order, which it is recognized is probably issued to comply with Sir Edward Grey's communication concerning German secret agents posing as American citizens. But many Americans want to know who is responsible for the apparent wholesale issuance of fraudulent American passports to Germans. The result is that now an American passport is not worth the paper it is written on unless backed up by a photograph of the bearer, a description of where he is going, what he is going for, how long he is going to stay, and so forth.

American embassies in European capitals to-day are circulating broadcast warnings to all Americans to consult the nearest diplomatic or consular officer before undertaking any voyage.

All Americans must understand that henceforth a passport does not mean permission to travel in Europe. They must have written and vouched for proof that they are not German spies before they can feel safe.

It is all the result of too free issuance of American passports at the outbreak of the war, coupled with German quickness to profit by American leniency in this respect.

Before the train started a commissionaire appeared, hurrying. He opened the door of their compartment, set a pretty basket inside, which was to be removed at the first station beyond.

The basket contained a very delicious luncheon, and Karen looked up shyly but gratefully as Guild set about unpacking the various dishes. There was salad, chicken, rolls and butter, a pate, some very wonderful pastry, fruit, and a bottle of Moselle that looked like liquid sunshine.

(To be continued.)

Your Washing Done for 2c a Week

Electric or Water Power Will do the Work

I have built a new "1900" power washing machine. I consider this machine the most wonderful washer ever put on the market. Built entirely of high quality sheet copper, it is the strongest and most durable machine made. It is constructed on a brand new principle, and I will guarantee that this machine will not tear clothes, break buttons, or fray the edges of the most delicate fabric. It will wash everything from the heavy blankets to the finest lace without damage to the goods.

This new "1900" washing machine can be connected with any electric socket instantly, and is started and stopped by a "little twist of the wrist," and it will do your washing for 2 cents a week.

If you would consider fitting up your laundry room in the most complete and approved manner, let us tell you also about our thoroughly practical motor-driven, self-heated Ironing Machines.

I also make a lighter power machine which can be run by water or electric power. On all of these machines the motor will run the wringer, too. Just feed in the clothes and this power wringer will squeeze the water out so quickly and easily you will be astonished. It will save 50 per cent. time, money and labor every week. The outfit consists of washer and wringer, and either electric or water motor, as you prefer, and I guarantee the perfect working of each.

I will send my machine on 30 days' free trial. You do not need to pay a penny until you are satisfied this washer will do what I say it will. Write to-day for illustrated catalogue.

Please state whether you prefer a Washer to operate by Hand, Engine, Water or Electric Motor. Our "1900" line is very complete and cannot be fully described in a single booklet.

Better address me personally,

A. D. MORRIS
"1900" Washer Company,
357 Yonge Street - TORONTO

RENNIE'S SEED ANNUAL 1919

A CATALOGUE containing complete and interesting information on how to improve and increase your productions of both flowers and vegetables. This catalogue is superbly illustrated in colors and shows practically all the varieties of garden plants which can be grown successfully.

Everyone With a Garden,

whether large or small, will find this book full of useful and practical gardening hints. Let it help you make your garden a great success this year.

Expert advice is given on what to plant, when to plant, and how to plant, under various soil conditions. Follow this advice and your garden will be the envy of your fellow gardeners.

(*Continued from page 49.*)

I tell you I felt like a cat in a strange garret. I couldn't and wouldn't for anything do as they did, but at the same time Madge and I felt dreadfully out of it. It isn't a bit nice feeling. Nobody talked to us and we sat there at the back of the sleigh, shivering and looking at the red sun going down and sending its light over the snow crust.

By the time we got to the inn I was ready to cry. I tried to talk to some of the boys who came alone. Fat Mason winked at me and told me I was a "peach." 'He and Mat Burnnup (the boys call him "turnip") came together. Mat looks sort of like one, white face that shape, and wispy hair that sticks up. He and Fat are always together. I perfectly loathe Fat. He broke down his seat in school one time, when he came in late and flopped down hard. He says he eats six potatoes every noon. The greedy pig!

Well, to resume! We got to the hotel and we girls all went up to the dressing-room with Miss Franklin. She made us help her with her hair, then powdered her neck and rouged her cheeks, but never noticed a bit how we girls looked. Hattie Mason said to me, "Didn't you come with some fellow? Huh! Then I reckon *I'd* 'a' stayed at home!"

Madge and I just hated to go down alone and file out into that dining-room without a gentleman escort. We waited 'til the last minute hoping Miss Franklin would fix things for us, but she never looked in our direction but went smirking down stairs with Ned and Horace tenderly supporting her on either side.

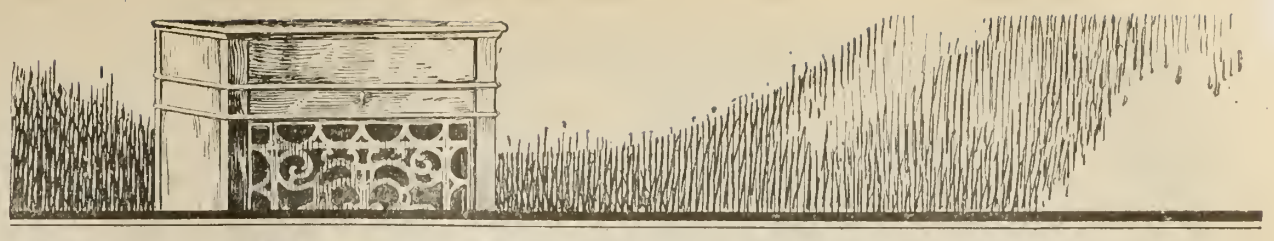
Madge and I were watching over the banisters, hanging back hating to go down. All the rest were standing 'round in pairs talking and waiting for supper to be announced, and the boys who came alone were on the outskirt, looking uncomfortable, just the way we felt. All of a sudden, the driver came in the back door and beckoned to Ned and Horace. They were managing the ride, so they murmured "Excuse me" and went off, leaving Miss Franklin alone. Mat and Fat saw their advantage, and quick as a flash they marched up and said real loud, "May we have the pleasure of taking you in to supper, Miss Franklin?" Everyone turned 'round and stared and the girls began to giggle. Bob Smith slapped his thigh and said, "By Jove! Pretty good!"

Miss Franklin was so taken aback you could have knocked her down with a feather. As chaperon, with everyone looking, of course, she couldn't say she'd rather go with Ned and Horace. Her face got red as fire, though, and she just snapped out, "Why certainly, boys."

Supper was announced just then, and she led off with Mat shambling on one side and Fat waddling on the other. Madge and I forgot all about ourselves, but ran downstairs just full of giggles, for we wouldn't have missed seeing Miss Franklin at supper for anything.

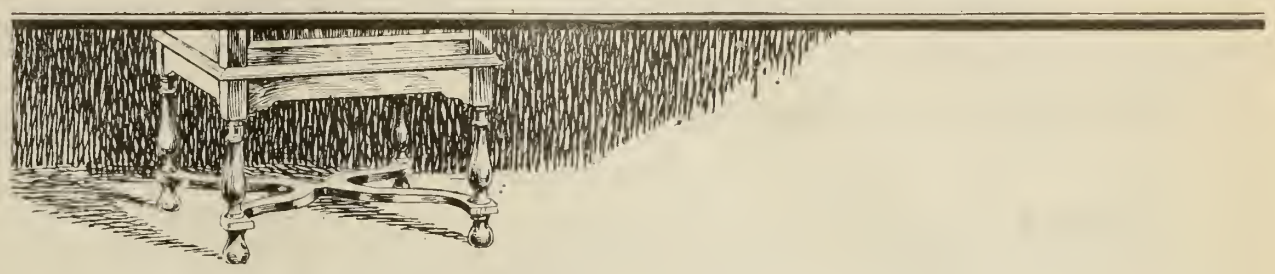
We didn't even see Ned and Horace till they stood bowing to us at the foot of the stairs, looking bewildered and red. They thought Miss Franklin had shaken them, you see, and were mad at her. Consequently they were lovely to us during supper, and we had the finest time!

Fate finally brought a beau to my feet at the last moment. To be sure, it was a sort of "better late than never" affair. It's really a living example of how "fortune favors the brave" (that's Madge and me). Why, his father's mayor, and they have the grandest house and a beauty of an automobile. I made the most of my opportunity!



More than half my fun, though, came from watching Miss Franklin. Fat talked with his mouth full to her, and she looked as if she wanted to cry when Mat peeled his orange and pulled the quarters apart and passed it to her all squashy from his hands. The girls around didn't talk to her a bit either.

She had a worse time still at the dance. Ned and Horace filled up our cards and never asked her to dance. The other boys had to look after the girls they brought and fill up their cards by exchanges. She wouldn't even try with Mat and Fat. I had every dance taken and so did Madge. Ned told me I looked great in my pink voile, and said, "You don't have to rouge to get your roses, do you, Miss Eleanor?"



Going home I was warm as anything in mother's white fox furs, and so happy I jabbered every minute. When we got to town, Ned walked the couple of blocks to my house. "Say, Eleanor, I didn't know you were such an awfully jolly girl. Do you think your mother will mind if Horace and I come over Monday night?" he said.

I told him, no, of course not, and I'd ask Madge too. Oh, I'm so glad!

THE END.

For a Few Hundred Dollars You Can Buy What Cost 3 Million

THREE million dollars was what it cost to perfect the New Edison. And if three times three million had been required it would have been spent. For when Thomas A. Edison assailed the problem of achieving an instrument which would actually RE-CREATE an artist's voice or instrument with such fidelity that by the test of direct comparison the two renditions could not be told apart, he forgot expense. Month after month he remained secluded in his laboratory, his every faculty concentrated upon one goal. Finally he emerged to announce that here at last was what the world had long awaited, an instrument which would RE-CREATE, not merely imitate. He exhibited

The NEW EDISON

"The Phonograph with a Soul"

"No human ear can distinguish between the living voice and its RE-CREATION on this instrument" he told the directors of his company. "And the same applies to a violin, a cornet, a banjo;—any musical instrument. Now build replicas. Don't lower the standard I have set in this Official Laboratory Model. I've spent $3,000,000 to perfect this phonograph. It is ready to offer to the public."

Hundreds of tone tests conducted in public have proved the truth of the great scientist's claim. The New Edison *does* RE-CREATE the artist's voice or instrument with such fidelity that the two renditions are indistinguishable. And now you can have in your home at the cost of but a few hundred dollars, the Official Laboratory Model, encased in a beautiful Chippendale or William and Mary cabinet:—the instrument which cost $3,000,000 to perfect.

Ask for a copy of "Along Broadway," the Edison Musical Magazine, and other Edison Literature.

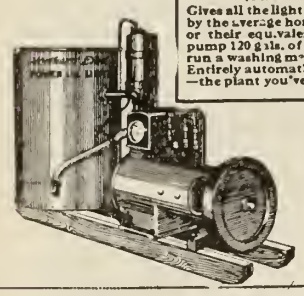
"MODEL No. 2, K.W."
(Consolidated Type)
Designed for heavy power and light work required by larger farms, stores, small hotels etc. It will operate practically all modern farm power requirements. Automatic—not even a button to press. 100 20 watt lights or its equivalent in power.

Drudgery on the Farm is like Autocracy to the World

—both are unnecessary evils. Drudgery is a menace to progress, a hindrance to liberty, and invariably responsible for the young folks quitting the farm. Now is the time to end drudgery and now is the time to investigate—

Northern Electric POWER and LIGHT



Learn what Northern Electric Power and Light can do for you; how electricity, properly and economically developed, will shake off the veil of drudgery that surrounds and isolates your farm.

As your helper Northern Electric Power and Light will free you from many daily drudgeries. It will afford you plenty of time to study crops and stock; increases your earning power—all at a surprisingly low cost.

Farmers all over Canada are lighting their homes and outbuildings with Northern Electric Power and Light, operating water systems, milking machines, cream separators, grinders, etc. The womenfolks love electricity because it is so clean, because it saves time and work. They employ it to do their domestic chores such as operating washing machines, sewing machines, vacuum cleaners, toasters, fans, etc.

Electricity on the farm is as practical as it is economical, aside from the comfort and convenience it brings.

"No. 1, NORTHERN"
(Consolidated Type)
Gives all the light and power needed by the average home—15 to 20 lights or their equivalent in power. Will pump 120 gals. of water per hour or run a washing machine, churn, etc. Entirely automatic in its operation—the plant you've been waiting for.

About the System

Northern Electric Power and Light is entirely automatic and guaranteed absolutely reliable. Like a good hired man, it starts when there is work to be done and stops only when the work is finished—plenty of power, plenty of light. Not even a button to press nor any thought nor care, excepting an occasional oiling and replenishing fuel.

There is a Northern Electric Power and Light for every requirement; all types, all sizes, either direct connected or belt driven. From 15 to 1000 lights, or their equivalent in electric power for farm work.

You will surely be interested in Northern Electric Power and Light. Valuable literature will be gladly sent free for the asking,

in Ontario towns? People seem to consider the buying of books as a special luxury, but not the buying of expensive furniture, rugs, or rich clothes. People borrow such extras as books from a public library. In the Western towns books are more frequently bought outright. People want to own them."

I wonder why that is! It would be interesting for instance to know just how many of that numerous and prosperous class the Retired Farmer possess libraries of their own.

Well, so much for the artist and the author. I find a trio of Woodstock voices, and one of them is as far-reaching as the greatest American weekly goes—George R. Pattullo of "The Saturday Evening Post." And from Panama to the Yukon, from Halifax to Vancouver, yea, verily from Vancouver the other way round to Halifax once more, via most countries of the earth, there goes "The Saturday Post" and Woodstock's George Pattullo.

Like Isabel Valancy Crawford, this denizen of Ontario began writing Western stories before ever he had seen the West. And they were good stories too. Then, with a Harvard friend, he went ranching and lived what he had already written. From the West he drifted down to Mexico and made so thorough a study of affairs that he became an authority on the somewhat vivid political problems of that troubled country. And "The Saturday Evening Post" took everything that he could write. People began to watch for his stories, and his style became so popular that when the "Post" wanted to send a man to the Front who would give Americans the most photographic articles of the life and adventures of the American soldier over there, articles which would show the people at home just exactly what the boys were doing in the detail that home people are always hungry to have, they chose George Pattullo. He has been as prominently in the limelight as any special War Correspondent since 1917 and has done excellent work.

Would the details have been as homely, as popular, as heart-reaching had the writer been born and brought up in the strangely individualizing atmosphere of a great city? After all the little town is a moulding force

to be published in New York and Toronto—this writer is to me chiefly a lyrist. I am not saying that she may not shortly become that influential personage, a successful novelist. In fact one can see that phase arriving. But she is a lyrist. That as far back as 1905 when out of a whole first book of verse she wrote the one memorable poem "Inheritance." One knew then that the woman who did that could do more. And she has done much more. During the intervening years there have been short stories, poems, children's verse and novels, and the quality has increased even more rapidly than the quantity. Mrs. Mackay, who has been living in Vancouver for some years, finds a great difference in the way that books are bought in the West as compared with the East.

"Did you ever stop to think," she says, "how few book stores there are

Turnbull's "M" Bands for Babies

are a necessity for every infant from the date of its birth.
They are made only of the softest and purest Australian Merino Wool, finely knitted, thus keeping the baby warm and comfortable.
The tapes, which are attached to the tabs front and back of the "M" bands and go over the shoulder, carry all the strain of the diaper, absolutely preventing any stretching of the garment.
The diaper is pinned to the tabs, which not only provide a firm hold for the pin, but, due to the support given by the tapes, keep the diaper snugly in proper place, no matter how active the infant may be.
Put up in sanitary boxes containing three garments. Price $1.50 per box.
Sold by the best dry goods shops or direct by mail. Send for a box to-day, give age of baby.

Are You Reading
Who Goes There

Pine Clad Woodstock

(Continued from preceding page.)

In a vortex of humanity where there are many specialists in all lines of life and work, one is bound to become individual, separate from the mass. A small town is a large family. Individualism is not encouraged. It is considered decidedly "queer." To be "queer" is also a minor crime.

Therefore one mixes with the family; one is limited and generous and silent and singing and careful and carefree just along with the others. And a certain ordinary human knowledge grows up in one that art can very well make use of for her own inordinate purposes.

One of the greatest short story writers I know—a delicate little girl by the way with an extraordinary knowledge of life and a Hardy-like way of interpreting it—found the most useful knowledge and the basis of most of her plots in and about the streets of Canadian villages.

"Here are the real types," she says, "but it takes all the skill you possess to draw them."

And each town possesses as marked an individuality as a person. You know how an individual will remind you of a color. He or she carries that color so to speak. So with these little or big cities. One is as young in spirit as meadow-grass, another is crimson, another yellow-strong.

I wonder what color peaceful Woodstock is!

I think of all those naval officers, and their interesting lives and their gently reared women-kind, and the little "Society" they tried to build up, and the graves in and among the trees at old St. Paul's. And I feel that the beginnings of things sometimes leave their mark upon the soul of a community. And so perhaps I would paint this pretty Pine-tree town not in the green of its much-foliage, but rather in the sea-blue of a past tradition, through which I hear the voices of the present.

LITERATURE AND JOURNALISM.

Only Typewritten MSS. will be read, and stamped and addressed envelopes must be enclosed for their return.

"I write to ask you about the best course for a beginner in short-story writing. Is it better to submit manuscripts direct to magazines or to send them to a literary agent? Is there any hope for a market for beginners in Canada? Do you recommend a course at any of the correspondence schools?"

The question of the mastery of the short-story form is evidently a vexed one, judging from the number of letters received relating to the subject. Given creative ability, it is undoubtedly necessary to obtain technique. There are three distinct branches in the study of short-story writing; composition, analytic study, and constructive work. Clayton Hamilton, the eminent American writer recently said, "There are precepts and examples in every art which lighten the incredible labor that leads to success. In each art there is a codified technique, but the average aspirant in the eager period of early youth is inclined to worry over much about what he has to say. Granted the initial talent, the worker can only learn by constant study and practice how to draw or paint or sing or write or act. Before this he probably has nothing worth while to say. Later when the time comes to express his talent, because his character is worthy of expression, and through means of technique, the message will flow rapidly and fluently."

I have lately come upon a genuine and excellent correspondence school for the help of those who wish to take up short story writing. The address will be forwarded to correspondents who send stamped and addressed envelopes for reply. In talking to the director of this school I was struck by his remark, "We have to teach people the rules of writing short stories as one teaches the rules of architecture, or whist, or dancing or anything else. But there is one thing that no school or teacher can impart by means of technique, it is the God-given gift of creation. We can develop creative power, however, and if a student is willing to work the results are sometimes amazing."

I should submit MSS. directly to magazines, using no agent.

Undoubtedly there is a market for beginners in Canada. Why not? The magazine and newspaper field is widening every day. Editors in Canada are just as anxious for good material as they are elsewhere and the prices paid are becoming much more reasonable, from the standpoint of the writer, than they were in the past.

Jellied Rabbit.

Recipes and Complete Instructions for Their Preparation

By MARION HARRIS NEIL,
Author of "Economical Cookery."

Tasty Dishes Made of Rabbit and Hare

WHEN rabbits and hares are young the claws are smooth, sharp and pointed, the cleft in the jaws is narrow, the teeth small and white, and the ears soft and easily torn. As the animal ages, the claws become rough and rounded, the cleft in the jaw deepens, the front teeth become long and yellow, the ears tough and dry, and the little nut under the paw disappears. Rabbits, like poultry, should be used fresh. Choose one that is plump and short necked, and with the flesh stiff and fresh, and without discoloration. When a hare is required for roasting, choose one under a year old, as it will be more tender. An older animal is better for making soup or for jugged hare.

To Paunch and Skin a Rabbit.—A rabbit should be paunched as soon as killed. Make a slit underneath and carefully remove the stomach and all the intestines, which must all be thrown away. Be particular to remove the piece of intestine which lies close to the tail and also any discolored parts. The rabbit should then be well wiped inside and hung up, if it is not required at once. To remove the skin: First chop off the ears, and the legs at the first joint. Then begin loosening the skin at the sides of the opening and draw it away from the flesh towards the hind legs. Turn the skin of the legs inside out and pull it right off. Now draw the skin off the body and towards the shoulders, and skin the fore legs in the same way. Remove the skin from the head very carefully, using the point of a sharp knife, and take out the eyes.

To Clean a Rabbit.—After the rabbit is paunched and skinned, it must be well washed and cleaned before it is ready for cooking. First remove the kidneys and draw away all the fat that surrounds them. Then break the thin skin which separates the chest from the lower part of the body and draw out the heart and lungs from the inside. The liver, heart, and kidneys are the only inside parts that should be kept. The gall must always be carefully removed from the liver. Wash the rabbit well in salt and water, and if possible let it soak at least for thirty minutes in tepid water with a little salt in it. Then lift out, dry and use as directed.

To Skin and Paunch a Hare.—A hare should not be paunched until it is about to be used. Skin the hare first in the same way as directed for skinning a rabbit, only in this case the tail and ears should be left on. The ears are the most difficult parts to skin, and a little care is required not to tear or injure them in any way. Sometimes a slit is made in one of the hind legs just above the foot, and the hare is hung on to a hook while the skinning is being done. Paunch in the same way as a rabbit, only be careful to save the blood, as this is required for some dishes, such as jugged hare. Save also the liver, heart, and kidneys, and remove the gall from the liver. Wash the hare quickly in tepid water, dry in a cloth, and it is then ready for cooking. Many cooks object to this washing of the hare and wipe it only with a cloth, in order not to lose any of the flavor, but a quick washing without soaking seems a more wholesome method.

To Cut a Rabbit in Joints.—First cut off the four legs by the joints. Leave the fore legs whole, but cut the hind legs in two or three pieces, chopping through the bone with a chopping knife. Then cut the body across in five or six pieces, chopping the breast piece in two in order to make it flatter. Trim the pieces neatly, removing from them all the flap or loose skin, which along with the neck may be put into the stock pot, or used in the making of any gravy. Split the head in two, and this may be served with the rabbit, if liked; it is considered a delicacy by some people. The liver, heart, and kidneys may also be served.

Savory Rabbit.—Cut three large onions into small pieces, and put them into a saucepan with plenty of seasoning and one tablespoonful of water, cover, and cook gently for one hour. After preparing a young rabbit, dry the pieces thoroughly, and roll them in flour. Place them in a baking tin containing two tablespoonfuls of hot drippings, and sprinkle with a little salt, pepper and powdered sage, adding a slight flavoring of marjoram. Cook in a hot oven for twenty minutes, then turn, and sprinkle again with seasonings. Ten minutes later pour away nearly all the fat, sprinkle the bottom of the tin and the rabbit with flour, and when it has browned add the onions and their liquid. Stir all well together, and return to the oven until the rabbit is done—usually one hour.

Jellied Rabbit.—One rabbit, one slice of bacon, two tablespoonfuls of gelatine, one-fourth teaspoonful of grated lemon rind, one blade of mace, four white peppers, one small bunch of herbs, one teaspoonful of salt, two cupfuls of water, two hard-cooked eggs, cut in thin slices, a few sliced stuffed olives, lettuce and sliced cucumber.

Cut up the rabbit with the bacon, and place in a stewpan with the lemon rind, mace, white peppers, herbs, salt and water, cover with the lid and cook for two hours in a moderate oven. Rinse a mold with cold water, arrange in it the eggs, and olives, and put in the pieces of rabbit, removing all the bones. Dissolve the gelatine in the liquid and strain it over the rabbit. When firm, turn out and garnish with lettuce leaves and cucumber.

Roast Rabbit.—Wash and clean the rabbit. Prepare some forcemeat and add to it the liver, heart, and kidney of the rabbit, parboiled and chopped fine. Now dry the rabbit, season it, add the forcemeat and sew it up. Rub it all over with flour and truss it into shape in the following manner.

To Truss.—Bend the hind legs forwards, cutting the sinew at the thigh to enable them to lie closely along the body, and bend the fore legs backwards in the same way. Fix them in position with two skewers or with a trussing needle and string. Now skewer the head into position, by passing a skewer through the mouth and fixing it down on the back between the shoulders.

To Roast.—Tie a few slices of fat bacon over the back of the rabbit, cover it with a greased paper, and it is ready for roasting. Put it in a well greased baking tin, and roast for one hour, basting it frequently, as the flesh of a rabbit is inclined to be very dry. A short time before taking it from the oven, remove the paper and slices of bacon to allow the back of the rabbit to brown. When ready, lift it on to a hot platter, and draw out the skewers and the thread used in sewing it up. Serve with a clear or thickened gravy in a sauceboat. Garnish with rolls of bacon and if liked a few forcemeat balls made from some of the forcemeat, and sprigs of parsley. Bread sauce, and red currant jelly or any other acid jelly, may be served separately. Sufficient for six persons.

To Make the Forcemeat.—Put one cupful of bread crumbs into a bowl, add the liver, heart, and kidney of the rabbit, add two tablespoonfuls of butter substitute, one tablespoonful of chopped parsley, one-half teaspoonful of pepper, one-half teaspoonful of salt, one-fourth teaspoonful of powdered herbs, and bind with a little milk or beaten egg.

Hare En Casserole.—Skin and joint one hare, put the pieces into a fireproof dish, add two sliced onions, two stalks of celery cut into dice, one cupful of chopped carrots, one bay leaf, one blade of mace, three tablespoonfuls of butter substitute, and one and one-half cupfuls of cold water. Simmer for forty minutes, then remove the pieces of hare. Add eight tablespoonfuls of flour and two tablespoonfuls of butter substitute to the pan, stir over the fire until brown, then add two cupfuls of boiling water, stirring until smooth and thick, add one teaspoonful of salt, one-half teaspoonful of pepper, one teaspoonful of Worcestershire sauce, and the pieces of hare. Cover closely and cook in the oven for one hour. Uncover and serve hot in the same dish.

Ramekins of Left-over Hare.—Remove the bones from cooked left-over hare and cut the flesh into neat slices, put these on a plate, season them with pepper and salt, and put them aside. Break up the bones and put them into a saucepan along with any trimmings, two cupfuls of water, one teaspoonful of salt and one-half teaspoonful of pepper. Allow this to simmer for one hour, then strain. Melt one tablespoonful of butter substitute in a saucepan, add two tablespoonfuls of flour, stir until smooth, then pour in the stock, stir until boiling and cook for five minutes. Then put in the pieces of hare and let them simmer slowly in the sauce for twenty minutes. Divide into small ramekins, garnish with cooked peas and re-heat in the oven for a few minutes. Serve hot with red currant jelly separately.

Jugged Hare.—Skin and paunch one hare, and reserve the blood. Cut it into small neat joints, and wipe the pieces with a cloth; or, if preferred, they may be washed and well dried. Then coat them with flour. Cut one-half pound of fat bacon into dice, put it into a saucepan, and fry it a few moments. Now put in the hare, two sliced onions, one bunch of herbs, and rind of one-half lemon. Put the lid on the pan and cook slowly for thirty minutes, shaking the pan occasionally. Mix four tablespoonfuls of cornstarch with a little cold water or stock, and add it to the saucepan with enough water to cover the hare. Add also the strained juice of the half lemon, stir over the fire until the liquid reaches boiling point, then turn the contents of the saucepan into a strong jar or large casserole, cover the jar closely and cook in a moderate oven for four hours, or until the hare is tender. It is safer to place the jar in a shallow tin, and to keep a little boiling water round it; or it may be steamed in a saucepan over the fire. A few minutes before serving remove the herbs, and add one tablespoonful of cranberry or red currant jelly, and the strained blood. This last may be omitted if it is objected to. Cook for a short time longer, but be very careful the sauce does not boil after the blood is added, or it will curdle. Season to taste with salt and pepper, and the hare is ready for serving. It may be arranged neatly on a hot platter with the sauce poured over and garnished with forcemeat balls, or served in the dish in which it is cooked. One pound of lean meat cut in inch pieces may be used along with the hare if a larger dish is wanted.

Stewed Rabbit with Rice.—Wash and clean one rabbit and cut it into neat joints, or, if preferred, cut the flesh in small pieces away from the bones. Melt four tablespoonfuls of butter substitute in a saucepan over the fire, put in one chopped onion and one cupful of rice well washed and dried, and cook them for five minutes without browning. Then put in the rabbit and cook for a few minutes longer, stirring constantly. Add two cupfuls of water or stock and one cupful of canned tomatoes, one teaspoonful of salt and one-half teaspoonful of pepper, cover closely and cook slowly in the oven or on the side of the fire, until the rice and the rabbit are tender and nearly dry. The saucepan should be shaken occasionally to prevent the contents from sticking. When ready, serve and garnish with rolls of cooked bacon. Barley or macaroni in short pieces, previously cooked for eight minutes in boiling salted water, may replace the rice.

Rabbit with Prunes.—Wash and dry one rabbit, then pour over it one cupful of vinegar and one cupful of water, then add one teaspoonful of chopped onion, and allow to stand over-night. Wash and cover one-half pound of prunes with cold water and leave them over-night. Next day dry and flour the rabbit and cut it into neat joints, brown them well in hot drippings, then put them into a fireproof dish with the vinegar, the prunes and their water, a little salt and pepper to barely cover the whole. Cover closely and cook gently in the oven or on the top of the stove for three hours. Thirty minutes before serving stir in one-half tablespoonful of flour blended with one tablespoonful of butter substitute to form a soft paste, which separate into small pieces that will blend quickly with the gravy and one cupful of boiling water. Serve hot.

Your MARMALADE will be better if you make it with Lantic Sugar

For perfect marmalade you must have pure, "FINE," granulated sugar that will dissolve instantly when added to the fruit, and make the sparkling, jewel-like conserve just right in flavor, color, and consistency. There are many excellent marmalade recipes if the right materials and right methods are used. If you have not already a satisfactory marmalade recipe, we recommend either of these:

Grape Fruit Marmalade

Cut two grape fruits in half and take out the pulp with a spoon. Remove the white fibers which separate the sections, wash the rinds in cold water and run them through the chopper. Mix pulp and chopped rind and measure into a large cooking bowl. Add three cups of cold water for every cup of the fruit mixture and allow to stand over night. Empty into a preserving kettle, heat thoroughly and return to the bowl. The second day return the fruit to the kettle and heat to the boiling point. Add one cup of Lantic FINE granulated sugar for every cup of pulp and continue cooking until the syrup jellies when a spoonful is poured on a cold plate.

Orange Marmalade

Slice an equal number of sweet oranges and Messina oranges very thin. Add three cups of cold water for each cup of fruit and allow to stand over night as described in the recipe for grape fruit. The reason for keeping fruit pulp over night is that it develops pectin, or jelly-making element, and avoids long cooking, which makes marmalade dark. On the second day bring the pulp to a boil, add an equal quantity of Lantic FINE granulated sugar and finish cooking as described in the recipe for grape fruit marmalade.

Any combination of the citrus fruits is delicious when made by the foregoing rule. One grape fruit, one orange and one lemon make a delightful marmalade, while a marmalade made of lemons alone is an excellent sweet and a good cake filling.

For marmalade and all preserving we recommend buying Lantic sugar in the original packages, so that you have an adequate supply as you need it and at the same time be sure of Lantic purity and quality.

Lantic Sugar is packed in 2 and 5 pound cartons, 10, 20 and 100 pound sacks. Many housewives find the 20 pound sack particularly convenient for preserving.

Send a 2c. stamp to cover cost of mailing and we will send you our little library of three cook books, "Lantic Sweets." The book on Lantic Preserves gives other recipes in addition to those for Marmalades.

Coming In The April Journal

The next issue will be the Easter Number of "Canadian Home Journal," and will contain suggestions for Easter Entertainment, Directions for a Money-Making Spring Festival, helps in the selection and rendering of Easter Music, and Easter Fashions —in addition to the following:

SHORT STORIES

"THE BARTERERS," by Louise Breitenbach Clancy, illustrated by Frank Downie—a story of life in the foreign quarter of a great city, with its pleasures, its ignorance and crime, but brightened throughout by the courageous work of its social service workers, and educational institutions. Yetta, a beautiful little dancer, through her unselfish loyalty to her sister, is caught in the toils of a cheap vaudeville organization. Her experiences and escape form the plot of an exceedingly interesting story.

"OUT OF THE BUTTERFLY CLASS," by Tina Forrester Best, illustrated by Mary Essex. The title itself tells the story; the transformation of a social butterfly. One is led to surmise that the great majority of women must at heart be true homemakers, whatever their assumed declarations may be.

"MY BOB," by Vincent Perry, illustrated by E. J. Dinsmore. All dog lovers will enjoy this story of a plucky little chap who goes with his master, Bob, to France. The experiences are supposed to be narrated by the dog, and make an appealing little story for all ages.

Would you like a glimpse into the "Journal" mail bag? Here you may have it:

"I was very much disappointed to find that 'Canadian Home Journal' would publish such a story as 'The Madness of McAra.' I destroyed these pages as soon as I had read them in order that the young people in our home would not see the story."

Next: "'The Madness of McAra' was excellent. I think it the best you have published."

Then in the Regina "Leader" appeared this:

> "Have you read 'The Madness of McAra,' in the January number of 'Canadian Home Journal'? It is ages since I have read as fine a short story. The writer, Edith G. Bayne, has a charming style and tells the story so vividly and yet so simply that the tale is a real literary gem and you say, 'Oh, she's an American, I s'pose! It takes the Yankees to do work like that!' until you learn she is no such thing, but a Canadian—more, she lived until very recently in Saskatchewan. And apropos of the story I was in a tea room not long ago in this, our city, and of sixteen women there twelve were smoking! I felt exactly as the hero in that story did. I saw red! The horrid, degrading habit is spreading all over our fair Canada, worse now than ever. Is this the way our 'smart' women are helping in the reconstruction work that is crying to heaven to be done?"

After this you will be interested in the short article Miss Bayne has written for our April number, "A LITTLE STORY OF ACHIEVEMENT," giving the true story of a young Ruthenian girl, Marya.

SPECIAL FEATURES

The April Number will contain another of Katherine Hale's colorful impressions of Canadian cities. This time she will picture Quebec in midwinter, in its least known and most beautiful aspect. Look for "QUEBEC, ITS ROMANCE AND LITERARY TRADITIONS."

Those who are contemplating building either a small house or summer cottage will find the two pages of architectural plans in the April number of value. The same architect, Clarence Thetford, who made the designs appearing in this issue, is preparing those for next month.

"DO'S AND DON'TS FOR THE FLOWER AND VEGETABLE GARDEN."

"SEWING SEEDS IN THE GARDEN."

"TRANSPLANTING."

"VACANT LOT GARDENING."

These are the subjects of the horticultural articles in the April issue by George Baldwin, F.R.H.S.

A "BOOK REVIEW" by Owen E. McGillicuddy.

Marion Harris Neil's usual number of excellent cookery recipes will appear, under the following heads:

"SAVORY DISHES WITH FRUITS."

"ATTRACTIVE DISHES FOR EASTER TIME."

Children Need Them Most

While the bulk of the Neōlin Soles made go on shoes for adults, it is a fact that Neōlin is of greatest benefit on children's shoes.

Children's shoes have suffered from soles of low quality. But *all* Neōlin Soles are of the same high quality—as good on children's shoes as on adults'.

But parents welcome most the grim, steadfast wear of Neōlin Soles that divides shoe bills for the youngsters.

Children need most the waterproof qualities of Neōlin Soles that protect against wet foot colds.

Young feet grow strong with the help of Neōlin flexibility.

Every member of your family will have more comfortable, longer-wearing shoes with Neōlin Soles. You'll find Neōlin Soles on fine shoes and everyday shoes, for men, women and children. Ask to see them at the shoe store.

Take your present shoes to the repairman and have him put on Neōlin Half-Soles or Neōlin Full-Soles. In every case make sure of the genuine by seeing the name "Neōlin" on the bottom of the sole.

Neōlin Soles

Canadian Home Journal
EDITORIAL

OUR AIM

TO publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome, and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

"EVERY TOWN A HOME TOWN." It was an American woman who gave this motto to the towns of her country, wherever an American soldier might be. It is good enough to be used beyond the duration of the war, for it expresses a feeling that we may well try to cherish in every community, in peace and war. In fact, if Germany had only known a little of this spirit, there would never have been the conflict that has left so many homes forlorn. When you turn a town into a fortress, you have not much of the home spirit left.

The whole spirit of militarism, against which we have fought, is utterly opposed to the community ideal. An old-fashioned saying about the home was: "A world of love shut in; a world of strife shut out." That is hardly broad enough for this sad earth's needs to-day. The home love must go beyond the four walls and so prove its strength that the kingdom of hate will fall before its power. The world of strife must be conquered; the realm of good-will must some day be world-wide.

A NEW COMMITTEE OF WOMEN. There has recently been formed in Canada a Committee of Women whose duty it will be to advise with the Women's Department of the Canadian Reconstruction Association on matters of reconstruction work in its many and varied phases.

Representatives from each province and from each branch of women's work will be on this committee, thus forming a body of women capable of giving expert advice on all subjects pertaining to the training and education of girls and women, employment and labor questions, child welfare and housing, in addition to the many problems in connection with the returned soldier and his family.

Such a committee of representative women should prove of greatest value to Canada in these chaotic times. Their programme, already drafted, demonstrates the excellent manner in which future efforts are being planned, perhaps the concluding paragraph, which is a challenge to all womanhood, best evinces the splendid spirit dominating this new organization:

"The increased capacity and united effort for service which have been called forth by War should be maintained, and even strengthened, in Peace. Otherwise we shall sink back upon a lower level and mark ourselves as unworthy of the Victory bought by unprecedented sacrifice and heroism."

EXAMINE YOUR SUNDAY SCHOOL PAPERS. Of all the literature coming into Canadian homes, one would expect Sunday School periodicals to be of the highest order. They are placed in the hands of our children through the channels of an organization which stands for truth, honesty and sincerity, and their standards are accepted unquestioningly by the impressionable child-mind.

In many instances the periodicals are excellent, filled with splendid matter of interest to boys and girls, but unfortunately there is a tendency on the part of a large number of Sunday School boards and teachers to ignore Canadian literature and bring into their Sunday Schools papers published in the United States, of a nature which deserves the strongest condemnation.

In one child's paper which was recently given out in a Canadian Sunday School (and this is a fair sample of the class to which we refer) there were eight pages. One entire column was devoted to what is known as fake, or fraudulent, advertising, such as "Given free, etc., etc,," "Earn huge profits," and many others of this nature. What right have we to allow unscrupulous persons to make promises which are utterly false to our children through the very medium which should stand for integrity, thereby destroying for all time their belief in the truth of advertising?

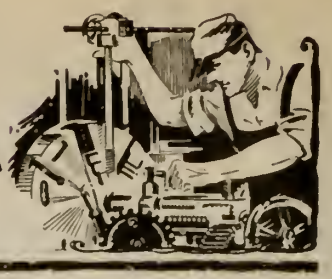
In the same paper there was also a long illustrated article, "Uncle Sam as a Ship Builder." The continued story was "The Flying Yankee," and a little further on a description of a huge American service flag. Another column was devoted to an advertisement of the United States Government Red Cross service flag.

If there were no Canadian Sunday School papers, it would at least be excusable to import them; but why people pass by our own publishers to bring into their schools foreign papers of the nature described, is beyond comprehension.

Let it be understood that we do not refer to certain excellent Sunday School publications for advanced students, nor to the new graded Sunday School literature, but to the ordinary Sunday School papers similar to our own, but of a decidedly inferior order for Canadian children.

Examine your children's papers when they bring them home next Sunday and see what they contain—where they are published—what sort of advertising they carry. The question of cost should not be considered. What of a few cents more or less when it is a matter of character building?

PEACE AND PALESTINE. An infants' welfare bureau has been established already in Jerusalem! Mothers are given the medical care needed, baby clinics are organized, health visitors are being appointed and kitchens that provide food for babies and the poor are being opened. The nurses are mainly natives of Jerusalem who need thorough training, but it is predicted that the rate of infant mortality will quickly drop.



All large centres throughout Palestine have excellent Government hospitals, and during the months since General Allenby's triumphal entry into Jerusalem thousands of natives throughout the country have gone of their own free will to these centres and asked for vaccination. The disinfecting plants distributed with a lavish hand by the Government have effected a wonderful decrease in typhus and relapsing fever cases.

The supply of fresh, pure mountain water with which Jerusalem is now blessed is the close of what at one time seemed a hopeless undertaking and was given up by a band of earnest workers who labored for nine years with the Turkish Government to secure the right to supply pure water to the city. General Allenby's civil engineers discovered a group of mountain springs which yielded 14,000 gallons per hour. This was pumped to a hilltop and then handed over to gravity and allowed to run to Jerusalem through a line of pipe. All hospitals were supplied and the insanitary cisterns were cleaned and then filled from the pipes. These cisterns were the only water supply known and have been in use since before the time of Christ. They were always filled from the winter rainfall and were most objectionable. Their total capacity was between 60,000 and 70,000 gallons.

It is a matter of but a few months before aeroplanes and tractor ploughs, electric trains and machinery driven by electricity, "wireless" news service, "movies" and those great disturbers of ancient civilization, sanitation and hygiene, will take possession of Palestine after four hundred years of misrule under the unspeakable Turk.

War to Peace

The Story of Repatriation

The Programme of the Government Regarding Returned Soldiers and the Change to Peace Conditions

Just as Canada planned in war, so must it plan and organize for peace. The Government has therefore formed a Committee of the Cabinet, to deal with the following four problems now facing the country:

(1) Bringing the soldiers home.
(2) Helping those who have suffered overseas to overcome their handicaps.
(3) Having ready for every soldier and war-worker an opportunity for employment.
(4) Ensuring proper living and working conditions.

Every Canadian should know what plans the Government has developed to help solve these problems.

An organization of experts has been formed to help in the work of securing the closest co-operation of all the departments of the Government and of all the other agencies that may come into contact with the work of repatriation.

Bringing the Soldier Home

As soon as the situation permits, our soldiers will be brought home. The fighting corps in France will be returned as units, each unit composed, as nearly as possible, of men from the same locality. The remainder of the Canadian troops overseas will be demobilized in standard drafts of 500 men. Canada has been divided into 22 dispersal areas. These drafts will be made up of men wishing to go to the same dispersal area.

Overseas there are also 50,000 dependents. These women and children will be brought to Canada at the public expense.

Thorough plans have been made to carry out this work of repatriation as speedily and efficiently as transportation facilities will allow.

Before the soldier arrives, he will be informed just what the country is prepared to do for him.

Getting Employment.

To help both soldier and war worker secure quickly such employment as is available, a chain of employment offices is being established from coast to coast with the co-operation of the Provincial Governments.

The Government is also helping to create additional opportunities for employment through (1) Public Works, (2) Railways and Canals, (3) Export Trade Commission, (4) Shipbuilding, (5) the loan of $25,000,000 for building workmen's homes, (6) helping soldiers become farmers by the provision of land, loans and agricultural training.

To help tide the soldier over the period between the time when he is discharged and the time when he is established in a position, the Government is granting a War Service Gratuity—on a scale more generous than that given by any other nation. This is in addition to any back pay, clothing allowance, etc., to which a soldier may be entitled.

The Disabled Soldier.

The soldier who has suffered a handicap through his service will be helped in two ways: (1) A pension will be granted to him in proportion to his handicap. (2) If he is so injured that he cannot follow his previous occupation he will be "Re-trained"—for a new trade or vocation. While training, he will receive adequate pay and allowances.

At the same time, the Government is to provide free medical treatment, dental treatment, artificial limbs, surgical appliances, etc., where the need for such is due to a soldier's war service.

Public Effort.

Voluntary organization, municipalities, educational institutions—almost all agencies that touch on the social and economic welfare of the nation—have been enlisted by the Repatriation Committee to help in welcoming our soldiers home, in creating an atmosphere of contentment, in bringing Canada forward to a peace basis with all speed.

The story of Repatriation has been written in more detailed form—in simple, interesting language. Every Canadian should read it. Write to this Committee at Ottawa for booklet.

The Repatriation Committee
OTTAWA

The Trail of the Blonde Beast

By William Hugo Pabke

ILLUSTRATED BY NORMAN PRICE.

A Story of German Treachery

"Schrecklich!" she said in an even tone as Bob finished his recital.

"Is that all you can say?" he demanded aghast.

BOB THURSTON was making good in the diplomatic service; there was no question about that. He was attache at one of our legations on the Continent when the war broke out. It would be rather indiscreet to mention which one it was as you will see for yourself in just a moment.

One minister to this particular neutral country quite lost his head during the excitement of August, 1914. He made statements that, although they did credit to his heart, were decidedly undiplomatic, to say the least. Thurston put his young shoulder to the wheel and by dint of pure genius extricated his chief and smoothed matters over generally.

The State Department was apprised of the exact facts because Senator Slocum was spending his summer abroad and happened to be on the spot at the time. Being a just man he believed in giving credit where credit was due. Therefore, in October, Thurston was recalled to Washington and told to stick around a while until something better than an attache's post materialized.

Things began to happen to him all at once—delightful things for the most part. First and foremost, he met Helene Kampf. Second—a very close second—he fell head over ears in love with her. Third and last, but by no means least, he married her.

The wedding was a very important social event of that season. Bob Thurston, although not yet at the head of the State Department or anything like that, was in a good social position on account of the ramifications of the Thurston family. There was a long list of sisters, cousins and aunts who were each and every one exceedingly prominent. And then there was Helene herself, who had been the darling of Washington society since her advent.

This was quite natural, taking all facts into consideration. She was, perhaps, the most beautiful girl that Washington had seen in a decade—a perfect type of the statuesque blonde. If she was a bit cold and aloof that only seemed to add to her desirability. The things in this life that are the hardest to attain we hold to be the most worth while. Society always figures that way. Her position was unique. At nineteen she was the mistress of her bachelor uncle's house, and helped him with his princely entertainments.

COUNT VON DAHL, her mother's brother, had come to Washington the year before the great war broke out as the unofficial representative of the Imperial German Government. He informed the world in general with his brusque frankness that his thirty years of diplomatic service entitled him to advise and correct his country's diplomats of all ranks, including ambassadors-plenipotentiary. He was a thorough man of the world, well-bred, well-informed, alternately suave and brusque, an admirable host, yet withal a trifle too obviously cynical.

The Count growled in deep German gutturals when Bob Thurston announced that he had won Helene. The old bachelor was essentially selfish and dreaded the inconvenience of having his pleasant household arrangements broken up. He ended, however, by slapping Bob on the back and wishing him joy, which struck the young lover as being a trifle superfluous.

State Department, for reasons of its own, refused Thurston leave of absence. Therefore, the young couple were obliged to forego the conventional wedding trip, which fact filled Bob with delight, although he promised to make amends as soon as his chief became less obdurate. Bob and Helene took immediate possession of a delightful little house given them by Thurston Senior. They began to entertain immediately; and at this sort of thing, which was her birthright, Helene shone.

From the first, Count von Dahl was a frequent visitor. In fact the best guest chamber was always in readiness for him. He seemed to take a strong liking to the fortunate young fellow who had succeeded in carrying off his beautiful niece in competition with a horde of eligibles. He was wont to lecture Helene seriously upon her duties as a wife, laying a special stress upon the virtue of obedience. Obedience was his hobby. Helene, duly impressed, would nod dutifully.

Bob during this blissful time was too ecstatically happy to wonder whether he had married a real flesh-and-blood woman or a statue. That thought was to obtrude itself later. For the time being he found every attribute of his beautiful bride sheer perfection. Her extreme biddableness rather amused him. There was a trace of the pathetic about it, but he laughed it off.

"LOOK here, dear," he said after one of the Count's lectures; "do you want to become thoroughly Americanized?"

"Of course," she said unemotionally.

"All right. We'll begin with your name. I've been trying ever since I fell in love with you to make three syllables out of it the way you Germans do, but it sounds foreign to me. Hereafter you're Helen. Helen—not Helene."

She turned her large blue eyes toward him and nodded seriously.

"As you wish," she said. "Helen," she repeated the new name tentatively.

Bob chuckled.

"You darling," he cried as he swept her into his arms.

There was probably not another household in Washington where the issues of the great war were discussed as little as at the Thurstons'. Bob felt very strongly about the German invasion of Belgium; but his government was officially neutral and he respected the natural feelings of the Count, his frequent guest. As for Helene, she never expressed an opinion and seemed to be not greatly interested. She ordered her life in an impassive, dignified manner; emotionalism was absolutely foreign to her nature.

Bob broached the subject of the war to her on one or two occasions. She looked thoughtful but not depressed.

"War is the men's affair," she said calmly. "I do not understand it."

BOB felt a distinct lack in her attitude. He admitted to himself that he would have been better satisfied had she shown sympathy, or horror, or even enthusiasm for the wrong cause. Her impassiveness irked him.

There was another trait of Helene's that began to get on his nerves; her implicit obedience to her uncle and to himself. At first her manner of a docile, well-brought-up child in the presence of its elders had amused him, but the extremes to which she carried her docility became distasteful. He consciously avoided the voicing of his preferences in small things because his wife evidently considered his lightest spoken wish in the nature of a command and executed it forthwith without comment.

Late one afternoon Bob came home from his Club. Helene was sitting on one side of the large fireplace in the living-room, hands folded, placidly gazing into the leaping flames. She was one of those phlegmatic women whose nerves do not cry out at inactivity. Opposite her Count von Dahl was comfortably ensconced in a huge armchair with the memoirs of a famous diplomat propped up on a pillow in his lap. As Bob stood in the doorway, the Count turned toward his niece.

"Helene," he barked, "my handkerchiefs are in the third drawer of my bureau. Get one."

Helene rose quietly and moved across the room in her stately manner. Bob felt the blood rush to his head and pound in his temples.

"Helen," he burst out, "why don't you stand at attention and say *zu befehl?* Isn't that what the German soldiers say when their tin-god officers order them about?"

Helene stopped and for once her calm was slightly ruffled. She turned a troubled glance from her husband to her uncle whose fierce eyes were beginning to blaze.

"Count von Dahl," continued Bob, "I must request you not to give orders to my wife in future. If there are not enough servants in the house to attend to your needs properly I shall take immediate steps to increase the staff."

The Count was on the point of retorting, but diplomat that he was, he changed his mind and began to chuckle.

"But what would become of rightful authority if men did not tell their womenfolk what to do?" he asked blandly.

"Rightful authority be———"

"Robert, please." interrupted Helene, "So I was brought up. I cannot change. I am accustomed to obedience."

"Well, here's a blanket order then for you to obey: Hereafter if any man—and that includes myself—commands you to do anything tell him to go to the devil. You may choose your own form of expression so long as the meaning is not impaired."

"Yes, Robert," she said placidly.

The news of the sinking of the "Lusitania" forced a change in the topics admitted to general discussion at the Thurstons'. Count von Dahl had given up his house and was temporarily making his home with the young couple. Bob dashed home when he heard the news. The Count was pacing up and down, up and down, in the large living room, his hands behind his back, his strong face exceedingly thoughtful.

"COUNT," cried the young man, his voice shaking, "I can no longer control my speech. I can't help it if you are hurt; but this outrage, this murder is too much. From now on I *must* speak of these things—I *must* say what I think."

Count von Dahl stopped his uneasy pacing.

"You have been very considerate, Robert," he said gravely. "Very considerate. Pray don't let any thought of me keep you from saying what is in your mind. I won't discuss these issues with you. What would be the use? We think differently. But that need not prevent your saying what you think."

"But, Count," protested Bob, "doesn't this latest act impress even you with its horror? What do you think of it all?"

A peculiar expression crossed the diplomat's face. The hard lines of it seemed to be graven in granite; his eyes had a far-away look.

"The killing of innocent people," he began slowly, "is deplorable. The poor women and little children—too bad—too bad! But——" he raised his head defiantly—"it is war."

The Count's attitude relieved Bob. Of course, he could not hope to convert him to an anti-German bias, but at least free speech was now possible in his own home. He rushed upstairs and found Helene in her boudoir dressing to go out. She had not heard the news. Breathlessly, Bob told her the sickening tale.

(CONTINUED ON PAGE 64.)

At The Sign of The Coal Scuttle

By Blanche Gertrude Robbins

ILLUSTRATED BY HAMILTON WILLIAMS.

Proving that Romance May Even Be Connected With the Coal Bin if There is a Granny MacGrath

A CHILL draught whistled shrilly through the rear corridors, rustling up the numerous stairways of the apartment house. The boy—Benny of the basement — struggling with a hod of coal, panted breathlessly and hoistlng it above to the landing of the third floor, pushed his burden with a vengeance toward the door of 320. The door suddenly flew open and a girlish figure, swallowed up in a blue checkered apron, called out a cheery greeting.

"Morning, Benny! Pretty near tuckered out? I just reckon nobody in Fort William is wishing any harder for an early Spring than Benny Pickles. Sorry, but they are bound to be late. Old Superior empties her ice as if it were cold molasses. How's my coal bin holding out?" questioned the girl, reaching down toward the handle of the coal hod, roguish smiles dancing in her blue eyes and chasing across the poppy-blown cheeks and hiding slyly under the ringlets with their tints of sun-kissed wheat, tumbling from under the blue band of her dust cap.

"S'holdin' out so far's your bin is, Miss Jinny. Can't guarantee it to hold out agin an awful late Spring, but, Holy Moker! you hadn't oughter worry. Say, come on out to the landin'. Want to show you somethin'."

Virginia Croft pushed the hod of coal under the range in her kitchen and followed Benny's lead to the head of the stairway. Straight down that stairway her eye travelled in line with Benny's pointing finger. Singularly distinct because of its pathetic emptiness stood the black coal hod on the landing of the second floor, its very attitude entreating the janitor's boy to fill it.

"You see that coal scuttle, Miss Jinny. That's Granny MacGrath's and she sets it out every mornin' jest as regular as clock work fer me to fill an' heft up the stairs to her. An,' Miss Jinny, there ain't one blamed chunk of coal left in Granny McGrath's bin. I scraped it to the dustin's yesterday an', Miss Jinny, I don't dast tell her, 'cause I know she ain't got the coin to fill her bin up with coal. When she had it put in last fall, she told us janitor folks that it had to last the winter for she couldn't scrape up an extry dollar fer fuel," Benny announced tragically.

"Oh, Benny, are you sure?" questioned Virginia, her blue eyes soft and serious, the dancing lights suddenly dimmed.

"Cock sure," Benny responded promptly, adding, "an' Granny MacGrath ain't asked—not once—how 'tis holdin' out. She's failin'—Granny is, and gettin' sort of forgetful—don't worry none about things like you'd think she might. She's awful kind hearted, allus knittin' me mittens an' wristers, an' I dasn't go in an' 'fess up 'bout that empty coal bin."

"Of course, you can't, Benny—not to-day anyway. Let us go down to the basement together and look the situation square in the face. Perhaps you are mistaken about the bin being really empty," suggested Virginia.

RUNNING nimbly down the stairway, the girl led the way, pausing on the landing of the second floor to pick up the empty coal hod, fearing that Granny MacGrath might come to the door, discover the tragedy and be alarmed. Benny came tumbling after Virginia, his heavy boots clattering noisily. Then suddenly without warning the door of the first floor flat was flung open with gusto and Virginia retreated into a dusky corner just in time to avoid a collision with an ash pan, overflowing with smoking, dust-fumed ashes. Behind the ash pan loomed a tall, spare, masculine figure clothed in long, gray duster, a shabby sport cap pushed down over an unruly shock of black hair, a smudge of soot shadowing his clean shaven cheek.

"I—I beg your pardon," gasped the man of the ash pan, a flash of amazement darting from his keen brown eyes which swept Virginia, blue-checkered apron, coal hod and all. Then backing into his own doorway, he allowed the girl and the boy to proceed down the stairway to the basement.

"Thank you," Virginia flashed back, a mischievous smile lurking in her eyes as she glanced directly toward the smudge of soot.

Benny led the way to Granny MacGrath's coal bin and Virginia at his heels, clutching the handle of the coal hod, stared dismally into the cheerless depths of the dusky pen. Assuredly it was empty, the thin layer of dust sweeping the floor giving but a vague hint as to the coal that had hitherto filled the four walls. The bin fairly shrieked its impoverished condition.

"You are right, Benny; there isn't one chunk of coal left in the bin," Virginia admitted tragically.

The man with the ash pan had followed them to the basement and suddenly Virginia became conscious of the fact that he was standing still, staring curiously at them.

"What's the trouble? Coal petered out before you expected it to?" he questioned, a warmth of sympathy in his tone, that sent the color surging into the girl's cheeks.

"It is Granny MacGrath's coal bin and she doesn't know it is empty and Benny doesn't dare tell her because—because there isn't any money in Granny's purse to pay the coal man to fill up the bin," Virginia burst out impetuously.

"Say, I call that tough luck! You mean the little old lady in the white cap, who just sits in the second floor window and smiles over the tops of her geraniums? Those red blossoms and that beaming, old face sort of glorifies the whole apartment house," the man responded promptly.

VIRGINIA nodded her head and moved swiftly toward her own coal bin, staring down with narrowed eyes at its frugal supply. It would barely hold out until Spring. But Grannie MacGrath's coal bin was pitifully, absolutely empty. Relaxing the grip of her fingers, she dropped the coal hod to the floor and turned to Benny.

"Benny, I tell you what to do. Just fill Granny MacGrath's coal hod from my bin this morning and we won't tell her just yet. Maybe I can think of a plan," proposed Virginia, her eyes gleaming like stars in the dusk of the basement.

Benny bore down upon Virginia Croft's coal shovel with emphatic energy. Then the man, dropping his ash pan with a clatter on the floor, sprang toward Virginia's coal bin and arrested the second shovelful of coal half way between the bin and the hod.

"No, you don't. Wait—where do I ring in on this? Benny, you just dump that coal back into Miss-—er—the other coal bin and fill that hod out of my bin. There's plenty there and you don't need any fuel controller to tell you this bin is likely to be emptied before balmy summer," he commanded authoritatively.

But Virginia's hand reached out detainingly. The spirit of defiance leaped into her eyes, her cheeks blazing with resentment.

"Don't you dare empty that coal back into my bin, Benny. This is my party, Mister—Mister Man of the First Floor, and I don't want any interference, please," she retorted hotly.

Virginia's cheeks blazed. "Don't you dare empty that coal back into my bin, Benny. This is my party, Mr. Man of the First Floor."

Benny stood transfixed—a statue of bewilderment—his green eyes staring at the man and girl towering over him, the coal shovel, brimming with black diamonds, tragically indecisively poised over Granny MacGrath's coal hod. The man cringed under the asserted independence of the girl, his soot-smudged cheek crimsoning.

"I—I am sorry, but I—I sort of wanted to help. The old lady's smile is worth stoking up. I'll beat you to it some morning," he challenged determinedly.

VIRGINIA drew her short person to a regal posture, shrugged her blue-checkered shoulders and with a wave of her hand commanded Benny to proceed. The boy emptied the shovel into the coal hod and dug it again into the bin of Virginia Croft. The man lifted his ash pan from the floor, spilling the cinders in his haste and crunching them with his feet as he turned to empty the pan. Then as he ran up the basement stairs, Virginia tip-toed to the coal bin of the First Floor Man and peered shrewdly into its depths.

Then, with an audible gasp, she gave vent to a queer, shaky laugh. Well, if the coal in that bin held out until balmy summer, it would be like the widow's cruse of oil. She hoped Mr. First Floor Man's housekeeper was an economical sort of being, but the few glimpses she had seen of the young, untidily-dressed thing on the back balcony lent doubtfulness to that hope.

"There, Miss Jinny, that's regular Scripture measure and then some. Granny MacGrath won't lose no smiles to-day, that is sure," panted Benny.

The boy of the basement puffed up the two stairways, laboriously pushing ahead of him the heavy coal hod, Virginia close to his heels. Then her breath caught in her throat for Granny MacGrath stood at her kitchen door peering anxiously down the stairway.

"My soul, Benny, I was gettin' powerful scared for fear you'd forgot to fetch back my coal scuttle. Dear knows how I'd ever get to the basement and back with my knees so rheumaticky. Mornin' dearie," added Granny MacGrath, smiling into Virginia's bright eyes.

"Good morning, Granny MacGrath. If ever Benny should happen to forget to fill your coal scuttle, you just call up the stairway to my kitchen door. My legs are young and spry and I'll be tickled to death to do anything for you," Virginia responded blithely.

"God bless you, dearie! It is you as waves up to my window mornin's and nights as you go down street and come home from work. Funny how when you watch out of one window all day long and see folks by the hundreds go by, how 'tis so many look up without seein' you. But I know you 'cause you wave back so pretty-like," explained the old lady.

"Oh, Granny MacGrath, how can anybody help waving back? Your beautiful, old smiling face and those bright, laughing geraniums make a body feel glad all over. Why it was a glimpse of your cheery window that decided me to take a flat in this apartment house," responded Virginia.

"And maybe you'll drop in some day and sit by the window and laugh along with me. Or maybe that would be asking too much——"

"Oh, Granny, Granny MacGrath, there is nothing in all this city, that I would rather do, than to visit with you beside your geranium window. I am sort of lonesome, all by myself in the flat. The girl-chum who was going to keep house with me found a better position West. The city is so strange and all the folks in the apartment house are strangers. I was born in a little friendly village and if only you would let me come and visit with you! But, there, if I am not careful, I will surely be late for the bank. Good morning, Granny, and watch out the window," Virginia called gaily, running up the stairway to her own flat.

HASTILY she changed the blue checkered apron and dust cap for coat and hat, and with a rueful glance at the partially tidied kitchen, she locked the door of the four roomed flat and ran down the stairs to the street.

The Mother Heart of Mrs. Whipper

A Story With a Heart Throb and Truth a-Plenty

By Ethel Cody Stoddard

ILLUSTRATED BY E. J. DINSMORE

"IF ever I take a child to adopt, it will be the eldest girl of a family that I will choose." Mrs. Whipper paused to straighten a knot in her knitting wool.

"The eldest girl! For goodness sake why?" asked Mrs. Murrin, putting down her work to look the surprise her voice expressed.

"Just because no one ever wants her, that's why. There are always no end of people willing to take a dimpled baby, or even a scrawny one, because it is bound to be appealing in some way. And there are always those who are willing to take cunning tots just beginning to talk, or even a bit older. But the poor eldest girl, especially if she is from nine to twelve years old,—nobody wants. I know how it goes, believe me. When our little family of four was left alone in the world, I was the eldest. We did not need to be adopted because there had been plenty of provision made for us. But I can still keenly remember that it was yours truly Eusebia Trotter, who was not wanted by any of the relatives who offered to take us home with them till all of our affairs were settled."

"You poor kiddie," murmured Mrs. Murrin.

Mrs. Whipper nodded. "Grandma Trotter and Aunt Ellen nearly had a row over who would take Hiram, who was then just a year old, and as cunning a little rascal as he could be. Emma simply fell into Aunt Honor's arms. Uncle Allan captured Robert without hesitation. But poor, awkward, ten year old me, was left to be picked last, and I drew Aunt Mary Jane Hedley, and it was no snap to be with her I can tell you. Right down to my last conscious hours I will remember those weeks with her. My heart lived right close to my tonsils those days, and lonesome! I missed the family, and my mother so much that it was no wonder I annoyed Aunt Mary Jane. I was nervous and bashful and terribly miserable. Any girl at that age is bound to be just that way—I know," with a wise look in her eyes.

"I never thought of it just that way before, and no doubt you are right."

"Of course I'm right. No, I don't ever expect to get my courage to stick long enough with my desire, to allow me to really adopt a child, but if I ever do, it will be the eldest of a family, and preferably a girl."

"I wouldn't do it for the world," asserted Mrs. Murrin.

"I know you wouldn't. Neither would I if I followed my own heartfelt inclinations, because I love cuddley babies. But memory would trot out my own experiences and force me to do it, if I ever decided to augment our family in that way. I guess though that I am too much of a married old maid to ever bring a child into our house now. It—she, would upset things terribly and make no end of extra work. Let's talk of something else."

IT was six weeks later, that Mrs. Murrin stood talking to her pastor, the Rev. James Rodney, while the beginning of a young snow storm sifted itself out of a heaven-made powder box, over them.

"I am feeling much distressed about the Ingram children," said Mr. Rodney. "Their mother passed away the other day. There are five of them, you know, and it has been a hard struggle for all of them the last year. It is just a little better than a year, you will remember, since the father was taken away. Mrs. Clements next door to them has been doing what she could, but she has her hands pretty full at her own home. Mrs. Rodney has helped too, but she is pretty busy also; everyone is just now."

"Shall I go around and see them right now? I think I have the time—I'll make the time."

"I wish you would. Mrs Alex. May wants to adopt the twins, and an uncle has agreed to take two of the others. The eldest girl will have to go to the Home, I guess. It is a weary world for some children, Mrs. Murrin. We expect to have the oldest girl—Sue,—with us for the week-end. If you can go around it will come in just right as Mrs. May and the children's uncle are coming for their charges this afternoon. Mrs. Rodney expected to get over there and help get them away, but I know she has not left home yet."

"You can tell her I have gone, and she need not come at all," said Mrs. Murrin.

"Thanks, that will help a great deal. A pastor's wife does have her limitations you know."

Mrs. Murrin nodded understandingly and hurried away, her heart full of pity for the Ingram children.

SHE found the shabby little house in a turmoil. Three children were whimpering and two grown-ups were talking very fast.

Mr. Manning, the children's uncle, had come for the two little ones that he had agreed to look after, and he and Sue, the eldest girl, were trying to secure whole wardrobes for them out of a medley of clothes mostly bad and indifferent, and which apparently belonged to any of the children they would fit.

Mrs. May had also come for the twins, and was busy dressing them in clothes which she had brought herself.

The house was cold and chaos reigned. Mrs. Murrin's first inclination was to turn and run, but the expression on her pastor's face as he spoke of his wife, remained with her, so she stepped into the matter at hand with determination.

Everyone knew the fight which Mrs. Ingram had made as a seamstress, since her husband, a warehouse clerk, had been killed by runaway horses. The matter had been repeatedly brought before the Ladies' Aid of Mr. Rodney's church, and considerable help had been given to her from time to time.

"WHAT can I do, dear?" Mrs. Murrin asked ten year old Sue, whose thin, blue fingers were busy trying to find buttons that had somehow disappeared from small garments.

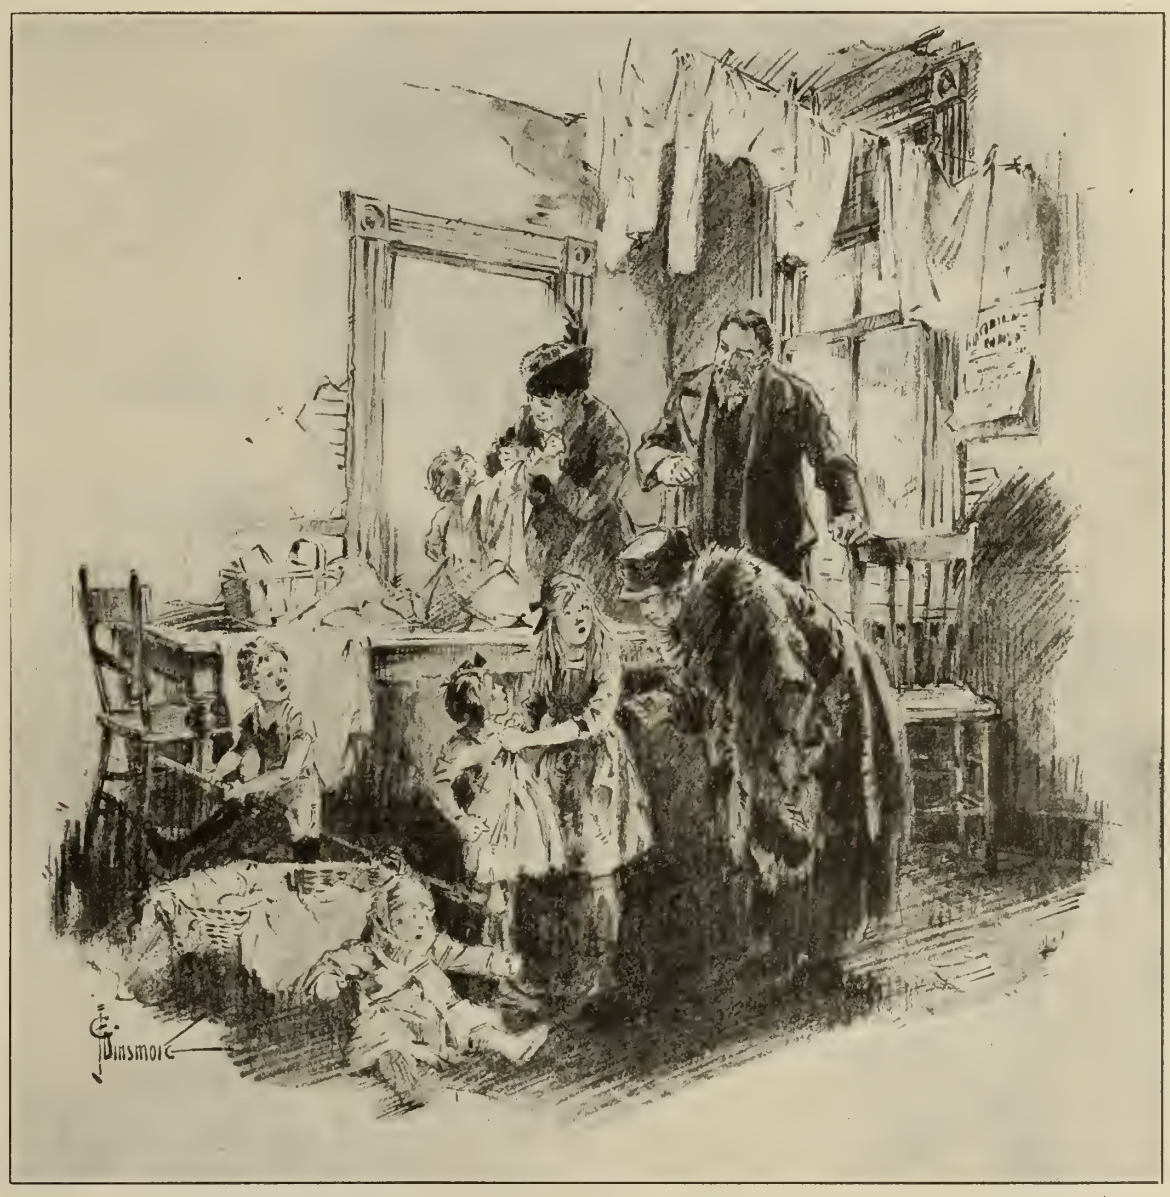
"There's Freddie to finish," answered the girl.

Mrs. Murrin took a small, round-eyed, blue-nosed boy of five on her lap, and after a great deal of wrapping and pinning, finally got him togged out to resist some of the cold of the winter day.

"Never mind," she told him, "you will have a nice warm fire at uncle's, and maybe lots of fun."

"We'll see to the kids all right," asserted Mr. Manning. "My wife would have come too, only on account of getting ready for them."

"You are taking two?" asked Mrs. Murrin.



"Yes, Freddie and Eva. Mrs. May's got the twins."

"That leaves Sue."

"Oh, the minister is taking her for tomorrow. Then come Wednesday, she goes to the Children's Home."

Mrs. Murrin looked at Sue on her knees in front of her little sister trying to button up a coat which was half a size too small for the child, and saw the girl's chin quiver.

"There, I think you two'll do," announced Mrs. May as she put the second comfortable looking little human bundle beside the first, on the kitchen table. "I've always wanted twins, but the Lord never even sent me one kiddie. William didn't say a word against it when I told him that I wanted these two. Told me to do as I liked; I'd have the trouble of looking after them, not him. Just you wait, Mrs. Murrin, and see what fine girls they'll grow up to be. Come out and see us some time and we'll show you, won't we, chickens?" And Mrs. May, a mother-born woman, patted each little bundle in a way that showed she had already taken both small bits of humanity to her heart.

"There's Freddie to finish," answered the girl.

"I think it is splendid of you," answered Mrs. Murrin. "Your heart is certainly in the right place. It is not every pair of twins that is so fortunate."

"Huh! No credit to me, it's just the sort of job I've been wanting—mothering twin girls. So I think I'm the lucky one."

"I am sure coming to see you, and soon," laughed Mrs. Murrin, watching the other woman tuck a thermos bottle into the basket she had brought.

"Now I guess we are ready," announced Mr. Manning picking up little sister whose bright eyes and small blue nose peeped over a cloud of woollen scarf wound around her shoulders. "You see we have ten miles to go, and we've got to get along."

WHO GOES THERE?

BY

ROBERT W. CHAMBERS

ILLUSTRATED BY DAN SAYRE GROESBECK

CHAPTER XII (*Continued*).

THERE was a pasteboard box which Guild gave to Karen without opening it. She untied the violet ribbon, opened it, sat silent. He seemed to pay no attention to what she was doing.

After a moment she lifted out the cluster of violet-scented orchids, drew the long pin from them, and fastened them to her blouse.

"Thank you—very much," she said shyly.

"Do you care for orchids?"

"Yes . . . I am a little—surprised."

"Why?"

"That you should—think to offer them—to *me*—"

He looked up, and his grey eyes seemed to be laughing, but his mouth—that perplexing, humorous, inscrutable mouth of his—remained grave and determined.

"Karen," he said, "if you only understood how much I do like you, you wouldn't perhaps deal so mercilessly with me."

"I? Merciless?"

"You are. You made me use force with you when you should not have resisted. And now you have done something more merciless yet."

"W—what, Kervyn?"

"You know . . . I must have those papers."

"Kervyn!"

"Dear—look at me. No—In the eyes. Now look at me while I say, as seriously and as gently as I know how, that *I am going to have those papers!* . . . You know I mean what I say . . . That is all—dear."

Her eyes fell, and she looked at her orchids.

"Why do you speak that way to me—after giving me these?"

"What have orchids to do with a man's duty?"

"Why did you give them to me?"

"Why? Because we are friends, if you will let us be."

"I was willing—am still—in spite of—everything. You know I am. If I can forgive you what you did to me in our stateroom last night, surely, surely, Kervyn, you won't take any more chances with my forgiveness — will you?"

He said: "I shall have to if you force me to it. Karen—I never liked any woman as much as I like you. We have known each other two days and a night. But in that time we both have lived a long, long time."

She nodded, thoughtfully.

"Then — you know me now as well as you ever will know me. Better than any other woman has ever known me. When my mind is made up that a certain thing is to be done, I always try to do it, Karen. . . . And I know that I ought to have those papers. . . . And that I am going to have them. Is that clear—Karen, dear?"

She remained silent, brushing her orchids with her fingertips, absent-eyed, serene. After a moment he thought that the ghost of a smile was hovering on her lips, but he was not sure.

Presently she looked up.

"Shall we lunch?" she asked.

CHAPTER XIII.

THREE times they were obliged to change cars after passing through Utrecht. Night fell; the last compartment into which they had been crowded was filled with Dutch cavalry officers, big, talkative fellows in their field uniforms and jingling equipments, civil to Guild, courteous to Karen, and all intensely interested in the New York newspaper which Guild offered them, and which they all appeared to be quite able to read.

They all got out at Maastricht, where the lantern-lit platform was thronged with soldiers; and, when the train started, the two were alone together once more.

They had been seated side by side when the officers were occupying the compartment; they remained so when the train rolled out of the station, neither offering to move, perhaps not thinking to move.

Karen's Tauchnitz novel lay open on her lap, her eyes brooded over the pages, but the light was very dim, and presently she lay back, resting her arm on the upholstered window ledge.

Guild had been sitting so very still beside her that she suspected he was asleep. And when she was sure of it she permitted herself closer scrutiny of his features than she had ever ventured.

Curiosity was uppermost. To inspect at her leisure a man who had so stirred, so dominated, so ruled and misruled her was most interesting.

He looked very boyish, she thought, as he lay there—very clear cut and yellow-haired—very kind—except for the rather square contour of the chin. But the mouth had relaxed from its sternly quiet curve into pleasant lines.

One hand lay on his knees; it was clenched; the other rested inert on the cushioned seat beside her, listless, harmless.

Was that the hand of iron that had closed around her shoulders, pinning both her arms helpless? Were these the hands that had mastered her without effort—the hands which had taken what they chose to take, gently violent, unhurried, methodical and inexorable?

How was it that her swift hatred had not endured in the wake of this insolent outrage? Never before had a hand been laid on her in violence—not even in reproof. How was it that she had endured this? Every womanly instinct had been outraged. How was it that she was enduring it still?—acquiescing in this man's presence here in the same compartment with her—close beside her? She had resented the humiliation. She resented it still, fiercely—when she remembered it. Why didn't she remember it more frequently? Why didn't she think of it every time she looked at him? What was the trouble with her anger that she seemed to forget so often that she had ever been angry?

Was she spiritless? Had his violence then crippled her pride forever? Was this endurance, this submission, this tacit condoning of an unforgivable offense to continue?

There was color in her cheeks now as she sat there gazing at him and remembering her wrongs, and industriously fanning the rather sickly flames of her wrath into something resembling a reasonable glow.

But more fuel seemed to be needed for that; the mental search for it seemed to require a slight effort. But she made it and found her fuel—and a brighter color stained her face.

Dared he lay hands on her again? What did his recent threat mean? He was aware that she had sewed the papers to her clothing. What did he mean by warning her that he would take them by violence again if necessary? It was unthinkable! inconceivable! She shivered unconsciously and cast a rather scared glance at him—this man was not a Hun! She was no Sabine! The era of Pluto and Proserpine had perhaps been comprehensible considering the times — even picturesque, if the galleries of Europe correctly reflected the episode. But such things were not done in 1914.

They were not only not done, but the mere menace of them was monstrous—unbelievably brutal. She needed more fuel, caught her breath, and cast about for it to stoke the flames before her flushed cheeks could cool.

And to think—to *think* that she, Karen, was actually at that moment wearing his orchids—here at her breast! Her gloved hand clenched, and she made a gesture as though to tear the blossoms from her person. . . . And

(CONTINUED ON PAGE 11.)

"Yes, sir," she said, with a vigorous nod. "And whenever any of the yokels hereabout tamper with the wires the Uhlans come and chase them till they think the devil is after them."

Who Goes There

(CONTINUED FROM PAGE 10.)

did not. . . . They were so delicate, so fragrant. . . . After all, the flowers were innocent. It was not these lovely, scented little things she should scorn and punish, but the man—this man here asleep beside her——

Her heart almost ceased for a moment; he moved, opened his eyes, and lay looking at her, his lids still heavy with sleep.

"You are horribly tired—aren't you?" she faltered, looking into his worn face, which two days' lack of sleep had made haggard.

He nodded, watching her.

"I'll move across the way and let you stretch out," he said.

"No—you need not."

"You look dead tired."

"I couldn't sleep that way. You—need not—move."

He nodded; his eyes closed. After he had been asleep a little while, watching him, she wondered what he might be dreaming, for a ghost of a smile edged his lips.

Then, sleeping, his arm moved, encircled her, drew her shoulder against his. And she found herself yielding, guided, relaxing, assenting, until her cheek lay against his shoulder, resting there, and after a while her eyes closed.

The fuel had given out. After a little while the last spark died. And she slept.

CHAPTER XIV.

THE dim light fell on them where they slept seated upright, unconscious, swaying as the car swayed. Unseen forests swept past on either side under a dark sky set with stars; low mountains loomed in the night, little rivers sparkled under trestles for a second and vanished in the dull roar of the rushing train.

The man, sunk back against the upholstered seat, lay as though dead.

But after a while the girl dreamed. It was the frontier toward which they were rushing through the night—a broad white road running between meadows set with flowers, such as she had often seen.

Two painted sentry boxes stood on either side of the boundary; the one on her side was empty, but in the other she realized that her enemy was on guard, hidden, watching her.

She desired to cross. In all her life never had she so longed for anything as she longed to cross that still, sunny, flower-bordered frontier.

She dared not. Her enemy stood hidden, armed, watching her from within that painted sentry box. She knew it. She was afraid. She knew that her enemy would step out with weapon levelled and challenge her the instant she set foot across that flowering frontier. She was afraid of his challenge, afraid even to learn what her enemy might look like.

Yet she *must* cross. Something had to be done—something had to be done while the sun was shining and the breeze in the meadow set the flowers all swaying. She looked desperately at the silent sentry box. Nothing moved. Yet she knew her enemy was watching her.

Then, frightened, she set one foot across the line— took one more step, very timidly.

"Halt! Who goes there?"

She knew it—she *knew* it! It had come—it had happened to her at last!

"F-friend!" she faltered—"but I do not know the countersign."

"Pass, friend, without the countersign!"

Could she believe her ears!

She listened again, her hand resting against her heart. But she only heard a child laughing inside the sentry box, and the smothered ruffle of preening wings.

Her dream partly awoke her; she lay very still, vaguely conscious of where her cheek was resting, then closed her eyes to seek her enemy again among her dreams.

CHAPTER XV

THEY awoke with a light shining in their eyes; the guard stood on the running rail, one hand on the knob of the door.

"The frontier," he said. "Descend, if you please, for the customs, and kindly have your papers ready."

The girl's blue eyes were sleepy and humorous as she rested her hand on his arm to rise.

"You know I can't give them to you," she said. "It would be dishonorable."

"Are we ever to have a good night's sleep again?" she murmured as he aided her to descend in the lantern-lit darkness.

"It's our punishment," he said.

"For what, please?"

"For ever doubting each other."

She said nothing. A soldier picked up their luggage and carried it across the platform where another train stood waiting.

And all at once Guild realized that the soldiers around the station and custom-house were not Belgians but Germans. He had forgotten that, and it gave him a distinct shock.

As he and Karen, following the soldier, entered the long room in the custom-house, an officer all in sea-grey from the shrouded spike on his helmet to his ankles came forward and saluted, and Guild coolly lifted his cap.

"Have I by chance the honour of addressing Herr Guild?" asked the officer.

"I am Herr Guild."

"And—gnadiges Fraulein?"—at salute and very rigid.

"Fraulein Girard."

"The gracious young lady has credentials?—a ring, perhaps?"

Karen drew off her glove, slipped the ring from her finger. A soldier held up a lantern; the lieutenant adjusted a single eye-glass, scrutinized the ring, returned it with a tight-waisted bow.

"Papers in order!" he said, turning to the customs officials. "Pass that luggage without inspection!"

He was very polite. He escorted them to the Belgian train, found an empty compartment for them, thanked them with empressement, and retired into the darkness which had hatched him.

As the train started Karen said in a low voice: "Would you care to call that officer a barbarian, Kervyn?"

"You haven't seen Louvain. But probably that officer has—through his monocle."

She sighed. "Are we to—differ again? I am *so* sleepy."

This time he was entirely awake and responsible for his actions. So was she. But she was really very tired, she remembered, when conscience began to make her uncomfortable and call her to account.

But she was too weary to argue the point; her cheek rested unstirring against his shoulder; once or twice her eyes opened vaguely, and her hand crept toward the orchids at her breast. But they had not been crushed. Her white lids closed again. It was unfortunate that she felt no desire to sleep. Her conscience continued to meddle at intervals, too.

But of one thing she was quite certain—she would not have tolerated any such thing very long had she not been very sure that he had immediately gone to sleep. . . . And she was afraid that if she stirred he might awake. . . . And perhaps might not be able to go to sleep again. . . . He needed sleep. She told herself this several times.

"Karen?"

"What?" she said in consternation. And she felt her cheeks growing hot.

"You *will* let me have those papers, won't you?"

She lay very still against his shoulder.

"Won't you?" he repeated in a low and very gentle voice.

"Please sleep," she said in a voice as low.

"Won't you answer me?"

"You need sleep *so* much!"

(CONTINUED ON PAGE 18.)

Synopsis of Former Chapters

WHO GOES THERE

Applauded by men, admired by women is Kervyn Guild—the hero Robert W. Chambers has chosen for his graphic romance of the war, "Who Goes There?"

Guild is an American, but of Belgian ancestry, and is in Belgium when the horde of Huns overruns and devastates that country. With all the chivalry of a typical, clean, high-minded young man, he immediately gets involved in the Belgian resistance and quickly finds himself the centre of a group being backed up against a wall to be shot—but he isn't shot—and how he escapes forms the brilliant opening chapters of the story.

While Guild's life is spared, he is not given his freedom because he frankly refuses to equivocate, and proves to the German general who cross questions him that honor is not a lost attribute of some nations, even in war.

The German general says he has a daughter in England whom he is anxious to have returned in safety to his estate in a Rhine province of Germany. Guild, being a neutral, is offered his freedom and safe conduct out of the German line if he succeeds in getting the girl to the safe haven of the general's German home. He undertakes the mission.

While there has been plenty of action up to this point, the moment Guild starts for England things begin to happen with such rapidity that one is tempted to compare the quick succession of events with volleys from a machine gun. Just about this time the English officials, and even the ordinary citizens, are much concerned about all aliens going to and from their country, and Guild discovers that while he has no trouble in getting into England and locating the girl, getting out is quite a different matter.

The moment Guild lands in England he becomes aware that the general has paved the way for him; in fact, a complete chain of spies connects London with the general's Rhenish home, to aid Guild in his journey. The British secret service gets on the job almost as quickly, and the fight between these two forces, both of which are frequently outwitted by the greatest of all factors—chance—forms an absorbing part of the story.

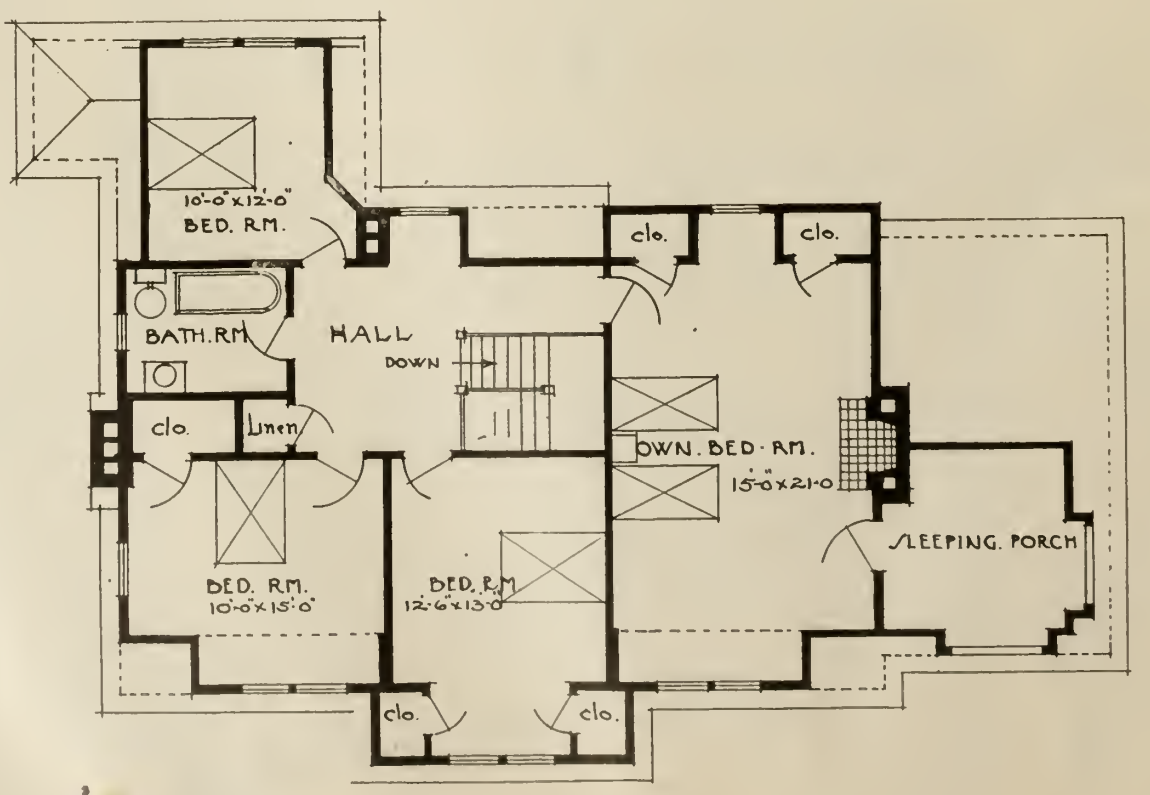
After starting on their journey, the young man learns that Karen, the German general's daughter, has papers of value to Germany in her possession. These he is able to obtain only by force, and is afterward outwitted by the steward who hands them back to Karen.

The Home You Have Been Planning For

Designed by Clarence Thetford, Architect

Comfortable Proportions With Economy of Space Characterize This House

IN preparing plans primarily for a house to meet the needs of the small town and rural resident, the architect has at the same time endeavored to design a moderately priced home which should give pleasure to the city or suburban dweller fortunate enough to possess a piece of land with a frontage of about one hundred feet. A lot of this size is necessary on which to build a house of Dutch Colonial style, such as is here designed, with its simple, dignified lines, in order that it may have its proper setting of shrubbery, foliage of tree and flower garden. Otherwise much of the beauty and charm as well as the benefits to be derived from a house built on these lines is lost, and it does not seem to belong to its surroundings, to have grown out of them.



In plans shown on this and the opposite page it will be seen that an abundance of fresh air and sunshine may be had in every room, the large number of windows permitting of no dark corners.

ENTERING the hall from the front, one of the principal features which distinguishes this house is the absence of the usual stairway. Just why it has always been thought necessary to bring stairways into such prominence is difficult to understand, they are seldom used by callers, and add greatly to the difficulties of the heating problem. In this plan at least the square hall is allowed to be a hall, and to receive its individual treatment and decoration without the ostentatious newel post, or difficult stairway. The screen dividing the halls may be a solid wall, or partitioned with balusters or leaded glass in upper portion. This space gives an opportunity for the placing in the main hall of a grandfather's clock, seat, or whatever decoration the owner may desire.

A door connects this square hall with a smaller hall at the rear, from which the stairs ascend. They are with this arrangement accessible from kitchen and can be built at much less expense. One may pass up the steps from the back of the house unobserved by those in either living-room, hall or dining-room. This smaller hall, with cloakroom and lavatory adjoining, in turn leads back to an outside door opening on the garden.

One has but to consider the possibilities of such an arrangement to appreciate its advantages. In summer the doors may be thrown open from front to back, revealing the garden in its riot of color and allowing the breeze to pass freely through the house. The doorway at the rear being in such close proximity to the kitchen and pantry, it is possible with very few steps to serve tea on the lawn.

The living-room with its beamed ceiling and generous fire place gives ample scope for an artistic arrangement, and just here let me depart from the description of the building proper to suggest a treatment for the decoration of this room. French windows on each side of the open fire, two others at the front and one looking over the garden, give an abundance of light—therefore the room could be successfully decorated with brown as the prevailing color, brightened with soft mauve, a suggestion of brilliant green-blue, and deep brick or yellow red. If the beams in the ceiling and woodwork are brown, the walls might be given a soft yellowed gray in which there is a suggestion of mauve. The floor repeats the natural brown of the beams but is brightened with rugs in which appear mauve, green-blue, deep yellow red and a touch of brown — this last color being introduced that the rugs may seem to belong to the floor. These colors in chairs and window chintz will keep the room from heaviness. None but the most generous of fireplaces in dull greyed ochre tones could perfectly harmonize with such surroundings. Then the polished brass tongs and the glow of the firelight complete the picture.

FIRST FLOOR PLAN

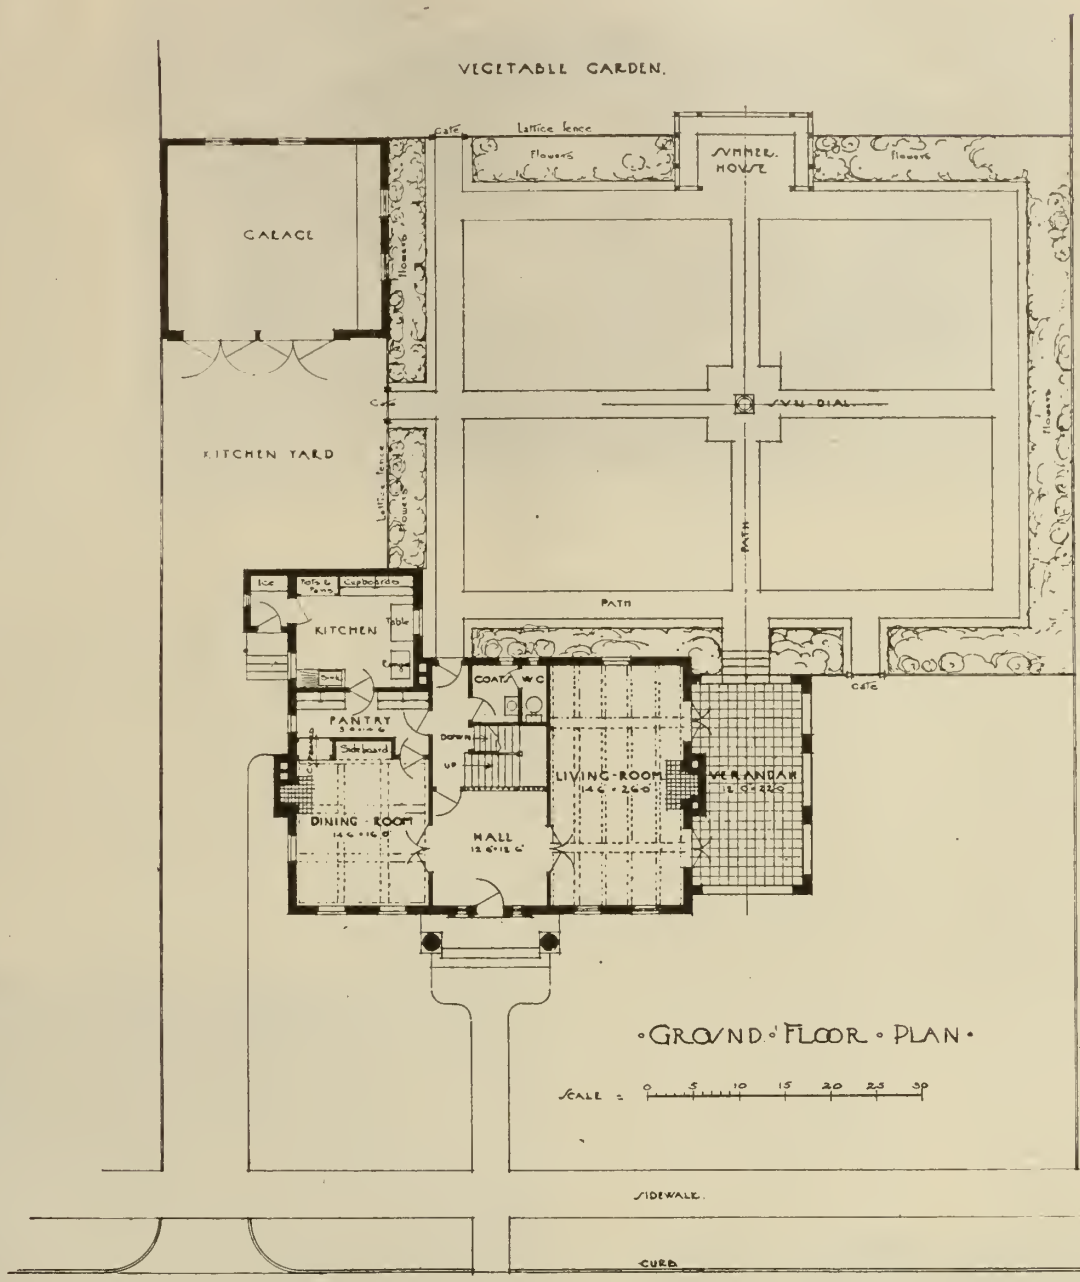
THE dining-room at the left of the hall also has an open fire to be used when occasion demands. The ceiling is paneled, the wall treatment a matter of taste. A recess is built in the wall adjoining pantry for the sideboard, thus an equal distance is provided for serving around the table. It will be noticed that a

(CONTINUED ON PAGE 13.)

The Home You Have Been Planning For—Ground Floor and Garden Plan

(CONTINUED FROM PAGE 12.)

cupboard opens into both pantry and dining-room for convenience in putting away clean dishes from pantry side and using them from dining-room side when setting the table. The provision of shelves and cup-boards in the pantry is generous enough to satisfy the most exacting.



But probably the room dearest to the heart of the housekeeper is the kitchen, and in its efficient planning lies the real secret of a successful house, for a score of years at least.

The kitchen shown in the plan is up-to-the-minute in kitchen efficiency standards, convenient in size and arrangement. The sink which is seldom "a thing of beauty" reposes modestly behind the door and a word of warning here should be sounded—insist upon the sink being placed high enough for those who will work at it. About one sink in five thousand is placed at the right height for comfort.

When the kitchen table is being built have the carpenter make another of slightly smaller size which will fit exactly under the first. If this is on casters it can easily be pulled out and brought into service when there is extra serving or baking.

A WINDOW above the table and one on the opposite wall permits a direct draught to sweep through the room when desired, a distinct advantage when the mercury is hovering around the nineties.

Another advantageous feature of this kitchen is the planning of the doors, which are so arranged as to allow no view of the kitchen from the dining-room.

The small service porch at the side of the house is an excellent place for the refrigerator, eliminating the necessity of cleaning muddy footprints on the kitchen linoleum after the ice-man's daily visit. Proper drainage can be easily arranged from this porch, and in a secluded spot away from draught there should be an appreciable lessening in ice bills.

ON the opposite side of the house is the large verandah with tiled floor. Steps go down from this to the garden, bordered with flowers, and a path leads past a sun-dial, bird-fountain, or whatever one fancies, to a small summer-house, an ideal spot for afternoon tea, or as a play-house for the make-believe fancies of the little people.

The second floor plan provides for four bedrooms, all well-lighted and with sufficient closet accommodation. Specially attractive is the owner's bedroom at the right, with open fire and sleeping porch.

The hall is square and well lighted, the recess beneath the window providing a suitable spot for a seat, the cover of which lifts, revealing a commodious chest.

THE cost of building such a dwelling depends entirely upon its location, accessibility and labour conditions. The architect has endeavoured to plan a style of house which would meet the needs of the great majority of CANADIAN HOME JOURNAL readers who are seeking for a house which, to quote from Ruskin, is "both useful and beautiful." It is designed to withstand the severe Canadian winter, and to give the fullest opportunity for enjoyment of the many summer pleasures. In other words, to be not only a house—but a home.

The One-Piece House is a Reality

THE one-piece concrete house, cast as a monolith, is at last a commercial reality, says *Concrete*. Proposed originally by Thomas A. Edison and experimented upon to a certain extent by that versatile inventor, it had been generally abandoned in favor of unit or "precast" construction. We are now told that the trouble with attempts at this kind of building has been the desire to get away from uniformity. There is no variety about a Ford machine, nor about an Ingersoll watch. They are cheap and successful because they are made of a few standardized parts and are exactly alike. So, we are assured, must be our cheap, standardized concrete houses, whether we like it or not. We read:

"Men who have been developing the concrete house—either in monolithic construction with unit forms or with precast units—all have labored with the besetting difficulty, elasticity in design without a multiplicity of confusing parts. That the system of construction must admit of architectural variety—not to say whim—has been a cardinal thought from the outset.

"C. H. Ingersoll, of Robert H. Ingersoll & Bro., whose watches 'made the dollar famous,' tosses that idea by the board; tells the architect and the town-planner he must contrive other means to variety in his housing enterprises.

"Mr. Ingersoll, with the help of Fred C. Fowler on concrete and Harvey Dodge on mill work, attacked the problem of housing, primarily for his own watch-factory employees, from a different standpoint. Of primary consequence was a small, livable house, sanitary and permanent, with no frills and at the lowest possible cost. The most important thing was quantity house production at low cost. As in making Ingersoll watches and Ford cars, quantity production at low cost is obtained by repeating certain operations over and over again—each time the same operation in the same way—repetition of certain unit operations was to be the basis of house construction. . . . . .

"The Ingersoll system utilizes concrete, as Thomas A. Edison proposed to do, in pouring an entire house in one piece—but with this important deviation from the Edison idea: Mr. Edison, taking into account the hydrostatic pressure of a column of concrete when poured from cellar to parapet, provided both top and bottom forms for floors; the Ingersoll system involves a trick of side-tracking the hydrostatic pressure and eliminating the difficulty of top forms for floors. Mr. Fowler, discussing this feature, points out that properly proportioned concrete, mixed so as to provide a flowing mixture without great excess water, will continue to flow only so long as the motion is continuous. Once stop the flow of a proper mixture of concrete, interrupt it for a few minutes only, and a preliminary congealing takes place in the material. It appears to be preliminary to actual setting. This fact is taken advantage of. Concrete is poured alternately from two sides of a structure. When the concrete flows out over the bottom floor-forms and comes to the desired level, pouring ceases at that place for a short time and the ensuing coagulation, so to speak, permits no further flow of concrete out of the opening in the inside forms where the floor is formed. . . . . .

"Before forms are completely erected and when exactly a certain stage of erection is reached, the plumber and the electrician are sent for; the conduits and pipes which are prefabricated are set in place in the walls with very few lost motions. In fact, the plumbing and wire conduits are all set up in five hours' time. . . . . .

"Twenty-four hours after the last concrete is placed, the forms begin to come down. First the wedges are driven from under the ten vertical posts on each floor. This permits the parts to drop down enough clear the concrete floor above into which they have projected. As these are the first parts required on the next job, they are the first parts removed. The trusses are then supported by the bolts passing through the walls, which now take the load first put on the posts."

The Herbaceous Border and the Vegetable Garden

By George R. Baldwin, F.R.H.S.

ILLUSTRATED BY PHOTOGRAPHS.

NOW that we are released from the burdens of War, and can once more turn our attention with renewed enthusiasm to those activities which were carried on before the great struggle, Horticulture may again take an important place in our thoughts. Although it is still necessary to produce foodstuffs, galore, we can at least devote a little time to the re-construction and the re-modelling of our Herbaceous Border. Outdoor work for the year begins in real earnest towards the end of this month, we therefore have none too much time to plan, and planning is absolutely essential to success.

In the matter of planning and arranging herbaceous borders, vast improvements have been made. The old straight lines of plants, graduated from the tall back row to the dwarf front row, have rightly given place to bold grouping and arranging of color, giving more character and originality. By giving due attention to the time of blooming of the several groups, it will never be necessary to offer apologies to any one visiting our borders, explaining: "If you had been here two weeks ago, you would have seen the Paeonies and Iris in their prime," or "If you will come two weeks later, the Delphiniums, Roses, etc., will be at their best." How often have we gone into a neighbor's garden, and noticed the galaxy of blossom, and two or three weeks later, gone into the garden again, and found practically nothing worth looking at. Let us avoid this and try to have a continuous bloom all season. While we do not all have sufficient space at our command to enable us to arrange for a series of seasonal borders, we can at least arrange to have perennials, with the addition of a few of the best annuals, and some blooming shrubs. These I strongly advocate to give this continuity of bloom from frost to frost.

NOW to accomplish this. Let us see how we can arrange the border with the Tulips, Hyacinths, Narcissus, Crocus and Snowdrops, which we planted with such care last October. Carpet the ground with close growing plants, such as Aubretias, Arabis, Pansies, Alyssum Gem and Saxatile, Forget-me-nots, Lobelia, Violas, dwarf Antirrhinums, Campanula Carpatica, etc., in the front three feet of the border and intersperse thinly taller growing subjects, that will grow through without smothering the carpeting plants, such as Statice Limonium, S. Tartarica, and S. Gmleni, Campanula Persicafolia, tall Antirrhinums, then following Liliums, Tenuifolium, Croceum (the real Belfast Orange Lily), Tigrinum, Fortunei, Speciosum Rubrum, Rosea and Album.

Immediately behind this front three feet, place a row of Rose Bushes, 18 inches apart, taking your choice from the following: Capt. Hayward, H. P., Caroline Testout, H. T., Hugh Dickson, H. P., Madame Ravary, H. T., Mrs. John Laing, H. P., Richmond, H. T., Duchess of Wellington, Killarney, Lady Ashtown, Madame M. Soupert, Hadley, Marquise de Sinety, all H. T's; C. L. Breslau, Austrian Briar, National Emblem, Hoosier Beauty, Lieut. Chaure, Lady Alice Stanley, Mrs. Andrew Carnegie, Molly Sharman Crawford, all H. T's, and last but not least the beautiful new rose that is in a class by itself, for fragrance, quantity, shape of bloom and hardiness, known as "Los Angeles" which is a cross between Mrs. Charles Pearson and Lyon Rose. In between the Rose bushes, plant 6 Gladioli, planting 3 on May 15th, and 3 on June 10th. Behind the roses plant alternately, Perennial Phlox, Delphinium, Rudbeckia Newmanii, Echinacea, and Sub Tomentosum. Helenium, Riverton Gem and Riverton Beauty, Flag Iris in variety, Lilium Candidum 4 in clump; Lilium Henryi the hardiest Garden Lily, Lilium Platyphyium, and a few more of the Lilium Speciosums, Paeonies in variety, and some of the taller growing Asters, etc., with here and there a plant of crimson Salvia, and one or two Cosmos. Reserve the back row for Hollyhocks, Helianthus, Heleniums, Perennial Asters, Chrysanthea Uliginosum, Coreopsis Testatium, and Lanceolata, Dahlias, Standard Hydrangea, and Standard Roses, with a blooming shrub at each end and one in the middle, such as Lilac Charles X, Deutzia Lemoine, or Philadelphus. And to climb on the fence at the back any or all of the following may be used, Tamarisc Indica, Clematis Jackmanii, the small fruited varieties of Tomatoes such as pear, cherry, plum and currants, which are splendid for preserving or pickling, Cucumbers, Squash, Cobea Scandens, or Grape Vines. This covering of the fence, especially if it happens to be of the close-boarded variety, will benefit the border greatly, through the excessive hot weather. At the end of the border and leading to Vegetable or Kitchen Garden, erect a bower or archway for the beautiful climbing Ramblers, such as Dorothy Perkins, Lady Gay, Crimson Rambler, Flower of Fairfield, or Tausendchon. An archway can be put up very cheaply, by getting two pieces of three-quarter inch pipe (second-hand) about 16 or 18 feet long, bending them in the centre to form the arch, placing them about 4 or 5 feet apart; then get some laths or sticks, and tie on with wire, horizontally, for the climbers to be tied to. Or a division between flower and vegetable gardens, can be had by making a rough, rustic fence, for the Ramblers, or anything of a climbing nature.

TO keep this border presentable, care and attention must be given, in cultivating, watering, feeding and spraying; keep the two or three toothed hoe going continually. The soil in between the plants requires stirring up to make it friable. Do not let it get hard and baked. Take the clippers or scissors to remove dead flowers, leaves, and limbs, also weak shoots. And besides watering when necessary (evening being the best time), the plants must be fed to bring out the beauty and richness of color, quality and quantity of bloom. To do this, it is necessary to sink a barrel half way down, in some out of the way place, and in the shade. Get some mixed manure if possible, place in an old bag, about six shovelfuls at a time. Throw it in the barrel, and if you cannot get rain water, use the hose and fill the barrel full. In two days remove the bag, and use the liquid especially for Roses, Paeonies, in fact for everything in the garden, if you have the time, but be assured that it will well repay for the trouble. A handful of Nitrate of Soda placed in the barrel every time you fill it will also be very beneficial.

BESIDES, "Praying without ceasing" you must "spray without ceasing" if you desire good results; arm yourself with a good Sprayer, (from 50c up), and Insecticides and Fungicides can be obtained ready mixed at the Seedsmen's, and commence in the early Spring by spraying everything with a weak solution of common borax water. As soon as the Roses begin to leaf out, be prepared for the horrid Green Aphis, which come in myriads, by giving them a dose of Nicotine. But for the small maggot or caterpillar, which destroys the foliage of roses, and nibbles into the underside of the buds, I do not know of anything better than the tedious method of handpicking, for if we put poison on strong enough to kill them, we injure the foliage and bloom at the same time. Then to avoid the brown or black spot which comes on later, we must spray with the fungicide known as Bordeaux mixture and later still when the wet weather sets in, bringing on mildew, we must spray with a solution of lime and sulphur. Although mildew usually comes after the blooming period, it must not be neglected, as that would be detrimental to next year's success.

The Vegetable Garden.

THERE is no gainsaying that the increase of our food supplies must be of untold benefit to the community at any time, and especially in these critical days, when hundreds of thousands of people in European countries are facing actual starvation, this matter cannot be brought too forcibly before us. For the very sake of the security of our national food supply, there is urgent need of a greatly increased production at home, and greater employment of men on agricultural land.

This Journal has been emphasizing for years that our home production of food would be infinitesimal were it not for our farmers, and a great deal of credit can also be given to Horticultural Societies and Vacant Lot Cultivation Associations, which of late years are rising up and growing strong. Giving one instance, the Toronto Vacant Lots Cultivation Association, in co-operation with the Rotary Club of Toronto, last year had no less than 2,060 vacant lot gardens under cultivation, of an average size of 4,000 square feet each, the products of which (vegetables only) is conservatively estimated at about $75,000.00, and when you consider that this vacant land in and around the city would otherwise have been growing weeds, I am sure you will agree that organizations which take up this work deserve the thanks of the community at large. Every city, town, village and hamlet in the Dominion should get in the game, for there is nothing that develops the country's resources like the home production of food.

Herbaceous Border, so chosen that it blooms throughout the entire Summer.

There are many who would willingly do their share and

even more, in the national work of food production in home and vacant lot gardens, but they have only a vague idea of commencing to cultivate a vacant lot. These are the people who need helpful advice from Horticultural Societies and the writers of articles in this and other journals.

INSTEAD of "First catch your chicken, then cook it," paraphrase it into "First get your vacant lot, then cultivate it." This can be accomplished by applying to associations handling lots, or direct to the owner of vacant and idle land. Then get busy, and if it is not plowed for you, get someone to spade or fork it over deeply, but here let me say a few words on manuring, which is a very important matter in horticulture, and a source of mystery to the average would-be back-yard or vacant lot gardener. It is necessary to manure the soil to render it fertile or sweet to a proper consistency for producing vegetables. The manure acts as a plant food, supplying the necessary mineral salts, in which the ordinary soil is deficient. Natural manures are preferable to artificial, and the long, strawy variety is the best for a heavy soil. Cow, pig or hen manure should be used for light loam and sandy soils. If these cannot be obtained, do the next best thing, get artificial, but by all means, one or the other.

For tap-roots or vegetables which grow in the ground, dig the manure in deeply; if for vegetables which grow above the ground, incorporate it thoroughly with the soil. Next to manuring, comes the question of lime. Our forefathers used too much; our fathers used too little; let us strike the happy medium, and get good results. It removes the sourness and acidity from the soil. It also acts as a plant food, besides being an insecticide.

We must now consider the rotation of crops; if the land was cultivated last year, so arrange that the tap-roots, such as beets, carrots, parsnips, etc., be planted where the legumes or vegetables which grow above the ground were growing last year, and potatoes where tap-roots grew, rotating the three classes yearly. Next comes the intercropping, or in other words, not letting the ground be idle for the balance of the year, where you have already taken off a crop of early stuff. This is what is called intensive cultivation. To give an example: About the middle of May, select the spot for some early cauliflowers, set out in rows 3 feet apart, plants 2 feet 6 inches apart. About the middle of June, Brussels sprouts, kale or cabbage can be planted in between the cauliflowers, and in between the rows, turnips, radish, lettuce, beets or carrots may be sown for a late crop. Remove the cauliflowers as they mature, and hoe the ground deeply. This will be found satisfactory, and this idea can be extended, altered and elaborated upon in various ways, but the idea is to have no idle land during the growing season.

Again, due attention must be given to thinning and planting, to give ample room for everything to grow properly, and not be crowded, as nothing is gained by overcrowding. Peas and beans in particular require lots of space between rows. Thin out the plants not required when quite small, to create that great benefit, aeration, and eradicate weeds. The hoe must be kept going continually, to conserve moisture. During the very hot period, if possible, the hose should be brought into requisition. Take the nozzle off, and put the water, a goodly supply, in between the rows, then in a day or two run the hoe through again. Don't forget that the liquid manure barrel is just as essential, if not more so, in the kitchen garden as it is amongst flowers. An occasional good soaking with manure water, during the growing season, will give excellent results with onions, celery, tomatoes, cauliflower, in fact everything.

Have a supply of stakes and brush ready for the tomatoes and peas, using four stakes to each tomato plant, and for the peas, the brush or sticks may be put in vertically as soon as the seedlings appear, and they will do their own tying.

Preparing the Garden for its Spring verdure.

PROPER distances to sow and plant must be given attention to. Cabbage, cauliflowers, and Savoys should have 18 inches apart each way, and be kept cultivated till foliage prevents. Beets, onions, carrots, parsnips, salsify and white turnips should have the rows 18 inches apart, and thinned out to 4 or 5 inches apart. Swede turnips, rows 2 feet apart, and 8 inches apart in rows. Tomatoes, when trained on four stakes, should be planted 3 feet each way, to give room for getting in between stakes to do the tying and cultivating. Peas and beans should have rows 2 feet apart, seeds to be staggered in the rows 6 inches each way. Corn should be staggered in hills 2 feet apart; sow 10 seeds to a hill, and thin to five stalks. Lettuce, radish and cucumbers may be sown in between rows of corn. Potatoes do best when planted in rows 2 feet 6 inches apart, tubers 10 inches apart. Take a potato the size of your closed fist, and cut it into three pieces longitudinally, planting them 5 inches deep in light soil and 4 inches deep in heavy soil. As to varieties of vegetables, the following will be found to give the very best results:

Onions — Red, White and Yellow Southports, and Yellow Globe Danvers.

Beets — Flat Egyptian for early, Cardinal Globe and Long Black Detroit for late.

Carrots—Chantenay, Early Nantes, and Carter's Red Elephant.

Parsnips—Hollow Crown and Sutton's Surrey.

Peas—Marrowfat, dwarf, and Telephone for tall.

Beans—Wardwell's Kidney Wax.

Cabbage—Early Jersey Wakefield and Henderson's Summer.

Cauliflower—Erfurt and Snowball.

Lettuce—Brittle Ice, Grand Rapids and Boston Market.

Savoy—Drumhead.

Swede Turnip—Purple Top.

Radish—French Breakfast and White Icicle.

Celery—White Plume, Paris Golden and Rose-ribbed Paris.

Corn—Golden Bantam for dwarf and early, Country Gentleman and Stowell's Evergreen for tall and late.

Potatoes—Early Rose, Cobbler, Delaware, Green Mountain, Carman, Rochester Rose and Beauty of Hebron.

No. 1: Tools required to start the garden indoors.

Possibilities of the Hot Bed.

WE have decided to go a little deeper into the matter of raising our own seedlings and showing the possibilities and advantages of raising our own plants. Location: The plot should be facing south and shielded from the north by a fence or hedge. Make your frame of 2-inch plank and of such a size as will enable you to use sash 6 feet long by 3 feet wide, according to the number of the sashes required Then get the required quantity of fresh horse manure and pile in a heap to start to heat, turning it over into similar heaps twice in four days.

Four days after the last turning it should be ready for use; level it off to a depth of 18 inches and place the frame on top. Be sure to tramp the manure down well in layers, then put the sash on and leave for three days, tramping the manure down again at the end of that time, then put on 6 inches of soil (fairly good), having the top of the soil not more than 6 inches from the under side of the sashes, sloping the whole 6 inches in 6 feet, so that the rain will shed off.

In four or five days the bed will be ready for the seeds. Make sure that the heat is not over 80 degrees, then rake over and level the soil, sowing the seeds in rows 4 inches apart, running north and south in shallow drills. Regulate the heat by raising the sash a little at north end, closing up at sundown and covering with mats or straw at night, and see that the frame is banked up to the top with more manure on the outside.

AS soon as the young plants appear, more air should be given, so that they will not become spindly, watering only at noon time when absolutely necessary.

In a cold frame (which is made in precisely the same manner, except that no manure is used, and which can be used for the same purposes as a hot bed) germination takes longer. Its principal use is in hardening off plants that have been raised in hot beds or greenhouses, before putting them out into the open garden.

No. 2: After first planting of seeds.

By starting your hot bed the early part of March you will have good, stocky plants by May 24th, which is the date for planting out. The next question is what seeds to sow.

Three kinds of onions—Red, White and Yellow Southports.

Three kinds of tomatoes—Chalk's Early Jewel, Earliana and Beauty.

(CONTINUED ON PAGE 67.)

Oh, What a Tangled Web!

By Nan O'Reilly

ILLUSTRATED BY E. J. DINSMORE.

In a Most Unorthodox Manner Jean and Jerry Became Engaged, and Afterward Very Unexpectedly Fell in Love. The Climax, However, Came In Quite the Customary Manner

"'I'm sorry, Jean,' she heard him say, 'I didn't think you'd mind so much.'"

WITH the deftness of long practice, Jean Peyton fastened a last loose end of yarn, and then held up for inspection a well-made khaki sweater.

"Come here, Jerry," she commanded the young officer lounging on the steps. "Let's see if it goes over the top or catches on your ears. They look about regulation size."

"One of them has five stitches in it, and both are pearly. Is that O.K.?" grinned Jerry Lewis, as he untangled his long legs and bent down patiently to have the garment slipped over his head.

"Guess I'm a pretty well-knit kid, huh?" he demanded as his head emerged and he swelled out his chest. "But, say, Jean, this is too good to pass along. I'm going to keep it."

"It's the twenty-sixth I've passed along, Jerry, besides all the other things I've done, but it's not enough," the girl said with sudden intensity, all the laughter gone from her face. "A Bolsheviki rebellion is mild to what's going on inside me to-day. I feel as if I had to do something sacrificial."

The man looked at her in quick concern, the note of passion in her voice had followed so unexpectedly on their raillery.

"You needn't look so woe-begone, though. I'm not going to get violent immediately. It's just that I've been a seething volcano for weeks, and to-day when I met that idiotic Cary Jacobs I felt that an eruption was imminent."

"Phew! revolutions and volcanoes all in a jumble. This is hot stuff," objected Jerry, lighting a cigarette. "What was wrong with Cary? Did she carry on?"

"OH, Jerry, haven't you learned that the pun is the lowest form of wit?" asked Jean, sadly. "But the fact is she doesn't 'carry on'; none of that crowd does. They're a bunch of slackers, that's what they are; but because two or three of them have little shrimps of brothers safely tucked away in the Ordnance Department, they can lord it over me. What does my knitting or sewing or bandage-making amount to when they can wave it all aside with a simple, 'Oh, yes; you know my brother's in the service'? If I only had a brother, wouldn't I be glad to send him away—but to really fight, as you're going to do. Then my words would mean something. Why, Jerry, all winter they've criticized every move the Government's made, and instead of working, sat around eating up the sugar and white bread till I thought they'd expire. But I haven't so much as a cousin to send, let alone a brother or husband."

"WELL, why not a lover?" suggested the man, hopefully. "Why don't you get engaged?"

The girl smiled at him ruefully.

"You make it sound awfully easy, Jerry, but produce the victim. One doesn't do it that easily in this little town."

"I suppose that's so," he pondered, rubbing his head. Then he looked at her quizzically. "You wouldn't consider me as a possible eligible?"

Jean's laugh rang out down the quiet street. It was a charming laugh—the sort that invites others to join in.

"That's a good one, Jerry. If you had said, 'Let me be a brother to you,' I'd have fallen on your neck, but I've seen you too often to retain any illusions."

The man was leaning towards her in a sudden mixture of fun and earnestness. A line of colour had run up his lean jaw and a sparkle had come into the keen eyes.

"I say, Jean, it's not a bad idea," he persisted eagerly. "I'm going away the day after to-morrow. You wouldn't have to keep up the bluff or stand me around long; and when I come back—if I do," he added quickly, "we can have a lovers' quarrel, be just friends and nothing more; you know the line. No one would be the wiser. You would have a weapon against the slackers, and my share would be at least a weekly letter from one Jean Peyton. Otherwise, you see, there isn't anyone in the way of a girl or woman who would write to me that I'd care to hear from, and perhaps if I were your honest and true 'gemmen friend' I could count on more than those brief death notices about the dogs or such like that you used to favour me with at college."

The girl was looking at him with wide, somewhat startled eyes.

"Oh, but, Jerry, it's so ridiculous. It almost doesn't seem respectful—getting engaged is such a serious thing."

"Come on, Jean, be a sport. It's just a game, and you do like me, don't you? Remember Cary Jacobs," he warned, and with a sudden laugh she gave him her hands.

"All right, my beloved; to-morrow night at the dance we'll explode our bomb," he exclaimed gleefully. "In the meantime, I shall wear this sweater as a sign I'm your true knight, though the mercury climbs to heaven and I'm court-martialed for breaking regulations."

"You will like ducks!" laughed Jean. "But as for me, I shall be off to dream of my melting lord, and so farewell." She disappeared, but, glancing back, he saw her leaning from the window. "Don't forget the picnic in the morning, Jerry," she called. "Eight bells we start."

ALL the time she dressed the next evening, a persistent, subtle singsong kept humming through Jean Peyton's brain.

"You're engaged to-night; you're engaged to Jerry. Look your best."

Every time the thought flashed its message, an answering signal would flame into her cheeks, so that by the time the last hook of her lovely gown was fastened the girl was startlingly radiant. She went down the stairs almost shyly, knowing he would be at their foot awaiting her. It seemed very queer to be shy with Jerry—Jerry who had taught her to ride and shoot, skate and swim; who had taken her to proms. as a matter of course. There was for Jerry, alas, a strong element of the unusual in the situation when he saw his playmate, strangely transformed in a day into someone remote and alluring, knowing that in an hour he was to announce to his little world sole ownership in anything so lovely. For with each, unknown to the other, the long picnic day spent together with the new bond between them, had played odd tricks, and they stood now staring at each other solemnly, until Jerry, with a little shake, thrust his hand into his pocket and, drawing out a jeweler's box, produced an exquisite ring—a great, blue-white diamond in a deep setting.

"For me?" the girl breathed. "Oh, Jerry, that wasn't in the game."

"Game?" the man frowned quickly. "No, Jean, aside from all that, there isn't anyone I'd want to have mother's ring but you. She was very fond of you, and so leaving our—our engagement out of it, I've had the ring reset as a gift from her. You see, I'm pretty hard to kill, but I may not come back, and it saves me the trouble of making a will. Anyway, what's an engagement without a ring—sounds like 'What is home without a good mattress'?"

Jean was swallowing bravely, but an enormous lump seemed to have come from nowhere into her throat, and her eyes grew misty.

Jean radiant, as Jerry was fast discovering, was a creature to be reckoned with, but Jean with tears in her eyes was almost too much for any man.

In sudden desperation, he plunged into another pocket, and drew forth a second box, from which appeared a service pin flaunting a single leaf.

"Come on, cry baby, what do you wish?" he teased, but Jean's wish as she held out her hand for the little token remained a silent one: "If only it weren't all a game!"

IT seemed to Jean as she came into the Country Club ballroom that the diamond on her left hand was flashing like a search light into the four corners of the room. She expected everyone suddenly to surround them, and in her panic felt like bolting from the room.

But it took some time for the news to circulate, and when it did she was floating away to a wonderful waltz—almost no one did the new waltz as well as Jerry—and Jerry's strong arm was like a bulwark against which the 'oh's' and 'ah's' of surprise could rebound.

"Yes, they've known each other so long."

"Did you know it this morning?"

"Will they be married before he goes across?"

Jerry chuckled wickedly as the last reached his ears, and the girl blushed adorably, but on the whole the brief wisps of questioning that buzzed around her only added sparkle to her eyes and brought the ready laughter to her lips.

She was always especially popular at dances, but to-night her new prominence, and the air of excitement that seemed to radiate from her made it doubly hard to secure a dance, and finally, after persistent cutting in, Jerry stole her away to the terrace.

"See here, young lady, is this the way you treat me?" he demanded crossly. "I think I'll have to resort to my old hair pulling to restore obedience."

How We Get Our Oranges

A story of the Orange, how it is grown, and the manner in which it finds its way to our tables.

The home of the orange in Southern California. Thousands of acres are watered from the snow-capped mountains in the background.

The golden fruit, brilliant foliage and glistening mountain background make a beautiful picture.

Pickers all wear gloves and clip the fruit from the trees with specially designed scissors.

IF all the boxes of citrus fruit shipped from California last year were placed end to end, the line would reach from Los Angeles to Gibraltar, a quarter of the distance around the earth, or a little further than the distance from the North Pole to the Equator.

Seventy-five years ago the orange was a novelty in California. It had been brought first from Spain by the Jesuit monks. But the little, sour, seedy oranges of that time were far inferior to the glorious fruit now shipped out of California. To-day the oranges from California, winter and summer, are practically seedless; they are sweet and juicy and of beautiful color and contour. To-day's orange is the product of years of human endeavor and scientific skill. And as to quantity: last year alone, 45,000 carloads of oranges were sent out of California to supply the tables of all North America. In addition to the oranges there were 8,155 carloads of lemons. Each carload comprises about 400 boxes.

Beginning with the early Catholic missions in California, the orange grew in favor. More and more orange trees yielded up their fruit for domestic consumption. With the completion in the seventies of the railroads to Southern California, far-seeing men began to commercialize the fruit.

The first carload of oranges was shipped from California in 1877. About this time as if Fortune had selected Southern California for her bounty, a great horticultural discovery was made by a representative of the United States Department of Agriculture who was travelling in Brazil. On a ranch near Bahia this traveller came upon orange trees which produced seedless navel oranges. To the department in Washington he sent a few of the small trees. The authorities there produced others from the original trees and sent two to Riverside, California, for experimental purposes. These trees known as the Washington Navel, are the original progenitors of tens of thousands of Washington Navel orange trees in the orange growing country. The original parent trees are still blossoming and yielding fruit in a favored sanctuary at Riverside where they are tended and cared for as befits a distinguished ancestor. This was the real beginning of Southern California's great citrus industry.

THE business of raising citrus fruit in California has been increasing year by year and still the production is not out-stripping the demand. In this connection it must be remembered that California is not the only source of supply. The world's production of citrus fruits is divided as follows:

One of the two parent navel orange trees taken to California in 1873. There are now more than twelve million descendants.

California	22	per cent.
Gulf States	11	" "
Spain	28	" "
Italy	24	" "
Japan	5	" "
Palestine	3	" "
Other	7	" "

It is particularly noteworthy that California oranges and lemons may be had fresh daily the year round. The Navel orange crop is picked and shipped each day from November to May. From May to November, and even later, fresh ripe Valencia oranges are marketed. Lemon trees at one and the same time show fruit in all stages of development from the blossom to ripe fruit. Lemon trees are stripped about every four weeks of all fruit which is ready for picking.

Science has been utilized to citrus growing, a greater degree in California than in any other district and as a result California oranges and lemons are taking the lead in quality and quantity.

Expert pickers who gather the fruit from the trees wear white cloth gloves; for the slightest finger-nail puncture of the orange skin is likely to cause decay in shipment. Special clippers are used to cut the stem close to the fruit; for a protruding stem may puncture the skin of a neighboring orange in the box. It is not an exaggeration to say that California oranges are handled as gently as eggs. The pickers are careful to avoid rough handling of the fruit. They carry a special bag which unbuttons at the base, allowing the fruit to be released gently into the field box. None of the fruit is dumped. The field boxes of ripe oranges are transported on wagons or auto-trucks equipped with springs to save the fruit from being jostled and bruised.

AT the packing house the oranges are cleansed with warm water in special washing machines. From the washing machines the oranges go through a cool spray of water to the dryer and thence to the grading tables. Only experts can work at the grading tables. Here the thousands of oranges move along on endless canvas belts and as they pass under the keen eyes of the operators, they are graded according to quality as indicated by formation, color and texture of skin.

From the grading tables the oranges move on a belt to the sizers. Here they pass along revolving rollers until the graduated width between the rollers allow the fruit to pass into a bin. Each orange finds its right place in this machine and eventually

(CONTINUED ON PAGE 18.)

THE INSIDE OF AN ORANGE PACKING HOUSE.

After the fruit is gathered it is thoroughly washed in warm water and cleaned by brushes, as shown in the first picture. Then it is graded according to size and quality. Before being placed in position each orange is wrapped in tissue paper. Then a machine closes the box, as seen in the last picture, and the fruit starts on its long journey.

How We Get Our Oranges

(CONTINUED FROM PAGE 17.)

rolls into a receptacle where hundreds of other oranges of similar size await packing.

The packers, most of whom are women, work alongside the bins into which the oranges roll from the sizing machine. Each packer fills from 50 to 75 boxes a day. Like the pickers, they wear white gloves. With lightning rapidity the packer takes an orange in one hand and a tissue wrapper in the other, rolls the orange in the proper place by a deft movement and places it in the box with one hand even while the other hand is reaching for another orange.

At each packing house the orange and lemon boxes are put together from box material already cut to size. Machines for this purpose turn out the boxes with such great rapidity that the man who pastes on the colored labels is forced to hurry or fall behind the box-making machine. As the boxes are packed with oranges, the tops are nailed on tightly and a steel girdle or "strap" is nailed on to keep the box intact until it is opened by the retail dealer.

DURING winter months the filled boxes are trucked directly into an insulated refrigerator car which protects the oranges from freezing, where they are piled in an orderly manner and tightly wedged to avoid disturbance en route. Something over 400 boxes or about 60,000 oranges, go into each car. In summer the packed boxes are often sent to a pre-cooling plant where they are brought down to a low temperature and then quickly placed in an iced refrigerator car. This car is re-iced at various points along the route.

The operation of a citrus ranch invariably proves deeply interesting to the uninitiated. The magnitude of the industry in California is most impressive when one considers the brief time in which it has been developed. The total California acreage now devoted to lemons and oranges is approximately 205,000 acres. Nearly every foot of citrus orchard must be irrigated. For this purpose water is brought down from the mountains and pumped from great wells for distribution at certain periods into the long avenues between the rows of trees. The single feat of bringing water from the mountains to the orchard is in itself an engineering triumph. Fancy the herculean task of carrying sufficient water scores of miles to irrigate a tract of 312 square miles and then remember also that these 312 square miles are not in one compact tract but are divided into thousands of small tracts widely separated in many instances. In the citrus country there are only three months of the year in which rain occurs. Throughout the remaining nine months of the cycle, the aqueducts must provide water for the trees.

WATER is not the only thing which California growers must supply to their groves. Artificial heat also must be in readiness; for frosts are not unheard of at certain seasons of the year. To guard against these cold spells, groves should be plentifully supplied with small stoves. In most cases there is a stove for each tree. The most common orchard heater is a sheet iron affair in which paper, kindling and coal are laid ready for instant service. Crude oil is also coming into general use as a fuel for the heaters. On a cold night the touch of a torch starts the fire and the tree then is enveloped in heat, as it is usually only necessary to raise the temperature a few degrees to avoid danger which wards off the threatening frost. In most large ranches there is a complete telephone system. Thermometers are hung at regular intervals. During the nights a watchman makes his regular rounds. If he notes that the mercury is approaching the danger mark he telephones the foreman who in turn arouses the ranch hands and sends them on their routes to light the heaters. Besides continuous vigilance against frost, the growers must also keep up a perpetual fight against pests of various kinds. The larger ranches employ entomologists who keep up a close acquaintance with each tree and watch for unwelcome inhabitants. In the lemon groves it is necessary at regular intervals to fumigate each tree. The fumigant is administered by covering the tree with a tent under which the hydrocyanic gas is released so that it acts upon every part of the tree's surface.

IT has been ascertained that it costs about $10 to bring an orange or lemon tree into bearing. The cost is not surprising when one considers all the care and ingenuity required to bring the young tree to maturity.

A large citrus ranch is almost a complete community in itself. At one of the biggest ranches in Southern California, a fair specimen of the more important ones, there are no less than fifteen large buildings. The largest of the buildings is the packing house where the fruit is washed, dried, wrapped and packed to be shipped by trolley to the main railroad line. Another building houses the chemical laboratory, the sales manager's office and the offices of the owner, ranch manager, irrigation engineer, clerks and others. Another large building serves as a club for the officers and white employees. Here at noon the men are served a proverbial farm meal with gallons of delicious lemonade. Next to the dining room is a large room completely equipped with billiard tables, piano, magazines and other paraphernalia for amusement and culture. Cozy bungalows of various sizes are furnished to officers with families; a large dormitory houses the bachelors, each of the men having a pleasant room connected with shower baths. Tennis courts close to the club house are in great demand. Only a few of the larger packing houses employ Jap packers. Most of the houses utilize women packers drawn from the nearby towns.

THE Japanese packers always maintain their own exclusive community within a community. They elect one of their number as steward and cook, each member of the community paying his pro rata share of the expense of food and other supplies. Fish and rice constitute their chief fare and so cheap is their living that each little workman is able to send considerable amounts to relatives in Nippon. None but men are in the Jap Colony. Wives, mothers, sisters and sweethearts await their return to the Mikado's realm as soon as the workman has stored up enough money to assure comfort in old age. Fathers and sons working side by side are not an uncommon sight in the packing house. A gratifying attribute of the Jap workmen is their meticulous cleanliness. A feature of their living quarters is the bath house where a huge concrete swimming tank with running water is the scene of their careful ablutions morning and night.

The Mexican field laborers are housed in another dormitory half a mile from the Japs. The ranch officials supply them with the best of food and plenty of it. Shower baths are afforded to the Mexican workmen. The Mexicans are employed exclusively in the groves, cultivating the young trees, pruning in season and picking the fruit periodically. White gloves are worn in the picking operation.

THE native beauty of the average citrus ranch (usually known by the Spanish word "rancho"), excites the enthusiastic comment of visitors. Imagine if you can the hundreds of orange trees in full blossom under the subtropical sun. The sweet perfume of the blossoms is omnipresent. Lift the eyes and they take in the snow-capped peaks of long mountain ranges. On a clear day one may see Mt. Baldy from fifty to eighty miles distant. The appearance of the mountains changes month by month. Snow gives way to patches of bright green verdure. Later, when the dry season is at is height, the high slopes are covered with brown in varying shades. The temperature seldom is oppressive except when a wind sweeps down from the hot desert. More frequently in the early evening there is a breeze from the Pacific.

AFTER nightfall the thermometer takes a sudden drop and from then until sunrise in the winter danger period the thermometers must be watched sharply. Disastrous natural conditions sometimes do great damage to the citrus crop in a single night or day. In 1913 a hard frost defeated the efforts of man to save the crop. Fortunes were lost in a night and for months there was a shortage of oranges in the East. Four years, later, in June of 1917, a sudden period of intense heat literally burned the fruit on the trees. So intense was the sun's rays that maturing walnuts were completely shriveled. The 1917 heat wave did away with almost 75 per cent. of the crop of navel oranges. A peculiar result followed. With 75 per cent. of the fruit gone, the complete energy of each trees was centered upon the remaining 25 per cent. of fruit. When picking time came around the remaining oranges were of unusually large size. There were only a few, to be sure, but they were giant oranges.

The rapidly growing conviction among physicians and laymen that oranges are the most healthful fruit is largely responsible for the growing popularity of this fruit. More and more are oranges coming to be the favored fruit for children. Thousands of doctors prescribe orange juice as the only food, aside from milk, to be given to infants. For adults the orange is the ideal fruit.

But it is not its healthfulness alone that has placed the orange in the lead. As several authorities have pointed out, it is one of a few fruits which furnish their own germ-proof package. From the tree to your hands the orange comes free from contamination. When you remove its skin the meat and juice are revealed in all their purity and deliciousness. No other hands have tampered with them. "Oranges for health" is more than a catch-phrase: it is truth itself.

Who Goes There?

(CONTINUED FROM PAGE 11.)

"Please answer me, Karen."

"You know," she said, "that unless you let me sleep I—couldn't rest—like this. Don't you?"

"Are you not comfortable?"

"Yes. . . . But that has nothing to do with it. You know it."

He murmured something which she did not catch.

"I don't *care* to rest this way if we are going to remain awake," she whispered.

"I am asleep," he replied, drowsily.

Whether or not he was, she could not be certain even after a long while. But, in argument with her conscience again, she thought she ought to take the chance that he was asleep, because, if he were, it would be inhuman of her to lift her head and arouse him.

Meanwhile the train moved ahead at a fair speed, not very fast, but without stopping. Other trains gave it right of way, hissing on sidings—even military and supply trains which operated within the zone controlled by General von Reiter's division. The locomotive carried several lanterns of various colors. They were sufficient to clear the track for that train through that strip of Belgium to the Luxembourg frontier.

Hills, woods, mountain streams, stretches of ferny uplands, gullies set with beech and hazel flew by under the watching stars.

Over the fields to the west lay what had been Liege. But they swung east through Herve, past Ensival, then south by Theux, Stavelot, over the headwaters of the Ourthe.

Forest trees almost swept the window panes at times; lonely hamlets lay unlighted in darkened valleys. Karen's blue eyes were shut, and she did not see these things. As for Guild, he lay very still, wondering how he was to get the papers—wondering, too, what it was about this girl that was making this headlong, nerve-racking quest of his the most interesting and most wonderful journey he had ever undertaken.

They were not asleep, but they should have been. And in separate corners. Conscience was explaining this to her, and she was really trying to find relief in sleep. Conscience was less intrusive with him, except in regard to the papers. And when it had nagged him enough, he ceased wondering how he was going to get them, and merely admitted that he would do it.

And this self-knowledge disturbed him so that he could scarcely endure to think of the matter and of what must happen to their friendship in the end. Sorrow, dismay, tenderness possessed him by turns. She seemed like a slumbering child there on his shoulder, softly fragrant, trustful, pathetic. And he was pledged to a thing that might tear the veil from her eyes—horrify her, crush her confidence in man.

"I can bribe a couple of old women," he thought miserably—"but it's almost as bad as though I did it myself. Good Heavens!—was a man ever before placed in such a predicament?"

And when he couldn't stand his horrid reflections any longer he said, "Karen?" again. So humbly, so unhappily that the girl opened her blue eyes very wide and listened with all her might.

"Karen," he said, "in a comparatively short time you won't listen to me at all—you won't tolerate me. And before that time is upon us, I—I want to say a—few—words to you . . . about how deeply I value our friendship. . . . And about my very real respect and admiration for you. . . . You won't let me say it, soon. You won't care to hear it. You will scorn the very mention of my name—hate me, possibly—no, probably. . . . And so now—before I have irrevocably angered you—before I have incurred your—dislike—I want to say—if I may—that I—never was as unhappy in all my life."

Lying very still against his shoulder, she thought: "He does not really mean to do it."

"Karen," he went on, "if you don't find it in your heart to spare me this—duty—how can I spare myself?"

She thought: "He *does* mean to do it."

"And yet—and yet——"

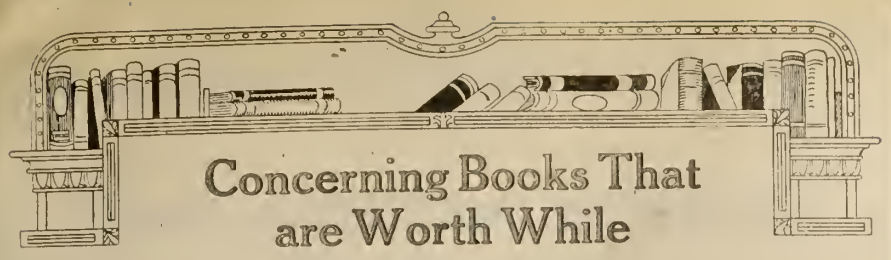
"He won't do it!" she thought.

"There never has been a coward in my race!" he said more calmly.

"He *does* mean to do it!" she thought. "He is a barbarian, a Hun, a Visigoth, a savage! He is a brute, all through. And I—I don't know what I am becoming—resting here—listening to such—such infamy from him! I don't know what is going to become of me—I don't—I *don't!*"

She caught her breath like a hurt child, hot tears welled up; she turned and buried her face against his arm, overwhelmed by her own toleration of herself and the man she was learning so quickly to endure, to fear, and to care for with all the capacity of a heart and mind that had never before submitted one atom of either mind or heart to any man.

What had happened to her? What possessed her? What was bewitching her that from the first instant she had laid eyes on him she seemed to realize she belonged with him—beside him! And now—now a more terrifying knowledge threatened, menaced her—the vague, obscure, formless idea that she belonged *to* him.



Did it mean she was in love! Was *this* love? It couldn't be. Love came differently. It was a happiness, a delight, a firm and abiding faith, a sunburst of self-revelation and self-knowledge. It wasn't tears and conscience and bewilderment, and self-reproach—and a haunting fear of self—and a constantly throttled dismay at her own capability for informality—the informality, for example, of her present attitude! And she wept anew at her own astounding degradation.

Love? No, indeed. But a dreadful unaccountable exposure of her own unaccountable capacity for familiarity! That was it. She was common—common at heart, common by instinct. She had thought she had a will of her own. It seemed she had not. She had nothing!—nothing admirable in her—neither quality nor fineness nor courage nor intellect. It must be so, or how could she be where she was, blotting her tears against the shoulder of a man she had known two days!—biting at her quivering lip in silence there, miserable, bewildered, lonely—lonely beyond belief?

After a moment she said, without emphasis, and thoughtfully, as though in self-communion to make things clearer to herself:

"I'm really well born. You might be pardoned for not thinking so——"

(CONTINUED ON PAGE 54.)

Concerning Books That are Worth While

---and Some Others

By Owen E. McGillicuddy

A Chance to Live, by Zoe Beckley. Published by The Macmillan Co. of Canada. Price, $1.60.

THIS is a little gem of a novel, written by one of the feature writers of the New York "World," who amply demonstrates that she has a very unusual gift for observing human nature in its various manifestations in a large city.

Miss Beckley was urged to write this book by Miss Kathleen Norris, several of whose stories have appeared from time to time in the pages of the CANADIAN HOME JOURNAL. In a brief introduction, Miss Norris pays a tribute to Miss Beckley's ability, and tells how the story came to be written. "After two years of waiting, Miss Beckley has written the story which I asked her to. She showed it to me a few nights ago, and I laughed and cried over it as usual. It is the story of one small, ambitious, wistful, life-hungry girl—Annie Hargan—lost in the lower regions of New York like a hundred thousand others, climbing and hoping in spite of the pitfalls and despairs that we leave in the path of such girls, studying life with half-puzzled and half-frightened eyes, holding tight to the miraculous truth of her own soul—as so many girls mysteriously do in spite of all our civilization does to crush it and them.

"And if it comes to you to wonder how many other girls' feet are going to naturally and simply follow Annie's feet, and how many other girls are going to find the solution where she finds it—well, Zoe, Annie and I can only assure you that the facts are these—and we are dealing in this life with facts.

"For me it is only to bespeak your interest and affection for little Annie Hargan as she steps shyly but courageously into the world of loved heroines of fiction. And like Napoleon's irrepressible laundress, or like the curtain-raiser who nodded a last reassurance to Galli-Curci when she made her first bow to us, I take the privilege to wish her godspeed on her new way, and with her toil-worn and tired but strong little hands in mine, allow me to say, 'Ladies and gentlemen—Annie.' "

This column is pleased to recommend this book to the many readers of the CANADIAN HOME JOURNAL, because in it they will not only have the pleasure of reading a tale well told, but will also receive a knowledge of conditions as they affect many of our girls in the large cities of America. It is one of the few novels of this season which will afford complete satisfaction to all who do read it.

Democracy in Canada, by John D. Hunt. Published by The Macmillan Co. of Canada. Price, 50c.

A LITTLE over a year ago, The Macmillan Co. of Canada, Limited, published a volume by Mr. Hunt, dealing with the cultivation of good citizenship, under the title, "The Dawn of a New Patriotism." This work proved to be of such value and was so well received by the reading public that the first edition was exhausted as soon as it had been issued. When the second edition appeared, it was decided to add an additional chapter dealing with the development of self-government in the Dominion. This chapter has been reprinted, and is issued now as a separate book under the title, "Democracy in Canada."

The small volume gives a concise but connected general summary of the important events, political issues and constitutional changes which have affected Canada since 1763, when French occupation of the country ceased. The essentials of Canadian history are thus given in such a way that they will appeal, not only to the occasional reader, but also to those who have a deeper interest in Canadian history. The little volume is written in a non-partisan spirit, and is, apparently, an honest attempt to give the average citizen a short and interesting story of the steps by which the threshold of Canadian nationhood has been reached.

Twinkletoes, by Thomas Burke. Published by The Musson Book Company. Price, $1.40.

THIS is a novel which, despite a certain strength of artistry, we cannot recommend to the readers of the CANADIAN HOME JOURNAL. It is a story of the gradual deterioration of a London dancing artist, who, losing faith in her father on discovering him to be a counterfeiter, has not the strength of character to save herself from a life of common prostitution.

The novel is not one which should be allowed to fall into the hands of boys and girls, and will afford little helpfulness to any adult reader, notwithstanding the many capabilities which are shown in the actual writing of it by this young but thoughtless novelist.

The Aims of Labour, by the Rt.-Hon. Arthur Henderson. Published by McClelland & Stewart. Price, $1.00.

IN this book the Secretary of the Labor Party of Great Britain counsels and warns his fellow Britons against the doctrines of violence which certain groups of revolutionary Socialists are preaching in many countries. He protests against the notion of a revolution by "bombs and bayonets," and deplores the propaganda of the so-called "Bolsheviki" as tending seriously to undermine belief in the efficacy of political action.

In a brief preface, Mr. Henderson states that the sole purpose of the book is to advance the social and political ideals which he has at heart. "In presenting this little volume to the public," he writes, "no pretense is made that it is a complete or comprehensive statement of the aims of British labor. The main substance of several of the chapters has already appeared in the form of articles published in various magazines and newspapers. When it was suggested that I should issue them as a collection of chapters dealing with some of the vital problems now confronting the democratic forces of Great Britain, I agreed to do so, in the hope that they might prove of some little help to my prospective readers in forming their own views on the questions which are discussed."

Mr. Henderson is professedly a Socialist, and has an international reputation as one of the leaders of the movement, but his teachings are scorned by revolutionists like the Bolsheviki in Russia, the Spartacans in Germany, and the "Reds" in other countries. In people of this "unstable temperament"—a very charitable description of advocates of brigandage and terrorism—Mr. Henderson sees the enemies of true social progress. He points out that revolution, in the sense of armed insurrection, is alien to the British character, and that no responsible person can contemplate such a possibility without horror. The whole book is a reasoned appeal for gradual and peaceful transformation of industrial conditions.

The Canadian Almanac for 1919. Edited by Arnold W. Thomas. Published by The Copp-Clark Co. Price, $1.50.

THIS is the seventy-second year of publication for this annual compendium of useful information, and the

Literature and Journalism

What It Means To Be a Woman Reporter: By Katherine Hale

(No manuscript will be read unless typewritten and accompanied by a stamped addressed envelope.)

THE life of the woman reporter! "Will you kindly write an article on the kind of work and life a girl encounters when she is looking for and finally gets a newspaper reporter's job? What are the qualifications, education and personality necessary for success? Does a girl require personal courage to go into slums, or among foreigners when sent to report?"

One of the most interesting positions on a daily paper is that of the woman reporter. Hers is by no means "routine" work. she is in very truth never sure "what a day may bring forth."

On the average city newspaper there are many departments filled by writers of varying degrees of experience and ability. There are the "cub" reporters, the boys just beginning work, the night reporters, the day reporters, the "special" reporters who are valuable, each in a certain line, and there is the woman reporter. None of these sign their work, they, like the editorial writers, are bound up with the body of the paper. The reporters represent the news and the editors the voice of the paper.

Special writers have a place by themselves though many a special writer also does reportorial work. The special writer signs his or her articles. "Critics," in Canada at least, are usually merely special writers who are assigned the book reviews, musical criticisms, theatres and art notes. Special writers usually do a good deal of "free lance" work. That is, they may take several magazine commissions along different lines, go into short story work, etc., and still appear weekly in the columns of their own newspaper; whereas the regular reporter is usually too busy to go farther afield than his or her daily assignments.

AS the first step in a journalistic and even a literary career nothing can be more educative than the life of a reporter. In the case of a young girl just beginning, her assignments will not be too alarming at first. It is highly improbable that she will be hurried at once to report police court proceedings or a baseball match, of which she may not even know the technical language. Besides, these are important items and the beginner must start humbly. She will in all likelihood be sent to a Woman's Temperance Meeting and must be very careful of her shorthand, for Mrs. A. does not want her ideas mixed up with those of Miss B. or Miss C., and an uplift meeting of any sort is no occasion for little mistakes. Women are much more severe on mistakes in reporting than men, as any editor will tell you.

Some of the requirements of the woman reporter, apart from the requisite knowledge of shorthand and stenography, are a healthy body, which implies strong nerves, the habit of observation, instinctive concentration—by which I mean the power to throw the mind entirely on the subject in hand—and a keen journalistic curiosity about the ways and workings of ordinary human life all about us.

I do not think that the success of the woman reporter means any special educational training, to fit her for the post. Her work itself will be a training, a training so great that it will tinge all the rest of her life, with the knowledge gained, no matter in what sphere it may be lived. As for "personal courage," every career that is worth while requires that. For my part, as a writer, I should say that it requires much less personal courage to go on a sudden mission to some sordid slum than to deliberately enter into training, for instance, in an ordinary well-regulated hospital, where everything runs by clock-work and nurses are well protected young women. To see other people's inevitable suffering is a much more terrifying process to me than to encounter the vague possibilities of an unknown slum. But that is a matter of personality; journalists, like nurses and poets, are born, not made.

I am sure that my correspondent, like many others, wants to know the comparative remuneration of the woman reporter.

Well, that depends largely on the size of the city and the circulation of the paper which employs you. It depends also, as you will easily understand, on your experience and ability. Probationers in a hospital are required to put in three years of training, with at least eight hours a day of work, without any remuneration, before they are qualified to ask for a weekly fee. The woman reporter is paid from her first assignment, usually at "space rates" which vary from two dollars to five dollars a column. After a time, when she has proved herself an able reporter, she may be taken on salary which is paid weekly, and this may run from ten dollars a week up to twenty-five. Then her time belongs solely to the paper which employs her, and usually her hours of work are defined.

THESE hours vary according as the paper is a morning or an evening sheet. When it is published at noon, the forms are what we call "locked" about eleven o'clock in the morning. Nothing may be added after that time. With a morning paper this mystic rite is performed about midnight, so that the afternoon and evening are the busy times. The haste with which the social reporter at a dance, the dramatic critic, the woman who is taking notes at an evening meeting, departs from the scene of action at ten thirty or eleven o'clock, by no means implies a lack of interest. It signifies a natural inclination to get one's copy in while there is yet time.

I have often heard the remark at a concert or theatre. "No wonder artists despair of fair criticisms. Watch so and so of the 'Era' disappear before the best thing on the programme!"

Yes, but, dear Sir or Madam, the play or the concert may have been late in starting, it is nearing eleven, time is pressing. If you are to see your name in the social column tomorrow morning, or to read all about the quality of Galli-Curci's voice, or just what so and so said about the Makings of Peace, that harried individual, the reporter, or the special writer, as the case may be, should, by this time, be at a green shaded desk with the typewriter going like mad.

And it is really a very fine game!

TO be, if not a voice, at least a faithful echo of the doings of this big, puzzling, splendid old world—to learn to report accurately its doings—this is surely interesting enough to make up for the rigors of learning the process. And there is always the hope that the reporter will himself become a "voice" in time. I do not see how any man or woman can report life faithfully, with the seeing eye and the understanding heart, without coming to certain realizations that will eventually give him or her the power of self-expression. For the greatest artists are really just the truest reporters of life. There is in them an entire absence of the spirit of small criticism, of ego, which makes the affectations and mannerisms of the lesser lights in all fields. That is why supreme art always seems to the outsider so "natural."

Someone, speaking of a great novel of the war, "The Four Horsemen of the Apocalypse," by Vicente Ibanez, a Spanish writer, said, "Why it is really just a straight report of the way the war came to certain people in Europe!" Yes, but with what shining truth, with what ruthless clipping of unnecessary detail, with

The Piano's Place In Music

Its Importance for Those Who Would Learn to Sing

By Hector Charlesworth

LAST month the writer dealt with the history and evolution of the pianoforte from a small, simple contrivance of the middle ages into one of the most imposing, and certainly the most widely used of modern instruments. There is much to be added on the subject of its general utility in the mission of spreading the art of music; which accounts for the manner in which it continues to hold its own, despite the fears of those, who, when reproducing instruments first came into general use, predicted that it would decline in popularity.

The primary reason, of course, is that the instinct of a large part of humanity is to make music themselves, and not to be content with merely listening to music mechanically reproduced in which they have no share. But it is the wonderful adaptability of the piano as the support of the human voice and of other instruments, that makes it an indispensable factor in modern music. The ease with which its principles are mastered; and the fact that its tone is already created, and only awaits a stroke on the right key to be evoked, make it possible for the child or adult of indifferent ear to obtain satisfactory results, so long as he pays attention to what his fingers are doing. Let us make this point clear; only a comparatively small number of people, even when possessed of passable voices, find it possible to sing in tune, let alone to read music at sight for singing purposes. Only by aid of careful training and a correct ear does a pupil learn how to form the notes of the scale on the violin. All this is already done for the pupil at the piano. Once he learns the notes on the staff that correspond to those on the keyboard, the tone will take care of itself if the piano is properly tuned; and the result depends on his dexterity and taste.

For many years, the piano has been recognized as an indispensable aid to the art of singing and to performace on the various stringed instruments of the viol type. It is a fact known to most of those who are brought into contact with music in a professional way that many singers are deficient in musical aptitude. They lack the intuition which enables one person to sing or whistle in tune; where another equally fond of music utterly fails. But most people with voices can learn to sing a given set of notes correctly if supported by the piano. They accustom themselves in the melody of a song by singing it in unison with the piano. Trained musicians of highly developed ear are apt to dismiss singers as poorer musicians than any other class of musical executants. In the belief of many this conclusion would be less true if more young people had learned how to play the piano before they seriously attempted to sing at all. Take for instance the boy or girl who develops a beautiful voice in adolescence and is completely without musical training of any kind. Such young people are entirely at a loss as a rule when they start to make use of their gift.

A REMEDY is to be found in the practice, now becoming more and more general, of teaching the young child the piano as a part of his general education. The utilitarian parent may ask with regard to the youngster, "Of what use is the piano going to be to him?" You never can tell. It may turn out to be of enormous practical use, entirely apart from the boon of an addition to his general culture. It is best that children should begin lessons on the piano at seven or eight, so that their hands may become accustomed to the use of the instrument, while still soft and plastic. On the other hand, except for simple school ditties which cause no strain on that delicate organ the human voice it is regarded as liable to cause serious physical consequences to try and induce a child to engage in the more difficult feats of song, unless they come naturally to him. Even with the child who is naturally a sweet singer a knowledge of the piano will be the best of all possible aids while the youth who develops a fine voice in his or her 'teens will find the knowledge of the rudiments of music, so easily acquired at the piano, of tremendous advantage. It may be added that in such cases vocal studies will leave but little spare time for other lessons; while inexperienced hands become stiffer and less manageable with the passing of childhood.

FOR this reason it is good policy for parents who can afford to make a small sacrifice to anticipate future developments by setting their children to the task of learning the piano while they are little. When they reach adolescence and develop social or musical ambitions, as most of them do, they have a groundwork of ineffaceable knowledge that will last them all their lives. If nature has shed its dower upon them in the shape of beautiful voices they have a foundation on which to start and build careers.

There is hardly anyone, however, remotely located, who has not heard of the bird-like singer, Madame Galli-Curci. They may not have been so fortunate as to have actually listened to her in some great concert hall; or even to have heard the records of her voice which have travelled to countless localities that she could never hope to visit; but they have read of her in newspapers and magazines; and know of the great fame and fortune she has won in North America in the short space of two or three years. Yet it is a fact that Madame Galli-Curci did not commence to sing until she was approaching womanhood, and even then did not take singing lessons. Her knowledge of how to sing was gained from the fact that she was a trained musician in other branches. A year or so ago Madame Galli-Curci said: "A girl who desires to be a fine singer must not begin vocal study too young. She should not be singing much even at sixteen or seventeen years of age, but should wait until she is at least eighteen. But those early years should be well used, learning much of the piano; for a singer must be able to play her own accompaniments."

THIS latter statement would surprise some singers; but what Madame Galli-Curci meant was that to practice properly the vocal pupil must have the aid of the piano to learn the real structure of the song. Other great prima donnas like Marcella Sembrich and Nellie Melba are insistent on piano study as essential in enabling the vocal student to perfect herself in the art.

For the above reason many vocal teachers advocate the continuance of piano lessons along with vocal lessons if a pupil can afford it and has not received early instruction in that instrument. With regard to the violin music in which in all public performances the piano plays a part, the condition is different. It goes without saying that the violinist cannot accompany himself; and is compelled to gain sufficient confidence in private practice to do without its aid. But the public ear demands the support of the piano to enrich the effect in the concert hall; which is but another illustration of the piano's pervading influence.

THUS far one has only spoken of the pianoforte as the servant and coadjuster of other branches of musical effort. It is almost unnecessary to add that as a solo instrument it wields a great and potent influence all its own. In fact to lovers of music there is nothing more satisfying than piano music interpreted by some highly gifted performer; while in the home it is, to those who can play, an ever-ready

Something New by Ingersoll, Maker of Ingersoll Watches

Ingersollite

The Ingersol-lite is a little unbreakable glass tube filled with a luminous substance containing real radium—exactly the same as on the dials of Ingersoll Radiolite watches, that tell time in the dark. You attach it to electric light or gas jet, and it glows in the dark, guiding you straight to the light chain or switch.

Sold by progressive dealers.

Ingersoll Watches Are Guaranteed

Buy a watch with the name Ingersoll on the dial and you get the absolute guarantee of good time-keeping service. The guarantee is not a mere word. It is a contract which Robt. H. Ingersoll & Bro. live up to unconditionally. It is one of the features that have made Ingersoll Watches famous for a quarter of a century all around the World.

See the complete Ingersoll line at your dealer's.—Maple Leaf—Radiolite—Waterbury—Reliance and other Models.

Robt. H. Ingersoll & Bro., - 128 Bleury Street, Montreal.

Tell Time in the Dark.

The Journal Juniors' Club

Conducted By Ethel Bain

Stories by Our Girls and Boys Become More Interesting Each Month

MY Dear HOME JOURNAL Children:

Our Club is just like a lucky bag. Why? Because it is full of surprises. The surprises are the interesting letters you send in. One grown-up, when she had finished reading of how you helped to win the war, confessed that the club members had made her feel ashamed of the little she had done towards ending the greatest war in history.

I am sure the birds enjoyed their Christmas treats. Wasn't it a splendid idea of Clotilde's, putting the warm bricks out for her feathered friends? How well she solved the problem of the cheeky sparrow. No wonder the birds love you, Clotilde. Possibly the strangers were red-breasted nuthatches. Watch them, and then write me a letter and try to describe them better.

No letters were received for Contest No. 3. This was for children under twelve years of age. Don't give up trying, for you know that every member cannot win a prize the first time they contribute. Write again, won't you, and so help to keep your own page the most interesting in the JOURNAL?

Your sincere friend,
ETHEL BAIN.

Contests for March

1. For boys and girls from 12 to 16 years. A letter of 500 words about the birds which arrive from the South this month.
2. Camera Contest for boys and girls up to 14 years. Any subject.
3. For boys and girls up to 11 years of age. A letter of 300 words about the "Robin."

Write on one side of the paper only.

Name, age and address must be written on each contribution.

PRIZE LIST FOR JANUARY CONTESTS.

1. "My Work for the Red Cross." Awarded to Mayme Tompkins, age 13, R.R. No. 1, Lindsay, Ont.
2. "My Christmas Treat for the Birds." Awarded to Clotilde Dinner, age 12, Ziska, Ont.
3. "My Work for the Red Cross." Children under 12 years of age. No letters were received for this contest.
5. Prize for best photograph. Awarded to Carmeletta Yallop, R.R. No. 1, Tillsonburg, Ont.
6. Prize for scrap book. Awarded to Maud Gillespie, age 11, 159 Fourth Ave., Niagara Falls, Ont.

HONORABLE MENTION.

Contest No. 1—Reta Hiscocks, Rodney, Ont.
Contest No. 2—J. Moore Hart, Cannington, Ont.

PRIZE LETTER.

"My Christmas Treat for the Birds."—By Clotilde Dinner, age 12, Ziska, Ont.

Having read in the December number of the CANADIAN HOME JOURNAL, about a little boy and girl who put their Christmas Tree outside with a treat on it for the birds, inspired me to do the same.

On Christmas Eve, when my brother and I went to the swamp for our tree, I got him to cut down another little tree also, about two feet high.

We took the trees home and after decorating our own, I took the other and tied many little pieces of suet, crusts, liver and bones to it. After this was done I tied it to the board outside, where the birds came to feed. I also scattered crumbs on the board and ground.

Early Christmas morning I was awakened by a sweet "Chick-a-dee-dee-dee." Jumping up, I looked out of the window and beheld a little chickadee and a big bluejay happily devouring the goodies.

I watched for a while and presently along came some more chickadees and two little reddish black birds, but to mar the happiness of the feast an English sparrow came and tried to drive the others away.

When I was dressed I went out and put some scraps on a board a little distance away. The sparrow growing tired of quarrelling flew over to the board and began eating, leaving the rest alone. I then put two heated bricks on the bird board for them to warm themselves.

I had a very happy Christmas this year, and I think what added to the happiness of it was the thought that I had shared my things with some of God's little creatures.

PRIZE LETTER.

"My Work for the Red Cross."—By Mayme Tompkins, Age 13, R. R. No. 1, Lindsay, Ontario.

Not being able to leave home to go and work in an ammunition factory I decided to help the Red Cross. So I joined the Cambrai Women's Institute of which I am the youngest member.

While the war was on, the Institute bought flannelette, making it into various garments for soldiers such as surgical shirts, etc. The women would meet at the home of a member and cut it into the various articles that it is used for. These were distributed to be made. I made a number each time. We also bought yarn which I helped knit into socks.

Each month we pack boxes for the boys from around here that are overseas. We always put in a pair of socks, fruit cake, tobacco, home-made candy, gum and a home-made candle; sometimes we put in towels and soap, or writing paper, or some other small sundry.

As I have no brothers at all, and no friends overseas, I put notes in the pockets of the shirts and in the socks, and so got the names of soldiers, to whom I wrote and tried to cheer them up a little.

Last summer, as a means of raising Red Cross money, the Institute decided to hold a contest to see who could collect the most money. I came first, having collected the sum of fifteen dollars and twenty-five cents in the month of July.

In the winter we had a social evening at the home of one of the members. Mother and I baked pies, a cake, and made sandwiches. I gave a recitation, took part in a dialogue, and helped serve lunch.

We also have had two basket socials. At one I took a basket, which sold for one dollar and a half. At the other one I had a basket ready and a recitation prepared, but just before it I took the "flu," so unfortunately was unable to go.

Now, as they do not need surgical shirts, we are making flannelette underwear, sheets, pillow-covers, etc., for relief work. So, as I also worked on the farm in the summer to help production, I do not think I can be looked upon as a shirker.

Prize photograph taken by Carmeletta Yallop, age 12, Tillsonburg, Ont.

HONORABLE MENTION.

"My Christmas Treat For the Birds"—By J. Moore Hart, Age 11, Cannington, Ont.

This Christmas I thought I would give the birds a treat. I first went to the house and got a broom and swept away the snow from a level stretch of ground. Then I got wheat and grain of all kinds, and scattered them on the swept space. I also got bits of suet, breadcrumbs and other tasty morsels of food that all birds like.

Then I watched the birds come, in twos and threes, and start devouring the supply I had put out for them. When they had flown away, I went and looked at the spot where I had put the food, but there wasn't a crumb left. I hope some other boy or girl will try this next winter and just find out what a kindness it is to help the birds.

Jackson, Mary E., R.R. No. 1, Malton, Ont.

Only A Sparrow.

"HELLO, chicken!" Bushy, the red squirrel, cried, as he scampered down his home tree to greet the bird scratching amongst the dead leaves.

"I'm not a chicken, I'm a sparrow," retorted the bird.

"But," protested the red squirrel, "sparrows don't scratch."

"Yes, they do, at least fox sparrows do. What's more, we use both feet when we scratch and that is more than any chicken can do, because it only uses one foot at a time. See—" and there and then the fox sparrow began to scratch vigorously, scattering the leaves, like any barn yard fowl.

"But," persisted the red squirrel, "Why are you called the fox sparrow? You don't look like a fox."

"No more than you do, but I expect it is on account of my reddish brown feathers. You can see they're quite the same color as the fox's fur. Still I can do something that a fox can't."

"What is that?" eagerly asked Bushy.

"I can sing," proudly answered the bird.

"Sing," echoed the disappointed squirrel, "But—but I thought all birds could sing."

"Did you ever hear a turkey or an eagle, or a vulture sing?" sharply asked the fox sparrow. "I never did," he went on. "They scream or cry, but as for singing, no, they leave that for the smaller birds to do."

"I'd like to hear you sing," said Bushy shyly.

"Would you?" replied the now delighted bird. "Listen then." At once the fox sparrow flew up and perched on a bush and gave Bushy, the red squirrel, a joyful surprise, for he burst into the fullest, richest song he'd ever heard. Such glorious tones they were, that a lonely wayfarer on the nearby road stood still to listen and feared to move lest the slightest noise would stop the golden voiced singer. There was a tinge of sadness in the strains of music that poured forth from the feathered songster but they only added beauty to his song and the red squirrel gasped in astonishment that such a volume of tone could be contained in so tiny a throat. His song ended, the fox sparrow briskly descended to the ground in search of more insects.

"WELL," exclaimed the red squirrel, "I wish I could sing like that, but there, squirrels never sing."

"No, they chatter," laughed the fox sparrow. "Never mind, Bushy. It would never do for us all to be alike."

Neither would it, but I dare say many of us wish we could sing as well as the fox sparrow. This hardy bird, seven inches long is the best singer of all the sparrow family. You wouldn't think so if you heard his weak call-note of "tseep, tseep" in the roadside bushes. Scratching amongst the dead leaves he finds hundreds of insects still in their winter sleep. These insects are only awaiting the sunshiny days of April, then they will be awakened by the warmth of the sun's rays and as soon as they are awake they will attack the trees. The fox sparrow wages war on the sleeping enemy and destroys hundreds of these tree pests, for this is the work that Mother Nature has given him to do, and in the early days of March you will see him hard at work.

INSECTS and weed seeds are what he feeds upon, so he is indeed a valuable worker and those of you who live on a farm should encourage him, for he loves those tiresome weeds and your weed patch won't grow any larger if you make friends with the fox sparrow. "But, he's a sparrow," you will say. Yes, he is a sparrow and sparrows on the whole are not favored. But remember, that there are good and bad sparrows.

The sparrow family is large and when one knows the various members one is apt to get a

(CONTINUED ON PAGE 56.)

Points For The Novice Motorist

By JEROME T. SHAW.

THERE are always to be found a number of motorists who become stranded by the roadside each time they venture beyond a very limited distance from home. If the cause of their forced delays were investigated it would be found that they were generally of a trivial nature, such as could have been avoided by taking the proper precautions in advance.

So often does the "ounce of prevention is worth a pound of cure" moral enter into the conclusion drawn from the diagnosis of the situations which "hang up" the owner on the roadside, that this article is devoted to a recapitulation of some of the more simple remedies, or precautions, that are the secret of success of those fortunate owners who run their cars year in and year out without roadside delays.

Contrary to the usual opinion, these successful owners know no more than the average; few have had any extensive experience in machinery and the majority have never been inside an engineering works. Perhaps their success is due to their ability to apply the remedy in advance of the difficulty, or because they conceive causes before their effect is produced; at any rate, they seem to possess a faculty of warding off the demon of breakdown.

Here are some useful hints that can undoubtedly be applied with advantage to your new car, even though your neighbor stands in no need of the same advice, since his car's mechanism is already perfect to this degree.

Since it is the engine that makes the car go, so it must likely be some failure in the engine that is the cause for which it stops. And, moreover, just as it is the diet to which the human body is subjected that has more to do with its fitness or unfitness of condition than any other factor, so it is the fuel supply of an engine that, before all else, needs to be perfectly arranged. Let us, therefore, start these simple remedies at the beginning by considering the fuel supply, and let us further bear in mind that in the case of all simple remedies it is a thorough recognition and appreciation of the first principles that makes their application a success.

Filter the Gasoline.

THUS, in the fuel supply, let us start with the principle of cleanliness, than which there is no principle more vital to the preparation of any kind of food. Impurities in the engine's fuel supply are fatal to good working; in fact, the impurity seldom gets as far as the engine before it causes trouble, since the minutest speck of solid matter is sufficient to choke the jet of the carburetor and interrupt all further supply from that point onward. Notwithstanding the fact that you are dealing with minute and invisible difficulties, consistent care is an absolutely sure way of eliminating their evil work.

When filling the tank, for example, make a practice of wiping clean the region of the opening before removing the cap, as this is generally covered with dirt and dust. Never fill the tank without using a strainer, and if you have no strainer or chamois, use a silk pocket handkerchief for it makes an excellent filter.

Incidentally, when you want to know the amount of gas in your tank and have no gauge, do not use a dirty stick as your measuring gauge; many a one unconsciously does so after taking the most elaborate precautions to eliminate particles not one fraction as large as those he afterwards introduces wholesale without realizing it.

Replacing Fuel Leads.

SOMETIMES the fuel pipe breaks, and the cause is generally vibration. The first thing to do is to fit in a new length and see that the pipe is properly supported; for this purpose follow the channel side member of the main frame; the pipe can be well supported and excellently protected there.

Even when the gasoline is filtered at the tank there should always be a filter in the supply pipe also, and preferably it should be situated near the carburetor, for then it is in a very accessible position. If your car is not already provided with one, such an accessory should be obtained without delay; if it is already there remember that it needs cleaning out occasionally. If your gasoline pipe breaks at the union near the carburetor, procure a longer length of pipe and coil the extremity in a loop so as to make the attachment less rigid.

Ignition Difficulties.

IGNITION troubles, at one time, were supposed to be the cause of every ailment to which an engine was heir, but since the general adoption of the more perfected ignition systems the firing arrangements have been so much improved that even an expert thinks twice before blaming the spark, even though he may feel that there is something at fault in the circuit. Nevertheless, the ignition system of most of the modern electrically equipped cars is rather delicate, notwithstanding that it does wonderful work, and if anything does go wrong with it, it is scarcely within the province of the amateur to set it right. For this reason, the motorist in outlying districts, far from the conveniences of the local repair shop, would be well advised to have on hand sufficient spares for his car, including a set of dry batteries, and to find some quiet corner under the seat where they can be stored away in wrappings against emergency. They can be made to fit in a small space, and they weigh but little; but what a blessing they will be should you happen to have a serious breakdown in that quarter.

If the car has magneto ignition you will not have to depend upon batteries, but it may be wise to carry a spare kit containing an extra high-tension brush and a low-tension contact breaker. Do not overlubricate your magneto, and do not let it get covered with oil and dirt; above all keep water from it, and if you are going to dash through a driving rain and deep puddles, beware, for your gladiatorial spirit will produce spectacular splashes that will put your ignition system out of commission, perhaps at a very critical moment. As to the lubrication, two or three drops of oil every 500 miles is enough for any good magneto.

Hard Starting.

WITH neglect some engines become increasingly difficult to start and the first things to look at are the spark plugs and the battery or magneto contact breaker. Generally the gap between the sparking points of the plugs is too large, and often the separation of the contact breaker points is too small. The gap in each case should be one-fiftieth of an inch for a magneto system and slightly larger for a battery system, unless there are special instructions to the contrary.

Now and then you will be tempted to change your plugs for a different pattern that is said to be an improvement. Undoubtedly, some plugs are better than others, and especially is this the case when they have to work on engines where the oil is deposited on the porcelain and having become carbonized causes a short circuit of the current, thus putting the plug out of action. Therefore, when you select your plugs, bear this point in mind. If the threaded portion of the plugs are short in their reach they will leave a small pocket in front of each spark plug where inert gases can get trapped. It is now very generally recognized that the distortion

The Inhalation Treatment for Whooping-Cough, Spasmodic Croup, Colds, Catarrh, Asthma, Bronchitis, Coughs.

Simple, safe and effective, avoiding internal drugs. Vaporized Cresolene relieves the paroxysms of Whooping-Cough and Spasmodic Croup at once; it nips the common cold before it has a chance of developing into something worse, and experience shows that a neglected cold is a dangerous cold.

Mrs. Ballington Booth says: "No family, where there are young children, should be without this lamp."

The air carrying the antiseptic vapor, inhaled with every breath, makes breathing easy and relieves the congestion, assuring restful nights.

It is called a boon by Asthma sufferers.

For the bronchial complications of Scarlet Fever and Measles, and as an aid in the treatment of Diphtheria, Cresolene is valuable on account of its powerful germicidal qualities.

It is a protection to those exposed.

Cresolene's best recommendation is its 39 years of successful use.

Sold by Druggists. Send for descriptive booklet.

Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist or from us. 10c in stamps.

Around the Hearth

By Jennie Allen Moore

"Summer and Winter and Spring,
Heat and the cold and the rain—
This is the tale the years bring,
Blessing and bane.
Labor and reaping that's sweet,
Twilight and day and the night,
Seed and the soil and the wheat,
Darkness and light.
God made the earth for man,
Home for a little span."

—Owen E. McGillicuddy.

OPPOSITIS.

THIS page shall be named in honor of the first letter in my correspondence pile. It arrived last year, just before my answers were sent to the press, but on account of its length could not be fitted into the allotted space. I crave the writer's indulgence for my delay, but my readers will kindly remember that there is only one mail-bag a year for public replies. All who desire their questions answered privately must so indicate by sending stamped and addressed envelopes, all of which receive my prompt attention. Following is the letter in its completeness:

My Dear Jennie Allen Moore,—

Having been a constant reader of the Canadian Home Journal for somewhat over ten years, I want to tell you a few of the things which are dashing through my mind, knowing full well that I will have a sympathetic listener, who will respond with a heart full of understanding.

Yes; it pertains to my own sex—and yes, again, to persons somewhat close to the years which I am now numbering as mine—the dear, blessed forties.

Do you ever wish you could go back, dear Jennie Allen Moore? I don't. I wouldn't exchange the blessed security of husband and daughter love, and the discernment and poise which experience and battling with the world have brought me, for all the thrills and visions of youth.

As I look back over the years, and from the height of my motherhood and mature womanhood observe the lives of young people about me, I do not look with envy, but with a feeling of satisfaction that I do not have to pass again through the deep waters of doubt, longing and disappointment. And so, I am coming to my point.

I am glad to be forty, but if, having reached it, I have arrived burdened with some of the little characteristics and peculiarities which are clinging to many of the women within my scope and vision, I do wish some one would feel free to tell me about it. That is why I am going to talk to you about some of my observations, thinking you might pass the criticism along through the medium of your page and save many a delightful feminine creature from falling into the ways—not of the wicked, but of the obnoxious.

Do you know her—she who is nearly always contrary-minded; who seldom agrees with your already expressed opinion? I have one friend who seems to be quite seriously afflicted—and it is serious, because where once her companionship was desirable, her friends are gradually leaving her to herself, and she is making her way quite alone. That is a calamity to befall anyone—for one cannot be disagreeable and retain friends.

By way of illustration, let me relate our conversation of the other day. We were at luncheon, and I made the remark that I did wish I could find a cream pitcher that did not drip. Immediately she replied: "We have fifteen at home, and not one of them drips."

Once again I said: "I have two pairs of gloves, all spanking clean and ready to wear." She answered: "Oh, I always keep a dozen pairs ready to put on."

Just that constant disagreeing with your opinions, or anyone else's, is very trying and disquieting. It is just a habit—a bad habit—and unless one takes a mental inventory one may be going around among friends with that ungracious and annoying habit fastened on tight forever.

I meet it so often now, and have been taking close count. It strikes the people verging towards forty. Tell them something, Jennie Allen Moore, how unloving and unlovely a woman is who is letting herself—gradually perhaps—through the gates of "oppositis."

I remember hearing one of my friends say that in one of her father's last talks with her, he said: "Never pointedly disagree with the previously expressed opinion of any other person in the room." That is a little broad, perhaps, else we would never have an exchange of outlook; but better err in that direction than let the pendulum swing just as far the other way.

What do you think of this trait, dear friend? Have you met this characteristic I speak of, and do you admire it? Tell me some time on your page.

A. W. L.

THE latter part of your letter reminded me of an incident of my teaching days. There were eight children where I boarded, and a byword among them was, "Who disputes you?"

An old man who had stayed with them at times was wont to greet their childish exclamation of "It's starting to rain" or "It's an awful cold day," and such like remarks, with this phrase, even although he was not directly addressed, and thus the expression grew into a joke.

He was troubled with "oppositis"—what a suitable name you have chosen—and when he couldn't contradict he gave vent to his feelings by growling out "Who disputes you?"

Have I ever come across it, you ask, and do I admire it? Oh, yes, friend; I know it well. It is a disease with some people, they are so sorely afflicted. They always take the opposite side apparently for no other reason than to be contrary. They will admit to nothing that is said or done that pleases or suits other people—exactly the reverse is their idea. How tiresome in a man, and how unlovely, as you say, in a woman!

One asks, why or what causes such results; and instead of being answered in a few words, one is led through such a labyrinth of questions that you are exhausted long before the convincing category leads you up to the point you wish to know.

Admire that? No, indeed. Such people, where I am concerned, are given a wide berth. Life is too short to argue and convince unceasingly. I like the people that take some things for granted, and if their opinions differ from others, manage to enjoy it without everlastingly giving it expression to force discussion.

We will welcome you again in our column, friend, from your distant home and in your own breezy style. Your letter will give rise to new thought, and, let us trust, yield fruit. Many of us need just such a little reminder to prevent us drifting into uncongenial ways, and this little talk may bring our peccadilloes into the limelight, and so lead us into improvement.

"G. J." wishes that I "might find space in 'Around the Hearth' for the language of flowers."

Little girl—for young and sentimental is what I believe you to be—you have waited a long time for your answer. In many patent medicine advertising books, and in some almanacs, there is given in a very complete form, the information you seek, as well as the significance of names, the wedding anniversaries, language of precious stones, etc. Be on the lookout for one of those, but, in the meantime, here is a list of the most common flowers:

Apple blossoms, preference; aster, I will think of it; Calla lily, beauty; cedar, I live for thee; carnation (white), disdain; carnation (red), sympathy; daisy (white), innocence; geranium, consolation; goldenrod, encouragement; honeysuckle, bond of sweetness; lily of the valley, return of happiness; yellow lily, gaiety; morning glory, coquetry; red rose, I love thee; white rose, purity; yellow rose, jealousy; primrose, inconstancy; violet, modesty; orange blossoms, chastity.

IN a very friendly letter from "Mrs. J. A. P.," she inquires: "Is there any place—a children's hospital or shelter—where second-hand picture postcards would be welcome? I remember when my child was small, a few cards would often amuse for a long time. Now we have so many they are in the way; and no doubt many others feel the same way. We would be glad to get rid of them if they could be of any use, but we do not like to burn them, as they are really pretty and interesting."

Indeed, they are too pretty and instructive for such a fate; and, yes, I believe they would be welcome in a "children's home," but in a loose collection would soon be lost or destroyed. I never cast aside a picture postal. They are all put into a box awaiting my leisure week—which usually arrives in midwinter, when housed in with a howling snow storm.

Then I make a bowl of just plain flour paste, and procure an old cash book or ledger from some business man's discarded or disused pile, and paste the cards in as picturesquely as possible. There are always other little fancy cards that come in soda and in candy boxes, with colored or embroidered paper to fill in any gaps, and the prettiest book imaginable is the outcome. A bunch of leaves—three or four together—would be required, cut out about an inch from the binding, here and there, in order that the book would close properly. It will take time, of course, but the pleasure the book affords doubly repays.

THE next letter I pick up is a lengthy one, and cannot be answered in full in this public column. It will require a private answer, and the questions must be put in a concise form, and not so many scattered ideas from which to frame my reply.

As no name was given in this case, and only initials used, I shall observe the secrecy desired of me by not using them, leaving the writer to detect her letter by the reply I make. As all letters are strictly confidential, and destroyed as soon as the answers go forth, correspondents may feel free to subscribe their full names to prove the good faith of the writer, as the editor's memory is never taxed to retain any of those addresses.

Question No. 1 asks: "Do you have any faith in those people who read our hands, called palmists? How much do they charge? I sometimes wish I knew what was before me."

Professional palmists usually charge a dollar, I believe, sometimes double that. They have different prices. But, friend, they do not reveal the future as "fortune-tellers" are supposed to do; but tell you what the lines on your hand indicate as to your abilities and qualifications, and what you are best fitted for. I have heard some very clear delineations of character, but do not allow it to leave any deep impressions.

Question No. 2 asks about certain books, and "whether they would be helpful, or are they dull?"

That largely depends upon the sort of reader you are. If you are seeking information, you will find them full of interest; but if you enjoy fiction, and only light reading, you might find them too deep. What you need is a discriminating study of human nature—yourself included.

Celery stuffed with cheese and nuts.

Celery at Its Best

By Marion Harris Neil

(AUTHOR OF "HOW TO COOK IN CASSEROLE DISHES.")

Celery is one of the Most Valuable Vegetables We Possess, and by Some Cooks Counted Also the Most Economical.

IT possesses great medicinal value; especially it is proved to be a wonderful curative food for those suffering from rheumatism. Celery is practically indispensable to good cooking, because it can be used in such numerous ways.

The economical claim for celery is that there need be absolutely no waste with it, and this cannot be said of any other vegetable. The stalks can be used for special purposes, and then the so-called "trimmings" can be used for flavoring soups, broths, stews or sauces. In some places the leaves are made use of, and even the seeds are employed for seasoning.

Besides the many ways in which celery can be used for cooking, it is also served in the raw state, but it is less easy of digestion than when cooked.

Scalloped Celery.—Cut celery in one-half inch lengths, and cook until tender in boiling salted water. Drain, and reheat in white sauce. Put the celery into a greased fireproof dish in layers, sprinkling each layer with grated cheese and breadcrumbs. Have the last layer of breadcrumbs and cheese, dot with butter substitute, and brown in the oven. Serve hot.

Celery Stuffed with Cheese and Nuts.—Select tender white stalks of celery, leaving on the leaves; wash, dry and chill well. Beat two tablespoonfuls of butter substitute until creamy, add three tablespoonfuls of cream cheese and beat again, then add one-fourth cupful of finely chopped nut meats, one-half teaspoonful of salt, one-fourth teaspoonful of pepper and a few grains of paprika, and spread on the inside of the celery stalks. Serve garnished with radishes, diced pickles and stuffed olives.

Celery En Casserole.—Remove the outer stalks from four bunches of celery, leaving the bunches six inches long. Wash and scrape the stalks and cut them in quarters, lengthwise. Put them into a saucepan, add one teaspoonful of salt, cover with boiling water, and cook for five minutes. Drain the celery and place it in a fireproof dish with one teaspoonful of extract of beef and two cupfuls of boiling water. Cover and cook in a moderate oven until tender. Melt two tablespoonfuls of butter substitute in a saucepan, add two tablespoonfuls of flour, and cook for two minutes. Add to liquid in fireproof dish, stirring continually. Stir until it boils, and season with salt, pepper and a few drops of Worcestershire sauce. Sprinkle with browned breadcrumbs, and serve hot.

Celery Cream Soup.—Cut up some cleaned celery and measure one cupful. Boil until tender in six cupfuls of boiling salted water. Heat four cupfuls of milk in the upper pan of a double boiler. In a bowl mix three tablespoonfuls of butter substitute with four tablespoonfuls of flour, over this pour the hot milk slowly, stirring well. Return to the double boiler, add the celery and the liquid, season with salt and pepper, and heat until creamy. Beat up the yolk of one egg in a soup tureen, with one-half cupful of cream. Into this pour the soup when ready to serve.

Celery and Cherry Salad.—Chop fine one head of cleaned celery, including root and leaves, add one cupful of preserved cherries from which the stones have been removed, mix with mayonnaise dressing, to which one cupful of whipped evaporated milk has been added, and serve on crisp lettuce leaves, with mayonnaise or boiled dressing separately.

Another Method.—Mix finely cut celery with cold sliced beets and two tablespoonfuls of chopped nut meats, and serve with French dressing or mayonnaise dressing.

Celery and Meat Cutlets.—Mix three cupfuls of cooked and chopped celery with one cupful of fine breadcrumbs, one cupful of cooked cold meat, chopped, one-half teaspoonful of salt, one-fourth teaspoonful of pepper, one onion, chopped, and one well-beaten egg. Form into neat cutlet shapes, roll in fine breadcrumbs or cornmeal, dip in milk or beaten egg diluted with cold water, roll again in breadcrumbs or cornmeal, and bake in a hot oven or fry in plenty of smoking hot fat. Drain and stick a small piece of macaroni in the end of each cutlet to represent the bone. Serve hot, garnished with sprigs of parsley.

Celery Pie.—Soak one cupful of sago or tapioca over night in one cupful each of milk and water. Wash and scrape four sticks of celery, shred it very finely, add one large tomato, skinned and chopped, one-half cupful of grated cheese, one teaspoonful of salt, one-half teaspoonful of pepper, one-fourth teaspoonful of mustard, and the sago or the tapioca. Put into a deep pie plate, cover with crust, and bake in a hot oven for one and one-half hours. Serve hot. This makes a most delicious pie.

Celery Sauce.—Take two sticks of celery and wash them well, cut them up in small pieces, put them into cold water, let it come to the boil, drain, wash them in cold water, and put them into a saucepan with three cupfuls of milk and one cupful of water, let this boil up and then simmer for three hours. Then add two tablespoonfuls of butter substitute mixed with four tablespoonfuls of flour, stir until it boils, then cook for ten minutes, stirring occasionally. Strain, reheat, and add one-half cupful of evaporated milk or cream, and use.

Celery Braised.—Wash well and trim four heads of celery and leave them in cold water for two hours, then tie them up with string and put them into a saucepan with cold water sufficient to cover them; bring them to the boil, then wash them in cold water. Put two tablespoonfuls of butter substitute into a saucepan with a few sliced vegetables, such as carrot, onion, a little turnip, and place the celery on the top; cover with a greased paper, and cook gently for twenty minutes. Add three cupfuls of water or stock, and cook for two and one-half hours, adding more boiling water or stock as that in the saucepan reduces. Remove the celery when ready and split the heads into quarters, and flatten them out with a knife. Dish on toasted croutons, and strain the gravy round. Serve hot.

Fried Celery.—Parboil, drain, dry, and cool several stalks of cleaned celery and cut it into short lengths. Dip into melted butter substitute and fry until nicely browned, or dip into fritter batter and fry, or dip into beaten egg and toss in breadcrumbs, and bake in a hot oven or fry in smoking hot fat. Serve hot with brown sauce.

To make the fritter batter: Sift one and one-half cupfuls of flour with two teaspoonfuls of baking powder and one-half teaspoonful of salt into a bowl, add one well-beaten egg to one cupful of milk, and stir liquid gradually into the dry ingredients, beating thoroughly, then add one tablespoonful of melted butter substitute, mix and use.

Celery and Cream Biscuits.—Cut and rub one tablespoonful of butter substitute into two cupfuls of flour, add one-half ounce of grated cheese and a pinch of salt, and make into a stiff paste with one yolk of egg and a very little water. Roll out and cut into rounds. Prick with a fork, and bake on a greased baking tin in a moderate oven. When cold put the following mixture on the top, sprinkle with a little finely chopped parsley, and garnish with celery leaves.

For mixture: To six tablespoonfuls of whipped evaporated milk or whipped cream add one tablespoonful of grated cheese, four tablespoonfuls of finely chopped celery, salt and pepper to taste. Pile on top of the biscuits.

Celery Boiled.—Trim and wash the heads of celery and leave them in cold water for two hours. Cut the sticks into even lengths of about four inches, tie them in little bundles and cook, uncovered, in boiling water, with a little salt added, until tender. Drain, remove the strings, and lay the celery on pieces of toast that have been dipped in the celery liquid. Pour over a good white sauce. Serve hot.

Celery with Poached Eggs.—Prepare and cook celery and cut it into small pieces, and put it into a saucepan with one cupful of thick white sauce. Simmer for thirty minutes, add a few grains of paprika and a grate of nutmeg, and rub the celery through a sieve.

Clean the saucepan, return the celery to it, add one-half cupful of milk, and stir gently until hot, but do not allow to boil, and arrange on a hot serving dish. Put toasted or fried pieces of bread on the top of the celery, then poached eggs on top of this, and serve at once.

Celery Sandwiches.—Prepare some thin slices of toasted and buttered bread; spread one side with a layer of tartare sauce, lay upon this thin slices of cooked meat and some finely shredded celery. Place two together, press and cut into the desired shapes, and dish up in a circle. Garnish the dish with celery cut in dice and celery leaves.

Celery Curled.—Clean and cut crisp celery into one and one-half inch lengths; with a sharp knife begin at the outside of the stalk, make six cuts one-half inch in length, then five parallel cuts, and cut the other end in the same manner. Throw at once into ice water. In one hour these pieces will curl, giving the celery the appearance of being fringed.

Celery, To Serve Raw.—Choose small heads of celery for serving raw, as they are usually the sweetest and the most tender. Remove the outside stalks, reserving these for flavoring and cooking purposes, and use the white, crisp stalk in the centre. Separate these and wash and brush them well in cold water. If large, cut the stalks in halves lengthwise, and curl the ends if wanted. If time permits, allow the celery to lie in cold water for thirty minutes, then serve them in a glass three parts filled with cold water, or in a flat celery dish on a bed of cracked ice.

The Pleasant Side of Housecleaning

There Is an Element of Real Fun There If You Search It Out

By Ethel M. Porter.

YEARS ago I knew a woman who prided herself on the fact that she never cleaned house.

"No, never," she would snap, "I would consider it a disgrace to ever have my house in need of cleaning," and one glance within its formidable portals was enough to convince the most skeptical that such was indeed the truth. The proverbial new pin paled into insignificance in comparison with its flawless severity. Three times a day certain rooms were swept and dusted, and a chance caller had hardly taken her departure before a cloth was seized to dust the chair upon which she had sat.

It always seemed to me that this woman deprived herself of a very great deal of fun in her work, for she never had the keen joy of seeing it count, and this is a very real delight. It is almost worth letting things get downright "upsidedown" for the sheer pleasure of having them straight again. Then when one is making the transformation there is always the temptation to change things about, put this article where another was, paint this and varnish that, all adding a zest and a "zip" to one's work. Let the above quoted lady keep things always in spotless order if it suits her. I believe the great majority of women have too much creative instinct to find pleasure in such enervating monotony.

HAVE you ever wished to find yourself possessed of some small, old, unused house, fearfully and wonderfully planned, in some country-side or village, for the sheer pleasure of taking it in hand and experimenting in making it livable, comfortable and —yes, artistic—on the very smallest possible expenditure of money? This is genuine sport. If you do not think so, try it in one room of your house, unless you are already overburdened with a multitude of furnishings, in which case probably a process of elimination would give the most enjoyment. And there is no better time to start this than at Spring housecleaning season.

Nature is busy making the out-of-doors beautiful, changing her coloring, and readjusting. Why not keep pace inside? The actual cleaning of the house is least important, and interest —the real fun—lies in the changing, making something out of nothing, and often making nothing out of something, for most homes contain an innumerable number of useless articles which should be promptly disposed of. If, as a well known authority advises, these things must be preserved, have a room saered to the memory of—and into this hallowed spot place those things which mar the unity and beauty of your home. Age does not make things either beautiful or ugly—some old pieces of furniture are truly lovesome because their lines are good and the design pleasing. Other old articles are very ugly. Learn to value them for their beauty alone, for it is only thus that we can hope to raise the standard of interior decoration. If a new thing is good in design and pleasing accept it as readily as if it were old. Blind worship of the work of the past is detrimental both to progress and spontaneity of effort.

Painted Furniture.

HAVE you ever tried painting the pieces of furniture which do not seem to suit your rooms? Such treatment is particularly suitable for bedrooms or breakfast rooms and many very attractive dining-rooms have been furnished with painted furniture. Soft French gray, deep ivory, almost any subdued color, or black may be used with good effect, and if a note of color is desired, gay little medallions may be introduced to suit the lines of the furniture. If these are kept in conventionalized flower design in colors or gold the work of even an amateur is quite effective.

ONE of the most attractive little dining-rooms I have seen was furnished with painted furniture. The girl owner was only able to purchase the most inexpensive of kitchen chairs and table which she enamcled carefully in gray with rose and gold decoration. Gray walls, very light in tone and warmed with yellow, formed the background for some good prints. large windows permitted a flood of sunshine in the small room, and the gay, small patterned chintz took away any sombre note that might have existed. The newest idea in drapery, (or one should rightly say an old idea, for it is decidedly Victorian) the tie-back, was used with good effect. Probably the lighting of this room was the most original of its many interesting features. The fixture consisted of a simple wooden butter-bowl enameled inside with white and rose and gold on the underside. Large silk cords fastened the bowl to the ceiling and the electric light bulbs were placed inside the bowl—the white enameled lining serving as an excellent reflector.

A very effective screen which had outlived its beauty as burlap was treated to several coats of paint, and near the top of each panel a medallion of bright old-fashioned flowers was painted. The result was a screen as charming as it was original, and exactly suited to the room for which it was intended.

The great trouble with so much of our house furnishings is they do not fit, or seem to belong together. There is no relation between the room and the furniture, and even the different pieces of furniture have little co-ordination. This however, is largely a matter of education, and the condition will right itself in time—the study of art in our public schools will be one of the greatest factors in bringing about a better state of affairs. Just now the fun is in transforming these misfits of furnishings.

Colored Walls.

THERE are times when it seems impossible to associate longer with certain papers on our walls, and yet one may not have the wherewithal to re-paper. In such cases it is well to know that one can apply tinting (I do not like this word, it suggests those frightful pale pinks and blues one has seen) or coloring with a brush, right over the paper already on the walls. To finish, paste on a border of well designed paper which may be purchased by the yard. Even panelling may be put on in this way.

The Obtrusive Rug.

HERE is a reliable test for the artistic merits of a rug. Do you notice it first when you enter a room? If you do, rest assured it should have treatment. If the rug is a good one, do not experiment with it yourself, but send it to a reliable establishment to have it dyed or toned down in harmony with the room. Rugs are so very like the small child we used to hear about "When they are good, they are very good, but when they are bad, they are horrid." The rug is the foundation of your decoration, and until it is right, a room is hopeless.

And these are the things that make housecleaning time interesting. There is not a woman who does not know that deep down in her heart there is the keen desire to remake, improve, and beautify. Man may rave and fume over the upset and turmoil, but it means progress, it means a desire for better conditions, more beauty and refinement in our surroundings, and is this not desirable even if it does come by the housecleaning route?

A skin you love to touch

Painting by CHARLES CHAMBERS

You, too, can have the charm of *"A skin you love to touch"*

YOU, TOO, CAN HAVE THE CHARM of a skin that's soft, clear, radiant. Everyone admires it. Every girl longs for it. To have your skin as lovely as it ought to be—soft, clear, colorful—all you need to do is to give it the proper care for its needs.

No matter how much you may have neglected your skin, you can begin at once to improve it. New skin is forming every day as old skin dies. If you give this new skin the right care *every day*, you can keep it fresh and radiant. Such things as blackheads, blemishes and unsightly spots, you can, with the proper treatment, correct.

Begin today to give your skin the right treatment for its particular needs. You will find the famous treatments for all the commoner skin troubles in the booklet wrapped around every cake of Woodbury's Facial Soap.

You will find that a cake of Woodbury's lasts for a month or six weeks of any treatment and for general cleansing use. It sells for 25c at drug stores and toilet goods counters throughout the United States and Canada.

This beautiful picture for framing
Send for your copy today!

Picture with sample cake of soap, booklet of treatments and a sample of Facial Powder for 15c

This picture is Charles Chambers' interpretation of "A Skin You Love to Touch." It has been reproduced from the original oil painting, in full colors and on fine quality paper, expressly for framing. No printed matter on it. Size 15x19 inches.

For 15c we will send you one of these beautiful reproductions with a trial size cake of Woodbury's Facial Soap—large enough for a week's treatment—also the booklet of treatments—"A Skin You Love to Touch," and a sample of Woodbury's Facial Powder. Thousands will want this picture. Send for your copy at once.

PARISIAN ART

What Has Joan of Arc to Do With Modern Times?

By Edith Halsted Lorway

THERE are four songs which always send a thrill through me from "my toes up"—they are my national anthem when heard in a foreign land, my Alma Mater, and "Keep the Home Fires Burning," sung as our khaki-clad boys swing along, and the song, "Joan of Arc," which when sung by the ringing voices of a vast audience seems to catch some of the mirrored splendor of the "Marseillaise" itself. And we whose school-books are perhaps long dusty on the shelf wish we could remember a little more about this Joan of Arc, but somehow the days seem so full of present-day duties we never seem to get the time to sit down and "look her up." We want to refresh our memory as to *why* this mediæval heroine should be so brought into the limelight of the twentieth century, for surely, we think, there are enough heroes and heroines—our own boys and girls who were there in Flanders' land—as heroic, as great, as any personality of fact or fiction. Why, then, do we hear so much of Joan of Arc in modern song and drama?

The reason lies here—Joan, though she was a very real and vital person, yet to our minds typifies an idea, the idea of exultant, vibrating enthusiasm which is ready to die, and does die, for the cause at stake. We know that this terrific modern war has turned the books of history from more or less "dry," dead facts into something pathetically understandable. Men and women of Biblical times, men and women of Greece, Rome, the middle ages, who through warfare suffered, are as real to us as the fate of Belgium; the goodbyes of ancient sweethearts and mothers, as real as our own goodbyes.

We have also taken it home to our minds with a concrete meaning, that whereas no volcanic social disturbance can take place in any nation, but every other nation near and far, great and small, feels the distant rumblings—likewise we understand that events and personalities living in one age will throw their search-light, and tingle their influence through the human chain of the ages yet to be.

SOME, we know there are, who think that this war is but the beginning—that there is to be a century of upheaval and the passing of the nations; but let us not forget that the darkest time is just before the dawn, and that there is probably a "Dawn of Tomorrow"—finer, greater, than we now can know—that dawn, true, *we* may not see, but our children will. Now we look "as through a glass, darkly," but it may be that whereas Christ was crucified, that humanity through the succeeding ages might pause and remember, yet the mass of that careless humanity, has passed by unheeding; for we have clashed in our creeds, we have builded the great cathedrals while we let little children toil, and let girls be caught in the white slave nets and all the time *we* danced "the light fantastic toe." This we have done and Christianity has hung its head—now may it not be that an all-wise Spirit, who sees not one age, but scans the chain of all time, past and to be, has marked our particular day, for the crucifixion of humanity. Christ uncrucified might have disappeared from the thoughts of men, Christ crucified walks with increasing force through the busy marts of men. Humanity uncrucified might have in spite of our worldly wisdom and wealth, become as to soul, increasingly petty, and dwindled away—Humanity crucified and bearing with Atlas-like fortitude, the burdens of our time, becomes a figure colossal, standing upon the earth, yet touching the Divine.

It is said that of every man who goes "over the top," or rides over the sea, when a crucial crisis comes to him, there is near him as a breath, the spirit of some woman—his woman. It is this spirit of the woman inspiring, leading on, idealized if you like, which is making the fifteenth century Joan of Arc such a thrilling personality, not only through France, but through the British Empire and America, "Joan of Arc, We are Calling You."

Many of us have seen that wonderful picture of her hearing the voices, in the Metropolitan Museum of Art, but because the voices seem to hold such a large part, we are apt to think of her as a heroine in a fine legend. Yet never did a woman live, really live, more vigorously. purely and heroically than Joan of Arc.

BORN IN 1412, a peasant girl in the mountains of Vosges, she could claim no powerful friends nor influence of her own. While her brothers tended the flocks, she helped her mother spin and sew, and when not needed to do that she helped care for the village sick. Although she had neither money nor influence to start her in the world. she *did* have strength, health, beauty, and a great love of romantic adventures, while her religious fervor and unusual piety. dominated all her other qualities.

When she was thirteen years old, she began to hear strange voices, and to see visions, all of which called her to the service of her country, and of her God. promising her that some day she was to do something great.

At the time when Joan of Arc was about eighteen, France was poor, miserable and drained of her fighting men —drained through a war which had originated by Edward the First claiming the throne of France. Edward the First was dead, but the dispute as to which sovereign, English or French, should sit on the French throne, still continued.

In 1428, the Duke of Bedford resolved to take Orleans, a city on the north bank of the Loire, and the key to the South, but as it was well supplied with provisions and strongly fortified, it would by no means be an easy city to besiege.

It was now that Joan of Arc began to feel most strongly that the time had come for her to act. What did she. a peasant girl, know of war or equestrian exercises? Yet she determined to obtain an interview with the governor, Baudricourt. This was not an easy task, and when she did at last obtain one, he merely laughed at her, and told her uncle to take her home. But the voices never left her, and she came back to Baudricourt so often, that he finally told the king about her. Fortunately, the Duke of Lorraine became interested in her and sent her to the king with a guard to protect her.

AS the drowning man grasps at the straw, so the ministers of France thought that Joan of Arc, by her mere enthusiasm, might be able to arouse the common people, and to put new life into the French resistance.

By her lack of vanity and ambition, she won the hearts of the noble ladies, especially as they saw she had no worldly ends to gain; so it was not long before the French government granted her an army of six thousand men.

With this army, and dressed as a man she set out to take Orleans. Joan did not fight herself, but by encouraging her men she spurred them on to victory. The first thing she did upon entering the city was to march to the cathedral where a service of thanks was held.

Her next task was much harder, to capture Toires and Chalons. However the Maid again triumphed, and the French king was crowned in Chalons.

After the capture of Chalons, Joan wished to return to her own village. but the king urged her so hard to continue the war, that she finally consented. In one way, this may be considered the mistake of her life, in another way it may be considered as the step which led her to martyrdom, and thus to the everlasting homage of the world.

After the taking of Chalons, she met with one defeat upon another; for this poor village girl had no genius for war, but had only been led on by a mighty inspiration.

She was defeated at Compiegne. and there the Duke of Burgundy took her a prisoner. The most disgraceful thing connected with her capture is that no effort was made by the French to obtain her release; so that John of Luxemburg basely sold her to the English, like merchandise, for ten thousand livres.

A TRIAL of mere mockery was held by the English, at which Joan was tried for heresy—Joan who was too ignorant of religious doctrines to doubt the creeds which the priests had taught her. Never has a more unjust trial taken place in the name of justice. The outcome was, that she was sentenced to go to the Castle of Rouen, and there to be put in an iron cage and chained to its bars!

Then after another wicked, absurd trial, she was dragged to the stake and burned. calling "Jesus, Jesus, my voices, my voices!"

Joan of Arc lived in an age when England had not yet emerged from barbarism. Yet Germany to-day is farther behind than either of these nations were 500 years ago! May the light soon break upon the Saul-like blindness of Germany. But it is Joan, not her captors, of whom we are thinking here. In France as elsewhere, people have been unjustly sentenced to death for their religion or their country many times, therefore it is not for her martyrdom *alone* that she has become the national saint of France, but because of her girlish enthusiasm and the devotion of her womanhood which, through 500 years, have inspired a nation.

FULL well we know that the signing of the armistice does not mean the immediate healing of all wounds—there is yet much Red Cross work to be done; the Y.M.C.A. still calls; The Salvation Army, the Knights of Columbus; all the other great and noble organizations still pleadingly look to us; lay a needy hand upon our pocket books and our woman's strength. We Canadian women do not pretend to understand the mazes of Bolshevism, nor have we as a nation yet decided whether Socialism—Socialism of the more sane type—is merely hallucination of a nerve-strung and over-wrought world or whether it is a real child of the flesh, being given birth to with the pangs of revolutionism of a blood-stained Europe. We do not know; our grandchildren—perhaps our children—they will know, but we ourselves are too near the firing-line of events to have our twentieth century glasses focused in proper perspective.

This, however. we do know, that it is given to us women of the twentieth century to hold high the banner of Joan of Arc—not necessarily by engaging in actual combat, but by letting the spirit of our womanhood sweep through munition factories; blow over the harvest fields; race with the ambulance cars; stand unflinching through long hours of hospital duty; keep time to the "click, click," of knitting needles, and the "stitch. stitch," of sewing machines; shine compassionately and wisely around the fatherless child; and if the cross of war even yet be handed to us, may we not falter, having come to know that the spirit of Christ still lives—that the Spirit of Joan of Arc still lives; and that the Spirit of Modern Womanhood will live,—"Joan of Arc, We Are Calling You."

To keep a lovely skin
—with soap that rinses off.

Nature says: "Don't hamper my work by using haphazard methods and soaps."

And all Nature asks is a little common-sense coöperation in the care of the skin she is daily trying to give you.

Nature lays great stress on *rinsing*.

She says: "The soap must *all rinse off*."

So, if you want to choose and keep a clear, beautiful, natural skin, you will want to choose, also, a *method* and a *soap*, to take proper care of that skin.

Pure Fairy Soap is made for skins. Fairy Soap is made to cream refreshingly in *and out* of pores, as Nature asks. And when it has performed its perfect cleansing—*off it rinses*.

It rinses off perfectly — after its perfect cleansing.

That is why Fairy Soap is a soap that Nature herself loves—for the care of healthy, natural skins.

THE N.K. FAIRBANK COMPANY
LIMITED, MONTREAL

FAIRY SOAP

"Have you a little Fairy in your home?

"IN TUNE WITH THE TIMES
you find them caring for their native charms in simpler ways—the ways that Nature herself intended.'

Savory Meat and Fish Pies

Some New Recipes for the Use of Fish and Meat in Pies

By Marion Harris Neil

AUTHOR OF "SALADS, SANDWICHES, AND CHAFING-DISH RECIPES."

There is nothing more appetizing or satisfying than a meat or fish pie. Served in the form of a pie, a small quantity of meat or fish will go further than the same quantity served alone.

Mutton Pie.—One and one-half pounds of mutton, two sheep's kidneys, one onion, one tablespoonful of flour, one teaspoonful of chopped parsley, five parboiled potatoes, one cupful of stock or water, one teaspoonful salt, one-half teaspoonful of pepper and plain pastry.

Choose a piece of mutton without much bone or fat, wipe it and cut it in small pieces. Remove the skin and the core from the kidneys and cut them in thin slices. Toss the meat and kidney in the flour and then sprinkle them with the chopped parsley, onion chopped and seasonings, add th potatoes cut in slices and put the mixture into a fireproof baking dish, piling it rather high in the centre, and pour in the stock or water. Cover the pie with pastry, and bake in a hot oven for one and one-half hours. A few slices of tomato will give a nice flavor. Mutton by itself is rather greasy for a pie; the potatoes are put in to absorb some of the grease.

Salmon Pie.—One can of salmon, two cupfuls of bread or cracker crumbs, four cupfuls of good white sauce and pastry. Remove the liquid, skin and bones from the salmon and flake it. Line a deep fireproof dish with pastry, then fill it with alternate layers of fish, crumbs and sauce. Cover with pastry and bake in a moderate oven until nicely browned on the top. Have the sauce well seasoned with salt, pepper and paprika.

Rabbit Pie.—One large rabbit, or two small ones, one-half pound of bacon or ham, one tablespoonful of flour, one teaspoonful of salt, one fourth teaspoonful of pepper, two hard-cooked eggs, a dust of powdered herbs and pastry.

Cut the rabbit into neat joints, remove the top bone from the legs; put the flour, salt, pepper and herbs on to a plate, roll in this the rabbit, cut the eggs in thin slices, also the bacon or ham; arrange in a baking dish alternate layers of the rabbit, egg, and ham, also sprinkle a little salt and pepper over the egg; add four tablespoonfuls of water, and line the edges of the dish with pastry, cover with pastry, decorate with a few leaves of pastry and brush over the top with a little beaten egg and bake in a moderate oven for one and one-half hours. Meantime cook the bones with water, one small onion sliced, one blade of mace, a few sweet herbs, and season with salt and pepper; when cooked add one tablespoonful of gelatine and when the gelatine is dissolved, pour the gravy into the pie. This pie may be served hot or cold.

Pork and Turnip Pie.—An appetizing and inexpensive pie can be made as follows: Cut in small pieces two pounds of fresh pork, place in a saucepan, add three white turnips chopped fine, one tablespoonful of chopped suet, salt and pepper to taste and two cupfuls of water. Cook until the turnips are tender, stirring frequently. Line the sides of a deep fireproof dish with strips of pastry, and turn the pork and turnip mixture in. Cover with a top crust and bake in a moderate oven for thirty minutes.

Another Method.—Three pounds of loin of pork, one tablespoonful of tomato or walnut catchup, one tablespoonful of cornstarch, one teaspoonful of salt, one-half teaspoonful of pepper, one-fourth teaspoonful of powdered sage, one onion chopped, two cupfuls of milk, one tablespoonful of butter substitute and baking powder crust.

Use the thick end of the loin of pork. Place a layer of the pork on the bottom of a baking dish, sprinkle with parsley, place in another layer, and sprinkle with onion, add another layer and sprinkle over it the catchup. Make a gravy by boiling together the butter, milk, flour, and seasonings. Pour this over the pork, and cover with a thin layer of bread crumbs. When the meat is nearly done remove from the fire and put the crust over the top, and bake in a moderate oven.

Russian Fish Pie.—Cut the flesh from the bones of a cooked haddock or a thick slice of cod, then cut it into pieces one-half inch square. Add one chopped, hard-cooked egg, two teaspoonfuls of chopped parsley, two tablespoonfuls of thick white sauce, one-half teaspoonful of salt, one teaspoonful of lemon juice and one-fourth teaspoonful of pepper.

Into a bowl sift two cupfuls of flour, two teaspoonfuls of baking powder and one-half teaspoonful of salt. Cut and rub in one-half cupful of butter substitute, and add gradually enough cold water to mix the whole to a stiff paste. Turn it out on to a floured baking board, work it lightly into a smooth ball, then roll it out into a neat square of about nine inches. Place the fish mixture in the centre, and fold each corner of pastry into the middle, so as to form a large envelope. Brush over with beaten egg or a little milk, and garnish it with four leaves of pastry. Place it on a greased baking tin, and bake it in a moderate oven for forty minutes. Garnish with parsley, and serve hot with white or tomato sauce.

Excellent Egg Pies.—Line some gem pans or tartlet tins with thin rounds of plain pastry. Line with white paper, fill with raw rice or beans and bake in a hot oven for fifteen minutes. Shake out the rice and papers and return to the oven for a few minutes. Mix one cupful of chopped cooked meat or poultry with four chopped hard-cooked eggs. Mix three tablespoonfuls of bread crumbs with one-half cupful of boiling milk, add this to egg and meat mixture add two teaspoonfuls of chopped parsley, one teaspoonful of onion juice, two tablespoonfuls of melted butter substitute and salt and pepper to taste. Divide the mixture into the pastry cases, lay a slice of peeled tomato on the top of each pie, and bake in a hot oven until very hot.

Meat Pie With Oatmeal Crust.—Into a saucepan pour three cupfuls of water, add one teaspoonful of salt, bring to boiling point, sprinkle in one cupful of fine oatmeal and cook for twenty minutes. Leave until almost cool, then spread on bottom and sides of a greased fireproof dish, and in the centre place any kind of cooked meat cut in small pieces, add chopped onion and parsley to taste, and cover with some more of the oatmeal paste. Cover with a greased paper and bake in a moderate oven for one hour. Serve hot with gravy made as follows: Take any bones left from the meat, and chop them small and put them into a saucepan with cold water to cover, add two peppercorns, one bay leaf, and one peeled onion with three cloves stuck in it. Simmer for one hour, then strain off the stock and to one and one-half cupfuls add a little kitchen bouquet if necessary, and two tablespoonfuls of cornstarch mixed with four tablespoonfuls of cold water, then cook for six minutes and serve hot.

New Onion Recipes

Use Onions to Keep the Body Healthy

By Marion Harris Neil

AUTHOR OF "HOW TO COOK IN CASSEROLE DISHES."

The onion belongs to the lily tribe, the bulb being the part which is edible. The leek, shallot, garlic and chives all belong to the same family. The onion has wonderful medicinal properties; it contains a pungent volatile oil which is rich in sulphur, besides other valuable minerals. Not only is it a useful adjunct in cookery for flavoring purposes, but cooked and served by itself it is one of the healthiest vegetables we have, being both purifying to the blood and soothing to the nerves. When to be used alone (not as flavoring merely), they should, like all strong-tasting vegetables, be "blanched," as it is called, by putting them on in cold water, allowing this to boil, and then straining it off. Afterwards they can be either stewed or braised in stock, or cooked like other vegetables in boiling water, with salt in it. Onions take a long time to cook. For large onions two or three hours must be allowed. Small onions will require about one hour.

Onions, Baked.—Take off one layer only of the outer brown skins. Put the onions in a saucepan in slightly salted boiling water, and boil them for one hour. Take out the onions, twist each up in a piece of greased paper, and put them in a baking tin in a moderate oven for two hours, or until they feel quite tender when pierced with a sharp skewer. Either serve them unpeeled in a hot vegetable dish and pass sweet butter with them, or peel and pour over hot brown sauce. Allow one onion for each person.

Or choose onions of equal size. Cut off the roots and tops and remove all the brown outside skin. Throw the onions into a saucepan of boiling salted water; boil them for fifteen minutes, and drain well. Then place the onions in a deep fireproof dish, just large enough to hold them. Season well with salt and pepper; heat one cupful of fresh or evaporated milk and pour it over. Add four tablespoonfuls of butter substitute, broken in small pieces; cover with a greased paper and bake in a moderate oven until tender, basting occasionally with the milk. Serve very hot. One tablespoonful of grated cheese may be added when nearly ready.

Glazed Onions.—Two dozen small onions, four tablespoonfuls of butter substitute, salt and pepper to taste; two tablespoonfuls of stock or water and one tablespoonful of brown sugar.

Remove the skins from the onions and throw them into boiling salted water for five or six minutes, then drain. Heat the butter substitute until browned, then fry the onions a light brown; add the stock or water, sugar and the seasonings, and simmer until tender. Dish, and pour round the gravy.

Small Fried Onions.—Put some small onions that have been peeled into a saucepan with cold water and a little salt, and bring them to the boil; then strain and put them in a clean saucepan to cook for one hour with four tablespoonfuls of butter substitute (for one quart of onions), a dust of paprika, the strained juice of one lemon and one-half cupful of stock or water. Cover the pan and allow to cook steadily at the side of the stove; take up when tender, and roll them in chopped parsley, and then into flour and beaten egg; then toss in bread crumbs or cornmeal and fry in smoking hot fat until brown. Serve garnished with parsley, and serve the following sauce separately: Take the liquor in which the onions were cooked and mix it with one-half cupful of thick brown sauce; boil up, strain, and use.

Onions a la Mediterranee.—Take three dozen small onions, peel and blanch them, and put them into a saucepan with one cupful of fresh or evaporated milk and two ounces of fat and lean raw ham or bacon, cut up in small pieces. Wash a crisp lettuce and shred it, and sprinkle over it a little pepper and salt, and place it on the top of the onions. Put a greased paper over and cover the pan with the lid, and let it simmer for one hour; then add to it two yolks of eggs that have been mixed with one tablespoonful of thick white sauce. Shake the pan over the fire after adding the yolks of eggs, and when the mixture has thickened turn out the onions on to a hot dish. Garnish it round with a border of plainly-boiled macaroni or spaghetti, and serve very hot.

Onion Soup.—Three large onions, two cupfuls of boiling stock, two cupfuls of hot milk, two tablespoonfuls of butter substitute, two teaspoonfuls of cornstarch, two raw yolks of eggs, four tablespoonfuls of cream, one teaspoonful of salt, one-half teaspoonful of pepper, a dust of powdered nutmeg and toast. Peel and slice the onions. Put them into a soup pot with cold water to cover; bring them to boiling point and cook five minutes, then drain. Melt one-half of the butter substitute in a saucepan; add the onions, and cover them and let them cook in the butter substitute for ten minutes without coloring in the least; then add the stock and simmer the soup until the onions are soft, then rub through a sieve. Rinse out the saucepan, melt the remainder of the butter substitute in it, and stir in the corn starch; add the sieved soup and milk gradually, and stir until it boils. Beat up the yolks of eggs with the cream and add them to the soup. Re-heat it again, without allowing it to boil. Serve hot with small squares of toast.

Onion Salad.—Slice large onions, sprinkle with salt and allow to stand for thirty minutes; drain and pour over boiling water to just cover, and allow to stand until the water is cold. Drain, rinse and pack in a colander with alternate layers of shaved ice. When crisp, dry and serve on lettuce leaves with French dressing, sprinkling with chopped parsley.

Or, mix equal quantities of sliced onion with sliced tart apples; add mayonnaise dressing and serve on lettuce leaves.

Stuffed Onions.—Four large onions, two tablespoonfuls of cooked meat, two tablespoonfuls of bread crumbs, one tablespoonful of chopped parsley, one teaspoonful of salt, one-half teaspoonful of pepper, one tablespoonful of brown or tomato sauce, four tablespoonfuls of butter substitute and one-half cupful of stock or water. Choose onions of equal size. Cut off the root and top and remove all the brown skin. Put them into a saucepan of boiling salted water; boil them for ten minutes, then strain and throw them into cold water. When cool enough to handle, remove one or two of the outer coatings from the onions and scoop out the centres, making a hole large enough to receive two tablespoonfuls of stuffing. Chop up these onion trimmings; put them into a fireproof baking dish with the butter substitute and the stock or water, and make them hot over the fire or in the oven. Then make the stuffing. Use chicken, tongue, ham or any nicely-cooked meat, and chop sufficient to make two tablespoonfuls. Put it into a bowl with the bread crumbs, parsley, sauce and seasonings. Fill up the centers of the onions with this mixture, piling it rather high in the center. Place them in the fireproof dish with the onion trimmings; cover with a greased paper, put on the lid and cook in the oven or on the top of the stove until the onions are quite tender, about two hours. Serve in the same dish.

If desired, chopped nuts may be used in place of the meat. This makes a very good supper dish.

Both Carry The Same Food Value

Measured by Energy Units

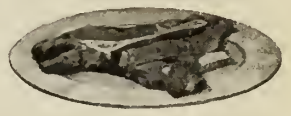
The 35-cent package of Quaker Oats contains 6,221 calories of energy. And foods, as you know, are now measured by calories.

Note what a bulk of some foods it takes to equal that single package. That is, to supply the same energy value.

It Equals In Calories

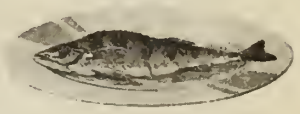
73 Cans of Tomatoes
Or 21 Cans of Peas
Or 50 Large Potatoes
Or 750 Oysters
Or 80 Bananas
Or 22 Pounds Perch.
Or 89 Eggs
Or 9 Pounds Veal Cutlets

Compare the cost on this same basis and the difference is amazing. See table below.



Note that meat foods, fish and eggs average ten times Quaker Oats' cost for the energy they yield.

But the difference is greater still. The oat is better-balanced food. It is more nearly a complete food. For people of all ages, it is called "The Food of Foods."



Note these cost comparisons, based on prices at this writing. Consider them in your breakfasts. Ten people can be fed on Quaker Oats at the cost of feeding one on meats.

Cost Per 1,000 Calories

Quaker Oats	5½	cents
Round Steak	41	"
Veal Cutlets	57	"
Dried Beef	70	"
Salt Codfish	75	"
Fresh Halibut	53	"
Hens' Eggs	70	"

This Costs 57c
Per 1,000 Calories

This Costs 60c
Per 1,000 Calories

Quaker Oats Costs 5½c
Per 1,000 Calories

Quaker Oats

The Exquisite Flakes

In Quaker Oats we flake the queen grains only—just the rich, plump, flavory oats. We get but ten pounds from a bushel.

The result is a flavor which has won millions, and which costs you no extra price. Don't forget to specify this brand.

Two Sizes: 35c and 15c—Except in the Far West

The Quaker Oats Company

Peterborough, Canada — Saskatoon, Canada

"The intimate article of dress known as the corset which the majority of women wear but know very little about"

Alice L. Cutler, M. D.

IN THIS pertinent way the well-known medical authority, Alice L. Cutler, M. D., describes the most important garment in the wardrobe of women.

But women, generally, *do* know more about corsets today than they did before The War; they are beginning to realize those proven fundamentals of correct corsetry *always* known and appreciated by every wearer of a correctly fitted Gossard Corset. It was sufficiently proved in the war that only by the hygienically correct support of those muscles which protect the vital organs are women capable of sustained effort in any line of endeavor. Thousands of women were broken in health before this demonstrated truth was fully appreciated and corsets declared a war essential.

The important part that Gossard Corsets were privileged to play in sustaining Canada's splendid woman power will always be the brightest achievement in the long succession of triumphs that have marked the development of the original front-lacing corset to its unquestioned leadership in modern corsetry.

Every Gossard Corset is hygienically correct. If properly fitted to the figure for which it was designed, and carefully adjusted each time it is worn, it will mould that figure to the ideal proportions of its type. It will give a priceless all-day comfort. It will safeguard the wearer against those bodily ailments that are often the result of improper corsetry. It will render a wearing service that alone is worth the price paid for the garment.

GOSSARD CORSETS

The Original-Unequalled Front Lacing Corsets

Buy your corset carefully. To again quote Dr. Cutler, "No one wants to be ill, and when women realize that the constant wearing of an ill-fitting corset helps to keep our hospitals open they will insist on being properly fitted to corsets instead of buying them hit or miss."

Gossard Corsets are easy to buy because of the exact science with which they are designed for the needs of the various figure types. Their proper purchase merely means that thoughtful care you generally give to matters of importance.

Adjusting a Gossard is simplicity itself; it is so simple as to offer no excuse for neglecting that daily adjustment by which alone the full benefits and service of the corset may be realized.

Never hurry in putting on your corset. That elusive charm called "style" is nothing but correct body poise induced by a correctly fitted corset. You may be sure that the woman you admired today has taken the time to carefully adjust her Gossard.

Every Gossard Corset represents complete corset economy regardless of its price.

No woman is so poor she cannot afford a Gossard Corset. No woman is so rich she cannot afford to practice true corset economy.

The more you know about correct corsetry the more you will appreciate the superiority of Gossards from the standpoint of comfort, hygiene, style and wearing service.

Spring Time Fashions of Latest Mode

The suit with box jacket, belted and vested, is one of La Mode's favorite themes for the Spring, as for example the illustration below.

Its rival is the semi-fitted jacket, also belted and with a flare to the peplum, as shown above. The material used in both is navy blue gabardine.

Gowns Designed To Show The New Spring Modes

Elaborately braided with soutache is the black charmeuse gown with Chinese sleeves. The unique cuff is of tucked net and matches the shawl collar.

Foulard is the fabric used for the gracefully draped gown on the right, which is vested and collared with white satin.

There is something distinctly new in neck lines this season. Besides the round and square collarless necks, there are the deep U-shapes, filled in with tuckers of fine organdy. Then, strictly tailored dresses of serge have the flat Buster Brown collars. These invariably are trimmed with black silk Hercules braid.

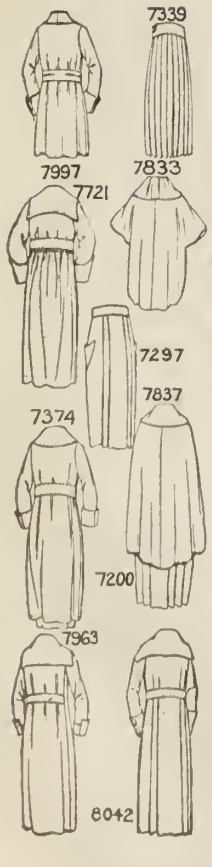
THE chemise dress is to be more popular than ever. The model illustrated on the right is of navy blue gabardine over black satin and trimmed with cut-out applique.

The illustration at the left is a Harry Collins model of white khaki kool with pussy willow design embroidery in grey and brown angora wool.

Patterns cannot be procured for the costumes illustrated on this page.

Smart Coats and Wraps For Early Spring

The model in the lower left corner is smartly attired after the fashion of the moment. Her cape is of navy gabardine with grey collar and waistcoat, with two buttons, one for utility and the other for ornament. Her plaid woolen pleated skirt is in the height of fashion; so is the pineapple straw sailor.



The centre figure showing the back view is also wearing a navy gabardine cape, which is shirred to a shallow yoke, almost concealed beneath a close-fitting collar with long point, tipped with a silk cord tassel. The chapeau is of fancy braid with satin and wings.

The third model is more intricate. The skirt is gathered to a deep yoke which has long ends that encircle the body and fasten in front with a large buckle. The deep collar is typical of the season's capes. The small turban of fine straw and ribbon with front trimming is one of the Spring's most popular styles.

Patterns cannot be supplied for these coats. They are shown in order that they may serve as a guide when deciding upon Spring wraps.

Coats and Capes For Sports Wear and Practical Service

7997—Ladies' Single-breasted Coat (25 cents). Seven sizes, 34 to 46 bust. Width at lower edge (open) about 1⅝ yard. As illustrated, size 36 requires

2¾ yards 54-inch Bolivia cloth
3¼ yards 36-inch lining

7339—Ladies' One-piece Side-plaited Skirt (20 cents). Five sizes, 24 to 32 waist. Width at lower edge about 2¾ yards. Size 26 requires

4⅛ yards 36-inch serge

7721—Ladies' Single-breasted Coat (25 cents). Seven sizes, 34 to 46 bust. Length at center-back 47 inches. Size 36 requires

3¾ yards 54-inch velours
¾ yard contrasting broadcloth for collar
5 yards 36-inch lining

7963—Ladies' Double-breasted Coat (25 cents). Seven sizes, 34 to 46 bust. Width at lower edge of coat (open) about 2¼ yards. Size 36 requires

3½ yards 54-inch check velours
4¾ yards 36-inch lining

7833—Ladies' and Misses' Cape (25 cents). Sizes small, medium, and large, corresponding with 16 years and 36 and 42 bust. Size 36 requires

4⅜ yards 36-inch velveteen
4⅛ yards 36-inch lining

Cape may be closed high at the neck with a wide gathered collar; perforated for open neck with shawl collar.

7297—Ladies' Four-piece Plaited Skirt (20 cents). Six sizes, 24 to 34 waist. Width at lower edge about 2¾ yards. Any size requires

4 yards 36-inch plaid

This requirement is for skirt in 36-inch length including a 3-inch hem and pointed pockets; or 4¼ yards 36-inch material if made with side gores having inserted pockets.

8042—Ladies' Single-breasted Coat (25 cents). Six sizes, 34 to 44 bust. Size 36 requires

3½ yards 54-inch gabardine
4⅜ yards 36-inch lining (making seam at center-back)

Coat has large convertible collar buttoned high at the neck, or rolled with fronts, forming revers. Back of coat laid in plaits, stitched above the waist-line and pressed below. Patch pockets; and long one-piece sleeves finished with deep turn-back cuffs. Length of coat at center-back, from neck to lower edge 47½ inches.

7374—Ladies' Coat (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires

3⅞ yards 54-inch cheviot
4½ yards 36-inch lining for coat without cape

Length of coat at center-back 48½ inches. Coat may be made with or without the circular cape which is perforated for an open-back cape. Large collar closed high at the neck, or turned down and the fronts rolled back to form pointed revers.

7837—Ladies' and Misses' Cape (25 cents). Sizes small, medium, and large, corresponding with 16 years and 36 and 42 bust. Medium size requires

3⅞ yards 36-inch serge
3⅜ yards 36-inch lining

Cape has convertible round collar.

7200—Ladies' Four-piece Skirt (20 cents). Seven sizes, 22 to 34 waist. Width at lower edge with plaits drawn out about 2⅞ yards. Size 26 requires

4¾ yards 36-inch check worsted

Skirt has high waist-line and close at left side-front under plait.

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

Spring Tailored Suits Show Jackets of Varied Lengths

7590—Ladies' Jacket (25 cents). Six sizes, 34 to 44 bust. Length at center-back 32½ inches. Size 36 requires for jacket with shawl collar

2⅝ yards 44-inch striped worsted
3¼ yards 36-inch lining

7905 — Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 22 to 34 waist. Width at lower edge of skirt about 1½ yard. Size 26 requires

2⅜ yards 44-inch striped worsted

7264—Ladies' Jacket (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires

2⅞ yards 54-inch tweed
3 yards 36-inch lining

7394—Ladies' Three-piece Skirt (20 cents). Six sizes, 24 to 34 waist. Width at lower edge about 2 yards. Size 26 requires

2 yards 54-inch tweed

7720—Ladies' Semifitted Jacket (25 cents). Six sizes, 34 to 44 bust. Length at center-back 27½ inches. Size 36 requires

3½ yards 36-inch velvet
3¼ yards 36-inch lining

7696—Ladies' Two-piece Skirt (20 cents). Seven sizes, 24 to 36 waist. Width at lower edge about 1¾ yard. Size 26 requires

3¾ yards 36-inch velvet

7170—Ladies' Jacket (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires

2⅞ yards 54-inch velours

7888—Ladies' Two-piece Gathered Skirt (20 cents). Six sizes, 24 to 34 waist. Width at lower edge with plaits drawn out about 2 yards. Size 26 requires

2½ yards 54-inch velours

8040—Ladies' Jacket (25 cents). Six sizes, 34 to 44 bust. Length at center-back 38½ inches, perforated for 34 inches. Size 36 requires

3 yards 44-inch serge
4¼ yards 36-inch lining

7928—Ladies' Two-piece Gathered Skirt (25 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 1⅜ yard. Size 26 requires

2⅜ yards 44-inch serge

7958—Ladies' Jacket (25 cents). Six sizes. 34 to 44 bust. Size 36 requires

3⅞ yards 44-inch gabardine
3 yards 36-inch lining

7511—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Width at lower edge of skirt in 39-inch length about 2 yards. Size 36 requires

4⅜ yards 44-inch serge
⅜ yard 27-inch satin
1 bought belt

12372—Blue or yellow transfer pattern (3½ yards of 2- and 3¾-inch borders), 20 cents.

7824—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Width at lower edge of skirt about 1¾ yard. As illustrated, size 36 requires

3⅝ yards 44-inch checked material
¾ yard 27-inch black satin
⅜ yard 18-inch or wider white satin for vest

7822—Ladies' Dress (25 cents). Seven sizes, 34 to 46 bust. Width at lower edge of skirt about 1½ yard. Size 36 requires

6 yards 36-inch checked taffeta
½ yard 36-inch white satin
2¾ yards braid

11653—Blue or yellow transfer pattern 15 cents.

7840—Ladies' Dress (25 cents). Seven sizes, 34 to 46 bust. Width at lower edge of skirt about 1½ yard. Size 36 requires

2⅜ yards 36-inch black satin
2 yards 54-inch blue serge
¼ yard 27-inch white satin
⅞ yard 36-inch underbody lining

11602—Blue or yellow transfer pattern (2 yards of 1- and 2-inch border), 15 cents.

7703—Ladies' Jumpers (20 cents). Sizes small, medium and large, corresponding with 32, 36 and 42 bust.

7820—Ladies' One-Piece Dress (25 cents). Nine sizes, 34 to 50 bust. Width at lower edge of dress about 1⅝ yard.

7703 and 7820 in medium size, require

4 yards 36-inch black satin
1⅝ yard 44-inch blue serge

12468—Blue or yellow transfer pattern (2½ yards of 18⅞-inch border), 25 cents.

7671—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Width at lower edge of skirt 1⅝ yard. Size 36 requires

4¾ yards 36-inch black velvet
¼ yard 27-inch white satin
2¼ yards 36-inch lining for underbody and top of gores

12426—Blue or yellow transfer (6 yards of 4-inch border), 15 cents.

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

Afternoon Frocks of Serge, Check and Worsted

7992—Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust.

7910—Ladies' Two-Piece Gathered Skirt (20 cents). Six sizes, 24 to 34 waist. Width at lower edge of skirt about 1½ yard. As illustrated, 7992 and 7910 in medium size, require

4⅛ yards 44-inch serge
¼ yard 27-inch white satin
1⅜ yard velvet ribbon
⅞ yard 36-inch underbody lining

Blouse has square neck, with a collar which is round at back and pointed in front, or V-shaped neck with round collar. One-piece flowing sleeves with flaring cuffs or plain one-piece sleeves with turn-back cuffs. Applied front and crushed girdle in one piece, finished with a straight sash over the closing at back. Skirt has three-inch high waistline and straight lower edge closed at left side seam. One-piece straight belt with strap extensions in front; or two-piece belt closing at left side with attached straps, and plaited sections having pockets inserted.

7990—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Width at lower edge of skirt about 1½ yard. If made as illustrated, size 36 requires

3 yards 44-inch checked velour
3⅛ yards 36-inch black satin
½ yard 32-inch white satin
⅞ yard 36-inch underbody lining

8043—Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust.

8034—Ladies' Skirt (20 cents). Eight sizes, 24 to 38 waist. Width at lower edge of skirt about 1½ yard. 8043 and 8034 in medium size, require

3 yards 36-inch black satin
2½ yards 44-inch gabardine
⅞ yard 36-inch underbody lining

The blouse is in the new revers style, the fronts turned back in revers to show a satin vest. Bone buttons form an effective trimming.

8016—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires

6 yards 36-inch velvet
⅜ yard Georgette
½ yard fringe
⅞ yard 36-inch underbody lining

12425—Blue or yellow transfer pattern (3 yards of 14-inch border and 2 yokes), 50 cents.

Velvet is much favored for afternoon gowns developed on simple lines, and with fringe and embroidery or braiding as the decorative notes.

8028—Ladies' Blouse with Panel (25 cents). Six sizes, 34 to 44 bust.

12376—Blue or yellow transfer pattern (3½ yards of 8-inch border for braiding), 20 cents.

7330—Ladies' Two-Piece Skirt (20 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 2¼ yards. 8028 and 7330 in medium size, require

6⅜ yards 44-inch serge
¼ yard 32-inch or wider white cloth

Here we have the new panel blouse with Mandarin sleeves; combined with a skirt that has high waistline and straight lower edge; closes at left side seam or at center-back.

Serviceable Dresses For The School Girl

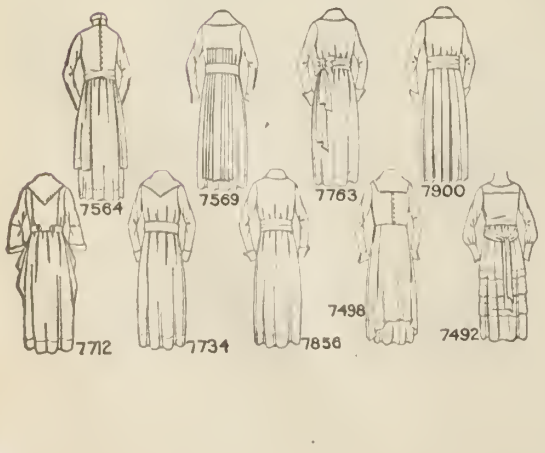
7564—Misses' Dress (25 cents). Three sizes, 16 to 20 years. Width at lower edge of skirt about 1¾ yard. As illustrated, size 16 requires

2⅝ yards 44-inch checked cloth
2⅛ yards 36-inch satin
⅞ yard cord for girdle

7734—Misses' One-Piece Dress (25 cents). Four sizes, 14 to 20 years. Width at lower edge of dress about 1⅞ yard. As illustrated, size 16 requires

3⅞ yards 36-inch material
1¼ yard 36-inch contrasting material

7712—Misses' Dress (25 cents). Three sizes, 16 to 20 years. Width at lower edge of skirt about 1⅝ yard. As illustrated, size 16 requires



3⅛ yards 44-inch serge
1⅝ yard 40-inch black satin
⅞ yard 36-inch underbody lining

12469—Blue or yellow transfer pattern (24 motifs), 20 cents.

7498—Misses' Dress (25 cents). Four sizes, 14 to 20 years. Width at lower edge of flounce about 1½ yard, tunic about 2¼ yards. As illustrated, size 16 requires

5½ yards 36-inch velvet
⅜ yard 22-inch or wider satin
2½ yards velvet ribbon
1⅞ yard 36-inch lining for gores and underbody

12466—Blue or yellow transfer pattern (3½ yards of 3-inch border), 20 cents.

7569—Misses' One-Piece Dress (25 cents). Four sizes, 14 to 20 years. Width at lower edge of dress about 2 yards. As illustrated, size 16 requires

5⅝ yards 44-inch serge

12058—Blue or yellow transfer pattern, 15 cents.

7900—Misses' Dress (25 cents). Four sizes, 14 to 20 years). Width at lower edge of skirt with plaits drawn out, about 2⅜ yards. As illustrated, size 16 requires

4¼ yards 44-inch wool Jersey

12326—Blue or yellow transfer pattern (6 yards of 4-inch border), 15 cents

One-piece gathered skirt with high waistline and straight lower edge (closing to the left of center-front) attached to underbody at raised waistline.

FOR DETAILED DESCRIPTIONS SEE THE COUNTER CATALOG

7856—Misses' and Juniors' Dress (25 cents). Nine sizes, 12 to 20 years. Width at lower edge of skirt about 1½ yard. As illustrated, size 16 requires

3¾ yards 44-inch wool mixture
⅜ yard 27-inch velvet

7763—Misses' Dress (25 cents). Four sizes, 14 to 20 years. Width at lower edge of skirt with plaits drawn out about 1⅞ yard. As illustrated, size 16 requires

4¾ yards 36-inch material
⅞ yard 36-inch underbody lining

The skirt is closed at left side seam under the plait.

7492—Misses' Dress (25 cents). Three sizes, 16 to 20 years. Width at lower edge of skirt about 3 yards. As illustrated, size 16 requires

7¾ yards 40-inch crêpe meteor
¾ yard 40-inch white Georgette
⅜ yard 10-inch lace
⅞ yard 36-inch underbody lining

Misses' Spring Suits in a Variety of Styles

SKIRTS

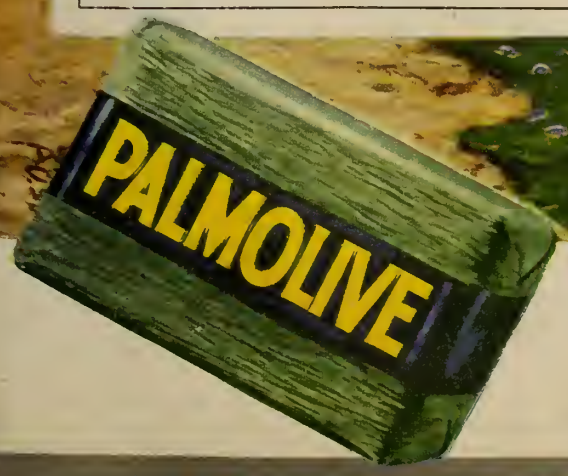
PALMOLIVE

After a Journey Three Thousand Years Ago

Travel stained caravans, halting for the night, sought the same source of refreshment that weary travelers do today. A bath with Palmolive was the great "First Aid."

For the same Palm and Olive oils to which Palmolive owes its famous qualities, was the great toilet luxury of that remote age.



Theirs the discovery—ours the final perfection of the most perfect cleansers the world has ever known.

Palmolive is sold by leading dealers everywhere. It is supplied in guest room size by popular hotels. It is the favorite soap of the army and navy, at home and abroad.

THE PALMOLIVE COMPANY
OF CANADA, LIMITED

Toronto, Canada

The Palmolive Company, Milwaukee, U.S.A.

Painted for The Palmolive Company by Dean Cornwell

NOTE: From the earliest recorded times Palm and Olive oils have served as cleansers and protectors to the people of oriental climes. Their wonderful qualities have guarded the peoples of these countries against hot sun and dry wind for centuries. These same qualities are embodied in the modern Palmolive.

For *cleansing*, one cream — For protection, an entirely *different* cream

To give your skin the loveliness it should have, two entirely different creams are needed — an oil cream for cleansing, and a non-oily cream for protection

The nightly cleansing and massage with Pond's Cold Cream keep the skin clear and smooth

THE skin is constantly being toughened and coarsened by its daily exposure to wind and dirt. Unless you take care to cleanse it thoroughly of all impurities at night and to protect it properly during the day, you deliberately sacrifice the clear, fresh-looking complexion you could so easily have.

Cleanse the skin thoroughly each night

Particularly at the end of a windy, dusty day the pores of your skin are filled with fine particles of grime and dirt. To make the skin clear and fine-textured, it must be kept thoroughly cleansed.

Before going to bed, cleanse the skin liberally with Pond's Cold Cream. The soothed, *refreshed* feeling will be noticeable at once.

You will find Pond's Cold Cream a perfect oil cream for massage as well as for cleansing.

Protect your skin all winter

Every woman who cares about her appearance knows that in cold winter days the skin must be especially protected to prevent its becoming rough, red and chapped. You can protect your skin from wind and cold, can keep it soft and smooth by applying a little Pond's Vanishing Cream just before you go out.

Rub it lightly into your skin. At once it disappears without leaving a trace of disagreeable shine. By taking this simple precaution, you can keep your skin lovely all winter.

The very first application will show you how much your skin is benefited.

Pond's Vanishing Cream is wholly different from any other cream you have ever used. It contains no oil and cannot make the skin shiny. Its purpose is to give you a pure, greaseless cream for use in the daytime; to protect your skin from dirt, wind and chapping; and for use in the evening or whenever you want to freshen your skin and make it especially lovely.

Famous women who use it

Billie Burke, Frances Starr, Martha Hedman, Elsie Janis, Norma Talmadge, Marion Davies, Mabel Taliaferro, Marjorie Rambeau, and others of the most famous women of the stage use Pond's Vanishing Cream constantly.

All of the ingredients of Pond's Cold Cream and Pond's Vanishing Cream have been carefully selected and tested. Only the purest and freshest are used. Neither cream will grow hair or down on the skin. Try them both for a week and notice how much lovelier your skin looks.

Free sample tubes

Tear out and mail the coupon today and we will send you sample tubes of each cream free. Or for 10c to cover postage, packing, etc., we will send you larger tubes of both creams, containing enough to last two weeks. Send for them today.

Address Pond's Extract Company, 146-T Brock Avenue, Toronto, Canada.

You can get Pond's Cold Cream in either the tube or the jar

AT a moment's notice, whenever you want your skin to look its best, Pond's Vanishing Cream brings it new freshness. As a protection, too, you should apply a little just before going out into the cold. It prevents roughening and keeps the skin fair and soft

Keep Pond's Vanishing Cream where you can get at it often during the day

MAIL THIS COUPON TODAY

POND'S EXTRACT CO., 146-T Brock Ave., Toronto.

Please send me, free, the items checked:

A free sample of Pond's Vanishing Cream

Institute Reports From All Parts of Canada Denote Progress

The Annual Convention of Women's Institutes of Ontario

Postponements are sometimes not satisfactory, but no one will question the success of the Ontario Women's Institutes Convention postponed from Novemher, 1918, and held in Toronto on the 4th, 5th and 6th of February. Over five hundred Institute members from almost every point in Ontario were in attendance and the keenest interest was manifested in all matters under discussion. While patriotic work is not yet at an end, the dreams of aggressive Institute work which had been set aside were allowed a promise of early fulfilment.

The Convention was pleased to greet the new Minister of Agriculture, the Hon. George Henry, who came in to give a word to the delegates.

The message which Lady Hearst gave in her address of welcome was that the women continue in peace the practice of thrift and service that had been developed during the war and to cultivate the broadest public spirit—resist everything tending to make for class distinction.

Miss E. E. Haycraft, after acknowledging the cordial words of welcome, said that the uppermost thought for first consideration is work of reconstruction; the Institutes are not to be among those organizations which have outlived their usefulness. Our interest must still be in the youth of the country, in local charities, in hospitals and all work of a community nature. Canada, as a result of war will be a changed nation; let us hope that our women will he changed also and have a broader outlook on life. Many conditions require improving and it is our duty in a large measure to cope with them. As Institutes, let us put before the world a work of which no one of us need be ashamed.

Mr. Putnam, the Superintendent, summarized the work of the year and referred to features which would be given prominence in the coming months, matters dealing with Child Welfare to receive special attention. During the Institute year, 1917-18, with a membership of 30,000, the total contribution to patriotic work in cash and goods amounted to at least. $85,000. The total for the war period had been well up to the two million mark. A goodly number of Institutes have included the Demonstration Lecture courses in their programme and these have been particularly attractive to the girls in and outside of the Institute. During the past six years, 13,000 had taken advantage of these Courses. The importance of Medical Inspection in schools had forced itself upon many of the rural districts, and 289 schools had been inspected during the year; 14,076 children had been examined, the percentage of defects being approximately: impaired vision, 19%; defective teeth, 68%; defective tonsils, 33%; defective hearing, 10%. Many cases of impaired vision were found to be due to improper lighting in school rooms.

In referring to the Canning Centres carried on in co-operation with the Red Cross Society, Mr. Putnam stated that the product had totalled over seventy-six tons of vegetables fruit, chicken, soup, etc. Mr. Putnam also spoke of the desire of the Department of Agriculture to formulate plans for permanent Provincial Women's Institute organizations. The plans accepted by the Convention are outlined in the resolutions, a copy of which is found in another column. Here we might mention Federal organization of Women's Institutes, and similar organizations will be discussed at a special meeting called for the purpose at Winnipeg, in February, the Ontario representatives being, Mr. G. A. Putnam, Superintendent, Mrs. Wm. Todd, of Orillia, and Mrs. James Patterson, of Gadshill.

An outline of forward movements for Institutes as given in the Superintendent's report will appear in another issue.

Two announcements of particular interest were made by the Hon. H. J. Cody, Minister of Education. The first one was that beginning in March, the Department of Education will institute a complete medical survey of the rural and smaller town and village schools of the province by a corps of doctors and nurses appointed and paid by the Department, in conjunction with the Women's Institutes.

The survey is not only for the securing of information regarding conditions, but to encourage school authorities to secure regular Medical advice and nurses for the school.

The other announcements made also tend to the welfare of the child and referred to a bill heing prepared which will render farmers' wives and daughters eligible as members of school boards, whether the woman in question has property or not. Farmers' sons will be accorded the same rights. Dr. Cody considered the women on School Boards of incalculable value.

Dr. Cody urged the Women's Institutes to create public opinion that more money be spent on Education. "Never believe that the interests of any class in the community will be served at the cost of the misfortune of another class. All classes have the same common interest and over the world at present there is sweeping a fresh sense of the value of education. Education needs a great deal of expenditure, and therefore, if you want education you must create a public opinion that it is not only worth while ideally, but is worth while paying for. Education is the most valuable investment that can be made for Canada."

Dr. Cody, speaking of Reconstruction work, which is the problem of the day, said that this does not mean a return to former conditions but a change to a better, fairer world, and a more equitable distribution of the opportunities of life. We have a new vision of responsibility and opportunity. Great things can he done by co-operation, as has been proven by the war.

No problem is too hig to be solved. The good God, who has brought us through the days of conflict will bring us through the other. That is the best guarantee that we will get through. We must take up the task of citizenship with a new sense of responsibility.

Dr. G. C. Creelman, of the Ontario Agricultural College, Guelph, who recently visited England in connection with the Khaki University, had the privilege of attending the annual meeting of the Women's Institutes of England. England has made wonderful strides in Institute work, having organized over 900 branches in three years, and has been the means of breaking down much class distinction. One of the special features of their regular meetings is that they usually have something home-made to sell from which the Institute get a percentage to be used for general expenses. Toy-making has become the special work of the Institutes. These toys are made of scraps and have been sold at every Agricultural Exhibition. Some samples of toys had been given Dr. Creelman to bring back to Ontario and made an interesting display at the evening session when Dr. Creelman gave the address.

The outstanding features of the Institutes in Great Britain are:

(1) Stimulating interest in Agricultural activities, covering co-operative buying and the developing of profitable and pleasant country life.

(2) Developing Co-operative Enterprise.

(3) Encouraging Home and Local Industry.

(4) Study of Home Economics.

(5) Providing a centre for educational and social intercourse for all local activity.

In preparing their programme the rule is to provide: Something to hear; Something to see; Something to do.

And in all their work they seek to have "The vision of what it should be. the Understanding that it can be. The Faith that it shall be."

Taking it all in all, the Women's Institutes of England have been perhaps the biggest thing that has happened in country places.

"It is a great idea, the slow awakening of much that is good and beautiful. the realization of the purpose for which it was created, and from these splendid schemes and objects as laid down by the plan of Women's Institutes, there should arise a changed and glorified country to respond to the Love which formed it all out of nothing, but which determined each individual to become a part of a perfect whole."

Rev. G. C. Pidgeon, of Toronto, in his brief address on "Things Learned from the War," spoke of the splendid spirit of comradeship which has developed among the men in khaki and their wonderful capacity for sacrifice. He expressed the opinion that it is too fine a thing to lose now that the war is over. Perhaps no organization is more in harmony with such a spirit than is the Women's Institutes, and it is for that organization to create and develop a spirit of friendship and of social intercourse among those living in the rural districts.

One of the happiest events of the Convention was the singing of a number of returned soldiers now taking vocational training at Hart House. The appreciation of the audience and the spirit in which the men gave song after song made it an inspiration for all. The feeling of the audience was expressed in a practical way in an offering of $176.00, to be used by the boys for musical instruments or whatever they think best.

An undercurrent of thought in nearly all the addresses was that of the welfare of the child. and in an interesting talk on the "Hot Lunch for Rural Schools," Mr. Leake, of the Ontario Department of Education, outlined the benefit of such an undertaking. Mr Leake spoke of the enjoyment of the hot dish—cocoa, soup apple sauce, or some other easily prepared food—added to the lunch brought from home, and eaten in an orderly manner. An opportunity for teaching the rudiments of table manners at such a time would be given. Not only from the

(CONTINUED ON PAGE 49.)

This interesting photograph was taken at the time of H.M. Queen Mary's visit to the Women's Institute Exhibition in Caxton Hall last month.

The central figure is that of Mrs. F. Tyrell Godman, of Little Ote Hall, Burgess Hill (formerly Miss Josephine Ellison, of Victoria, B.C.), president of the Sussex Federation of Women's Institutes. Mrs. Godman has been associated with Mrs. Alfred Watt, M.B.E., the founder of Women's Institutes in this country, since the beginning of the movement here.

The stall is that of the Sussex Women's Institutes, which won the prize banner presented by Lady Cowdray. The now famous "Cuthbert" rabbit made by Sussex Women's Institute members is seen next the police woman. Over five hundred dollars' worth of toys made by Sussex village women was sold during the Exhibition from this stall alone.

Sussex has upwards of eighty Women's Institutes, or one-tenth of the total number in England and Wales, with a central office at Haywards Heath, runs several co-operative market stalls, has published a book, "The First Women's Institute School," and a play, "The Baby in the Ring," held a big Village Industries Exhibition in Brighton on January 15th, opened by the Countess of Chichester, and is not only developing rural life and industries, but is reviving old Sussex pageants, dances, mummers' plays with masques, and many ancient and forgotten customs.

A great deal of the success of the Sussex Women's Institutes is due to Mrs. Godman's enthusiasm and organization. Mrs. Godman's husband, Captain F. T. Godman, 9th Sussex Regiment, died a year ago, a prisoner of war in Germany.

Canadian Women's Institutes

(CONTINUED FROM PAGE 48.)

standpoint of enjoyment, but also from a physical standpoint, is the hot lunch to be commended. Mr. Leake emphasized the great necessity for a supervised lunch hour. For the first year, the pupils donate the material for the hot lunch; from the second year the Department of Education makes a small grant, covering the cost of the materials. Very full information regarding this phase of rural school work, including manual training, is to be sent to the Women's Institutes at an early date.

MRS. ARTHUR MURPHY
of Edmonton, elected President of the new Federation of Women's Institutes.

At the Convention of Women's Institutes held at Winnipeg on February 13th-17th, the following officers were elected: the appointment of a Second Vice-President was left to the Cercles de Fermieres of Quebec. Mrs. J. F. Price of Calgary was elected Corresponding Secretary, and Miss Eliza Campbell of Lower Kingsclear, N.B., Treasurer.

The following Directors were appointed: Miss Mary McIsaac and Miss I. Noble, for Alberta; Mrs. Blackwood-Whiteman and two others to be named, for British Columbia; Mrs. W. H. Dayton, Mrs. Watt and Miss Helen McDougall, for Manitoba; Mrs. W. M. Todd, Mrs. James Patterson and Mrs. G. A. Putnam, for Ontario; Mrs. Cameron, Mrs. Bracass and Miss Abbie DeLury, for Saskatchewan; Miss S. J. Armstrong, Miss A. L. Hill, and one from the Cercles de Fermieres, to be named for Quebec; Miss Hazel McCain, Miss Eliza Campbell, and Mrs. J. W. Lawlor, for New Brunswick.

Dr. Margaret Patterson, of Toronto, who has become so well known through her lectures in connection with the influenza epidemic, gave an address on "Physical Development." She said: "It has taken this war to teach us the value of life, and I feel that the women should at once start a 'talk health campaign.' We must have general education along health lines. It is estimated that the economic loss alone in the United States each year from unnecessary and preventable diseases is over a billion dollars, and the percentage in Canada is quite as high. Surely there is something wrong when one-third of all persons born die before they are twenty years of age. We have rightly been taught to conserve, and we must continue to do so, for millions are still hungry, but our conservation has not gone far enough. We have left the best for the last—the conservation of life. Now the time is ripe for action." Among the good things which Dr. Patterson believes the war will bring us are:

An estimate of the value of the individual citizen; a better appreciation of the necessity for personal physical preparedness for the activities of peace and good citizenship; better care of the health of the average citizen by the Government, and the providing of courses of instruction in hygiene and health matters in all our educational institutions and to citizens generally; universal physical training for both boys and girls, and more attention given to wholesome recreation and provision made for sufficient play for both old and young to keep them normal; the suppression of vice diseases, and a nation-wide campaign against all unnecessary disease.

In all of this it is for the individual to co-operate with those in authority.

The use of paper handkerchiefs by school children was commended by Dr. Patterson, who stated that statistics show that where these are used there is less illness, and there are fewer absentees from school.

Dr. Patterson spoke in a most comprehensive manner of the care of the baby, and the needless fatality among babies. Mothers were advised to avail themselves of all the help they can get in the care of the baby. "Parenthood is the noblest privilege given us, yet the care of children is an unskilled profession in Canada."

Reference was made to the publications of the Provincial Board of Health and the value of the Baby Clinics held under that Department.

Dr. Mary McKenzie-Smith. who has done considerable medical inspection in rural schools, spoke of the value of the work. In renewing her work, she found in one school 22 per cent. suffering from defective eyesight, and in another as many as 40 per cent. suffering from eye strain. A very small proportion of these were hereditary cases—the rest were caused by defective lighting. Dr. Smith urged the Institutes to do what they can to see that the schools have not only proper lighting, but proper colors in the decoration of the walls. Dr. Smith also referred to the large percentage suffering from decayed teeth, adenoids, diseased tonsils and defective hearing due to adenoids.

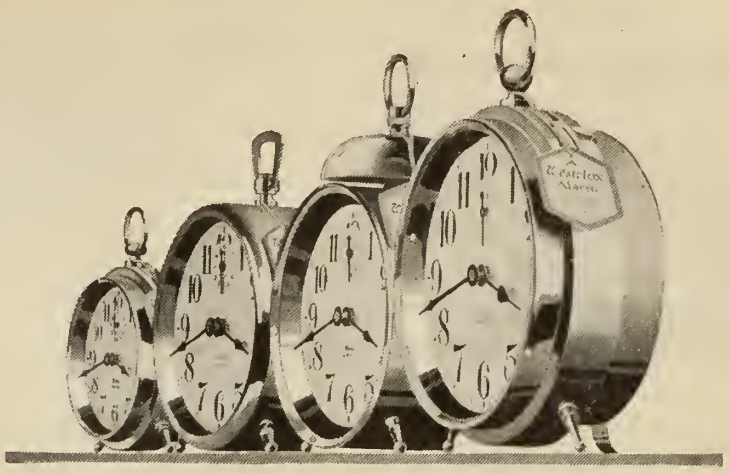
The purpose and plan of the Demonstration Lecture Courses were outlined by Miss Sutherland, of the Department of Agriculture. The courses are made as comprehensive as possible in the ten lessons of each course, and as college-like as possible.

In connection with the course in Domestic Science, if time permits, information is given in table-setting and house management.

Miss Gertrude Grey, of Toronto, one of the demonstrators in these courses, was present at the Convention with a class of seventy-five from Thistletown.

The popularity of the course is evident from the fact that the class rose from 47 to 75.

Several dresses made by a sewing class in Dundas were shown and were all that could be desired. Mrs. Pirie, Dundas, spoke a few words in appreciation of the course.



Two Institute members from St. George who had taken the Home Nursing Course with that Institute, demonstrated the changing of sheets without uncovering the patient, and also the giving of a hot mustard foot bath in bed. Dr. Smith remarked that she had found this foot bath of exceptional value in breaking up fever in "flu" cases. Other members of this class demonstrated bandaging. Dr. Smith spoke of the recording of temperature, the respiration, the food taken by a patient, and other information gained in the home nursing course as being of the utmost value to the doctor. Dr. Smith also paid tribute to the assistance which the Home Nursing pupils had been able to render in the Influenza epidemic.

Miss Graydon, a nurse, told of the "Follow-Up Work" after the inspection and referred to the classes held in the school for demonstrating general emergencies.

Mrs. Drinkwater of Streetsville, gave an account of the first rural dental clinic ever held, as well as a medical clinic held previously.

The Girls' Work was dealt with by Miss K. McIntosh of Brampton, who has given considerable attention to this phase of Institute work in Peel County. She said we must begin with our girls and get them to eliminate the petty things and see that love and service for home and country are the greatest things in the world. We need the joy of living and the beauty of life which the girls bring into our Institutes.

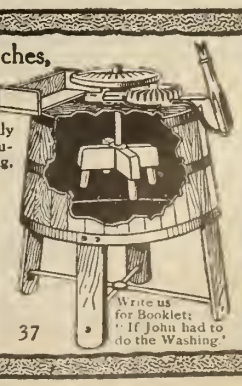
Westclox

HERE they are; the four top-notchers in the Westclox line. Big Ben heads the family. He's a good, substantial timekeeper and a loyal call-clock.

At his right, America: trim, alert, competent. Then Sleep-Meter, a close second to Big Ben; refined, neighborly, watchful.

Last but least only in size comes little brother, Baby Ben, who tucks cozily into places where Big Ben might feel out of place.



They're all faithful timekeepers and punctual alarms. They all have that same good Westclox construction. They all wear our quality-pledge, Westclox.

For Swollen Veins

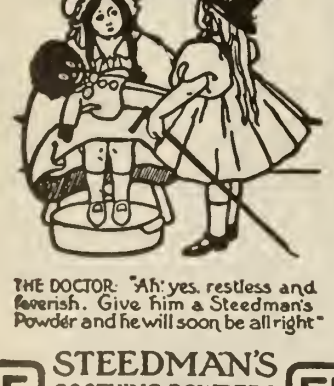
Absorbine, Jr.
THE ANTISEPTIC LINIMENT

That Absorbine, Jr., would relieve Varicose Veins was discovered by an old gentleman who had suffered with swollen veins for nearly fifty years. He had made many unsuccessful efforts to get relief and finally tried Absorbine, Jr., knowing its value in reducing swellings, aches, pains and soreness.

Absorbine, Jr., relieved him, and after he had applied it regularly for a few weeks, he told us that his legs were as smooth as when he was a boy and all the pain and soreness had ceased.

Thousands have since used this antiseptic liniment for this purpose with remarkably good results.

Absorbine, Jr., is made of oils and extracts from pure herbs and when rubbed upon the skin is quickly taken up by the pores; the blood circulation in surrounding parts is thereby stimulated and healing helped.



$1.25 *a Bottle at Druggists or postpaid*

A LIBERAL TRIAL BOTTLE will be mailed to your address for 10c in stamps. Booklet free.

Canadian Women's Institutes

(CONTINUED FROM PAGE 49.)

She would have them make the following rule to live by:

For yesterday is but a dream,
And to-morrow only a vision,
To-day, alone, is ours.
But each to-day well lived
Makes every yesterday a dream of happiness.
And each to-morrow a vision of hope.
Live well this day—
Such is the Salutation of the Dawn.
—From the "Sanskrit"

Miss McIntosh told of the canning classes and competitive exhibition for the girls in that county and of the classes in Mothercraft, and of the information gained which would stand them in good stead in the coming years. Among the class mottoes suggested by the girls were "Plan your work and work your plan"; "Each for all and all for each"; "Carry on".

Canning Centres was an interesting item on the programme, Mr. P. E. Culverhouse of Vineland telling of the equipment necessary and its cost. Mr. Culverhouse's idea is that those centres which have been used for patriotic purposes, could now be turned to community use, where with a carefully supervised outfit, every family in the neighborhood could preserve food. There would be a saving of labor and expense, as the up-to-date equipment would make the work very much easier than would be possible in the ordinary home. Mrs. Crowe, Mrs. Bluett and Miss McTavish spoke of the co-operation developed in the carrying on of the work, the splendid spirit of the women, and expressed themselves as seeing great possibilities in a community canning and kitchen centre. Reference has been made to the immense output of the centres established which was used wholly for military hospitals overseas and at home. Several of the centres had rendered invaluable aid during the Influenza epidemic in preparing food.

Patriotic work had its place on the programme. Colonel Noel Marshall spoke of the work of the Red Cross Society, a work of which we perhaps can never realize the full value.

The needs of the Serbians and Belgians and the French refugees were placed before the Convention by Mr. W. A. Langton, Miss C. Laing, and Mr. J. M. Lyle. These appeals will, we are sure, meet with a very ready response from the Institutes.

The rural aspect of the Housing Problem was the subject of a talk by Prof. C. B. Sissons of the Housing Commission. Proper home conditions is a matter which we must be interested in. A home may be merely a shelter or a dreary workshop. There should be work and leisure combined in just proportions. Leisure is important, but work, and plenty of it, is more so. There should be facilities for work. From replies to a questionnaire *re* housing conditions on the farm, Prof. Sissons had found it quite evident that the cottage for hired help on the farm is conducive to securing better and more permanent help. The attitude of the farmers was unanimously in favor of the separate home for the hired man. Prof. Sissons foresees within the next few years a radical change in the matter of modern conveniences in the farm home.

In his remarks on Women's Work on the Farm, Dr. W. A. Riddell, Director of the Ontario Labor Bureau spoke appreciatively of the work of the Farmerettes during the past two years and was of the opinion that while there will be an increased number of men for farm work, the farmerette will still be required. It is his hope that a more satisfactory wage will be offered. Dr. Riddell, in referring to the farm situation, stated that he thought that this can only be solved by giving the hired man a cottage to live in.

Mrs. James Patterson, of Gadshill, a real woman of the farm, told in a most interesting way of what the farm women are doing. She said: "The farm women have always worked hard, with few intermissions and little recreation, and, if the hard places have been made easier, and the long ways shortened, the Women's Institutes is largely the medium by which it has been brought about." Mrs. Patterson contrasted the daily work of the farm woman of twenty-five years ago with that of the farm woman of to-day, outlining the easier methods which have brought about a saving, not only of time, but of strength; but, withal, the work of the farm woman is not an easy job. Mrs. Patterson paid a tribute to the women who have taken a hand with the hoe, the pitchfork, the team and the tractor. "Why should any one hint at drudgery when a woman is seen with a hoe any more than seen with a golf stick? Each in their own way is developing energy and vigorous health." With all the work on the farm, the farm woman has found time to take her part in patriotic work, and, finds time, too, to keep posted as to current events. "The farm woman has come very close to nature in God's very wonderful creation of the things about her. What woman does not like to go and pet the gentle mare and her frisky little colt, and when milking the cows to give them an extra pat on the neck, and to be surrounded by that barnyard medley of geese, ducks, turkeys and chickens? If she does not find her happiness in this, she has missed her calling." Mrs. Patterson looks forward to a not far distant day when the farm women will be taking a more active part in school and other matters which concern the rural communities.

A discussion of District Annual Meetings brought out some good suggestions. In East York, the Board of Directors meets a few months before the District Annual to outline the programme, leaving the details to be worked out by the Executive. Each district director is expected to report this meeting to her branch at its first meeting. When final arrangements are made, the District secretary notifies all branch secretaries. Two sessions are held, morning and afternoon, and, if time permits, one or two addresses are given with a view to deepening the interest and giving a broader view of work.

The Prince Edward District officers begin in April to plan for District Annual, the arrangements being very much as outlined above.

In preparing the programme, each branch is asked to provide one item. A special speaker is usually announced to deal with such subjects as will be of special benefit. In the morning session, which is really the most important, the business is carried through in regular order. This district has good results in allowing each branch to contribute what it thinks best for the afternoon session —music, readings, reports, etc. Each branch has been supplied with copies of "Order of Business."

In West Kent, a uniform programme for the year for all the branches is planned at the close of the district annual meeting.

A talk on "Extending the Work in the District" by an East Simcoe District officer seemed so good that we are giving it in full on another page.

A district officer from South Oxford spoke of the work which the Institute may do to help the soldiers' wives make good homes in Canada.

Among the Branch Reports, West Seymour reported educational work; another branch reported improvement in the library, and plans for a young men's recreation room.

Mrs. B. O. Allen, of Fort William, reported for the Thunder Bay and Kenora Districts. She mentioned special local features introduced. In one township an Institute fair had been inaugurated, and is now a successful annual affair. In many townships, halls have been built, which serve as social centres and for all public meetings. In some districts the Institute women do the catering for all large assemblies, and during the influenza epidemic, one Institute opened a diet kitchen. The greatest accomplishment during the last two years has been Medical Inspection. Practically all the rural schools have been inspected. Mrs. Allen stated that it was difficult to express the appreciation of the people for this. She also referred to townships with goodly numbers of children without schools. The Institutes are interesting themselves in this, and hope soon to have this condition remedied. A home for the feeble-minded in those districts is claiming the interest of the Institute women, and the needs have before this been brought before the proper authorities. "District nursing" is the dream of the Institutes in that part of Ontario, and one which they hope soon to have realized. Mrs Allen is of the opinion that any assistance given that district will be a good investment.

Mrs. Locking, of Emo, reported for the Institute of the Rainy River District, making special reference to the Medical Inspection. The story of the clinics held was an interesting one. One hundred and thirty-five operations were performed, all of which were successful.

The work of the branches there has been largely patriotic, but now attention is being turned to other matters, a hospital at Emo being one of them. An interesting bit of information was that through the efforts of the Institutes, the only doctor between Fort Frances and Rainy River, a distance of sixty miles who was likely to leave for military service, was retained for service in the district mentioned.

Short addresses were given by Miss Saunders, of the Y.W.C.A., who thanked the Institute for their co-operation in housing the girls who did war-time work on the farms, and who also outlined her organization standard for "Canadian Girls in Training"; by Mrs Griffith Thomson, of the McAll Mission, asking the Institute to become affiliated with that mission, and by Mrs. C. A Chennel, who spoke of the Thrift Stamp League.

The Convention was pleased to have Mrs. W. E. Sanford, of the National Council of Women, come with her greeting, pleading for mutual helpfulness and selfless service. Mrs. L. A. Hamilton of Toronto, spoke briefly, referring to the franchise as a great heritage. She thought we would be very ill-advised if we allow ourselves to fall into partyism She emphasized the danger of being attached to a party instead of a principle Party politics was described as an outworn system, and the women were urged to keep independent. Women should get together for their own special needs.

Several new books were mentioned by Mrs. Becker as being helpful in studying the questions discussed by Mrs. Hamilton.

Major Bailey, of the College Street Military Hospital, in an address on Occupational Therapy, described the types of nervous diseases among the soldiers and how the different temperaments would be affected by strain. The shell-shocked man should not be given sympathy, but something to do. Examples of work in basketry, wood carving and inlay, hammered brass and bead work were shown, evidences of what these men are able to accomplish in a short time. With each piece of work the story of the man who had made it was given, in some cases a paralytic, and in one, an insane man.

Mr. Swift, of the Institute for the Blind, spoke of the splendid work which that Institute is doing for the blind These blind soldiers, Mr. Swift stated are making remarkable progress in their vocational training, and special reference was made to several who are taking the poultry course at the O.A.C Guelph.

The Convention closed with a few remarks from Mr. Putnam, the Superintendent.

Extension of Institute Work in the District.

Institute—the germ of service, of mutual helpfulness. Therefore, to extend the work is not merely to increase the membership of the branches already organized and to add other branches to them, but it is to spread that spirit of service as leaven is spread, by personal contact. So the District President should visit each branch, get into sympathetic touch with its membership and study to make her office valuable to each branch.

The average District President herself, a busy woman, may say, "I have no time for visiting," but four years and a half of war have shown us that we always have time for the thing we wish to do; it simply depends on how deep the interest is—how broad the estimate of the possibilities in the work.

The District President should not only visit the branch, but she should make of herself a link between the branch and the central office, (1) by helping the work of the visiting delegates to her district, creating an interest where there is none and developing it where it languishes; (2) by encouraging the branches to avail themselves of the special courses provided by the Department; in short, by leading them to feel themselves to be parts of a great co-operative scheme "for Home and Country." Good business methods should be demonstrated by the District Secretary-Treasurer, who should be an occasional visitor to the branches, and should ever be in touch with them through correspondence. Best results can be obtained by the thorough co-ordination of all the benefits proffered by the Department. We cannot afford to be narrow, or to confine our efforts to one line, but every line of work open to our Women's Institute should be presented in the most practical manner, that, in turn, every advantage may be the real possession of each branch, because understood and appreciated by them.

To serve as leader, the District President must prove herself true to the spirit of the Institute ideal or germ of life, and loyal to all the great construction agencies which that living germ of service calls into action. She can never lead by "knocking," but should strive to develop in herself and in those she serves a broad-minded discrimination between constructive criticism and mere pointless fault-finding of things in general.

Lastly, by every means in her power, she should foster co-operation between the Farmers' Clubs and the Women's Institutes, where both exist in a community, or between the men in places of authority and the Women's Institute, where the latter is in a town or village community. This is our great strength as a women's organization—that there is a close community of interest between our aims and our work and the interests of our Canadian men, wherever they may be found.

Resolutions.

The resolutions presented at the seventeenth annual Convention of the Ontario Women's Institutes were dealt with as follows by the Resolutions Committee (Mrs. William Todd, Orillia, chairman; Dr. Margaret Patterson, Toronto; Mrs. L. C. Burns, Caledonia; Mrs. James Patterson, Gadshill, and Miss M. E. Pearson, Merrickville):

1. The Committee recommended that the resolution from the Lobo Women's Institute, requesting that military training in our schools and colleges be eradicated from the school curriculum, and in its place additional prominence be given to physical culture, be laid over until such time as full assurance is given that such training is not necessary.—Carried.

2. That the resolution from the O'Connor Women's Institute, asking that free homes for the insane be provided, and also that the resolution from Kenora, Thunder Bay and Rainy River Districts, asking for adequate provision for the insane and feeble-minded, be endorsed by this Convention, and forwarded at once to Dr. Clarence M. Hinch, Secretary of the Provincial Organization for the Care of the Feeble-Minded.—Carried.

3. That we endorse the protest of the Wilson Road Maidstone Branch against the importation of poppy seed into Canada, as it is believed to be a noxious weed, and that such protest be forwarded at once to the Horticultural Societies Convention now in session. —Carried.

4. That the resolution of the Central Dumfries Women's Institute, asking this Convention to petition the Government to grant universal suffrage to women before the next election, be laid aside as not coming within our jurisdiction.—Carried.

5. That, with regard to resolutions from Central Dumfries and Halton County upon daylight saving, we ask careful consideration by our Federal Government as to whether the advantages of this measure outweigh its disadvantages, and if its continuance be found to serve the best interests of the Dominion, that this Act be so amended as to make it more acceptable to the rural people.—Carried.

6. That, in respect to the resolution from North Essex, asking that action be taken to stamp out the manufacture, sale and importation of cigarettes, we urge our members to interest themselves in the study of the increased use and the injurious effects of cigarettes upon the children, with a view to arousing public opinion as to the necessity of such action being taken.—Carried.

7. That the South Lanark resolution, strongly condemning the Senate for vetoing the Bill for Amendment of the Criminal Laws as passed by the Commons, be endorsed, and that we express the hope that in the light of further consideration these amendments will be passed at the coming session.—Carried.

8. That the resolution of South Lanark, asking that a woman (or women) be appointed on the Board of Censors for moving picture films, be adopted, with the addition that we ask for a Dominion Board of Censors, to standardize pictures so presented.—Carried.

9. That the resolution asking that lectures on "Laws Relating to Women and Children" and on "Citizenship" be included in our summer series of subjects, be adopted.—Carried.

10. After careful consideration of the two plans submitted for provincial organization, the Committee recommended that Plan A be adopted as a temporary measure, with the addition that the seventeen representatives have power to add to their numbers.

Plan A.—That a Board of Directors be elected at the annual conventions, or at special meetings held in each of the seventeen districts indicated below, and approved by the Central Convention:

No. of District.	*Counties in District.*	*No. of Branches.*	*Representatives for 1918-19.*
EASTERN DISTRICT—			
1.	Dundas, Glengarry, Prescott, Stormont	21	Mrs. J. P. McNaughton, Maxville.
2.	Carleton, Lanark, Renfrew	44	Mrs. Jas. Reid, R.R. 2, Renfrew.
3.	Addington, Amherst Isd., Brockville, Frontenac, Grenville, Leeds South, Leeds North and Gren. Lennox	32	Miss M. E. Pearson, Merrickville.
		— 97	
CENTRAL DISTRICT—			
4.	Hastings, North'd, Prince Edward	62	Mrs. W. R. Munro, R.R. 3, Demorestville.
5.	Durham, Haliburton, Peterboro, Victoria	55	Miss E. E. Haycraft, Bowmanville.
6.	Ontario, York	55	Miss Kate McKay, Brechin.
7.	Dufferin, Grey	62	Mrs. Jas. Gardner, Owen Sound.
8.	Halton, Peel	56	Miss H. Beardmore, Port Credit.

(CONTINUED ON PAGE 59.)

The Food Value of Candy

ALL down the past centuries the human race has adopted such combinations of foods as best ourished the body. This was done ng before there was a chemistry or hysiology of food. Yes, long before ie first chemist or physiologist was orn. As the result of instinct, guided y experience, mankind had been con-ming large amounts of sugar foods, r other foods that in the process of igestion are converted into sugars. hese sugars or their equivalents were otained from the juices of plants, or om various substances that were put rough some process which changed em into sweet tasting, relishable, and utritious foods.

The Carbohydrate group of foods con-in carbon, oxygen and hydrogen in arying proportions. Sugars may be vided into the following groups:—

1. Sucroses, or disaccharids, such as ne sugar, beet sugar, maple sugar id malt sugar.

2. Glucoses, or mono-saccharids, such grape sugar (dextrose), fruit sugar evulose), and corn syrup.

3. Invert sugar, such as honey, which one of the forms in which the earliest e of sugar is recorded.

T must be remembered that the large amount of starch consumed as food ust be converted into glucose or dex-ose sugar before it can be made use in the body. It has been stated by minent authorities on foods that about ne-quarter pound of sugar per twenty-ur hours is the maximum amount re-uired by an adult. If more than this consumed, the extra amount will be creted by the kidneys. This would be out ninety pounds of sugar per an-um Children can assimilate more gar than adults because of their latively active muscular energy and latively large body surface for losing at in proportion to their size. They not as a rule care for fat meat, and efer sweets as a natural substitute.

It has now been established by chem-s and physiologists that, if sugar be t taken as a food, the digestive organs ake it out of other elements in the od. Such diets as potatoes, bread, rnmeal, arrowroot, sago and rice are ry rich in starch, which yield in gestion maltose, then glycogen, and ally the sugar that feeds the body. e healthy adult working hard requires ily nearly 2,000 grains of nitrogenous ods, about 750 grains of fats, and out 6,000 grains of carbohydates, ade up of starches and sugars.

Candies are among the attractive and eful forms in which sugar is used as food. They contain large quantities cane sugar, with frequently some s such as butter, nuts and fruits, rn syrup, starch, chocolate and flavor-g. All of these elements are useful ods. Nuts and fruits are recognized yielding a good percentage of pro-d nitrogenous material which is one the absolute essentials in body build-g nutrition. The fat is also a proper nstituent in every dietary. Corn rup is but another form of sugar, as s been aforestated.

STARCH found in exceedingly small quantities in good candy is also con-rted into sugar in process of diges-n. Chocolate is a most nourishing fat food and a delightful stimulant, especially valuable in cases of extreme fatigue or exposure. The flavorings are stimulants to the digestive organs, and increase the flow of saliva, gastric fluid, pancreatic secretion, and the action of the intestinal glands.

There is a rather widespread notion that eating candy injures the teeth. There is not the least scientific foundation for this opinion. The lack of sugar is much more likely to injure the teeth, through impaired nutrition, than even its excessive use is liable to do by any digestive troubles which might result from such overuse.

In like manner there is very little foundation for the common opinion that the consumption of candies causes diabetes. It is true that the abuse of sugars may produce a mild form of temporary diabetes, which disappears on the proper regulation of the diet. This form of diabetes is quite rare and unimportant. The excessive ingestion of any other food will cause derangement of health also. It is very doubtful if the use of candy, in any form, ever causes a case of true diabetes.

Statistics show that the annual per capita use of sugar in Canada and the United States is about eighty-four pounds. That of Britain, before the war, was about ninety pounds, though the latter figure does not represent the consumption of Britain itself, as a certain percentage of the sugar used in the country was exported to other countries in the form of sweet goods. This would give such large consumption figures per year as:

Canada	314,000 tons
United States	3,954,187 tons

THIS gives some idea of the importance of sugar and sugar products as food. The amount of sugar which each individual requires, indeed must have, may be taken partly in beverages, with fruits, with cereals, as a dessert, as jam or preserves, or as candy. The housewives are making fruit candies when they put down jams, the ingredients of which are some fruit and cane sugar. Such fruit candies, however, lack the other valuable materials which are incorporated in candies as produced by our Canadian manufacturers, and therefore are not so well balanced from a dietetic standpoint.

In candy, as a food, the essentials are the selection of good material, that the preparation should be well done, and that the product be properly kept in the sales shops. These are the same essentials one expects in the preparation of any other article of food; and apply to bread as much as they do to candy. Good flour, good baking and good keeping will insure good bread. Good material, good making and good keeping will guarantee good candy. These conditions being assumed, then candies are among our most valuable foods, particularly so as foods for the young, whose instincts have guided them correctly in their fondness for sweets of all kinds.

Confections in which chocolate is combined are not only delightful, but conducive to good health, and among our most highly esteemed modern food products.

Literature and Journalism

(CONTINUED FROM PAGE 20.)

at actual vivid color it is all sur-nded!

After all, art is just a light let in Truth.

And so I would say to correspon-nts who want to take a first step in rnalism, which is so often by way reporting, that it is a good road to llow, one which leads out by a raight and narrow path at first, to de avenues with broad vistas ever ening before one. Women are as ch a part of newspaper life now-a-ys as are men. Women are writ-g editorials and doing critical work ite as extensively as they are re-rting.

I think perhaps an experience in porting is something like a col-ge education. It is not really ne-ssary to success in writing but it is a very useful experience. Some of the most brilliant newspaper writers that Canada has ever known, such as "Kit," of the "Mail and Empire," Lally Bernard, of the "Globe," Sarah Jeannette Duncan and others, never spent an hour at the reporter's desk—and I remember how "Kit" used to scorn a typewriter. But we must remember that these women began to write twenty-five years ago, when the make-up of a newspaper was a different thing from that which it is to-day, and they would have been the first to assent to the fact that while all journalistic experiences are not absolutely necessary to the complete writer, nevertheless they are so helpful that one cannot very well afford to let them pass.

Only Trained Corsetieres are Permitted to Fit

"La Camille"

Reg. Trade Mark, U. S. Pat. Office.

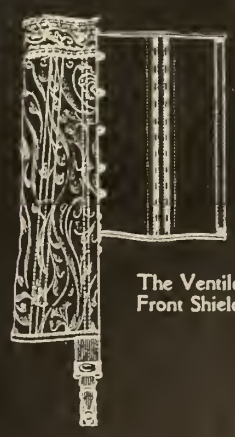
Front Lace Corsets

INTELLIGENT fitting of corsets is as important as the quality of the corset itself. That is why every possible step is taken to insure the fitting of "La Camille" Corsets by skilled corsetieres only. "La Camille" Corsets have earned too worthy a reputation to be jeopardized by improper fitting.

A model for every type of figure—designed for health and comfort as well as beauty and grace. The only corset with the patented health feature, the

Ventilo

Reg. Trade Mark, U. S. Pat. Office.



BACK AND FRONT SHIELD

The back shield is a lattice work ventilating strip, soft and pliable, preventing pressure on the spine and nerve centers.

The front shield also acts as a ventilator, prevents flesh from protruding between lacers; permits better adjustment of corset.

The model illustrated is made from brocade in pink. The elastic inserts under bust provide for figure with full diaphragm.

Catalog of Spring styles gladly mailed on request.

Points For The Novice Motorist

(CONTINUED FROM PAGE 23.)

or wave motion of the incoming mixture exercises a very beneficial influence on the rapidity with which the flame is propagated throughout its midst.

A little point to remember, when judging plugs on first principles, is the tremendous heat to which their extremities are subjected inside the cylinders. If there is too great a mass of metal it is likely to retain so much heat as to cause pre-ignition; on the other hand, the over-heating of a properly designed section of porcelain will cause deposited oil to be absolutely burned away and thus automatically prevent short circuiting from this cause.

Do not forget, of course, to keep all terminals tight and clean, neither forgetting to see that the wires are well clear of the exhaust pipe. It is not every car that has the refinement of a special casing for the wire. Another useful precaution is to number each wire at its ends and to number the firing order of the cylinders and the magneto or distributor terminals accordingly.

Remember, also, when you remove a magneto for any purpose that there are two ways in which the coupling connection can be re-made when putting the magneto back, but that there is only one position that is correct, and this is determined by the position of the high-tension distributor brush and of the pistons in the cylinders of the engines. Always, therefore, observe the position of the high-tension distributor before removing the magneto and never on any account turn the engine when the magneto is not attached. By this little precaution you may avoid all trouble when re-coupling.

Tire Knowledge.

IN tire troubles the most you can do is to minimize the inconvenience resulting from a mishap. In the first place, use nothing but the best tires and always take the trouble to see that they are inflated to a proper pressure, which depends a good deal on their size, the weight of the car and in some measure the speed you drive at. Twenty pounds per inch of cross sections (80 pounds for a 4 inch shoe, etc.) is a safe rule to follow.

In the whole art of motoring there is nothing more economical than moderation in speed, and especially is this true in regard to tire troubles. Carrying a rim with an inflated tire already attached saves the trouble of repairing a tire on the road. When faced with the necessity of making a repair, keep cool, put on an overall suit and go to it with a smile—it pays

Around The Hearth

(CONTINUED FROM PAGE 24.)

THIS last question seems somewhat out of season, but as my copy was sent in before it arrived in October I will leave it for consideration for next Christmas. "Mrs. R. C." writes the following:

"Dear Jennie Allen Moore,—What do you think of giving presents this year, when there is such a demand on our purses for other things? And do you think that giving away some of our surplus old-fashioned silver and dishes would be acceptable among the poorer classes in a city or large town?"

I am really glad you asked me about that. It furnishes me with an excuse to tell you something I experimented upon last year. Nearly every housewife can take the cue. You know how every one loves to add to her dishes, and how the old-fashioned pitchers and salad bowls and cake plates are relegated to high shelves in the pantry or cupboard. Last year my housecleaning lagged, and it was near Christmas when I ascended the step-ladder to investigate the top shelves of the pantry.

The dish that had been wont to hold boiled eggs when three healthy lads surrounded the table was there—but the three boys were gone. The mottled, thin glass water pitcher that had done duty in years long gone had been supplanted by a water bottle of more modern design. The high, old-fashioned cake plate stood at dusty attention; and the glass bowl that had held our defunct "fish" family stood silently by.

Needless to say, I acted upon the suggestion that presented itself. These articles now repose in other cupboards—nay, sideboards—given places of honor, because they were appreciated instead of the dishes that had been broken "coming across" or been given away to save space and packing.

Those of you who have stacks of discarded saucers and plates, odd cups and vegetable bowls, hand them out now, when purses are slim, and the price of dishes is high and breakages still occur. In many homes where there are children there are not sufficient dishes to set the table properly. There is the hint. I leave it with you

Who Goes There?

(CONTINUED FROM PAGE 18.)

"Your father is of that caste."

"General von Reiter is not my father."

"What!" he exclaimed, astounded.

She turned her face from his shoulder and looked up at him.

"He spoke to you of me as his daughter. You spoke to me of him in that relation, too. I did not enlighten you because it did not seem to matter. But it is not true."

"Is he—your guardian?"

"No; I need none. My father was a German officer—of that caste. My mother was Danish. . . . Something happened—I do not know what. I was very little. And my mother would never speak of it. She was very beautiful. I remember her quite well. We lived in Copenhagen.

"Whatever happened occurred before I was born. I know that. Mother told me. My father dropped both title and name and left the army and went with my mother to Copenhagen. He took the name of his mother, who was English—Girard. I never was even told what our name had been. Neither father nor mother would ever speak of it."

She rested there, silent, absent-eyed, gazing into space as though recalling years that had not been unpleasant. Then, serenely meeting his gaze, she smiled up at him.

"You know," she said, "my life has been a happy one. My father was a man of means. We lived very happily in Denmark. I've always thought of myself as Danish.

"My childhood was really wonderful. I had a passion for study, for learning; and I learn very easily—almost without effort. And you know, perhaps, how thorough the Danish schools are, how much they demand of a child, physically as well as mentally.

"And I did everything, Kervyn; learned the accomplishments of a young Danish girl—and was flattered I am afraid, and perhaps spoiled.

"And always I desired to go on the stage—always—from the very beginning—from the time I was first taken to the theatre.

"It was quite hopeless. I did act for charity, and at school; and afterward took lessons. But as long as my father and mother lived that career was not possible. . . Afterward I decided for myself. And first I went to Germany, and they gave me a small part in a company that was going to Posen. And there General von Reiter, who had been my father's friend and brother-officer, met me.

"He was very kind. He wished to adopt me and give me his name. He was very insistent, too—a man—Kervyn, not unlike you—in some respects. But I never dreamed of permitting him to sway me—as you do.

"He knew my desire for a stage career; he has for three years attempted to destroy in me that desire. When I had no engagement, or was studying, he insisted that I stay with his brother and his brother's wife, with whom he lived. He spoke freely of his desire and intention of legally adopting me, called me his daughter when he spoke to others of me—and always I felt the constant, iron pressure of his will—always—not harshly, but with the kindly patience of resolution.

"Then I decided to go to England, study, and if possible gain some experience on the London stage.

"And then"—she bit her lip—"I think I may say it—to *you*—not saying it lightly, Kervyn—then, on the eve of my departure, he asked me to marry him.

"And because he would not accept my answer he exacted of me a promise that in November I would return to Berlin give him my final answer, and choose then between marrying him or a return to the profession I care for most.

"That is my history, Kervyn. No man has ever figured in it; none except General Baron von Reiter has ever even invaded it . . . until you have done so . . . and have made your wishes mine—I don't know how—and your will my inclination—and me more than the friend I was.

"One thing only you could not do—and in my heart I know you do not wish it of me—and that is, make me break my word—make me forget a promise.

"Now I have told you all," she said with a little sigh.

"Not all, Karen."

"Yes, I think so."

"No. You have not told me what answer you mean to make."

Her eyes opened at that. "I am not in love. What answer should I make?"

"You return to your career?"

"Of course, once my promise is kept."

"What promise?"

"To see him and tell him what I have decided."

"Do you think he might persuade you?"

"No!"

"Are you sure?"

"Perfectly."

He said, looking at her with a hint of a smile in his eyes: "Do you think I might ever persuade you to give up your career?"

She smiled frankly: "I don't think so."

"Not if I asked?"

(CONTINUED ON PAGE 58.)

The Girls' "Carry-On" Column

A New Profession for Women In Which the Demand is Greater Than the Supply

By Betty O'Hara

THESE are to be surely momentous times of unrest. Labor troubles social difficulties and financial disagreement, seems to be the order of the day. So apparent has this unrest made itself, that it was only a few days ago, that Lloyd George was compelled to leave the all-important questions at the Peace Conference, to smooth the troubled waters.

This settling down from the horrors of war, to what we hope is everlasting peace. seems to be much more difficult than we had anticipated. A fact was forcibly brought home to me the other day, as I sat in the Government Employment Bureau watching the ever moving throng of humanity, which sought refuge near its threshold.

"I have answered advertisements for three weeks," I heard a bright little girl say, as she answered the enquiry of the lady in charge. "I must get some employment soon. for I cannot hold out much longer," and the quivering lips bore out the truth of the statement.

But most of the troubles that employment bureaus encounter. are caused by the labor market being flooded with unskilled labor, while this is the age of specialization; and employers are asking for highly trained specialists, who will bring their venture to a successful issue.

To choose your vocation, then try to reach the top of the ladder is the only sure way to success and to all girls who are thinking of taking up a different line of work I would say, "specialize." Even if you have to forego the pleasure of a weekly pay envelope for a time, it will more than double your salary by the time the second year has elapsed, and you will have the satisfaction of knowing you are doing something really worth while, not as a small cog in the wheel of commercial or industrial life, but an important unit for the betterment of all those with whom you come in contact.

Now as never before in the world's history, there is an increasing demand for bright, happy, intelligent girls, who will help this old world to solve its many problems. Not those idle daughters of the rich. who in by-gone days took recreation and eased a troubled conscience by paying their debt to humanity in what they were pleased to call "slumming." but girls who are trained intelligently to grapple with the problems of industry, social welfare, and recreation.

It is a sphere which is peculiarly woman's. Her quick intuition, tact, and resourcefulness, give her a sympathetic understanding of these problems which is seldom granted to the other sex, It is a sphere, which, on account of its growing necessity and complexity, can no longer be left for accomplishment to the spasmodic enthusiasm of the volunteer worker.

To answer these various and pressing needs, one of the large Canadian Universities has inaugurated a surprisingly short and comprehensive course of studies for the scientific training of the social worker. This course is divided into three parts:

A—Instructs the student in the fundamental conditions and principles of social life and development, which is a study of the underlying social and economic conditions.

B—Gives instruction in respect of the specific conditions and problems of Social Service.

C—Field Work, giving actual practice and training in performance of social work.

In this part of the course the student puts into practice under careful supervision the knowledge she has gained. and this is carried out through the various hospitals, societies and settlements arranged by the university.

Then the studies are so very interesting, although at the first glance one would expect they would be overwhelmingly difficult. This, however, is not the case, for times without number we have spent our leisure hours perusing articles and books on the same subjects for the pure love of it. And when you think of it as a means of understanding humanity, its joys and sorrows, which of us would not give a small part—a few months—of our long lives to understand its greatest problems? Students in this course are obliged to take these subjects as a background and when they decide just what line they prefer, and are most interested in, they are given a chance to specialize in that one particular branch. And their field work is of such a character as will increase their knowledge of such a specialization.

Here is a list of subjects which are considered necessary:

1. Evolution of Modern Industry.
2. Social Economics.
3. Introduction to Psychology.
4. Social Ethics.
5. Social Hygiene.
6. The Social Treatment of Poverty.
7. Community Work.
8. The Municipality, its work and problems.

Then there are six lines of specialization:

1. Medical Social Service.
2. Recreation and Play Ground Work.
3. Child Welfare.
4. Labor Problems.
5. Essentials of Case Work.
6. Settlement Methods.

Besides this there are special lectures given on various subjects of which the students are supposed to have a knowledge, and they have the privilege of reading and studying from one of the finest libraries of its kind in America.

When the course is finished, and the delighted graduate takes her place in the work-a-day world, she will find herself a lady of tremendous importance in the field of labor.

The employer will look to her to put her finger on the cause of dissatisfaction which so often leads to serious labor troubles in the women's realm. Little children will be dependent on her for the happiness of their surroundings. Child miscreants will look to her for guidance and advice, instead of the unsympathetic. domineering. brute force which too often reigns in juvenile courts. In factories and large departmental stores, the comfort and happiness of the wage earners will rest in the hollow of her hand. And the strangers in the Y.W.C.A. and Y.M.C.A. houses and hostels will remember her as the one bright light in the gloom and glamour of the great city.

Don't you think this is a coveted career for any girl to look forward to? To the girls of the social service, opportunity stands with open arms. The salary is ample and the positions are varied. and more numerous than are the applicants.

It is one of the few places where a girl who is not necessarily a university graduate can see vast results for her work. It is the open door of vast opportunities in both United States and Canada, and no girl who is hoping to make a success of that existence we call life, can do better than take advantage of it.

Change Regarding the W.A.D.

An order has come from Ottawa which cancels the General Service Department of the W. A. D. Those who wish to take up this line of work are employed as civilians by the military authorities. The Masseuse Functional Trainer and V,A.D. Nurses are still under the control of the St. John's Ambulance Brigade.

(CONTINUED ON PAGE 56.)

You Can Now Get "Prepared"

Junket

MADE *with* MILK

as well as Junket Tablets. "Prepared Junket" (Nesnah) has the sugar. flavor, etc., already added. Easily and quickly made —simply stir in lukewarm milk and let stand. Comes in six pure flavors. A package makes six to eight dessert glasses of Junket.

Plain milk—Nature's most wholesome food—when made into Junket is tempting, attractive and delicious. Junket is both **food** and **dessert.**

Try a package of Prepared Junket—you will like it.

A Recipe Booklet and sample of either Prepared Junket or Junket Tablets sent for 3c. stamp. A full package for 12c.

Chr. Hansen's Canadian Laboratory, Toronto. Ont.

Give Your Skin Freshness, Softness and Color

Your skin's enemies come on the wind: they travel in dust. and lodge in the open oil and perspiration glands of the face. They stop the action of these glands and sometimes fester and create unlovely disfigurements. Our treatment will remove these dust and germ trespassers and give your skin health, elasticity, delicacy, freshness, softness and color. Our 27 years' experience in treating Pimples, Blackheads. Blotches, Roughness, Wrinkles, Crowsfeet, Eczema, etc , has proved the value and effectiveness of our preparations. Write us; consultation FREE.

Inflamed gums—the cause of tooth-base decay

JUST as the strength of a building is dependent upon its foundations, so are healthy teeth dependent upon healthy gums.

Permit the gums to become inflamed or tender and you weaken the foundation of the teeth. This condition is called Pyorrhea (Riggs' Disease). Loosening of teeth is a direct result. And spongy, receding gums invite painful tooth-base decay. They act, too, as so many doorways for disease germs to enter the system—infecting the joints or tonsils—or causing other ailments.

Pyorrhea (Riggs' Disease) attacks four out of five people who are over forty. And many under that age, also. Its first symptom is tender gums. So you should look to your gums! Use Forhan's, which positively prevents Pyorrhea if used in time and used consistently. It also scientifically cleans the teeth — keeps them white and clean. Brush your teeth with it.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

30c and 60c tubes
All Druggists

FORHAN'S, Ltd.
307 St. James St.
Montreal

THE children—and the grown-ups as well—crave a hot, nourishing drink these cold days. Try this:

Mix together, dry—
3 heaping tablespoonfuls Klim
1 heaping tablespoonful Cocoa
Sugar as desired.

Place mixture in utensil, slowly add cool water, avoiding lumps; boil for five minutes or longer. Beating with egg whip improves the quality.

This is an example of the convenience in using Klim. Having a tin of Klim in the kitchen is like having a little cow of your own. Whenever milk is needed for cooking or baking, for tea or coffee, or to drink, just open your tin of Klim and take out the required quantity. What is left in the tin will be fresh and sweet when needed again.

Klim is pasteurized, separated milk in powder form, and will not freeze nor sour.

Sold by all grocers in 1 lb. and 10 lb. tins.

Klim is genuine—the flavor proves it.

Watch for Geo. Baldwin's article in the April number. He will tell you many facts about your garden and its cultivation.

The Journal Juniors' Club

(CONTINUED FROM PAGE 22.)

shock, for it is like putting one's hand into a lucky bag and finding all sorts of hidden surprises. Who would ever think that the beautiful goldfinch or the tropical Indigo Bunting bird was first cousin to the brownish gray ragamuffin you see every day on the streets of every city? Does sound strange but it is true. The rich blue plumage of the Indigo Bunting seems a bit of heaven itself and one glances skyward to see if there is a vacant place where that bit of glowing blue has dropped from. Not so his mate, for Mrs. Indigo Bunting is decidedly like a brown sparrow. Sometimes there will be a tinge of blue on her wings and shoulders, but happily for her, her coat is dingy, for thus she escapes being seen whilst on her nest which is always built in a low bush or roadside thicket.

THE Snowflakes, Juncos, Purple Finches and the Rose-Breasted Grosbeaks are all cousins to the sparrows. So too is the Towhee bird. This is no stranger than the tiny humming bird being related to the Nighthawk. The sparrow tribe have all the same kind of conical shaped bills for all are seed eaters and they find their strong bills very useful for crushing the hard weed seeds. There is hardly a day throughout the year that they cannot find food, for even in winter the weeds show themselves above the blanket of snow, and so the sparrow family does not need to migrate any distance. One of the best features of these birds is the quick way they have in adapting themselves to conditions. Have you ever noticed how that little immigrant, the English sparrow, has made himself at home in his new country? We can learn a lesson from this cheerful little bird and that is, that whenever we leave our home town to seek a living in a strange place we shall do well to copy our little friend the sparrow and adapt ourselves to the new conditions as quickly as possible, for by so doing we shall make better progress in every way.

"Sparrows eat the grain," I heard one girl say, and so she encouraged her cat to hunt them. The sparrows thinned in number but the grain still disappeared. At last I convinced her that rats and mice, not sparrows, were spoiling the grain and suggested that a family of Screech Owls in the barn would be better than her cat which was too lazy and too well fed to catch the culprits. Later I heard that the owls had been encouraged and, given time, they repaid the kindness by killing off the grain eaters.

THERE are mischievous birds in every tribe, the same as there are mischievous boys and girls in every family, but they are lovable and have their good points in spite of their faults, and it is the same with the sparrows. The mischievous birds must not be encouraged. Those of you who live in the country districts surely know the Chipping Sparrow, the Vesper Sparrow, the Field Sparrow, the White-throated Sparrow, the—but there, I have named enough for you to observe in your district, and on a future date, we will have a contest, so that you can tell us just what you know and have found out about these birds, which thanks to their protective coloring are more often than not, overlooked by their enemies, the hawks, when those birds of prey are in search of a meal.

The Girls' "Carry-On" Column

(CONTINUED FROM PAGE 55.)

QUESTIONS AND ANSWERS.

A club of girls is planning to take "eats" to the bed patients of one of the military hospitals, once a week. What kind would you suggest the girls should take?—Elsie.

As the hospital cooks do not care about making salads or fancy cakes, I think they would be most acceptable. The soldiers are very fond of both.

Do you think if I took a course in Occupational Therapy, I would have a chance to use it after the work in military hospitals is over?—H. J., Saskatoon.

Of course none of us are sure just what course the civilian hospitals will take after such an upheaval as has taken place in medicine in the last four years, but in all probability the larger civilian hospitals throughout the Dominion will take up this work.

I wish to take a clerical position in one of the military hospitals, to whom should I apply?—H. L. J.

Apply to the Headquarters of the military district in which you live. Since it is in No. 2, address your correspondence to Military Headquarters, College St., Toronto.

I wish to take a nurse's training. Do you think it would be advisable to take a two years' course?—N. L. Brantford.

There are very few hospitals which give a two years' course, and if you wish to reach the top of the ladder in your profession you must be a graduate of a standard hospital, and have three years training. So you see a three years' course is almost necessary.

I would like to take a position with the I.S.C. as a trained nurse. To whom should I address the correspondence?—Kathleen.

Address of the I.S.C. Headquarters is Keens Building, Spadina Ave., Toronto.

Please tell me if the government pays the transportation for girls who have to take the courses at Hart House.—Vancouver.

Your transportation is paid to Toronto and also to the hospital to which you are sent to work.

Could you please tell me if the girls who have to sign up for six months as V.A.D.'s have to buy their own uniforms?—J. H., Niagara.

The government allows V.A.D.'s $60.00 for the uniform, anything more than this the girls must pay for themselves.

I would like to have some training which would enable me to earn my own living, as I do not like anything in the line of book-keeping, I am at a loss as to what I could do.—S. D. K

The Y.W.C.A. is giving a short course for girls and the salary is very remunerative. I am sending you the address for further information. It is the shortest course I know of that is at all remunerative, that is if you do not like book work.

Oh, What a Tangled Web!

(CONTINUED FROM PAGE 16.)

But, alas, the brown hair so often pulled, had acquired a mysterious beauty, and the lifted face that we regret to say Jerry had once slapped in days gone by, in the shadowy moonlight had lost its old friendly familiarity, and become strangely, hauntingly lovely; the little nose he had been known to twitch, was now a thing to dream of, and the soft arm he had often pinched had been transformed into a tender, clinging touch that one might long to feel on lonely nights in France.

They sat in sudden silence while the moon played its noiseless harmonies about them, and the air quivered with the thousand voices of the night. Abruptly the quiet was broken by a voice from the club.

"Peyton, Lieut. Peyton, Western Union on the phone."

It took Jerry but a moment to get the message, and then he was back beside her, followed at a short distance by a friendly crowd. He was a little breathless.

"I'VE got to go, Jean," he said hurriedly, "right off, and let Pirson take you home. Isn't that the worst luck? Orders been changed, leave in an hour." He glanced over his shoulder. The crowd was closing around them. He caught the girl's hands in his.

"Jean, dear," he whispered, "don't forget the game. Remember we're engaged and you haven't even kissed me. They usually do, you know, and besides it's goodbye. Come on, Jean, play up, or Cary Jacobs will know you for a fraud."

The girl gave a little gasp as the soft colour flooded her face. She swayed towards him like a flower, as he gathered her into his arms.

"You see, Jerry," she murmured breathlessly, "I've never been engaged before," and Jerry, unbelievably strong, held her close as he murmured back, "Thank God."

"Stafford, July 9."

"JERRY, dear.

"I WANT to sing a veritable song of triumph. Our scheme has worked like a charm and you are the hero of my young life. No longer am I a rank outsider, but one of the magic inner circle. My service pin is the sesame that opens all doors, and with a perfect right I can tell the grumblers and idlers what I think of them, and they take it. When I stormed about their not knitting they meekly accepted the rebuke and asked for yarn; another crowd is making hospital shirts at my instigation, while the erstwhile tennis club winds bandages. I begin to feel like a missionary blazing a trail in the wilderness. It's like the little woman in that play of Barrie's 'The Old Lady Shows Her Medals,' who invented a son in the war so she'd have something in common with the other old women of the neighborhood. Oh, Jerry, it was a grand idea.

"P.S.—I bought a new record yesterday—'How I Miss You, Dear Old Pal of Mine.' It's pretty."

IT is strange how the presence of an idea can change the current of a life. As the weeks went by, Jean, the unsentimental, who for years had read Jerry's boyish letters with airy unconcern, came to know the sickening disappointment that followed the postman's "Nothing to-day, Miss Peyton." Jean, the game little creature, with nerves of steel, grew familiar with a breathless tension that accompanied each morning's casualty list. She passionately told herself that she would have felt the same with Jerry away under any circumstances, but unacknowledged in her heart was the conviction that she had changed from a care free girl into a patient, waiting woman. Impatiently she would thrust aside these thoughts. It was all nonsense, she would insist, with a queer sinking of the heart, they were only playing a game, and when Jerry came back it would be over and they would return to the old, careless footing. How he would despise her if he knew how foolish she had grown. Still it was very sweet to get his letters, with their new note of tenderness and proprietorship.

"Jean, dear," he wrote one day in the fall, "how would you like to knit me some extra big socks, about size eighteen? The ones you gave me when I came away are about gone, and after wearing them I don't want any bought ones, especially with winter coming on. My sweater, the historic one, has been a life saver on more than one cool night. I have my ears trained now so that they slip in and out without ever catching.

"You know you're some little letter writer, Jeanie. Why didn't I find it out before—I must have bundles of notes from you at home, tied with a blue ribbon, I bet, but you were such a scrappy kid, that we never wrote two in succession without coming to blows.

(CONTINUED ON PAGE 60.)

A Tale of Two Tires

In Which the Experiences as Given by the Tires Themselves are Better Than a Volume of Advice.

ONE morning two brand new tires emerged from the factory. Rubbing shoulders in the crowded express wagon they became acquainted. The first one smiled proudly at the new-found friend.

"You are the same size as I," she said, "I note from the pattern of your wrapper that you are a 34 x 4. Are you smooth tread or all weather?"

"I'm all-weather," replied the second "And you?"

"Same here," came back the answer.

"Of course I don't have any idea where I am going, but I do hope I am treated well, because it won't take a young lady like myself long to become aged and wrinkled."

So the two new friends talked of their future homes. They reviewed the past. They reminded each other of the tropical days when in their crude state they bathed under the warm sun in the rubber trees. They told their experiences in coming across in the big ships. And they exchanged experiences in going through the wonderful processes at the factory by which they were revitalized into a salable commodity.

But soon the station was reached and they knew they must part. So they bid each other a fond farewell and vowed they would tell their experiences if fate ever again threw them together.

It was a year later when the express wagon drove up to the factory and discharged its load. Eager hands grabbed the worn casings and threw them into the assorting room. Others moved them into assorted piles according to size. Once the worker's hands stopped for a moment as they touched an apparently good casing.

"Good for a couple thousand more with a little repair," his voice was heard to mutter. Then with a quick movement, the tire was laid with hundreds of others of its kind. But something happened the moment it touched its neighbor.

"Get over a little bit," the neighbor's voice was heard to say. "You're mashing my side."

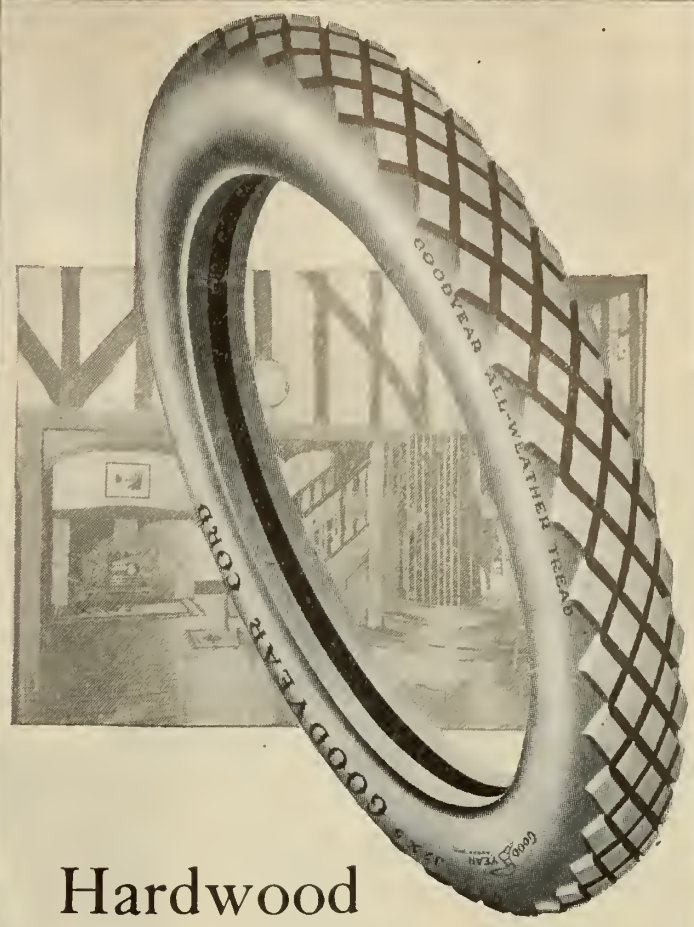
That voice sounded familiar. Sure enough it was the first tire which spoke—the same tire which looked upon life so joyfully that sunny day a year ago.

"Why, my old friend," exclaimed the newcomer. "Tell me where you've been and what you've seen."

"Oh, the story itself is too sad. Life held such hopeful possibilities for me when I first started out to perform my service for humanity, but it wasn't long until my young life was blighted. You can see what a wreck I am. But you look really too good to be among us cripples. You see I've only seen 5,000 miles of the world. It was all due to my owner's carelessness, too. When I left the factory and took my place on the shelf of a Service Station, I was the proudest tire you ever saw. I trembled with anticipation whenever a customer came to buy. I wanted to go out into the world and perform my duty. At last my chance came and I was so happy when the day found me travelling on the rear wheel of a nice red machine. But I hadn't gone forty miles until I was given a jab in the solar plexus that nearly put me out. I tried to brace up, but the blow was so strong it left me pretty weak. But I had about recovered my wind in the next fifty miles when I got another in the same place. It made me wobbly all over. That spot was so sore I could hardly bear to have it touch the ground. It began to feel better, though, for the next five hundred miles, until one day my master's son came home from college and took the red car out to burn up the roads. I enjoyed the fast riding somewhat, but he had a habit of stopping so fast I just had to coast until my skin was red hot and I smelled like burnt rubber. This weakened me and I began to go down terribly. They didn't seem to pay any attention to my condition, and not until I was almost a bare skeleton, did they stop and feed me air. This gave me new life but I still had that bad spot where I had hit those stones.

"The vacation for the master's son seemed to last for a long time because he used me day and night. Frequently he rubbed me against the curbing until my side was chafed and sore. Then he ran me into a lot of glass which he could have avoided easily, and I was cut and bruised something terrible. He never once thought of putting healing lotion on my cuts. I was getting weaker every day and losing strength every minute. My stone-bruised injury was throbbing unbearably. I just collapsed.

"Luckily we were on a smoothly paved street when I took the count. The master couldn't understand what was wrong. He fumed and swore. He took me back to the Service Station. There I was examined by kind and loving hands. They told my master how I had been weakened and abused. They gave him booklets telling how many of my sisters had fallen victims to the careless habits of their owners. But my master was a hard man and he stormed more and said I never was worth the price he paid for me. He finally consented, though, to let them put me on the operating table in an effort to save my life.



"I spent three days in the hospital and came out feeling like a new tire. It wasn't long, though, until I was suffering the same treatment as before. In a few weeks I felt my old sickness again. Gradually I weakened until I suffered a complete collapse. I never revived until I felt you push against my side when they threw you here. Now tell me how much of the world you have seen."

The newcomer swelled with pride. She seemed to be so happy at her very existence. Then she told her story.

"You'd never think," she said in almost a whisper, "that I've travelled more than 20,000 miles. That was my record. And I feel good enough for a couple of thousand more. I only attended one blowout and just because that put me under for a time, my kind master straightway sent me back to have my place taken by another. There is very little to tell, only that I was treated kindly. I was always given plenty of air. If I was cut, my wounds were healed with soothing cement. My master was careful of bad bumps; he avoided riding in the car-tracks. He never rubbed me up against a curbing. He was kind and I just worked along with him and gave him my best efforts. When he left me, he told a friend I was the greatest value in the world."

Just then the tires were seized by firm hands, and the two friends parted forever.

The moral of course is, "As ye sow, so shall ye reap," and the car owner who devotes a certain amount of time to the care of his tires is amply repaid.

Hardwood Floors; of Course

WHEN you build that new home of your dreams, you will have hardwood floors.

Pine would be cheaper. You'd save money on the first cost. Hardwood at twice the price would cost you less in the end—would give you longer wear and a thousand times greater satisfaction.

That's just the reason so many women favor Goodyear Cord Tires. Their higher first cost is offset by greater mileage, so that they really cost less in the end.

And Goodyear Cord Tires, like hardwood floors, are more than mere equipment for your car. They add greatly to the appearance of any car. By their lively construction they save gasoline. Their flexibility adds comfort and reduces car depreciation. They resist tire troubles.

Most motorists who use Goodyear Cord Tires realize the value of Goodyear Heavy Tourist Tubes. Their extra thickness and goodness warrants an extra price. They are fit mates for the Goodyear Cord Tire and better tubes for any tire.

Goodyear Service Station dealers everywhere are at your service.

Who Goes There

(CONTINUED FROM PAGE 54.)

"You wouldn't do such a thing."

"I might if I fell in love with you."

"Is it likely?" she said, the tint of excitement in her cheeks.

"Do you think so?"

"I don't know. Is it?"

"It's perfectly possible I imagine."

"That you could fall in love with me?"

"Yes."

After a moment she laughed as a child laughs at the prospect of beholding wonders.

"Kervyn," she said, "please do so. I will give you every opportunity if you will remain at Trois Fontaines."

"I mean to remain in that vicinity," he said, meaningly; and she laughed again, deliciously, almost maliciously.

"It would finish you thoroughly," she said. "It would be poetic justice with a vengeance."

"*Your* vengeance?"

"Yes, mine. Oh, if you only *did* do that!"

"I think, considering the way you look at it, that I'd better not," he said, rather seriously. "Besides, I've no time."

"No time to fall in love with me?"

"No time."

"Why?"

"Shall I tell you?"

"Yes, please."

"Very well. Because after I have the papers I shall enter the Belgian army." He added with a hint of impatience—"Where I belong and where I ought to be now."

She became very silent at that. After a few moments she said: "Had you decided to do that before I met you?"

"Yes. I was on my way—trying to avoid the very trap I fell into."

"The German army?"

"Yes."

"The next station," said the German guard, squinting in at them from the window under his lifted lantern, "is Trois Fontaines."

"What!" exclaimed Guild, surprised. "Have we passed the customs?"

"The customs? This is a German military train! What business is it of the Grand Duchy where we go or what we do?"

He lowered his lantern and turned away along the running-board, muttering: "Customs, indeed! The Grand Duchy had better mind its business—and the Grand Duchess, too!"

A few moments later the locomotive whistled a long signal note to the unseen station.

"Karen," said Guild quietly, "in a few moments I shall be out of debt o General von Reiter. My life will be my own to do with as I please. That means good-bye."

She said with adorable malice: "I thought you were going to rob me first."

"I am," he said, smiling.

The train had already come to a stand-still beside a little red-tiled station. Woods surrounded it; nothing was visible except the lamps on a light station-wagon drawn up to the right of the track.

The guard unlocked and opened their compartment. A young man—a mere boy—came up smilingly and lifted his cap:

"Mademoiselle Girard? Monsieur Guild? I come from Quellenheim with a carriage. I am Fritz Bergner."

He took their luggage, and they followed to the covered station-wagon. When they were seated, the boy stepped into the front seat, turned his horses, and they trotted away into the darkness of a forest through which ran the widely winding road.

Fresh and aromatic with autumn perfume, the unbroken woods stretched away on either hand beneath the splendor of the stars. Under little stone bridges streams darkled, hurrying to the valley; a lake glimmered through the trees all lustrous in the starlight.

Something—perhaps the beauty of the night, possibly the imminence of his departure—kept them silent during the drive, until, at last, two unlighted gateposts loomed up to the right and the horses swung through a pair of iron gates and up a driveway full of early fallen leaves.

A single light sparkled far at the end of the vista.

"Have you ever before been here?" asked Guild.

"Once, to a hunt."

Presently Guild could see the long, two-storied hunting lodge of timber and stucco construction with its high peaked roof and dormers and a great pair of antlers spreading above the hood of the door.

Out of the doorway came a stout, pleasant-eyed, brown-skinned woman who curtsied to them smilingly and welcomed them in German.

Everything was ready; they had been expected. There was a fire in the hall and something to eat.

Guild asked to be driven to an inn, and the housekeeper seemed surprised There was no inn. Her orders were to prepare a room for Herr Guild, who was expected to remain over night. She regretted that she could not make them more comfortable, but the Lodge had been closed all summer, and she had remained alone with her son Fritzl to care for the place.

There seemed to be nothing for him to do but to stay over night.

Karen, waiting for his decision, looked pale and tired.

"Very well," he said to Frau Bergner, who curtsied and went away for their candles. Then he walked over to where Karen was standing, lifted her hand and touched the slender fingers with his lips.

"Good-night," she said; "I hope your dreams will be agreeable."

"I hope yours will be, also."

"I hope so. I shall try to continue a dream which I had on the train. It was an odd one—something about a frontier and a sentry box. You woke me before I had entirely crossed the frontier. I'd like to cross and find out what really is on the other side."

He laughed:

"I hope you will find, there, whatever you desire."

"I—hope so. Because if I should cross the boundary and find—nobody—there, it might make me unhappy for the rest of my life." And she looked up at him with a slight blush on her cheeks.

Then her features grew grave, her eyes serious, clear, and wistful.

"I think I am—learning to care—a great deal for you. Don't let me if I shouldn't. Tell me while there is time."

She turned as the housekeeper came with the lighted candles.

Guild stood aside for her to pass, his grave face lowered, silent before this young girl's candor and the troubled sincerity of her avowal.

And in his heart he knew that, although he had never liked any woman as much as he liked this young girl, he was not in love with her. And, somehow or other, he must tell her so—while there was still time.

CHAPTER XVI.

HE awoke in a flood of brightest sunshine; his bed, the floor, the walls, were bathed in it; netted reflections of water danced and quivered on the ceiling; and he lay looking at it, pleasantly conscious of green leaves stirring near his open window and of the golden splashing of a fountain.

There was a little bird out there, too, diligently practicing a few notes. The song was not elaborate. Translated, it seemed to consist of tweet! tweet! twilly-willy-willy! repeated an indefinite number of times.

Curious to discover what his surroundings resembled, he rose and looked out of the curtained window. There was a grassy carrefour where a fountain spouted into a stone pool; all else was forest; a stream sparkled between tree-trunks, bridged where the drive crossed it.

To bathe and dress did not take him very long. In the hall, which seemed to be the main living-room below, he prowled about, examining a number of antlers and boar-heads mounted on the beamed and plastered walls. The former had been set up in German fashion. antlers, brow-antlers, and frontal bone. and these trophies appeared to him uninteresting—even a trifle ghastly when the bleached skull also was included.

The boars' heads were better, nothing extraordinary in size, but well-tusked. The taxidermy, however, was wretched.

The square hall itself did not appear particularly inviting. The usual long oak table and benches were there, a number of leather arm-chairs, book-racks, cue-racks, gun-racks with glazed panes to protect the weapons, a festoon of spears, hunting knives and curly hunting horns, skins on the floor, brown bear, wolf and stag.

Mrs. James Patterson and Mrs. W. M. Todd, representatives from the Ontario Institutes to the Convention at Winnipeg. These delegates, with Mrs. G. A. Putnam, were appointed Directors from Ontario.

The seventeen directors will be empowered to elect from among themselves a president, two vice-presidents, and four (or six or eight) directors to form an executive, and from among themselves or otherwise, a secretary-treasurer.

Plan B provides that at each district annual meeting a delegate will be appointed to represent the district concerned at a meeting to be called some time before September, 1919, for the purpose of completing organization upon the plan to be prepared by the members of the present organization and submitted for approval at the next annual Convention.

The seventeen members then withdrew and appointed the following officers: President, Mrs. William Todd; Vice-Presidents, Mrs. James Reid and Mrs. J. Patterson; Secretary, Mrs. B. O. Allen; Executive Committee, Miss M. E. Pearson, Dr. Annie Backus, Miss H. Beardmore, Miss Kate McKay and Mrs. John Clark. Mr. Geo. Putnam, the Superintendent of Women's Institutes, was made Honorary President.

It is recommended to the seventeen representatives that as soon as possible the Advisory Committee be elected by the Districts which they represent, and be responsible to the Districts for their work on that Committee.—Carried.

11. That the branches be advised to bring matters of official interest to their annual meetings, and from there send in their suggestions, recommendations or resolutions for the agenda of the Convention, and have some person appointed to open the discussion.—Carried.

12. We, the members of the East Harwich Women's Institute, would like to submit the following resolution to the Convention: Resolved that we think it would be very advisable in the interest of sanitary and moral improvement of our schools to appoint two ladies on the public school boards besides the three men trustees.—Carried.

13. We, the Ontario Women's Institutes in convention assembled, representing 30,000 of the rural women of Ontario, realizing the importance of children being brought up under their mothers' care, would ask our Government to institute a system of allowance to needy mothers.—Carried.

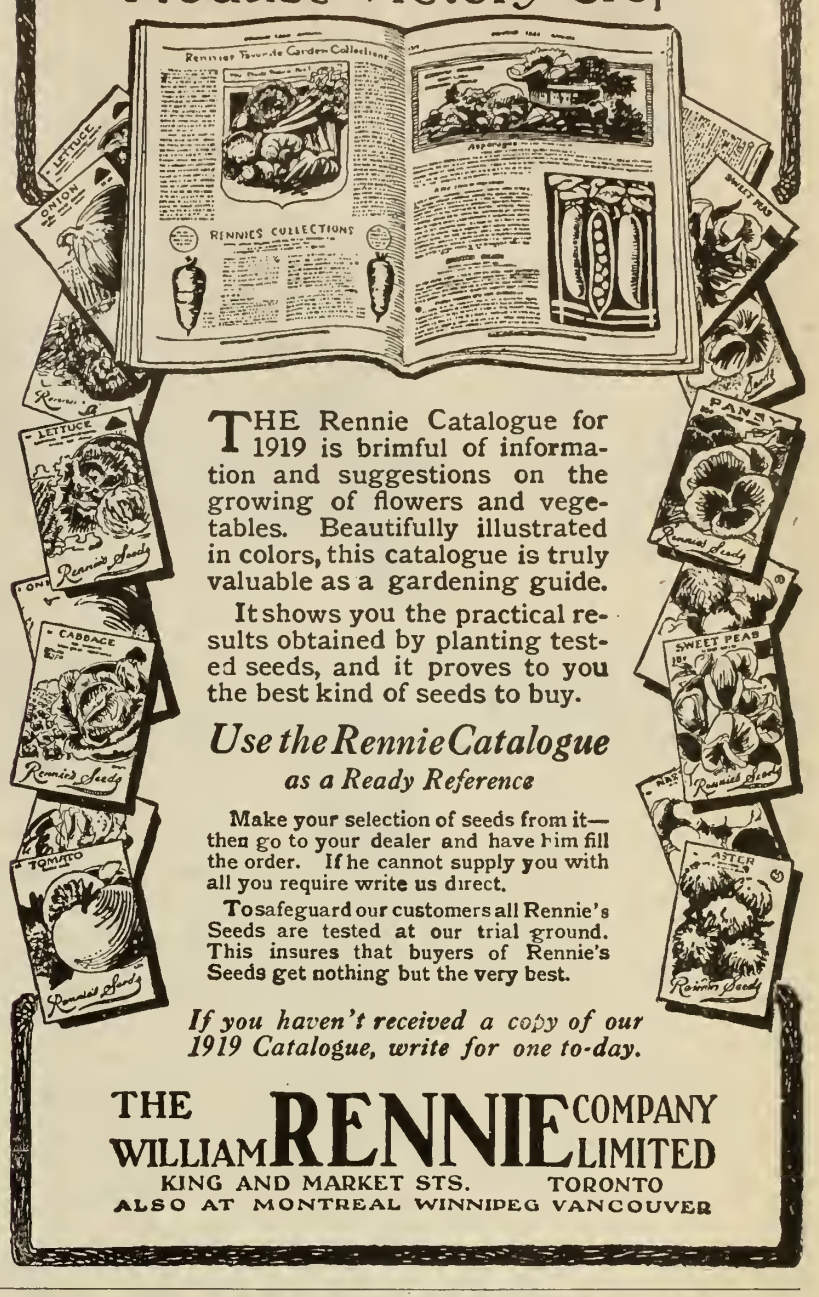
14. We wish to record our grateful appreciation of the able services of the late Miss Susie Campbell.—Carried with standing vote.

15. That we desire to send greetings from this Convention to Miss Guest, our representative in England.—Carried.

16. In view of the fact that district organization is being made more complete, efficient work can be done only with additional grant, and we would recommend that a Special Committee be appointed to formulate a definite basis. —Carried.

17. That the Convention wishes to express its thanks to Principal McKay and all who have helped to make the Convention a success.—Carried.

18. Whereas the ignorance of the public in regard to home nursing is appalling, as evidenced during the influenza epidemic, be it resolved that Home Nursing be placed on our public school curriculum; that our Model and Normal students be thoroughly trained in same, and that this course be given careful inspection by our school inspectors. —Carried.



19. That the resolution from Thunder Bay District, petitioning the Premier and the Minister of Agriculture for the appointment of a woman representative for that part of the province to act in the capacity of district representative of the Department of Agriculture, be adopted.—Carried.

20. And finally, the Committee wishes, on behalf of all members of the Women's Institutes of the Province of Ontario, to most heartily endorse the words of appreciation expressed in a resolution from Thunder Bay District of the work accomplished under the able leadership of our Superintendent, Mr. Geo. A. Putnam, and considering the extent and importance of the work done by Mr. Putnam, and considering the great problems of reconstruction now before us, the women of the Institutes, now assembled, petition the Government to make such increase to the salary of our Superintendent as shall assure us of his continued leadership of the Ontario Women's Institutes, the phenomenal growth of which has been largely due to his untiring efforts and his executive ability.—Carried, with great applause.

Moved by Mrs. Fowler, seconded by Mrs. Brethour, that the Provincial Committee provided for in the report of the Resolutions Committee be empowered to nominate two delegates to the meeting of representatives of the Women's Institutes and similar organizations throughout the Dominion, called to meet in Winnipeg shortly to consider the formation of a National Federation, and that the persons so named be submitted to the whole Convention for approval.—Carried.

Sentence Reports of Canadian Institutes will appear next month.

RENNIE'S SEEDS
Produce Victory Crops

THE Rennie Catalogue for 1919 is brimful of information and suggestions on the growing of flowers and vegetables. Beautifully illustrated in colors, this catalogue is truly valuable as a gardening guide.

It shows you the practical results obtained by planting tested seeds, and it proves to you the best kind of seeds to buy.

Use the Rennie Catalogue as a Ready Reference

Make your selection of seeds from it—then go to your dealer and have him fill the order. If he cannot supply you with all you require write us direct.

To safeguard our customers all Rennie's Seeds are tested at our trial ground. This insures that buyers of Rennie's Seeds get nothing but the very best.

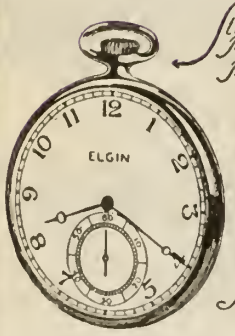
Elgin—
"The Spirit of Reconstruction"

On Schedule

THE time has come when this business—and every other business, to be a success—must run *on schedule*. Our armies couldn't win on any other plan—how can we?"



They knew the value of Time "over there." As they waited in blackest night, eager, alert for zero hour, every tick of the Elgin was fraught with grim significance.

For they learned—in those breathless rushes as the barrage lifted—that victory and destruction and eternity were separated only by seconds.

For magnitude of operations and for stupendous outcome the Allied war machine threw into insignificance any previous effort of man. Yet its mighty machinery worked as smoothly and accurately as an Elgin—because everything was planned and carried out *on schedule time*.

Shall wartime efficiency be lost in time of peace? Working to schedule is absolutely essential to profitable production in factory, office, mine and field alike.

Elgin plays its accurate part in these days of reconstruction—just as unerringly as it upheld the Service on land, on sea and in the air.

Editorial from the Daily Star, of Monday, Nov. 4:—

KEEP THE HOUSE MOIST.

One of the cheapest ways of increasing the warmth of the house is to keep the air moist. In summer, when the heat appears excessive humidity is given as the explanation. In winter we are apt to go to the other extreme. A bulletin issued by the Toronto Fuel Administrator says:

"Nature has provided the people of the earth with a great blanket in the form of moisture; take the blanket away, or thin it out, and we get cold. Moisture is extremely necessary to life. In our homes in winter we get an excessive amount of heat and an insufficient amount of moisture, which not only makes the air oppressive and uncomfortable, but accounts for a large percentage of the catarrhal and other diseases of the nose and throat. Dry air at 70 or 72 F. may feel cooler than moist air at 60 degrees."

Simple directions are given for increasing moisture. If the house is heated by a stove keep a pan or kettle boiling. If there is a furnace, the water retainer in the hot-air jacket should always be filled with clean water. It is also advisable to keep a pan of water near the registers, particularly those giving out the most heat. When the house is heated with hot water or steam, pans or humidifiers should be on every radiator. The mere fact of steam or water-heating does not keep the air moist. It is recommended that a hygrometer as well as a good thermometer be kept in every home. Water is a good deal cheaper than coal, and should be freely used.

For Health's Sake Keep Your House Moist

Pure, Healthful Indoor Air Assured by the Use of the

RADIATOR HUMIDIFYING PAN

Positively the Only Efficient Humidifier on the Market to-day

Saves coal—saves your health. Fits between radiator and wall.

Out of sight. Out of the way. Just as essential to comfort and health as is heat itself.

The Piano's Place In Music

(CONTINUED FROM PAGE 21.)

resource against loneliness or boredom During the past half century there has been a great advance in teaching methods, designed to develop the musical intuitions of the budding pianist. Thus the pupil is trained by real teachers to regard the instrument not merely as a machine for the display of great manual dexterity; but as one for delicate and tender expression. The aim is to play it with a "touch" which will bring forth gentle and wooing accents and not merely to hammer out brilliant or thunderous tones. Thus the really good teacher tries to induce his pupil to endeavor to create the effect of song, after he has mastered the intricacies of fingering.

The really great pianists are men and women, who become as it were so much in accord with their instrument, when they are seated at the keyboard, that, despite the magnitude of its mechanical devices, it seems to become part of themselves just as is a violin in the hands of a great virtuoso. Of course comparatively few are so peculiarly gifted that they can make a piano speak as it were with their own voices, but for the person of average taste and ability the wealth and variety of sound in a well tuned piano offers unfailing delights. It is capable of every form of expression, whether of the order that makes the young and vivacious listener eager to dance or of that which inspires tender reflection. For that reason the piano will remain one of the most precious attributes of the home.

Oh, What a Tangled Web!

(CONTINUED FROM PAGE 56.)

"They talk about the French girls, and how chic they are, but every time I see a pretty one, it only sets me dreaming of that last night in the garden with you, when the moonlight played hide and seek in your hair and you kissed me goodbye. That was a pretty dress you wore, pretty enough to be married in, I'd say."

JERRY was playing the game with a vengeance, Jean thought with a twisted little smile, but nevertheless, she slept for nights with that letter under her pillow until the next one came to send her to her room shivering with apprehension.

"Don't worry, dear, if you don't get any word for a while. We're apt to be weeks without the chance of writing, but they'll let you know if your old man has 'gone west' so no news is good news.

"You see you're that old sweetheart of mine, Jean, the only girl I ever scratched or used a stick on, as I'm the only boy you've ever kissed—Yes?—so remember me in your prayers these nights and when our guns thunder out they'll be answering back 'God bless you.'"

Long, weary days followed that letter, sick hours when it seemed to the girl as if unseen terrors held her in grip. Each morning's headlines telling of the big offensive and the fighting brought fresh fears, and the worst of it was that she could expect no word of reassurance from Jerry. Jerry who had grown so infinitely dear. The month dragged by, and still more months and still no word. Shadows came under Jean's gray eyes and her round cheeks developed hollows. She told no one of her trouble, but the whole little suburb watched the girl with friendly anxiety, and even Cary Jacobs became gently tactful.

Poor Jean! It was hard to have all her heart ache at once. Never having known that she possessed such an organ, it had hurt to find that strange pain that the thought of the temporariness of her claim on Jerry had brought, but now that was happiness compared to this sharp keen anguish that caught away her breath and at night made her stretch out pleading hands to the friendly darkness. Jerry was such a boy in spite of his twenty-eight years. She could see him in all his young strength, lying inert on the battlefield, his fighter's face turned to the stars. All the horrors she had read became things that might happen or had happened to Jerry, her Jerry, with the close clipped hair and boyish smile.

(CONTINUED ON PAGE 61.)

Oh, What a Tangled Web!

(CONTINUED FROM PAGE 60.)

She came back late one night from a long day's activity at the Red Cross. Her whole body throbbed with weariness; even her eyes ached from straining after accuracy in making nine by nines, so that the figure on the wind swept porch seemed but another hallucination. He was sitting on the railing, Jerry's old familiar perch, watching her come up the walk with the dear quizzical smile that was his, but she had seen him like that so often in her fancy that she came on up the stairs quietly, still scarcely realizing that the gaunt man sitting there was a reality and not a creature of her dreams.

THEN she knew him. With a rush she was in his arms, all the suffering of the months in her cry. She kissed him hungrily, feeling his thin cheeks with her fingers and running eager hands through his crisp hair.

Suddenly she drew back. Her onrush had been so quick that the man had scarcely said a word, but like a slap in the face had come the thought to Jean that this was no game she was playing. She had completely forgotten all that in joy at the return of the man she loved, but now hot waves of shame rushed over her face. He must have seen. She turned away and tried to speak, but only a horrid choking sound came from her throat. The man rose for the first time, and a new horror gripped her as she realized that he used a crutch.

"I'm sorry, Jean," she heard from a way off. "I didn't think you'd mind so much, I wanted you to know before I came, but our cable must have gone astray."

He didn't think she'd mind! Through the chaos of suffering that filled her that phrase stood out like a spar. She clutched it wildly.

"Mind? When you can never have any fun any more, ride or swim—or anything, you of all men?" Her balance was coming back. She spoke hurriedly, breathlessly, watching him almost furtively.. There was a chance for her to keep her secret—he thought the sight of him a cripple, had unnerved her. Perhaps that was all he had seen. Perhaps the cards were still in her hands.

Jerry was talking again.

"I won't miss these things, Jean," he was saying, "We see tragedies over there that sort of kill our youth. I suppose a certain readjustment comes with the years, but just now the picture of those old, old men and women with their dead eyes, and the little children's wizened, tortured faces is all I can see. That, and on the other side of the picture—you. You're all that they've lost—all the beauty and sweetness of life." He took her hands in his, and under his fingers felt her ring.

The girl's eyes filled with tears. This was such a different boy from the one who had gone away so gaily. She felt as if her heart would break. It seemed to her, as it will seem to many women, that somehow she must bring the laughter back into those dear eyes, and wipe away the memories of all the horrors. But it was not her place. She looked down at the ring that had grown so precious, and slowly drew it off.

"You must take it back now, Jerry," she said, her voice quivering wistfully, in spite of herself as she pressed the ring into his palm. "It's done its part, but it wouldn't be right for me to keep it any longer. Some day you'll want it for your wife."

ALL the light died out of the man's face. A fighting look came into it as he slipped the ring back into place.

"I want it for her right now," he said quietly. "The game's not up yet. What effect do you think it would have in this town if the first man who comes back with a leg off is thrown down by the girl who had made the biggest bow-wow about patriotism? Who'd be the slacker then? What would you tell them—that it was all a joke? It might make a good story at their expense, but anyway who'd believe it after that night in the garden?"

The girl had drawn away from him, filled with a sick confusion. It was all as he said, of course. She who had been so proud, so sure of herself in all that it meant of devotion and sacrifice, she would be pointed out as the slacker, the worst kind of one, at whom they would think the finger of scorn might rightly be pointed. Yet she loved him. She had got him into this, she couldn't let him marry her to spare her humiliation.

She lifted her head, and a gallant little smile curved her lips.

"Well, you always said I was a good sport. I guess I'm not going to stumble now at the first hurdle. It's my own fault anyway. If I hadn't been so smug over being patriotic I wouldn't have to fall so hard. They might as well have a good mouthful for once, they talk enough over nothing."

Her fingers strayed to the ring again, but before she could touch it one of Jerry's strong arms had swept her close to him, and his eyes, sometimes so kind, were now like steel.

"All right, Jean, if it was all a game, why did you kiss me just now as you did? Why did you look at me as a woman looks only at the man she loves. You were with me last year when they thought I was dying and you didn't act like this. Look at me, Jean."

So might he have spoken to an imprisoned Boche, and Jean looked, but what she saw sent the hot blush of shame away, and in its stead came a lovely glow of happiness. Tense strings seemed to loosen in her heart, and the bubbling laugh came singing to her lips.

"Jerry," she whispered.

"Jean," he murmured, and then the laugh pealed out.

"We're two j's," she choked.

"We are that," he comforted, "j's and jays, whichever way it's spelt."

THE END.

Chocolate the Ready Luncheon

WHEN business prohibits your leaving the office at lunch time, yet you are hungry and tired—eat chocolate! for chocolate is a sustaining food.

All through the war the value of chocolate has been demonstrated.

The Allied soldiers found that when fatigued, eating chocolate renewed their energy, and thousands will testify how bars of chocolate used as emergency rations supplied them with strength to "carry on" in many a tight pinch.

Chocolate has proven its vitality-restoring qualities to every Canadian soldier. Profit by this war lesson. Apply it to civil life.

Eat chocolate as a luncheon—it satisfies—and will help you through the business hours.

Chocolate is a food product which the human system craves and demands. It fills a real need.

Keep a few bars of chocolate in your desk drawer. Eat them when you feel fatigued—they will help relieve the strain of your work.

"Chocolate is a most nourishing fat food and a delightful stimulant, especially valuable in cases of extreme fatigue or exposure."

—*Canada Lancet.*

It is a Splendid Food.

WHO GOES THERE

(CONTINUED FROM PAGE 58.)

A badly stuffed otter displayed its teeth on the mantle over the fireplace between a pair of fighting cock pheasants and a jar of alcohol containing a large viper, which embellishments did not add to the cheerfulness of the place.

For the rest there was a billiard table shrouded in a rubber cloth, and three well-engraved portraits on the walls, Bismarck, after Lehnbach, Frederick the Great playing on flute like fury, and the great War Lord of Europe himself, mustaches on end, sombre-eyed, sullen, cased in the magnificent steel panoply of the Guard Cuirassiers. The art gallery bored Guild, and he opened a door which he suspected communicated with the pantry.

It was a valet's closet, and it smelled of camphor. Shooting-coats hung on stretchers; high-laced shooting-boots were ranged in rows. On a chair lay Karen's skirt and blouse-coat of covert cloth. Both were still slightly damp and wrinkled. Evidently they had been brought down here to be brushed and pressed while Karen slept.

Passing his hand over the brown silk lining of the coat gave him no clue to the hiding-place of the papers; what revealed their presence was a seam which had been hurriedly basted with black thread. The keen point of his pocket-knife released the basting. He drew out the papers, counted them, identified them one by one, and placed them in his breast pocket. Then he laid the coat across the back of the chair again and went out.

He had two hours to wait before there could be any decent hope of breakfast. Nobody seemed to be stirring in the house. After a few minutes, he unlocked the front door and went out into the early sunshine.

It was as warm as a spring day; rain had freshened grass and trees; he sat down on the fountain's rim and looked into the pool, where a dozen trout lay motionless, their fins winnowing the icy water.

No doubt some spring, high on the wooded hills, had been piped down to furnish the pool with this perpetually bubbling jet.

The little bird who had entertained him vocally earlier in the morning was still vocal somewhere in a huge beech-tree. Around a spot of moisture on the gravel-drive two butterflies flitted incessantly. And over all brooded the calm and exquisite silence of the forest.

An hour or more later he got up and re-entered the house.

First he took a look at the valet's room. Evidently Karen's clothes had been brushed and pressed, for they had disappeared.

Another door in the square hall promised to lead into the pantry, judging from significant sounds within.

It did, and the housekeeper was in there as energetically busy as every German woman always is when occupied. And German women are always occupied.

The kindly soul appeared to be much flattered by his visit. They had quite a gossiping time of it while she was preparing the breakfast dishes.

It was mostly a monologue.

No, she and Fritzl were not lonely at Quellenheim, although it was pleasant to have the lodge open and a noble company there shooting. But, like Marlbrook, the Herr Baron had gone to the wars—alas!—and it might take him some time to capture Paris and London and set the remainder of the world in order.

But it really seemed too bad; the Herr Baron was fond of his shooting; Fritzl had reported some good antlers in the forest, and a grey hoar or two—but enormous! As for the place, it would certainly go to ruin, what with faggot stealers and godless poachers!—And the foresters, keepers, and even the wood-choppers all gone off and deserting the place—think of it!—the ungrateful Kerls—gone!—and doubtless to join the crazy Belgian army which had refused to permit Prussian troops to pass! *Prussian* troops! The impudence of it! Gratitude! There was little of that in the world it seemed.

"When does the Herr Baron return here?" inquired Guild, smiling.

It appeared that the Herr Baron was to have arrived at Quellenheim this very week. But yesterday his adjutant telegraphed that he could not come perhaps for many weeks. No doubt he was very busy chasing the French and English. It was a pity; because the autumn is *wunderschon* at Quellenheim. And as for the deer!—they stand even in the driveway and look at the Lodge, doubtless wondering, sir, why they are neglected by the hunters, and asking one another why good fat venison is no longer appreciated at Quellenheim.

"Could you tell me where I may telegraph to the Herr Baron?" asked the young man, immensely amused by her gossip.

"That I can, sir. My careful household reports are sent to the Herr Baron through military headquarters at Arenstein, Prussia. That is where he is to be addressed."

"And a telegraph office?"

"At the railroad station."

"In communication with Prussia?"

"Yes, sir," she said with a vigorous nod. "And whenever any of the yokels hereabout tamper with the wires the Uhlans come and chase them till they think the devil is after them!"

"Uhlans? Here?"

"And why not? Certainly the Uhlans come occasionally. They come when it is necessary. Also they cross the Grand Duchy when they please."

"Then if I write out a telegram here——"

"Fritzl will take it, never fear, sir. Leave it on the billiard table—any telegrams or letters—and they shall be sent when Fritzl drives to the station."

"Where," he inquired, "is Lesse Forest?" And could he send a messenger?

"Lesse Forest? Why the chasse wall separates the range of the Lesse Hills from Quellenheim. Any peasant at Trois Fontaines who possesses a bicycle could take a message and return in an hour."

"Do you know who leases the chasse at Lesse?"

"Yes. Some wealthy Americans."

So he smiled his thanks and returned to the hall. There was writing material on the long oak table. And first of all he wrote a brief telegram to General von Reiter saying that he had fulfilled his promise.

This was all he might venture to say in a telegram; the rest he embodied in his letter to the Herr Baron:

> Having telegraphed to you, and fulfilled my enforced obligations to the letter, I am confident that you, in your turn, will fulfill yours, release the hostages held by your troops at Yslemont, and spare the village any further destruction and indemnity.
>
> You had made it a part of the contract that, in case you were not at Quellenheim, I was to remain over night under your roof.
>
> I therefore have done so. It was not an agreeable sensation, and your forced hospitality, you will recognize, imposes no obligations upon an unwilling guest.
>
> Now, as I say, the last and least item of my indebtedness to you is finally discharged, and I am free once more to do what I choose.
>
> I shall be a consistent enemy to your country in whatever capacity the Belgian Government may see fit to employ me. I shall do your country all the harm I can. Not being a public executioner, I have given the spies in your employment in London a week's grace to clear out before I place proofs of their identity in the hands of the British Government.
>
> This, I believe, closes, for the present, our personal account.
>
> Miss Girard is well, suffered no particular hardship, and is, I suppose, quite safe at Quellenheim where your capable housekeeper and her son are in charge of the Lodge.
>
> May I add that personally, I entertain no animosity toward you or any German, individually—only a deep and inextinguishable hatred toward all that your Empire stands for and a desire to aid in the annihilation of this monstrous anachronism of the twentieth century.

When he had signed and sealed this and directed it, he wrote to his friend Darrel:

> DEAR HARRY:
>
> If you are at Lesse Forest still, which I understand adjoins the hills of Quellenheim—and if your friends the Courlands still care to ask me for a day or two, I shall be very glad to come. I am at Quellenheim, Trois Fontaines.
>
> Please destroy the letter I entrusted to you to send to my mother. Everything is all right again. I may even have time to fish with you for a day or two.
>
> The messenger from Trois Fontaines who takes this will wait for an answer.
>
> Please convey my respect and

Your Safeguard in Buying Shoes

WHEN you buy shoes, you take somebody's word for value. It is CONFIDENCE which leads you, in the end, to lay down your hard-earned dollars for shoes. And you are right in buying where you feel the most confidence.

This confidence on the part of the buying public is the biggest asset which any dealer, or any manufacturer can have. The reputable, established dealer has YOUR interests in mind when he buys his stock; the manufacturer bears them in mind when he makes it.

Your safeguard in buying shoes is to see that your confidence is well placed. Go to a dealer whose judgment you can trust. And see that the manufacturer's trade mark is on the shoes you select. Thus you may buy with DOUBLE confidence.

Our booklet "How to Buy Shoes," will be sent, with our compliments, to any address in Canada upon request to our head office at Montreal.

At the Sign of the Coal Scuttle

(CONTINUED FROM PAGE 8.)

"To think of me—Jinny Croft—keeping house all by my lonesome. If only Madge hadn't had that alluring position offered her just as we got settled so comfy together. It will never do to stay settled alone. I must chum up with some other girl in the city and entice her to my flat to share my solitude and my rent. Comes pretty hard on my purse these days, especially if I am to go shares with my coal bin," Virginia mused grimly, turning to wave gaily back at the sweet, smiling face watching above the geranium blossoms.

It was rush day at the bank and Virginia had no spare moments to think of either Granny MacGrath or the flat, but late in the afternoon as she hurried up the street and caught a glimpse of the beckoning smile in the window of the second floor, she laughed merrily.

"Half an hour before dark and I'll just accept Granny MacGrath's invitation to drop in and visit with her this very minute."

Granny MacGrath, herself, her wrinkled old face beaming her welcome, answered Virginia's knock and her withered, loving arms went straight around the girlish figure.

'JUST guessed it might be you, honey. Now lay off your bunnit and I ken you ain't in any hurry to climb the stairs—no man waitin' for you to make his supper. My kettle is boilin', and we'll spread the cloth on the little walnut table close to the Franklin grate. But first along we'll just sit by the winder and chat. My, but I've been hankering for company. The city's a grand, exciting place, but it gets kind of lonesome when you ain't any of your own to run in and take a cup o' tea with you," explained Granny MacGrath, shaking a shovel of coal on the blazing embers of the Franklin grate.

Virginia sank down into the little wooden rocker with its crocheted tidy —for all the world like the rockers of the friendly village that gave her birth. Granny MacGrath prattled on, drifting into the past with the privilege of grandmothers, and Virginia bent her head of sun-tinted braids close to the scarlet geranium blossoms. And as they sat thus, chatting and laughing of sweet, old-fashioned days, the Man of the First Floor came swinging up the street with a vigorous stride.

"There, dearie, there's one as looks at my window and sees me," exclaimed Granny. "He ain't never waved, but I can tell by the laugh that comes into his eyes that he does see, but, oh, look he is wavin' and ain't his arms strong and muscular. I wish mine weren't so crippled and I could wave back, Couldn't you, now, dearie, just wave your hand at the window and he'd know I like his looking up at my geraniums," coaxed Granny with a pretty wistfulness.

And Virginia's plump, little hand waved gaily above the scarlet blossoms, then remembering the meeting in the morning in the basement, the color surged into her cheek and, smiling grimly, she drew away from the window.

"That's a fine young man, if I know anything about human nature. He's the up-and-comin' sort, wide awake and you just couldn't get ahead of him," announced Granny MacGrath with conviction. But Virginia smiled mysteriously in the twilight flitting through the geranium window. She reckoned that the Man of the First Floor would not get ahead of her.

THE following morning found Virginia Croft bustling merrily about her tiny kitchen, when Benny came clumping, breathlessly excited, to the stairway. She had already peeked down the stairs and had glimpsed Granny MacGrath's coal scuttle standing with expectant air on the second landing. She would go with Benny to the basement and fill it from her own coal bin. Then without even stopping to knock, Benny clattered into the kitchen.

"Miss Jinny, Miss Jinny, what do you 'spose? Granny MacGrath's scuttle ain't out this mornin'. You don't think she's guessed her bin's empty, do you?" he questioned, breathlessly.

(CONTINUED ON PAGE 66.)

A Diagram Picture

Note the Pointed Corn

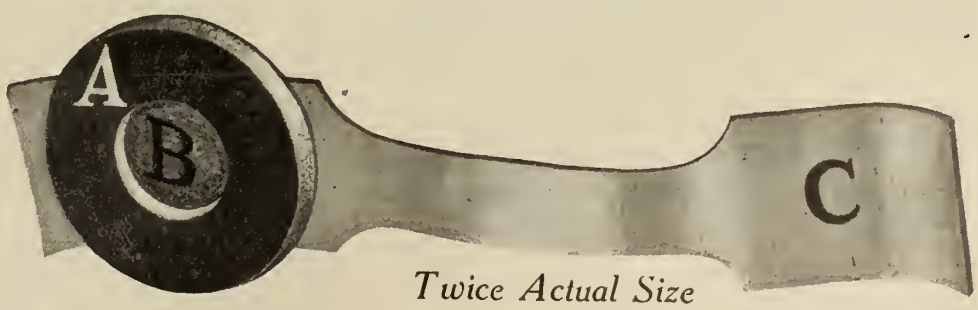
Why Corns Hurt

Note this diagram picture of a corn. Note its conical shape. The cause of the corn is pressure. And pressure makes it hurt. The point of the corn is pushed into the nerves.

Applying a Blue-jay plaster instantly removes the pressure. Note the felt pad (A) in the picture below. We apply no anesthetic. The pad gives barefoot comfort in the tightest shoe.

But that is temporary. One should not continue a pad. The corn should be quickly ended.

The bit of B&B wax in the centre of the pad does that (as noted in illustration below). In two days, usually, the whole corn disappears. Only rare corns need a second application.



That's the great reason for Blue-jay. It stops the pain, then ends the corn. And it wraps the corn so the action is undisturbed.

Then the action of the B&B wax is centered on the corn. Held there by the rubber coated adhesive tape which wraps comfortably around the toe. Healthy tissue is not affected.

These facts cannot be true of liquid applications. Those are the reasons why millions of people have adopted the Blue-jay method. It is scientific, quick, comfortable and certain.

Keeping corns is folly when this easy way can end them. Treating them in cruder ways is inexcusable.

For your own sake, convince yourself by applying Blue-jay to one corn.

Concerning Books That Are Worth While

(CONTINUED FROM PAGE 19.)

data and statistics which it contains on almost every field of endeavor in the Dominion must prove to be a work of great usefulness to all those who wish to know the facts and figures as they concern the people and institutions of the Dominion.

The full schedule of the Canadian tariff of Customs, together with the income war tax of 1917, is included in the present volume, and this, with the list of postoffices and railroad stations, would of itself be essential information for any firm doing a national business in the Dominion. Full particulars concerning banking, educational institutions, patent and copyright laws, British scale of Customs, and the Dominion of Canada militia list, are among the features, and the whole five hundred and forty odd pages should be in the hands of every Canadian who takes an interest in the progress and development of his or her country.

A Young Mother's Guide, by Francis Tweddell, M.D. Published by Frederick D. Goodchild. Price, $1.00.

THIS book, which is endorsed by the Mothers' Guide Association of Toronto, is written by one of the best-known children's physicians of New York City. Dr. Tweddell, although formerly a prominent officer of the British Army Medical Staff, is now physician to the Babies' Hospital Dispensary, New York, and in these pages he gives the results of many years' experience with the ills and diseases of children.

A large part of the work is devoted to the feeding of children during their early years, and special attention has been paid to the maladies of older children which result in suffering, loss of appetite and allied ailments. Such trouble producers as adenoids, tonsils, jaundice, vaccination, circumcision, dentition and convulsions are all adequately dealt with and the remedies explained. It is a book which ought to be in every household where babies are popular and their care a first consideration.

The Trail of the Blonde Beast

(CONTINUED FROM PAGE 7.)

Helene's white hands moved slowly, carefully over the surface of her dressing table until they found the powder puff that she sought. Her eyes were on her mirror, examining her flawless complexion.

"*Schrecklich!*" she said in an even tone as Bob finished his recital.

"Is that all you can say?" he demanded aghast. "At least, say it in English. You're an American now, Helen. Don't forget that. The wife of an American diplomat."

"Yes, it is awful," acquiesced Helene, her eyes still on her beautiful mirrored self.

SHORTLY after the "Lusitania" tragedy, Bob's vacation period came to an abrupt end. His chief told him that his services would be required daily at the State Department. His position held no title, but it was generally understood that he had been given important work to do of an exceedingly confidential nature.

Count von Dahl became a very busy man. He spent long hours in conference with the German Ambassador and others of his country's representatives. Besides he evidently had large financial interests in Mexico and certain South American countries. He apparently had nothing to do with the German propaganda that was flooding the country; and he held himself rigidly aloof from men who were bringing down upon themselves the wrath of the United States by their abuse of its hospitality. He devoted his days to business and his evenings to society. He had gained a decided popularity in Washington which he spared no pains to foster. When he appeared at his clubs or at a social function he never discussed the war.

There came a time when the patience of the United States was exhausted. Von Papen and Boy-Ed were caught red-handed in their treachery and were sent from the country. Whereupon Count von Dahl proclaimed with his disarming frankness that he knew both these gentlemen personally but that he had never approved their activities.

German intrigue became still more bold and finally the Secret Service laid the arch-plotter, von Bernstorff, by the heels. Count von Dahl was unable to deny his intimacy with the ambassador. Although he himself was not directly implicated he voluntarily announced his plans for immediate departure.

Bob Thurston's frank nature made it impossible for him to play hypocrite; therefore he shed no crocodile tears at the loss of his guest. He had a superficial liking for the genial, cynical old worldling; but their views were too greatly at variance to permit of a real friendship between the two men. Besides Bob could not overcome a vague undefined feeling of distrust.

The last two or three days the Count spent mostly with his niece. They held long, serious conversations together whenever they had the opportunity, which was often, as Bob considerately left them alone to discuss family matters.

ON the day of the Count's departure Bob and Helene motored with him to the station. There they found an assemblage of notables to bid farewell to the popular host and society man. Count von Dahl had never appeared more charming than when he thanked the little coterie for their courtesy. In spite of his departure, or perhaps on account of it, he was in excellent spirits. He turned last to Helene and his gracious manner stiffened perceptibly.

"Helene," he said, his eyes cold and steady, "be always a good girl. Obedience. Remember to be always obedient."

She dropped her eyes but her face remained expressionless.

"Yes, uncle," she replied docilely.

Von Dahl bent slightly and brushed her forehead with his bristling mustache in a perfunctory, impersonal caress. The next moment he was on his way south—to Mexico.

It was with a sigh of relief that Bob handed his wife into their closed car. With a boyish laugh he pulled down the side curtains and drew her to him.

"It's good to be alone; isn't it, dear?" he exulted.

Helene turned to him with her slow smile. Her blue eyes seemed very tender as her firm young arms crept about his neck. She dropped her golden head on his shoulder and settled it there with a little movement of sheer content.

There followed a time of happiness for Bob. He felt that at last he had really won his beautiful young wife. Although Helene was by nature quite the opposite of demonstrative she seemed to become warmer and more tender after her uncle's departure. Bob surmised that the stern old man with whom she had lived so long had unconsciously repressed her warmth.

It delighted Bob that his wife's attitude toward the war was changing. She was no longer uninterested; in fact she discussed the issues with him intelligently. As the storm-clouds gathered over the United States she very frankly defined her position. She declared that she upheld Germany against England, France and Russia; but in the event of war between the country of her birth and the United States she would be unswervingly loyal to her new land.

DURING this period Helene received daily letters from her uncle. She usually retired to her own room to read these, later giving Bob gracefully worded messages from the Count. Bob was heartily glad of this correspondence. It seemed to him to denote a greater affection between uncle and niece than was evidenced by their manner toward each other when living together. Bob judged that the Count's hardness was largely superficial.

Eventually the inevitable happened and the United States declared war. After being on duty twenty-four hours, Bob snatched a few hours' respite and ran home. Helene was waiting for him with outstretched arms.

"It had to come," she said. "You will have to be very good to me, Robert.

The Mother Heart of Mrs. Whipper

(CONTINUED FROM PAGE 9.)

"What is to become of the house?" ventured Mrs. Murrin.

"All settled—second hand man—he comes the day after next and takes everything away. Goodbye, Sue. I'm sorry I couldn't take you too, but your Aunt told me to be sure and bring the little ones, so I've got them. You'll be all right. Mr. Rodney will see that someone gives you a home pretty soon."

BUT Sue did not answer. Her thin arms were trembling around her little brother, and her tears were making a damp spot on his neck, much to his boyish disgust.

Mrs. Murrin drew the girl away. "It will be all right I am sure, Sue," she whispered, "and you can go and see the children often after awhile, when everything is settled."

But Sue, would not be comforted. "Everybody w-wants the little ones," she sobbed, "but n-no-nobody wants me, 'cause I'm older. Oh, I wish I was an in-between, then somebody'd take me too."

Man-like, Mr. Manning did not appreciate this turn of affairs, and he hurriedly bundled his little charges out to the waiting sleigh, while suspicious mist lurked in his brown eyes.

"It is too bad," said Mrs. May, when they were alone. "I'd like to take you too, Sue, but you're too old."

"I could look after the twins," Sue reminded her eagerly. "I know just what to do for them. Mother said I was a regular nurse."

"I wish William would come," broke in Mrs. May, in an evident desire to change the subject. "He said he'd be here by four."

"I wonder if there is a telephone anywhere near here?" asked Mrs. Murrin suddenly coming out of deep thought.

"Peters' have one, across the road," volunteered Sue.

MRS. Murrin caught up her muff, and buttoned her coat. "I will be back in a few minutes," she cried, and was gone.

Mrs. Peters was quite willing to allow her phone to be used.

Mrs. Murrin, her eyes large with excitement, almost dropped the phone book in her hurry.

"Exeter six-eight-nine," she asked Central. Then after a short wait, "Oh, Mrs. Whipper, is that you?"

"Yes."

"This is Mrs. Murrin speaking, and," with a nervous laugh, "now that I have you, I don't believe I know just what to say. But I will tell you what is on my mind and let you do your own answering. Do you still want to adopt a child?"

"Good gracious, no."

"Well, that is all right then, only there is one of the Ingram children you could have if you wanted her."

"The Ingrams! Oh, dear no, not one of those children. Where is the mother?"

"Died a few days ago, and the eldest girl is the only one left, all the others have been adopted."

Mrs. Whipper caught her breath. "How old is she?"

"Ten."

"What are they going to do with her?"

"Mr. Rodney is taking her to his house for a few days, then the Children's Aid takes her."

"Mr. Rodney with his large family! Say, Mrs. Murrin, I am in the middle of baking, and I can't get out, but if you think I can have her, and you can bring her here, I will take that girl unsight, unseen, as the saying goes."

"Mrs. Whipper, you are a dear, and the Lord will bless you sure," cried Mrs. Murrin, an uncomfortable lump in her throat. "I felt sure you would take her after what you told me once about the eldest girl, but I won't blame you a bit if you don't, after you have seen her. She is some thin little specimen of humanity, all arms and legs, and evidently no stomach at all, at least none that has been filled of late."

"Now don't discourage me," Mrs. Whipper's voice shook. "I will fill her up and round her out if it is at all possible. Bring her along. I will phone Mr. Rodney that she is coming here, and we will settle all the rest later."

THERE was now so much extra planning to do. Mrs. Whipper's mind flew to dolls, and hair ribbons, and slippers and a gold locket, then bounced sensibly to underwear, and stout shoes and a warm hat which even in the hurry would insist on being saucy.

It was snowing in real earnest when on looking out of the window for what seemed to her to be the hundredth time, she saw Mrs. Murrin and a tall slim child get off the street car at the corner. She watched them with interest.

"Dear me," she thought, "she is an animated rag bag if ever there was one. She will need shoes first, and stockings no doubt, and a coat—she has a shawl on. Can you beat that? That cap is never her own, and my, oh my! what must she be like underneath?" Her mind flew to warm water and a bath as she opened the door to let the two in.

The child, not knowing what the idea was, looked with dull eyes at Mrs. Whipper. Then as her small nose sniffed the warmth of the house, and the goodly aroma of things prepared in the kitchen, her eyes widened. Chilled to the bone, she took matters in her own hands, pushed Mrs. Whipper aside and running to the big fire in the living room, dropped on her knees before it, and held her poor blue hands out to the blaze.

"I will go now, unless I can help you," whispered Mrs. Murrin. "If you do not really want her, Mr. Rodney will come for her I am sure."

Mrs. Whipper smiled a tearful smile. "I guess she will stay all right, poor little eldest girl. She is not much to look at now, but food, and clothes d love and.—a bath, will do a lot for most anybody, and I am willing to try what I can do with her. She will look a lot different in a month from now."

Mrs. Murrin squeezed the other's hand and slipped out the door.

Mrs. Whipper did not wait for the door to close, but with eager steps sought the little figure crouched by the fire, and drew her onto her lap, and commenced taking off the soaked, shabby shoes.

Sue, still shivering, looked at Mrs. Whipper questioningly.

"Just what we will do to you dear," said Mrs. Whipper, answering the look. "You are going to be my little girl now."

Sue's eyes widened. "Me—truly—But I'm the oldest you know, and nobody wants me. The Children's Aid gets me so Mr. Rodney says."

"Not if I know it. Wouldn't you like to be my eldest girl?" answered Mrs. Whipper, with a mother-smile on her face.

Sue took a look around as if to see if there were any other children about, then seeing the joke in the question smiled. "Wouldn't I?" she answered, and tucked her head under her new mother's chin.

HALF an hour later, Sue, fresh from a bath and wrapped in a warm kimono of Mrs. Whipper's, sat trying not to appear too greedy over the bowl of delicious bread and milk, when Mr. Whipper came home. His eyes widened at sight of her.

"What have we here?" he rolled out in his jolly voice.

"I've got my wish at last, Ted. It's an eldest girl," chimed Mrs. Whipper.

Then she told him all about it. "And we are going up town to-night for shoes, and stockings, a new dress, underwear, a pretty hair ribbon, a new hat and coat, and perhaps a fur neck piece, but candy for sure," she ended up, a happy lilt in her voice.

Then as Mr. Whipper, who had sat silent during her recital, remained silent, she continued. "We can, can't we, Ted—keep her—and buy the things?"

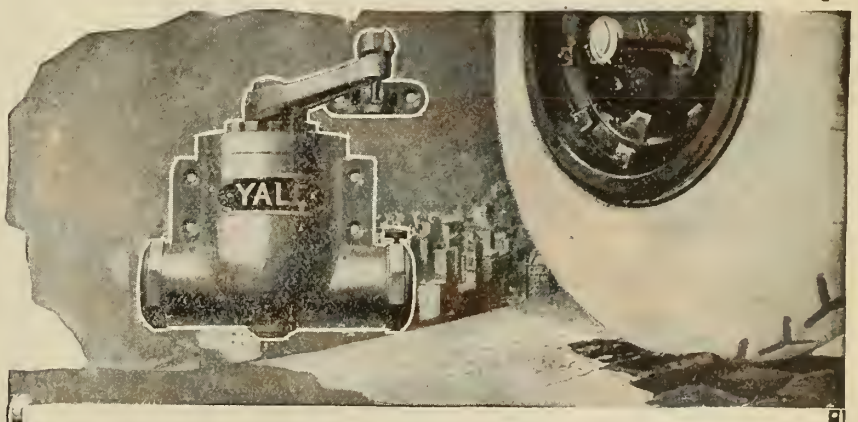
Mr. Whipper, his voice too husky for use because of what his eyes read in the big grey eyes of Sue, and the delicate pink coming and going anxiously in her thin cheeks, went to his wife and patted her on the shoulder.

"Sure girl," he managed at last, "we'll do our best by the eldest girl you have always talked about but never got your hands on before. Why—why, she is some girl; she can even help wash dishes."

"Won't I just? Th' other kids have nothin' on me—I'm taken too." piped Sue with happy sigh.

THE END.

To Prevent Headaches take



ENO'S
FRUIT SALT

HEADACHES! What woman isn't subject to them? Some frequently. Others less often. But, in any case, if the womenfolk would only follow the example set by their husbands and brothers in the use of Eno's "Fruit Salt," they, too, would escape the annoying, painful headaches caused by a lazy liver or deranged digestive system. Made of the stimulating and refreshing elements of ripe fruit juices, Eno's rouses the torpid liver to fresh activity and cleanses and invigorates the whole digestive and eliminative tract. A headache has no show where Eno's is.

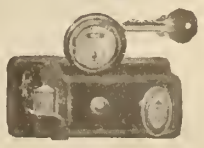
A shock absorber for the door

AS the pneumatic tire absorbs the shock for the automobile, so the Yale Closer absorbs the shock of the closing door.

There are certain doors in your home and business building that you want closed to secure privacy and quiet, or to keep out dangerous drafts. Yale Door Closers will do this, do it automatically, quietly and surely.

See your hardware dealer, he will tell you the right size, and will put a Yale Closer on your most troublesome and noisiest doors, *and keep them there for thirty days on free trial.*



See the "Yale" trade-mark on the Door Closer you buy. Made and guaranteed by the manufacturers of Yale Night Latches, Yale Padlocks, and Yale Builders' Hardware.

At The Sign of the Coal Scuttle

(CONTINUED FROM PAGE 63.)

"But it was out there. I saw Granny MacGrath's coal scuttle out at her door ten minutes ago. What ever could have happened to it? Benny, Benny Pickles, you get my coal hod from the kitchen and follow me quick," Virginia suddenly commanded, her lips pressed into a firm line.

Impatiently, her blue-checkered figure breathing defiance, she led the way, running down the stairs to the basement, the sound of coal shovelling and striking a coal scuttle, sent the blood tingling into Virginia's cheeks. At the foot of the stairs she paused and stared resentfully at the Man of the First Floor Flat shovelling coal from his meagrely filled bin into Granny MacGrath's coal scuttle.

"Mister—Mister First Floor Man, I call that—that brutal—taking advantage of a mere girl to—to get ahead of her," Virginia burst out wrathfully.

The Man of the First Floor turned a good natured face toward the girl, then laughed uproariously, digging the shovel into the hill of coal.
